SECULAR SONGS

HIGH VOICE

BURNHAM, EUNICE WAITE
A wondrous rose. [Ab] [Eb-*ab*]....$0.60
A gem of a song in the popular style, with waltz refrain. Used in the vaudeville circuit with much success.

DONIZETTI, GAETANO
Una furtiva lagrima (*Elisir d'amore*). [Bb] [F-*ab*]..... .49
A favorite tenor aria.

FISHER WM. ARMS
I heard a cry, Op. 18, No. 1. [C] [E-*a*] .40
A short concert song of dramatic force and strong interest.

GRANT-SCHAEFER, G. A.
Disillusion. [F] [d-*ab*]..... .40
An impassioned love song, intense and filled with dramatic fervor.

KRAMER, A. WALTER
O perfect love. [A] [c♯-*a*]..... .60
A fine setting of a favorite wedding hymn.

MANNEY, CHARLES FONTEYN
Love will live. [Db] [db-*ab* (*bb*)]..... .60
Breadth of style, melody, and harmony make this a "big" song.

MARCHESI, SALVATORE C.
La folletta (*The madcap*), Op. 41, No. 12. [Db] [b♭-*ab*]..... .50
From the classical Italian repertoire; a fine study for lightness of style.

RENAUD, EMILIANO
I would no more give thee a thought (*Je ne veux plus penser a toi*). [F] [d-*a*] .60
In the best French style; for concert use.

SAAR, LOUIS VICTOR
A cream-white rosebud, Op. 72, No. 6. [Db] [d-*ab*]..... .50
Fine lyric quality marks this new song by a well-known composer.

TCHAIKOVSKY, P. I.
Farewell (*Lebewohl*), Op. 60, No. 8. [F] [c-*a*]..... $0.40
A song of parting, full of tenderness and pathos.

WATTS, WINTTER
When I awake. [D] [c♯-*g*]..... .40
A fine love song, in which voice and piano part furnish a charming effect.
Wood song. [E] [d♯-*f♯*]..... .40
Somewhat in the old English madrigal style, melodious and graceful.

MEDIUM VOICE

BURNHAM, EUNICE WAITE
A wondrous rose. [F] [c-F]..... .60

FISHER, WM. ARMS
I heard a cry, Op. 18, No. 1. [Bb] [d-*e*] .40
I know not why, Op. 17, No. 3. [Bb] [c-F]..... .50
A song of varied moods which the music aptly delineates.

HARRIS, VICTOR
Ghosts. [C] [c-F]..... .40
A fanciful text and light, graceful music.

KRAMER, A. WALTER
O perfect love. [F] [a-F]..... .60

MARCHESI, SALVATORE C.
La folletta (*The madcap*), Op. 41, No. 12. [Bb] [c-F]..... .50

MANNEY, CHARLES FONTEYN
Love will live. [Bb] [b♭-*g*]..... .60

SALTER, MARY TURNER
Valentine song. [Eb] [d-F]..... .40
A charming setting of the lines "One, I love, Two, I love, Three, I love, they say."
Wanderer's night song. [Eb] [Eb-Eb] .30

SCHMIDT, LOUIS
Never again. [F] [b-F]..... .60
A song in waltz rhythm, with a little jest in the text.

TCHAIKOVSKY, P. I.
Serenade, Op. 65, No. 1. [D]..... .50
From the standard repertoire.

LOW VOICE

BURNHAM, EUNICE WAITE
A wondrous rose. [Eb] [b♭ Eb]..... .60

CADMAN, CHARLES WAKEFIELD
At dawning. [F] [c-E]..... .60
A new key of an enormously popular song.

FISHER, WM. ARMS
Swing low, Op. 17, No. 2. [E] [b-C♯] $0.60
A negro lullaby, presenting characteristic themes and harmonies.

LANG, MARGARET RUTHVEN
A cradle song of the war. [B min.] [b-D♯]..... .60
The text such as a Belgian mother might sing, the music full of tenderness and maternal love, the work of an American woman composer of prominence.

RENAUD, EMILIANO
I dreamed that you were leaving me (*J'ai reve que tu me quittais*). [F] [b♭-F] .60
In the modern French style, 5-4 rhythm.

WATTS, WINTTER
When I wake. [Bb] [a-Eb]..... .40

SACRED SONG

HIGH VOICE

DRESSLER, LOUIS R.
Thy way, not mine, O Lord. [F] [F-g (*a*)]..... .60
A fine sacred song, melodious and easy.

MEDIUM VOICE

WOOLER, ALFRED
Be brave! be strong. [C] [c-E]..... .60
A sacred song, broad in style, attractive in melody, and suited for general or festival occasions.

PIANO SOLO

HAYDN, FRANZ J.
Arietta con variazioni, in A major. III-IV..... .50
From the classical repertoire.

The Burrowes Course of Music Study
KINDERGARTEN AND PRIMARY
Has had nation-wide popularity for more than twenty years. It works from the child's viewpoint, uses suggestive methods, makes love of music part of the mental development, enables the child to think, to feel and to produce music.
By Using This Method TEACHERS Secure Classes and Hold Them
For descriptive illustrated catalogue, write Katharine Burrowes, 246A Highland Avenue, H. P., Detroit, Mich., or 502A Carnegie Hall, New York City.
Summer Term Begins July 10th

NEW YORK NOTES

BY EVA EMMETT WYCKOFF

Metropolitan Opera House is still open, at riting, and performances are being given for four weeks, by Serge de Diaghileff's Russe. Eighteen principals and a ballet of make up this unique organization. The and costuming are superb.

is same house was given the first concert of nds of Music, a society formed to further the ion of worthy and rarely heard music. The esented was Gustav Mahler's Eighth sym- Leopold Godowsky directed the Phila- Orchestra, eight soloists, and nearly 1000 All this he did without a score, and he dis- d system, strength as a leader of forces, and the entire performance to a glorious end.

CARNEGIE HALL

Kriens Symphony Club, consisting of one l players, nearly all students, and under the n of Christiaan Kriens, gave its annual con- ertainly it was commendable. The soloists ary Adele Case, who has a true contralto nd Kurt H. Dieterle, who was making his earance as a violin soloist. He covered him- his teacher, Mr. Kriens, with honor. Miss ssibly appeared to best advantage in a song garet Hoberg, *Thro' silent paths of night Awakening* of Charles Gilbert Spross, who ompanied her in her group of songs.

IA ELMAN gave his last violin recital of the It seems needless to say, it was beautifully His regular accompanist, Walter H. Golde and with a noble voice, she gives satisfaction to her audience.

REINALD WERRENRATH sings with studied art. The tone is mellow, with a finish and perfection, that tend to make his singing superior. Richard Epstein accompanied.

JULIA ALLEN, assisted by Sergei Kotlarski, the talented violinist, gave a program of unusual construction, because of the operatic arias included. Miss Allen sang *Je suis Titania* from *Mignon* and *Caro nome* from *Rigoletto*, together with French, German, and English songs. Her experience abroad in operatic singing, has fitted her for big tests. Charles Gilbert Spross accompanied.

EDDY BROWN, the violinist, who loomed upon the horizon in the fall with little heralding, has played here about eight times, and always with mastery and supreme art.

FRANCIS MACMILLAN played five recitals in this city, displaying smooth, sure technic. Richard Hageman accompanied.

THE Russian 'cellist, Boris Hambourg, gave his second recital this season and included the Debussy sonata for violoncello and piano, in which he was assisted by Josef Adler, who accompanied throughout the program. Mr. Hambourg's playing is masterly.

GUIOMAR NOVAES, Muri Silba, Herbert Fryer, Paquita Madriguera, all pianists and of foreign extraction, gave delightful recitals, and Harold Bauer, with his giant ability and superb masterfulness, played an all-Chopin program.

A SONG recital by Mona Downs was given in the Bandbox Theatre, Frederic Mets accompanied. There was added interest in her recital in that she wore a costume of 1850.

IN the auditorium of the DeWitt Clinton High School, Harry H. Barnhart conducted the first concert given by the New York Community Chorus, in connection with the National Conference on Community Centers and Related Problems. Mr. Barnhart is doing a magnificent work, for music is in the heart of these people. He directed his chorus and then turned to the audience and directed it, while the chorus on the platform played audience, and the latter sang so well, the chorus applauded. Mr. Barnhart is doing much with the community singing in Rochester, and many other places.

THE theatres are doing big business, and just now Shakespeare or Shakspere (or Bacon), is having Tercentenary celebrations. Sir Herbert Beerbohm Tree is reviving many of his favorite characters at the New Amsterdam, and with a splendid company. At the Century Theatre there is a revival of *The Tempest* and the performance is delightful throughout. The Hippodrome recently celebrated its eleventh anniversary, with a program whereon Sousa and his band, a list of Broadway successful song writers, some new and old time song favorites, contributed to the delectation of a large audience.

OSSIP GABRILOWITSCH, at his farewell recital, played a program selected from numbers that proved the most popular in the course of his historical series.

THE final concert of the Oratorio Society was of unusual interest, because of the fact *The Creation* had not been sung in twenty-two years by this society. Mr. Koemmenich, the conductor, secured most beautiful effects in his drilling for this Haydn masterpiece. Florence Hinkle, of beautiful voice and who sings so marvelously well, Paul Reimers, and Marion Green sustained the solo parts. Mr. Green has a voice of musical quality and sang well.

HOTEL CONCERTS

AT the Waldorf-Astoria Hotel, in its ballroom, the hotel orchestra of fifty men, under the direction of Joseph Knecht, gave a delightful concert on a Sunday afternoon. The art and exquisite coloratura singing of Lucy Gates, the soloist, was a rare treat. A pleasant incident of the afternoon was the presence of Henry Hadley and Victor Herbert. The former's suite from *The Atonement of Pan*, and Herbert's *Irish Rhapsody* were played and vigorously applauded. Also at this hotel the Rubinstein Club holds all its functions, and closed its concert season with a choral concert, assisted by Helen Stanley, and the Elsa Fischer String Quartet. Miss Stanley has a lovely voice, and uses it delightfully. Wm. R. Chapman is musical director, and about 180 voices comprise the chorus.

AT the Plaza, a concert was given by the New Assembly, Amy E. Ellerman and Calvin Coxe were the singers. Miss Ellerman's voice is of the true contralto quality, even and resonant, and she has a winning personality. Mr. Cox has a high lyric tenor, of splendid timbre and range.

AEOLIAN HALL

REGINA HASSLER-FOX gave a song recital, displaying a full rich tone. Her audience was enthusiastic. Mr. Richard Epstein most capably accompanied.

MAUDE FAY, in her recital, showed she is a well-drilled singer, but the voice is limited. This deficiency may be due to the fact that she had been ill. Kurt Schindler accompanied.

JULIA HEINRICH sang three groups of *Lieder*, one French group, and her father, Max Heinrich's cycle *Love in Spring*. Miss Heinrich's singing is intelligent

VICTOR TALKING MACHINE RECORDS FOR JUNE, 1916

No one need be without music during the summer days and evenings spent in the country, at the seaside bungalow, and the camp in the woods. There are places to which it is not convenient to take a piano, in order to make sure of some of the pleasures of the permanent home.

But it is not a matter of so much trouble to get a Victrola—there are several sizes—even to a camp deep in the woods. And the compensation for the trouble makes it worth while. How pleasant to sit as twilight shades gather, and listen to the strains of some well-loved air from opera or an old familiar song. And then the pleasant times that can be spent when dance music is played by an orchestra always ready.

When you are picking out the records you will take with you don't overlook these we mention below:

Caruso, Enrico, tenor: *Tiempo antico* (*Olden times*), written by the great tenor himself. Here is an opportunity to hear him in the double capacity of artist and composer.

Culp, Julia, contralto: *Cradle song*, 1915 (*Caprice viennois*), adapted by Fritz Kreisler from his celebrated composition for the violin. It makes an attractive song.

Gluck, Alma, soprano: *My old Kentucky home*, by Foster, one of the old favorites of the American people, charmingly sung by a popular artist. Mme. Gluck also sings, with violin obbligato by her husband, Efrem Zimbalist, Tchaikovsky's beautiful song *Nur wer die Sehnsucht kennt* (*Ye who have yearned alone*), full of pathos and melancholy, but appealing to every heart.

Journet, Marcel, bass: *Hymne national Serbe* (*Serbian national hymn*), sung in Serbian and French. This was written during the war with Hungary in 1848.

Martinelli, Giovanni, tenor: *M'appari* (*Like a dream*), the great tenor air from Flotow's opera *Martha*. It is one of those songs which everyone loves to hear.

McCormack, John, tenor: *Bonnie wee thing*, a new song by Liza Lehmann, composer of the popular cycle *In a Persian Garden*. This is a charming setting of Burns's tender little poem. The popular tenor also gives a fine interpretation of Tosti's sentimental ballad in barcarolle style, *Venetian Song*.

Melba, Nellie, soprano: *Songs my mother taught me*, by Dvorak, the celebrated Bohemian composer, a gem in the style of the gipsy folk-song.

Ober, Margarete, contralto: *Mit deinen blauen Augen* (*With your blue eyes*), Op. 56, No. 4, by Richard Strauss, the great German composer of today. This is a delightful number in the high class song style.

Zimbalist, Efrem, violinist: *Polish dance*, written by the violinist himself, for he is winning reputation as a composer as well as a player.

Werrenrath, Reinald, baritone: *The pa* Fauré, and *The lost chord*, by Sullivan, bot which are favorites with the American public

Harrison, Charles, tenor: *Kilkenny*, a song.

Miller, Reed, tenor: *Molly O*, by Olcott, song which many of the older folks will reca

Victor Concert Orchestra: *William Te ture*, parts 3 and 4, on one record. A gr chestra number.

PROGRESSIVE HARMONY

Earnest students wanted for a course in Harmony with a modern method and fascinating study plan.

NEW CHORAL WORKS OF QUALITY

SECULAR CANTATAS MIXED VOICES

The Merry Wedding

By PERCY GRAINGER

Cantata for Mixed Voices and Orchestra

Price, 60 cents, postpaid
For Rent, Orchestra Parts, Full, $6.00 per Month

First performed by "The Musical Art Society" of New York, under Frank Damrosch

"Its melody has the strong swing of many of the Scandinavian folk-songs of the chivalric type, and there is rich variety in its manipulation."—H. E. Krehbiel, in the New York *Tribune*.

The Highway Man

A Cantata for Baritone Solo, Chorus and Orchestra

Ballad by ALFRED NOYES
Music by DEEMS TAYLOR

Op. 8

Issued in two editions—with Chorus for Mixed Voices and with Chorus for Women's Voices (three-part). The Baritone Solo, Accompaniment and Orchestration are the same in both editions.

Time of performance, about 30 minutes.

Price, 75 cents, postpaid
For Rent, Orchestra Parts, Full, $6.00 per Month

First performed at the Fifth MacDowell Festival, Peterboro, N. H., Aug. 19, 1914, when it registered "An emphatic and resounding success."

The Chambered Nautilus

Cantata for Mixed Voices—with Piano, Organ and Orchestra

Poem by OLIVER WENDELL HOLMES
Music by DEEMS TAYLOR

Price, 50 cents, postpaid
For Rent, Orchestra Parts, Full, $4.00 per Month

This Cantata was first performed in May, 1914, by the University Heights Choral Society of New York City.

Hakon the Strong

(A Ballad of the North)
Music by GUSTAVE LAZARUS

Price, 50 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Solo voice: Baritone. Time, 15 minutes.
English and German text Poem by Fr. von Sallet.

This work tells, and effectively illustrates in music, a saga-like story of mighty exploit, love and catastrophe. A robust voice is required for the solo part. The cantata is in three short divisions.

An arrangement of this work has been made for men's voices by the composer, and will be found listed under that heading also.

The Djinns

(Ballad)
Music by FRANZ C. BORNSCHEIN

Price, 50 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Solo voice: Baritone. 20 minutes. Continuous.
Text is translation from Victor Hugo by John L. O'Sullivan.

Awarded a (divided) first prize in the competition inaugurated by the Mendelssohn Club, Cleveland, Ohio.

A fine pictorial subject this for choral treatment, and the music makes strong and moderately colored use of it. A work the first impression of which will be vividly retained by an audience.

The Wreck

By WILLIAM REED

A Cantata for Tenor Solo, Chorus of Mixed Voices and Orchestra

Time of performance, about 10 minutes.

Paper, price, 40 cents

The poem deals powerfully, though not specifically, with the "Titanic" disaster. It has a largeness of tragic import which is reflected in the sweep and force of the composer's music. The form is that of an antiphon between a solo tenor and the responding chorus; and the closing choral passage has breadth and dignity.

SECULAR CANTATAS WOMEN'S VOICES

The Highway Man

A Cantata for Baritone Solo, Chorus of Women's Voices (three-part) and Orchestra

For description and price, see Secular Cantatas—Mixed Voices.

The Knight of Toggenberg

(Ballad)
Music by W. W. GILCHRIST
Price, 50 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Solo voice: Alto. 15 minutes. Continuous.
Poem translated from the German of Schiller.

An affecting romantic legend of feudal times is here musically interpreted with a vividness that is, by turns, forceful or tender. The atmosphere of spellbound narration is admirably maintained throughout.

A Spring Cycle

By EDVARD GRIEG
Arranged by FRANKE HARLING
For Women's Voices
Price, 75 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Songs selected from Grieg's works, such as are associated in music and sentiment, have been arranged for chorus of women's voices, with solos interspersed. There are six numbers, all in the composer's most captivating vein, and take in performance half an hour

Zorah

Music by FRANZ C. BORNSCHEIN
Price, 40 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Solo voice: Soprano. Continuous.
Poem by Frederick H. Martens.

The picturesque text, dealing with a desert raid and abduction, gives the composer opportunity for Oriental color and dramatic effects in his music. There are two extended and very expressive solos for soprano, and the choral effects range from languorous rhythms to the vivid accents of combat and exultation.

SECULAR CANTATAS MEN'S VOICES

Hakon the Strong

(A Ballad of the North)
Music by GUSTAVE LAZARUS

See description under Secular Cantatas—Mixed Voices.

This work was originally written for mixed voices, and will be found listed under that heading also.

The Liberty Bell

(Ballad Cantata)
By WILLIAM G. HAMMOND
Price, 40 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Solo voice: Baritone. 15 minutes. Continuous.

The music aids with masculine forcefulness and spirit in the telling of the story of the first Independence Day, and of the suspense broken by the Liberty Bell's proclamation of a nation's rebirth. About nineteen pages of chorus-writing.

PRACTICAL ORGAN SCHOOL

BY RINCK-ROGERS

Being the practical Organ School of Johann Christian H. Rinck, revised and rearranged, and with new matter, edited by James H. Rogers.

Ditson Edition, No. 304. Price $1.25

WHAT EXPERTS SAY

"I shall take great pleasure in recommending it to my pupils."—EDWIN ARTHUR KRAFT, concert organist.

"I shall use it with my organ pupils in place of the first two books of Rinck's **Organ School**, as Mr. Rogers' original contributions are of great value; and his directions about pedaling and phrasing will be very helpful to a student beginning the study of organ."—W. M. FILLEBROWN, Director of Music, Virginia College.

"I regard it as particularly useful in the altogether too numerous cases of pupils who come to the organ without adequate study of the piano and, hence, are slow and inefficient in their organ manual work. The contributions of Mr. Rogers are of distinct value to the work."—SUMNER SALTER, Williams College.

"The Rinck-Rogers Organ Method, in this new form, should find a large sale, as it is too valuable a work to allow to pass from circulation."—ALBERT RIEMENSCHNEIDER, Baldwin-Wallace College.

TAPPER'S GRADED COURSE

FOR THE PIANO

Edited and Arranged by THOMAS TAPPER, Litt. D.
Author of Tapper's First Piano Book

The only course that provides all the necessary lessons in Theory, Music Writing, Melody, and Form, **when** and **where** they should be given

What a Progressive Teacher Says:

"I have never approved of a Graded Course, because I could never find one worthy of serious thought, but I am delighted with Tapper's Graded Course, and I shall recommend it upon every opportunity."

SARAH I. McCONNELL,
Conservatory of Music of Muncie National Institute.

Among the Distinguished Editors of the Work are: M. Esposito, E. R. Kroeger, M. Moszkowski, John Orth, Albert Ross Parsons, I. Philipp, Xaver Scharwenka, W. H. Sherwood, August Spanuth, Bertha Feiring Tapper

The Course Consists of

1. Graded Studies (Grades 1 to 7) . . . . — The Graded Studies constitute a course in technics, and in all problems that develop therefrom.
2. Graded Pieces (Grades 1 to 7) . . . . — The Graded Pieces offer the most pleasing recreations and repertoire selections, grade for grade with the studies.
3. Manuals for Grades 1, 2 and 3 . . . . — The Manuals contain graded lessons in Music Writing, Melody, Analysis, Form, and Music Theory, *applied to real musical composition.*
4. Four-hand Collection, Nos. 1 and 2 . . — The Four-hand Collections are for the double purpose of sight-reading and for ensemble work. They may be used from the third grade.

Price of each grade, $1.00, postpaid. Liberal Discount to Teachers

TEN MOTHER GOOSE JINGLES

WITH NEW MUSICAL SETTINGS BY

ARTHUR E. JOHNSTONE

The North Wind Doth Blow	One Misty, Moisty Morning
Dance a Baby Diddy	Goosey, Goosey Gander
Twinkle, Twinkle, Little Star	When I Was a Little Boy
There Was a Crooked Man	Little Bo-Peep
Pussy Cat, Pussy Cat	Dance, Little Baby

PRICE COMPLETE, 60 CENTS, POSTPAID

My dear Mr. Fischer:

I have sung the TEN MOTHER GOOSE SONGS by Arthur E. Johnstone in ten different cities and each time they have made a decided hit! This week I did them at the Cornell University for 300 school children and also for the High School children at Conard, N. H. I hope you will advertise the fact that the Mother Goose Songs are a great novelty and sensation. Sincerely, ANITA RIO.

WILLIS SERVICE

WILLIS SERVICE means the supplying of everything in music to musicians under the best possible circumstances. It stands for promptness, generous discounts, and minimum transportation charges. It is supported by perpetual courtesy, careful attention to every order, and a painstaking way of seeing that every patron is being treated the way they want to be treated. It is made possible by a large and great catalog of copyrights, and an immense stock of the publications of all the other publishers. It is something new and unquestionably good in the music business, and immeasurably separated from the obsolete "our own publications only" policy.

ON TO PLATTSBURG
"March"
By Herbert W. Lowe
Piano Solo .60 - Published also for Band and Orchestra
Boston - Oliver Ditson Company
New York - Chas H Ditson & Co. - Chicago - Lyon & Healy

THE COVER DESIGN IN THREE COLORS

THE LATEST PATRIOTIC MARCH SUCCESS

On to Plattsburg

By HERBERT W. LOWE

Piano solo (special price) .30 Postpaid
Piano, 4 hands 75
Mandolin orchestra
Orchestra parts and piano .55
Brass band 50

March with the boys on to Plattsburg,
Swing into line and hike away;
There's one place for us and it's Plattsburg,
One time--and that's today!
March on; ev'ry road leads to Plattsburg.

There's work for all to do
Under the Flag --
Glorious Flag --
The Red, White and Blue. *David Stevens*

THIS march is already a big favorite with Harvard assemblages. It is typically American, magnetic and irresistible in rhythm, with melodies which at once catch the ear and haunt the memory, for they express the ardor and energy of patriotic America.

COMPOSITIONS OF ENRIQUE GRANADOS

PUBLISHED BY

G. SCHIRMER

3 EAST 43d ST., NEW YORK

PIANO

ALLEGRO DE CONCIERTO.....$1.50
One of the most vivid and delightful of modern concert pieces. Less difficult than it sounds.

VALSE DE CONCERT..... 1.00
Contains no less than six well-defined themes.

A LA CUBANA..... .75
The slight syncopation produces a strikingly Spanish effect.

DANZAS ESPAGNOLAS..... .75
1. **Danza lenta**—A languorous waltz movement.
2. **Sardana**—A lively round dance of the province of Gerona.

MARCHE MILITAIRE..... .60
Suggestive of a patrol. Oriental in color, very stirring and distinctly martial.

EL PELELE..... .75
Extremely pianistic, with a strong racial flavor.

IMPROMPTU..... .75
Full of spontaneous charm and genuine lyric beauty.

INTERMEZZO. From the opera "Goyescas," arranged by the composer..... .60
A poetic and colorful gem especially written for the première of "Goyescas," and not included in the original score.

GRAND OPERA

GOYESCAS

A Spanish Opera
In Prologue and Three Tableaux
Book by Fernando Periquet
Vocal Score
Paper, net $4.00 Cloth, net $5.00

THE story of "Goyescas" was inspired by the paintings of the famous 18th century artist, Goya. But this lyric drama is much more than a musical version of dramatic pictures—it is the tonal quintessence of a temperamental people. The composer was the leading exponent of the modern Spanish School. His work, characterized by swinging rhythm, color and originality, was introduced in this country by Ernest Schelling through the piano sketches from which the opera was developed. The world première of "Goyescas" on January 28, 1916, at the Metropolitan Opera House, was a distinct event in musical circles. Whether "Goyescas" represents the full measure of the composer's genius, or merely its promise, will never be known, as Signor Granados and his wife were among those lost on the ill-fated "Sussex."

Send for free booklet containing a biographical sketch of Enrique Granados and thematic illustrations of some of his best-known compositions.

MARCHE MILITAIRE. Arr. by Tom Clark.....net $1.00

THE DITSON EDITION HAS FEW EQUALS AND NO SUPERIORS

DITSON EDITION

COMPRISING NEW AND STANDARD EDUCATIONAL WORKS
FOR THE PIANO, ORGAN, VIOLIN, AND VOICE

Edited and compiled on advanced lines

RECENT ADDITIONS

SCHOOL OF VIOLIN TECHNICS. *By Henry Schradieck.*
Ditson Edition, No. 203. Book I.....Price, **60 cents**
Ditson Edition, No. 204. Book II.....Price, **40 cents**
Ditson Edition, No. 205. Book III.....Price, **50 cents**

WALTZES. *By Frederic Chopin.*
Ditson Edition, No. 214.....Price, **50 cents**

FIFTEEN STUDIES IN STYLE AND EXPRESSION. *By G. Concone.*
Op. 25. Ditson Edition, No. 222.....Price, **50 cents**

NINE STORIETTES FOR THE PIANO. *By Cedric W. Lemont.*
Op. 14. Ditson Edition, No. 301 .....Price, **60 cents**

POLONAISES. *By Frederic Chopin.*
Ditson Edition, No. 213.....Price, **75 cents**

ONE HUNDRED RHYTHMIC STUDIES FOR THE PIANO. *By Thomas Tapper, Litt. D.*
Ditson Edition, No. 216.....Price, **75 cents**

TEN EASY WRIST STUDIES. *By Carl Preyer.*
Op. 53. Ditson Edition, No. 206.....Price, **75 cents**

NOCTURNES. *By Frederic Chopin.*
Ditson Edition, No. 212.....Price, **75 cents**

PRACTICAL ITALIAN METHOD OF SINGING FOR VERY HIGH VOICE. *By Niccolo Vaccai.*
Ditson Edition, No. 154.....Price, **75 cents**

PUBLIC SCHOOL CLASS METHOD FOR THE VIOLIN. *By Dr. Albert G. Mitchell,* Assistant Director of Music, Boston Public Schools.
Book II. Ditson Edition, No. 305.....Price, **$1.00**

PRACTICAL ORGAN SCHOOL. *By Rinck-Rogers.*
Being a practical Organ School of Johann Christian H. Rinck, revised and rearranged, and with new matter edited by James H. Rogers. Ditson Edition, No. 304. Price, **$1.25**

EXERCISES IN VOICE BUILDING. *By Horace R. Streeter.*
Edited by Isidora Martinez.
Ditson Edition, No. 302.....Price, **60 cents**

USUAL DISCOUNT TO TEACHERS

FOR SUMMER COURSES

PIANOFORTE STUDIES

F. BURGMÜLLER

TONE AND RHYTHM. 35 Melodious Studies, augmented, revised and edited by R. KRENTZLIN. Two Books. Each **$0.60**
(Schmidt's Educational Series No. 137a-b)

"Very good for early students. I shall use the same in my work. I like those preparatory exercises at the top of the pages. They will prove helpful to the pupil."—(Signed) David A. Johnson.

FRANK LYNES

KEY CIRCLE EXERCISES for the Pianoforte. Three Books. Each.....**$0.75**

Combining Technical Study with practice in MEMORY-TRAINING, SIGHT-READING, TRANSPOSITION, PRINCIPLES OF HARMONY.

CHARLES DENNÉE

75 EIGHT-BAR STUDIES FOR THE INTERMEDIATE GRADES. Adapted, edited and arranged in progressive order. Price.....**$0.75**
(Schmidt's Educational Series No. 115)

"Seventy-five of the more difficult passages in standard works used in studios, each passage fingered and with other hints furnished as to its simplification, will help many a learner over the 'one hard place' of which he so frequently complains."—*Pacific Coast Musical Review.*

PROGRESSIVE STUDIES IN OCTAVE PLAYING. (With special preparatory exercises.) Price.....**$1.00**
(Schmidt's Educational Series No. 37)

Selected from the works of Gurlitt, Parlow, Wolff, Eggeling, Biehl, Foote, Lynes, Spindler, Bach, Mozart and others. The preparatory exercises and a number of new studies have been specially written by the editor for this collection.

EASY GRADES

CORNELIUS GURLITT

Op. 228. TECHNIC AND MELODY. A fundamental course for the Pianoforte. The favorite Instruction Book. OVER 90,000 COPIES SOLD. Three Books. Each.....**$0.75**
(Schmidt's Educational Series No. 106a-c)

Endorsements

"The best book for beginners I have ever handled, and the cheapest also."—(Signed) Sister Irene.

"A most delightful book for children, and carries them through the early difficulties of music in a pleasant yet thorough manner."—(Signed) Agnes H. S. Ritchie.

MEDIUM GRADES

ERNEST A. DICKS

SIX SPECIAL STUDIES. Staccato, Cantabile (Melody Playing), Part-Playing, Octaves, Double Notes, Grace and Delicacy. Price.....**$0.75**
(Schmidt's Educational Series No. 125)

"I am using the 'Six Special Studies' by Ernest A. Dicks, and find them valuable and interesting to pupils. They are certainly amongst the best of recent issues—technically and for musical content."—(Signed) E. W. Hanscom.

CORNELIUS GURLITT

Op. 185. 7 SPECIAL STUDIES. Gavotte (Octaves), Capriccietto (Thirds), Scherzetto (Double Notes), Nocturne (Arpeggios), Impromptu (Left hand alone), Barcarolle (Trills), Scherzo (Staccato)..**$0.75**
(Schmidt's Educational Series No. 127)

MORITZ MOSZKOWSKI

Op. 91. DEXTERITY AND STYLE. 20 Modern Etudes. Two Books. Each..**$0.75**
(Schmidt's Educational Series No. 117a-b)

"We cannot too warmly recommend these Modern Studies of Moszkowski. It is rare to meet with technical works of value which have so many musical beauties."—*Musical Courier.*

H. R. KRENTZLIN

SYSTEMATIC FINGER TECHNIC. Progressive studies for the earlier grades by CARL CZERNY. Selected, arranged and augmented with studies after motives from CZERNY. Three Books. Each.....**$0.50**
(Schmidt's Educational Series No. 97a-c)

Book I. 50 Short Studies for the First Grade.
Book II. 40 Studies Progressing Through the Second Grade.
Book III. 24 Studies for Technical Advancement.

FERDINAND MEYER

THE PUPIL'S FIRST ETUDE ALBUM. 53 Easiest Etudes. Price.....**$0.75**
(Schmidt's Educational Series No. 70)

Studies by Gurlitt, Lynes, Sartorio, Eggeling, Franke, Parlow, Schytté, Wolff, and others.

ALBERT RENAUD

Op. 145. TECHNICAL ADVANCEMENT. 20 Studies (Third and Fourth Grades). Two Books. Each.....**$0.75**
(Schmidt's Educational Series No. 111a-b)

"Both useful in a technical way and rather novel in design. It will repay teachers who are looking for something different in the way of piano studies to examine them carefully."—(Signed) James H. Rogers.

NICOLAI VON WILM

Op. 256. PHRASING AND AGILITY. 12 Etudes. Carefully marked for delicate effects of light and shade and the use of the pedal. Price.....**$0.75**
(Schmidt's Educational Series No. 77)

"Studies of such all-round value are hard to find, or at least this has been my experience during the ten years I have been teaching. It is a real pleasure to recommend the book."—(Signed) Mrs. Howard E. Goodsell.

For Normal Kindergarten Courses

"CHILDLAND IN SONG AND RHYTHM"

Songs and Descriptive Pieces

Words by
HARRIET BLANCHE JONES

Music by
FLORENCE NEWELL BARBOUR

Price $1.00

Endorsement

ELIZABETH CASTERTON, President of National Supervisors of School Music, writes: "Its poetry is artistic, its melodies chaste and simple. . . . I can truthfully say I consider it a valuable contribution to Kindergarten Music."

FIRST YEAR SERIES

by
THOMAS TAPPER

"I believe Dr. Tapper is writing some of the most up-to-date texts for use in the Musical Class . . . and is giving us old truths in Twentieth Century form." (Signed) Caroline V. Smith, Director of Music, State Normal School, Winona, Minn.

First Year Theory
(Rudiments of Music)

First Year Harmony
(100 Lessons for Beginners)

First Year Counterpoint
(Two and Three Part Writing)

First Year Analysis
(Musical Form)

First Year Melody Writing
(The First Principles of Melodic Invention)

Second Year Harmony
(A Sequel to "First Year Harmony")

PROFESSIONAL PRICE, 75 CENTS EACH

SOME PRACTICAL THINGS IN PIANO PLAYING

by
ARTHUR FOOTE

Price 50 Cents

"For the average piano student who desires a book containing the requisites without frills, it should prove admirable."

PAUL REIMERS TALKS ON HIS ART

TO WILLIAM ARMSTRONG

PAUL REIMERS is a man of ideas. Having lived very nearly everywhere he has disproved the tradition that a rolling stone gathers no moss. Without the gift of adaptability people may journey endlessly and neither see nor gain by it; but granted its possession a fresh set of brain-cells seems to be put into activity with every strange surrounding visited.

There may be nothing new under the sun, but there is always a new way of expressing it, whether in life or in art.

Familiarity with a nation means to see its point of view, and absorb its atmosphere; it means as well to get at underlying human characteristics, in no branches more acutely reflected in a psychic sense than in those combining as medium of the singer's art, music and poetry.

Imitation of style and tradition is well and good so far as it goes; but imitation in anything never supplies it with the breath of life. Who among us will not recall our first hearing of French songs sung by a true French artist, or of *lieder* sung by a genuine German one? Very many and noted ones of another nationality get near to an exact expression of the contents of both, but fail to catch their spirit of inspiration, leaving them French songs or German *lieder* given with a foreign psychic accent, even where command of style and diction form part of the singer's equipment.

If this shortcoming extended to all types none could hope to sing with real authority in any other than his own vernacular. But there is the singer of trained adaptability, who, possessed of the technic of his art, fuses it with the true spirit of the song in its interpretation. Take, for instance, Elena Gerhardt. She had visited England for many seasons, and America for two, when she put into her programs songs by composers of these nationalities. The technic of her art as *lieder* singer, in word value, diction, coloring, were all obviously in evidence, as they should be, but knowledge of both the English and American spirit enabled her to voice them as few born of either nationality could do.

With Paul Reimers adaptability plays its same strong sympathetic part in varied psychic response. Born in Schleswig-Holstein, originally a Danish province, with his early youth spent in Hamburg, his training, through associations, came in many lands. For twelve years he made his home in Scotland and England, where he studied with Henschel and Zur Mühlen; for a long time Paris was his residence as a pupil of Criticus; at the outset and in Hamburg Prof. Spengel was his master; often he has visited Russia, England, Sweden, Denmark, Budapest, Vienna, Berlin; for three seasons he has been in America; in each and all of these, as well as Spain and the Balkans, he has lived as well as sung. None is ever denationalized; psychically basic traits remain indelible; but genuino assimilation of strange surroundings enlarges in exactly corresponding degree resource in varied expression.

In his early years, not unlike many others loving

PAUL REIMERS

music and ultimately to follow it, Reimers was destined for another profession, the law. At five, however, he was given piano and violin lessons; in his teens people said "You have a nice tenor voice and should do something with it." From his pocket money he paid for a few lessons. Presently he sang as amateur with the Philharmonic of Hamburg and also in the opera there. The ill health of his mother, and her known antipathy to a musical career, then kept him silent on the subject. Later, in Scotland, his real professional studies began; a successful London début was quickly followed by another in Berlin and, once launched, his singing journeys started.

HIS METHOD

No matter where he traveled though, Paul Reimers claims that two questions had arrived ahead of him: "Do you sing in opera?" and "What method do you use?" To this latter his invariable reply was:

"Method? I know only one. It can be described in two words: Sing well. In all other methods pointed out, I see shortcomings. Some there may be who, on hearing a guttural tone quality classify it as the German method; a white quality as the Italian; and a dwelling on the note or pinching of the nose as French. On hearing a really good singer no such thought enters the head. My idea is that if one only avoids the axaggerations of all methods one is already almost a good singer."

"As to that oft repeated, 'Do you sing in opera?' followed by a disappointed, 'Oh, you only sing in concert!' I can but say that beautiful as is his work in his own field the bad taste of the opera singer in recital is proverbial."

CONCERT VS. OPERA SINGING

It is a strange fact that, even with strong existing appreciation of the concert singer's art in many sections of our country, a goodly portion of the general public, as well as a goodly portion of that public which cannot by any means be classed as "general," fail to recognize the two branches of concert and opera singing as specialties distinct from each other.

Year after year operatic celebrities are chronicled as concertizing the United States. Aside from singing operatic arias, which are of questionable taste in recital programs, they are too frequently outside their sphere, and one in which they may be admirable. Artistically the situation would be paralleled if a great *lieder* singer were suddenly to step upon the boards and essay opera. Yet managers, ever supposedly in touch with public taste, frequently insist that to secure concert engagements it is of immense advantage to be connected with an operatic institution. A corresponding condition would not exist if two classes of trade experts were concerned. Sense of practicality would scarcely prompt any to engage a man to put on locks because he had become distinguished through painting the front door of the state capitol.

There are opera singers who are also great singers of songs and *lieder*, but the number of them is far from embracing all who have won fame in opera. As one among those distinguished in both branches once expressed it:

"I fear that in opera we put on our colors with a scene painter's brush, while recital requires the art of the miniature painter."

Each in his field is indispensable to art, and the opera singer who can also command songs and *lieder* commands doubly our respect. Where injustice enters is the lack of discrimination in existing demand for opera singers in recitals simply because they are widely known as members of some institution where opera is given.

Not unlikely a means sharply to emphasize the strong demarcation between the art of concert and that of opera lies with the concert singers themselves. If all recital programs were sung in English, the story might be another. Complete understanding of the words sung in recital makes a broader difference than in opera where action visualizes meaning. None may say that the most noted operatic aria sung in a foreign language and in a miscellaneous program will ever oust with the general public *Home, sweet home* well sung in the vernacular. But sing *Home, sweet home* in any other language than English and see how far the familiar, treasured melody alone will carry it. When concert and recital singing is brought home to the public by use invariably of that public's own language, confusion as to the distinct and separate place of the song and *lieder* singer in art will likely be forever routed.

PRODUCING EFFECTS IN OPERA AND RECITAL

Of the difference between opera and his own specialty, songs and *lieder*, Mr. Reimers, before touching upon other points, said merely this: "In opera the orchestra, scenery, costumes, action, all contribute to a combined effect. In recital the singer creates his own atmosphere; there are no illusions. To the sensitive music-lover *lieder* bring much more joy than opera; for in *lieder* something is left to the imagination of the hearer, depths are stirred by the singer who suggests unaided by the extraneous.

"In singing *lieder* one wants first the well-trained voice, then musicianship, and, of course, intelligence. Haydn, Mozart, and the beginners in that field built up things quite artificially. Even Beethoven in his *Adelaide* gave us something between an opera aria and the sonata form. In those days things were valued by quantity, not quality. They were written by the yard, repeating, repeating, and repeating, requiring maybe two pages for the close. The reason why so many old classical songs are never sung is that the artificiality in their composing has destroyed them. Take in comparison folk-songs whose natural simplicity is absolute. They are still fresh today after five hundred or a thousand years of existence. And take, too, those old masters when they allowed themselves to speak sincerely as, for instance, Mozart in his *Veilchen* and *Wiegenlied*. Such songs are as freshly alive now as when first written.

"If anyone were to ask me with which composers it is best to begin education in the study of *lieder*, I should say that in music one thing leads to another, period by period—know all. Those who know only certain works to the exclusion of all others know those same works only partially. Some have decried to me Mendelssohn or Schubert as old-fashioned, but on questioning I have found them ignorant of both. Such assertion is as tiresome as the query, 'Who is your favorite composer?'

"Before Wagner people had not thought so much about the *sprachgesang*, letting word and musical phrase go together. Hugo Wolf realized in his *lieder* this principle to perfection. More or less the modern composer writes with it in mind. But only too often the lovely melody seems to have come to the composer first, and words to have been found and put to it afterward.

"The first thing in studying a *lied* song is to get into the spirit of the words. Sometimes the melody throws out consideration of the poetic phrase, and confronts the singer with danger of breaking its sustained meaning. Schumann's *Du bist wie eine Blume* presents such a problem. The most important thing to do in studying songs like this is to get the meaning of the words, dividing two musical phrases, and yet welding the tone between the two in order to sustain the complete meaning of the otherwise broken poetic phrase.

"My belief is firm in reserving the voice in the matter of climaxes for too frequent climaxes fail of making any impression at all. Only too often people sing too loud. Heart and intelligence give the true value of the song. For instance, you hear a lovely voice from a lovely creature; you think them wonderful, and yet the exclamation comes involuntarily, "They leave me perfectly cold." That which one sings from the heart and soul is the thing which warms. If for a second one feels that people want effect on a certain tone, one forgets all else, and just as surely breaks the spirit of interpretation, for people remember only that one note given for the sake of mere effect.

"Very many Russian songs are translated into German. Sung in that language they sound to my ear all right. As to the question of singing German *lieder* in the English language, I cannot see why it should not be done, where a good translation is made in blank verse, and the word intended by the composer can so much more readily be welded with its proper note. Any attempt at rhyming in *lieder* translations is generally productive of senseless results. In making the book of words for a program, I always put my own translations into prose, for in that form the hearer can follow more completely the picture given in the original text.

"Personality and individuality are, as all know, invaluable to the concert singer. In the former, manner, bearing, attitude toward the public, and many more things play an important part. As to individuality, it must be the real one. Pupils of a teacher too often become mere imitators of him. Always I say to my pupils, 'Never dare to imitate me!' One almost finds that faults aid an original individuality. There are always two or three ways in which to look at anything. And if the way is sincerely one's own, it is surely more likely to appeal convincingly than any imitation could.

"In selecting songs for a recital, the singer would far better exercise an individual intelligence. This is the course which many seem not to have the courage to take, adhering instead to cut and dried formula with the eternal Schubert–Brahms, or the equally eternal Schubert–Wolf, thinking that this will surely be the right thing to do as so many have already done it. Why not give other composers a chance? Sometimes a composer has written one good song. Then why not sing it? Perhaps the answer might be, 'I am afraid of the critics.'

"Naturally in selecting a varied program one must carefully avoid making it flamboyant; gaudy and variegated combinations may look well in a flower-bed, but they sound bad in a recital

"The making of programs is a study which requires knowledge of human nature. High art ideals must be sustained, and at the same time, a thumb kept on the pulse of the audience. In arranging numbers three things must be considered in their contents, the emotional, the spiritual, and the period of the composition. Other points necessary to success in arrangement are sense of style and good taste. Variety and diversity must be considered tastefully, unless you want to drag your hearers from a hot bath to plunge them into a cold one."

Illustrative of his ideas on style and interpretation, Mr. Reimers recently gave three instructive Lecture-Recitals before audiences of singers in New York. The program of these, covering a broad field and of likely interest to vocal students, are in their order of sequence as follows:

FIRST LECTURE-RECITAL

Amarilli.....Caccini (1546–1614)
Aminte.....Old French
Lasciate mi morire .....Monteverde (1568–1643)
Danza, danza .....Durante (1684–1755)

Have you seen but a white lily grow
(Time of James I)
Passing bye .....E. Purcell (1689–1740)
When I am laid in earth..... } Henry Purcell
Nymphs and shepherds ..... }

Der Tambour ..... }
Biterolf ..... }
Ach in Maien war's..... } Hugo Wolf
In der Frühe ..... }
Das Lied vom Winde ..... }

Les berceaux.....Fauré
Guitares and mandolines..... } Saint-Saëns
Aimons-nous ..... }
Chevaux de bois.....Debussy

SECOND LECTURE-RECITAL

Aria from the opera "Sosarme".....Haendel
Komm' süsser Tod.....Bach
Der Kuss ..... } Beethoven
Adelaïde ..... }

Dichter's Genesung..... }
Alte Laute ..... }
Die Meerfee..... } Schumann
Der Soldat ..... }
Provençalisches Lied ..... }

International Folk-Songs

Das Mühlrad..... } Old Germ
Der Jäger..... }
Magasan repül adaru.....Hungar
La Colomba.....Ital
Kau fra Hallingdalen .....Norweg
Unlykkelig Kjaerlighed.....Dan
The bonny earl o' Moray .....Scot
Je voudrais me marier .....Sw
Modinha .....Portugu
Le pauvre laboureur
Non, le tailleur n'est pas un homme..... Bret

THIRD LECTURE-RECITAL

Vor meiner Wiege ..... }
Liebesbotschaft ..... }
Der Zwerg..... } Schub
Das Lied im Grünen ..... }

Beau soir .....Debus
Cythére .....Poldow
Les feuilles sont mortes .....Do
Les roses d'Ispahan .....Fau

Rachmanin
Am offenen Fenster.....Tchaikovs
Villanelle .....Cyril Sc
The sea-shell .....Carl En
The cock shall crow .....Carpen
Song of the blackbird .....Roger Quil

FRITZ KREISLER

Our readers will be interested to see a rece photograph of the eminent Austrian violinist, Fr Kreisler. The tragic, soul-racking experiences a military campaign as well as severe injury a bodily strain have left ineradicable marks on t great artist. It is pleasant to know that his ma nificent art has not suffered.

WHEN TO CHANGE TEACHERS

Parents are by no means always wise enou to know when their child is with the teacher who c impart to him all the knowledge he is capable assimilating, and will seek to impart just t much and no more. It is not always the teach who has the most pupils and gives the most su cessful recitals who sufficiently understands yo child to be the best teacher for him. Parents a slow to recognize this fact. They are likely place their child with the teacher to whom t majority go, and who is the fashion, irrespective the personalities of either teacher or pupil. The personalities may so clash as to make teaching learning difficult, and render the relation of teach and pupil impracticable. Result, child does n get on, and should be sent to another teacher.

Copyrighted 1915, by Arnold Genthe, New York

THE RUBEL TRIO

A FOLK SONG PROGRAM BY THE RUBEL TRIO

A DECIDED novelty in the way of ensemble music was the program presented in New York, April 30, by the Rubel Trio. Up to the present we have had folk-song programs by vocalists, both in solo and concerted form, and eminent composers have made use of this material for piano and orchestral works. But it remained for this Trio of young women to offer folk-song music in a new form, namely arranged for piano, violin, and 'cello.

The program included works from the Scandinavian, English, Scottish, Welsh, Irish, French, Spanish, German, Russian, Oriental collections, with several from the mountain regions of Kentucky, and from the negro folk-song.

Readers who are interested in this style of music will find valuable material in Granville Bantock's *One Hundred Folk Songs of All Nations*, a recent publication of the Oliver Ditson Company, one of the famous MUSICIANS LIBRARY volumes.

WHAT IS EDUCATION?

[In the May issue of *Education* is an article with the caption which appears above, written by Prof. Ernest C. Moore, of Harvard University. We have made some quotations from this article and added certain comments bearing upon the subject of music education.]

"AFTER teaching classes of many kinds and helping to train teachers and supervising them in their work I began to have a great desire to know quite definitely what I was trying to do. So for the last two or three years I have been asking myself the question 'What is Education?' and persistently trying to find an answer to it."

How many teachers of music have asked themselves this same question? How many there must be who are seeking an answer to the query "What is education in music?" Prof. Moore continues:

THE VALUE OF A TEACHER'S PHILOSOPHY

"The most important thing about any person is what he cares for, what he strives for, what he plans and seeks to achieve. What he plans and seeks to achieve depends upon his notion of things in general, upon what kind of a place he believes that this universe is, that is upon the kind of philosophy he keeps. . . . At any rate the most important thing about any teacher is his philosophy, his notion of what education is and what he is trying to do when he attempts to teach his classes and educate the young. Can one have a sound philosophy of education and be a poor teacher? Not if ideas count for anything in our work. Can one have a poor philosophy and be a good teacher? Again the answer is, not if ideas count for anything in our work. But they do count for something; they set limits to our undertaking; they define our task; they are our plans of action."

The above paragraph agrees with the central thought of THE MUSICIAN, which is the value and necessity of IDEAS to the music teacher. We have made this remark often, and doubtless shall repeat it many times more. We are trying to get ideas from one source to make them available for all who will try them. The teacher who is not always on the lookout for helpful ideas will never advance. Two definitions of education are referred to by Prof. Moore.

IS EDUCATION THE IMPARTING OF KNOWLEDGE?

"The first definition of education that I want to criticise is that education is the imparting of knowledge. The view of those who hold this definition of educatiou aud attempt to work by it is that some folks have knowledge and others do not and the business of teaching consists in taking it from the places where it is and putting it into the places where it is not. Instruction consists in this transferring of knowledge. . . . Knowledge is . . . made up of thoughts and thoughts cannot be handed around, or transmitted through the air, or sent from one person to another. . . . They grow out of sensations, perceptions, images, memories, conceptions, volitions, etc. Can these be handed round or imparted by one man to another?

"The root of the error that knowledge can be imparted is in our current definitions of what language is and does for us. We say it expresses thought, that it is the vehicle of thought, that it conveys thought or imparts thought. It does nothing of the kind. . . . You have each of you had the experience of coming across a new word. Did it convey any thought to you? . . . Now all the words which we use were new to us once, and as long as they were new they conveyed no thought to us. . . . Language does not impart thought; it provokes it or demands thought, or arouses thought or excites, stimulates, or necessitates thought.

KNOWLEDGE PROVOKES THOUGHT

"Now it is this that makes teaching a fine art. If it were simply a process of supplying thoughts for others to take it would be a relatively simple matter. Instead of that it is the most difficult process known to men—the process of so working upon other minds that they will generate within themselves the thoughts which society wishes them to have and employs us to produce within them. . . . It is quite clear that the teacher is never an interpreter of thought. He is instead a provoker of thought, which is Plato's view of his function."

We commend the three paragraphs immediately above to teachers of music. It is not sufficient to try to fill the minds of the pupils entrusted to your care with a mass of detail about notation, form, expression marks, etc., with the idea that they are thus learning music. Every idea presented to a pupil must be applied practically and thus become a part of his being. A method, so-called, is a collection of information and devices to accomplish a certain end. Its educational value depends upon the way the teacher applies. it. But to continue the quotation from Prof. Moore's article:

IS EDUCATION AN IMPROVING OF THE MIND?

"Since education cannot impart thoughts, a good many folks have taken the position that it has a wholly different sort of duty. They say that the minds we are born with are very imperfect minds, very blunt instruments, that they need to be perfected, improved, sharpened, polished, drawn out, made over, disciplined, etc.; that the business of education is to improve and perfect the mind."

Prof. Moore takes exception to this view and in the course of his summing up of the various definitions of education proposes the following:

A DEFINITION OF EDUCATION

"Education . . . is the process by which one learns to use his own mind in socially profitable ways in the making of his own knowledge.

"According to this view knowledge is always a kind of skill. It is always a doing and the acquiring of it in every kind of school which is properly conducted and whose teachers understand what they are about is just such a process of learning to work with the great tools which the human race invented to assist it in living. . . . Knowledge . . . is that body of insights and understandings which tells us how to give and take with the things and folks that surround us in the most effective and enduring fashion. It is always a learning to do on our part, always knowledge *of*—never merely knowledge *about*."

The best music education, in the opinion of the present writer, is that which helps the pupil to learn music by *doing*, and not by long assignment from text-books to be memorized and repeated in class recitation. Every principle presented to a pupil should have practical application at once, thereby giving to the pupil the material which really furnishes the idea. For example, if the lesson is on the use of the damper pedal it is well enough to explain the construction of the pedal and what it does when operated. But do not stop there. Show the effect which the pedal has upon the tone and train the judgment of the pupil through the ear to choose that effect which is desired.

———o———

EVERY successful teacher wins on IDEAS plus WORK.

A good idea is not individual in its value, but universal.

If you have good IDEAS in music education, it is a genuine contribution to the cause to pass them along.

THE MUSICIAN will be pleased to act as the medium for the exchange.

A PRACTICAL PLAN OF INSTRUCTION IN SCALE PRACTICE

BY GEORGE HENRY HOWARD

I

In these days of rush and hurry the teacher of music, and especially the piano teacher, is very apt to push forward his work too rapidly. Rapid progress seems, too often, a thing to be highly commended, and the pupil who thus distinguishes herself is, in many instances, highly praised, petted, and perhaps even spoiled with vanity.

But, too frequently, such a hasty advance results in a superficial and wholly inadequate technic. In no one item of pianistic training are such poor results to be more carefully guarded against by the earnest teacher than in instruction in scale playing. With this aim in view we wish to present herewith a carefully detailed plan of procedure.

TRAINING PREPARATORY TO THE SCALES

In any good plan for thorough training of the mind and fingers the following items will be found essential at the beginning:

1. Table exercises for shaping hands and fingers and training them in right conditions and motions.
2. Keyboard practice of location.
3. Single-finger exercises in six or more tonalities.
4. Two-finger exercises in the same number of tonalities; also three, four, and five-finger exercises.
5. Little pieces in the compass of five notes. such as are found at the beginning in any piano method or in *The Very Easiest Studies*, Op. 190, by Köhler.
6. Melodic analysis, that is, interval naming in these little pieces, for each hand alone.
7. Harmonic analysis, that is, interval naming for observing the intervals made by the hands together, so as to learn whether the two hands make an octave sixth, tenth, or other combination.
8. Exercises on table and keys for the motions of (*a*), passing the thumb under the fingers, and (*b*) carrying the hand and arm over the loosely yielding thumb.

These preliminaries will occupy, at least, five or six weeks, often more. Abilities vary so much that sometimes from eight to fourteen weeks will be well spent in this work.

SCALE STUDY AND PRACTICE

The following items are all indispensable for thorough instruction in scale playing: Instruction in

1. The plan of fingering.

In this plan of fingering observe that the right hand, in going up (toward the right) and the left hand, in going down (toward the left) will have exactly the same finger successions. They are these: 1 2 3, 1 2 3 4. As we have only seven *different* letters in a scale we can always observe our fingering as consisting of a series of three fingers followed by four fingers. More simply, the plan of fingering is "threes and fours,"—three keys with the first three fingers, then four keys with the first four fingers. The little finger is only to be used for the very last key in going up with the R. H. or in going down with L. H.

Scales should never be taught both ascending and descending with the same hand at the same lesson. The right hand should practise ascending scales only, for three or four weeks, until the motions have become well controlled and the fingering very familiar. Likewise, the left hand should practise descending scales only until the motions are perfect and the fingering sure. These motions are passing the thumb under and carrying the hand and arm onward.

(Good qualities of finger motion are not alluded to here; they should have been established in the exercises of the weeks preceding. Yet it may, of course, be necessary to remind the pupil of these requirements in scale work. If, however, the single-finger and two-finger exercises have been well done from the beginning the influence of the good habits thus formed will remain throughout the present tasks. The pupil and teacher can, therefore, give most of the attention to the passing under of the thumb and the carrying onward of the hand and arm.)

In all learning, a little which is well done is worth ten times as much as that which is imperfectly done. The writer, in his experience as a teacher, is accustomed to make it absolutely sure that the scale of C is perfectly played before another scale is taken. Therefore he often allows from one to two weeks for this scale exclusively. But the short one octave scale is to be played only a few times,—just enough to ensure the realization of the principles of motion (thumb-passing and hand-and-arm carrying in addition to the now familiar good finger motions). This practice is in whole notes, that is, with four counts for each tone. The one octave scale is extended in the very first lesson in scale playing, to a two octave and perhaps a four octave scale.

If this very slow practice in whole notes is continued through five or six weeks the following very desirable results can be secured;

1. The habit of prompt thumb passing;
2. The habit of elastic hand shifting at the exact instant (after the thumb stroke under the hand).
3. The habit of elastic and delicate poise of the arm in carrying it from one region to another.

A New Idea in Pupils' Recital Programs

At the annual concert of the New England Conservatory Pianoforte Normal Department, May 20, Mr. F. Addison Porter introduced a fine program feature:

The solo playing began with the first little pieces that a child learns to play, and the program was arranged to show an even development in the performances up to the latter part of the fourth grade.

The class drill also started with elementary notation, rhythm, scales, etc., and led up to chords in all forms.

This progressive presentation is worth following by other teachers.

4. The habit of true legato tone successions combined with these motions just mentioned. (Clearness and beauty of tone are ensured in the simpler exercises before scale work is begun.)
5. The first five major scales, C, G ,D, A, and E, can be learned thoroughly in the use of a completely artistic touch.

The time allowance is as follows:

The first and second weeks for the scale of C.

The third week for scales of G and D.

The fourth week for scales of A and E.

The fifth week for review of the scales of C, G, and D, this time using half notes (two counts for each tone) and ensuring greater elasticity in the thumb passing and hand shifting, with specific drill on hand shifting. The whole keyboard should now be used. The sixth week for the reviews of the other scales, A and E, in half notes as well as whole notes.

Of course students vary much in aptness. Some pupils will do thorough work in less time than this; others need double the time. Others need four times as much time.

The earnest teacher will need to devise many expedients to make the work interesting, so that however long extended it may be the needful zeal may not be lacking.

All the practice thus far has been with each hand alone. This ensures ease, elasticity, finger independence, and many other needful qualities.

EAR TRAINING

BY C. L. CHAMBERLIN

This subject is one of the utmost importance to the piano student since it teaches him to know by sound the correctness of his playing. Skill in recognizing tones by their sound does away with the troublesome habit of watching the fingers.

One of the best methods of fixing the correct tonality of the scale tones is to sing them. Every teacher is urged to form classes of her piano pupils and teach them to read vocal music. Teach them to sing the scales and scale exercises, calling the tones by their old-fashioned names, *Do, Re, Mi, Fa, Sol, La, Ti, Do.* Nothing establishes a surer feeling of tonality than such practice.

The mental effect of the pitch of tones is secured by playing them slowly up and down or by singing them all to the convenient syllable, *La*, or by the number names from position in the scale. By giving each scale tone an individual name besides its number name in the scale, a name by which it may be called when speaking and when sung, one that gives it separate individuality, the pupil comes to attach the name to the mental effect when sung, and thus secures a feeling of tonality in the scale not otherwise obtainable. The American system of movable *Do* is here meant, for the foreign method of always fixing *Do* on C is no better for use than the figure names.

A method of increasing and fixing tonality, especially valuable to vocalists and in the choirs or classes, as well as for piano students, is that known as spelling chords. The tones of a simple triad are first sung in succession by a class or group of at least three persons; then the voices separate into three equally strong divisions and each division sings a different tone of the group, thus sounding the entire chord. On paper this might appear thus

SOL SOL and next chord—

MI	MI	LA	LA
DO	DO	FA	FA etc
		RE	RE

This is an excellent exercise with which to begin a lesson period and applies to almost every grade.

For ear training with young pupils in connection with the regular lesson and when no additional book is available, exercises like the following may be used with excellent results. Sound *one* of a scale giving it the syllable name (*Do*) or number (1) whichever is desired. Then play *two* of the scale without naming it or permitting the pupil to see the key sounded. Let the pupil name it orally or write it by number, by name in script, or in musical notation, according to the pupil's stage of advancement. Play *one* again without naming it and call for its name. Play *one*, then *two*, naming them; then play *three* and call for name. Continue thus, always giving a tone from which to base the other tones named. Later take up skips of a third, major and minor, then fourths, until all the tones of the octaves are known in their relation to the other tones.

Play these exercises slowly, striking *one* frequently. Play only tones of the major scale until they are well learned. While learning the sound of these intervals introduce their names and explain the difference between the intervals of the same name, such as major third and minor third.

There need never be a dearth of suitable material. There are the intervals, major and minor scales and chords, altered chords, and the practical use of all these in musical composition is found in every lesson. Such study paves the way for skill at sight playing and robs harmony of half its difficulties. The teacher who delights in planning and carrying out her own work will need no book, and the teacher who wishes a printed lesson to follow can readily obtain suitable books from the leading music publishers.

THE JUDGES IN "THE MUSICIAN'S" PRIZE CONTEST FOR PIANO COMPOSITIONS

Ernest R. Kroeger

Constantin von Sternberg

Hamilton C. Macdougall

The Musician Prize Competition for Piano Music

TO STIMULATE the composition of music for the piano THE MUSICIAN offers the following prizes on conditions set forth below:

One Prize of $100, and royalty of 10% of the retail price on every copy sold in sheet form
One Prize of $75 Two Prizes of $50 each Four Prizes of $35 each

CONDITIONS

1. *As to Grade:*
Compositions must not exceed Grade III (or advanced III) in difficulty in a scale of *seven* grades.

2. *As to Character and Style:*
They must be melodious and attractive, and have educational value, that is, useful for teaching purposes. They may be in dance rhythm, but mere dance music is not wanted. They may be descriptive or poetic in style, in such forms as the Intermezzo, Nocturne, Romance, Song without Words, Serenade, Idyl, etc.

3. *As to Manuscripts:*
Only manuscripts clearly written will be considered.

4. *Who may Compete:*
The contest is open to residents of the United States or Canada, with no restrictions as to nationality or sex.

5. *How to Compete:*
Address your manuscripts to MUSICIAN PRIZE COMPETITION, care of Oliver Ditson Company, Boston, Mass. Compositions submitted must not bear the composer's name, but, instead, a *nom de plume* or other distinguishing mark or motto, and be accompanied with a *sealed* envelope on the outside of which shall appear the *nom de plume*, etc., inside the composer's name and address. Competitors may submit more than one manuscript.

6. *When to send Manuscripts:*
No manuscripts will be considered which are received after October 2nd, 1916. The decision of the judges will be announced in THE MUSICIAN as soon thereafter as possible.

7. *The Judges:*
Ernest R. Kroeger, St. Louis; Prof. H. C. Macdougall, Wellesley College, and Constantin von Sternberg, Philadelphia.

8. *Publishing of Prize Compositions:*
The compositions to which prizes are awarded, with the exception of the one awarded first prize, shall become the sole property of OLIVER DITSON COMPANY, upon payment of the awarded prize. The OLIVER DITSON COMPANY shall have the option to purchase compositions to which prizes are not awarded at the usual current prices for piano numbers of similar grade and character. The prize compositions shall be published in THE MUSICIAN.

Oliver Ditson Company will not be responsible for loss of manuscripts in the mail.

We want you to participate in this contest if you have Musical ideas.

JUDGING THE LATEST THING IN MUSIC

BY ERNEST NEWMAN

It is inevitable that people who fall in love with the latest thing in music should imagine that because it is the latest thing it is also the best thing, and should suppose that other people who have the misfortune not to agree with them on this point should be less advanced than themselves. It is really a naïve form of self-flattery.

When people who regard themselves as particularly advanced in music speak with benign pity of people who do not share their views, they necessarily imply that there is something in the newer music which these other people are intellectually incapable of grasping. But the plain truth is that short of the music which cannot be grasped because it does not talk sense —Schönberg's latest piano pieces, for instance, which no musician in the world outside of Schönberg's immediate circle of idolaters, would take seriously—there is not now, and never has been, any music written which any ordinarily good musician could not grasp, if not at a first hearing, at all events after a little study. He may not like it when he has grasped it, but that is quite another matter—a matter of temperament; and it is absurd to speak of one temperament being more advanced than another. It is simply a difference of palate.

In our own time, we have seen Debussy pass from the position of leader of the team to that of a mere drag on the coach; and that largely for reasons which, as I shall try to show later, are inherent in the worship of any man as a "national leader" in music. Today he is not even an "advanced" composer in any sense whatever. The whole difficulty with him now is that he is simply incapable of advancing; with his incessant exploitation of a few formulae that have long ceased to be novelties and become mere oddities, he reminds us of nothing so much as an insect on a card, with a pin through its abdomen. So long as life is in it it can turn round and round, but it cannot advance.

Much the same may be said of Ravel, though he is still young enough to develop a new style. None of the latest Frenchmen write music that is in the slightest degree too "advanced" for any presses one with its uniformity.

In Russia, which is musically the most interesting country in Europe at present, there is a school that tries to be "advanced" in the wrong way, and of course achieves in the end nothing more than oddity. As this oddity consists mainly in the manipulation of spicy new harmonies, it follows that anyone can make just about the same effect with it as anyone else; and the work of the school in general, instead of exhibiting the originality its members desire, merely impresses one with its uniformity.

Nothing is easier than "originality" of this kind; any of us could write another work so like Rebikoff's *Les rêves* that it would be more like Rebikoff than Rebikoff himself; but none of us could write a simple diatonic tune that would be accepted as anything like, say, one of the songs in *Figaro*.—*The New Witness* (London).

Would you like to have your pupils interested in what THE MUSICIAN stands for?

We are offering a *Three Months'* subscription for 25 cents, during July.

Three Records of Community Work in Music

Austin, Tex., Parkersburg, W. Va., Lincoln, Neb.

BY THOMAS TAPPER

A MUNICIPAL INSTANCE

WE do not know whether Community Music has been looked upon in many places in the United States as an actual municipal asset, but here is one instance at least where business men and others have come together to inquire into and to state to the public the value of music as a community activity. There comes to us from Austin, Texas, a letter on Community Music from which we present to the readers of this Department some essentially uplifting paragraphs:.

About the middle of last October a few citizens of Austin, who are also friends of music, met in the office of the Mayor to consider the musical situation of Austin, and discuss plans for utilizing its musical resources for the general good of the municipality. The original group invited others to join them so that the entire body represented the city and its interests in the broadest way. There were present officers of the city government, representative business men, professional musicians, members of the University faculty, directors of some of the church choirs, and members of musical organizations of the city.

It was the unanimous opinion of those present that it is distinctly advantageous to a city to be known as a musical center. And it was also the opinion of all that if any city is to have a genuine, sincere musical life, the practice and appreciation of music must be widespread, and that this appreciation comes most of all *by trying to make music oneself rather than by paying others to make it.* [This is the *one essential point* —Editor.]

Attention was called to the spread of community music throughout the country; to co-operative musical activities; to the practice of music by large groups of citizens as a civic affair in the form of free public concerts, festivals, and pageants.

It is generally recognized that a mixed chorus is the most democratic medium of musical expression.

It offers the greatest opportunity to the greatest number of people for better musical training than any other combination. It is also recognized that some of the greatest music written is for choruses. A chorus can be increased in numbers without serious disturbances. It is not a clique, neither is it necessarily a limited organization. So it was decided by the preliminary committee that a large chorus would be proposed and the citizens of Austin invited to work together for the general good of music in this city.

THE CALL

A simple scheme of organization was deemed advisable and a brief constitution was adopted; temporary officers were elected and committees appointed; an invitation was given out in the city papers, music ordered, and rehearsals begun.

So far the response has been most gratifying and the rehearsals most interesting. But those who have the project most at heart feel that many others would be deeply interested and benefited if more fully informed of the purpose and scope of the undertaking.

Inasmuch as it is distinctly a city chorus, by, for, and of the people of Austin, the name "The Municipal Chorus of Austin," was adopted.

[Here, then, is an actual town chorus in the best civic sense.—Editor.]

The breadth and general character of the movement is clearly indicated in the constitution. In Article 2, emphasis is placed upon the public character of the organization, **"To form a coherent body of public spirited music lovers" and of all persons desirous of fostering "a civic spirit of co-operative endeavor"; opportunity to develop "a personal and broader fellowship" of those who "find joy and moral support in song and music."**

More specifically the objects are also "to promote the knowledge and appreciation of good music." "to give public concerts" and "encourage the musical life of the city."

Recognizing that there are many music lovers in the city who might not care to sing but who would wish to be identified with such a broad humanitarian and civic activity, the membership article was made especially comprehensive and provision made for both active and associate membership. All persons who have the musical welfare of the city at heart may thus find opportunity for self-expression, either as a singer or in some other manner.

It was suggested that two concerts during the year be planned. The first during or soon after the holidays and another in the spring. The program committee selected music for the first concert that would be suitable and available for church services so that members of choirs would not feel they were doing double service. Such music as will be given can be sung and heard frequently, and by being given before the congregations of several churches will thus reach the greatest number. There is just one way of making a community truly musical, and that is by making good music constantly and hearing it frequently.

It must be clearly understood that this Municipal Chorus, its concerts, and all its activities, is distinctly a city affair for which many have already made sacrifices in labor and money and who stand ready to make additional personal sacrifices.

This call to the citizens of Austin to give heed to music as a community asset was signed by:

Mayor A. P. Wooldridge, President,
Gen. W. H. Stacy, 1st Vice-President,
Mrs. H. L. Hilgartner, 2d Vice-President,
A. C. Goeth, 3d Vice-President,
Noyes D. Smith, Secretary-Treasurer,
Frank LeFevre Reed, Musical Director.

II

THE RESPONSE

In response to a call for singers and players there came an encouraging acquiescence. Between fifty and sixty began coming to rehearsals, which, were held once each week. The crowd, however, was different each night, so that the director and others in charge found some difficulty in getting results in the way of effective ensemble singing. They persevered, however, in the face of this and many other discouraging circumstances, and rather passive co-operation on the part of church choirs and local singing organizations, so that the final offering of the Chorus on the last day of April was of such character as fully to repay them for their efforts,

A cardinal principle of the Municipal Chorus is that no one shall receive any compensation whatever for services. This includes everybody from the Director to the least important player in the orchestra or singer in the Chorus. Considerable objection was at first raised to this idea on behalf of the orchestra players, and especially, the pianist, who would have to attend every rehearsal. It was finally agreed, however, that the principle must extend to everyone, or else not exist at all, and now everybody is satisfied, having seen it work out so successfully. All the concerts are free, and the incidental expenses are met by contributions by the members of the Chorus, and a small appropriation by the city government.

It is the plan of the program committee, carrying out Professor Reed's suggestions, that nothing but "good" music be given, even though such music may not appeal to the popular taste at first as much as a lower grade of music. Consequently, the (second) concert, as well as the first one, which was given last January, included only the compositions of such recognized masters as Mendelssohn, Handel, Massenet, Gounod, and others. Next year it is planned to give Brahms' *Song of Destiny* and perhaps the *St. Cecilia Mass* of Gounod.

The Austin plan is good for other towns.

Here is a plan that can be taken as reliable, effective, and comprehensive. By enlisting all classes of the Community citizenship (municipal, social, educational, artistic) it avails itself of the maximum of local power. It avoids cliques; establishes a platform broad enough for all; and still keeps everyone marching in one direction.

Another virtue of the Austin plan is this: No community is too large and none is too small to adopt it. It has a wonderful elasticity for fitness. Everybody agrees to do the best that is in him for the general good. At first sight this may seem Utopian, but it is just plainly sensible.

Try it out and see before pronouncing judgment.

A WEST VIRGINIA IDEA

A striking feature in the public school music idea today is the emphasis which is being laid upon instrumental music as deserving equal prominence in the curriculum. And this is also the case with those who are working to develop the musical resources of a community.

Of course the number of those who are ready to sing is much greater than of those who can play, ten singers, and more, to one player. But the instrumental resources of a community must also be organized so as to stand side by side with the choral forces. Our latest report on this phase of community work comes from Mr. N. Strong Gilbert of Parkersburg, W. Va., and gives the story of the Central Symphony Orchestra of Parkersburg:

"The orchestra was organized last season as a musical adjunct to the Central Conservatory, of which the writer is director. It was first called the Conservatory Orchestra, and was composed of eight musicians, a first and a second violin, viola 'cello, clarinet, flute, with piano and organ. Two concerts were given last season.

"Late last fall the director conceived the idea of establishing a permanent orchestra of good size for the study and performance of high class music to be composed of advanced amateurs and such professionals as might feel kindly toward the cause, the name of the existing organization being changed to the Central Symphony Orchestra. Rehearsals were begun in January with about fifteen members, the number being soon augmented to twenty five.

"The result was two concerts, one given May 7th without admission fee, but with a silver collection at the door, the second a sacred concert, on the following Sunday afternoon, with no fee. These two concerts created so much interest that it has been decided to increase the orchestra to at least thirty-five by next season, to give a series of concerts (number not yet decided), to keep the program at a high standard, and to bring one or more artists from abroad (probably singer and violinist) with the orchestra assisting. For the present the financial support will be guaranteed by the director. An admission fee will be asked in the future.

"The present object of the orchestra is to raise the standard of orchestral music, and to support municipal music by the city. There are no membership fees—all working for the good of the cause and no one is encouraged to join who is not interested in the musical development of the city.

"This series will be kept up through the summer, and the first fall program is in preparation, including such music as the *Largo* from the *New World* symphony by Dvorák, second movement of the *Fifth* symphony by Beethoven, minuets by Mozart and Boccherini, *Overture* to *William Tell*, and other works of a similar character."

WHAT LINCOLN, NEBRASKA, IS DOING FOR COMMUNITY MUSIC

BY HAZEL GERTRUDE KINSCELLA

Music plays a large part in the lives of the people of Lincoln, and that this is true is due not only to the fact that one may here listen to much of the best the musical world has to offer, but that one may here have the privilege of participating in almost any form of musical activity for which he has a preference. Community music in Lincoln has the support of schools—through grade to University; of churches; of various clubs, some entirely devoted to musical interests, others not; of the City Library; and of many of the city's most prominent citizens, including the Lincoln Commercial Club.

One of the first musical organizations to attract the pupil in our schools (and any child past the third grade is eligible) is the grade school orchestra. These orchestras were recently introduced by Charles H. Miller, Supervisor of Music. Each ward orchestra practises several times weekly at its own school building, and on each Saturday at one o'clock, all orchestras in the city come together at the McKinley School, which is centrally located, for united rehearsal.

When the children enter the High School from the grades, they are immediately given opportunity to enter the High School Band or the Orchestra, or both, and here receive ensemble training of a very high grade. Credits are allowed for these activities. Twenty-five per cent of the credits required for graduation from the High School may be earned in music, and these same credits will be accepted as entrance credits at the University of Nebraska, also located in Lincoln. The High School Orchestra does much public playing, both in its own concerts, and in playing the accompaniments for the frequent public appearances of the High School Chorus, which, under Mr. Miller, within the last year, has given, with complete costuming and stage settings, the *Trial by Jury*, by Sullivan, *The Bohemian Girl*, *Martha*, and *Spectre Knight*.

The High School chorus work interests many, so that they take up individual voice study. Mr. Miller reports that three years ago there was in the High School Chorus only one student who had taken up private work in voice culture; and that now, twenty-five members of the chorus are taking private instruction.

The Hayward School Community Center has a band of 25 pieces which was organized last year, largely from among the German-Russians who live in that neighborhood. This Band has been a power for good among the young men of that quarter of the city, and has had a marked effect upon the school attendance, for formerly a far greater percentage of the Hayward scholars dropped out of school before they had reached the sixth grade than at present. One cannot belong to the orchestra who is not in school, so school attendance receives a stimulus. At the recent National Conference of Music Supervisors, this Band played with much spirit and zest, at the City High School, Victor Herbert's *Gypsyland March* and a Beyer overture.

At the University, music is a partially accredited subject, and the huge chorus of over 200 voices which meets thrice weekly under the direction of Mrs. Carrie B. Raymond; the men's Glee Club, under the same direction; the Cadet Band under C. B. Cornell; the Kosmet Klub, which annually produces an opera which is entirely "home talent," being written and sung by the students (a prize is offered annually to the student who writes the best opera); and the string quartet, which, with the organist, provides annually a series of convocation concerts, are all participants in community music work.

The chorus gives *The Messiah* annually at Memorial Hall on the campus, and on this occasion standing room is at a premium. Once a week the University has a musical convocation, open to the public. All classes are dismissed for the hour. This year two separate series of programs have been given—one, the first nine symphonies of Beethoven played by strings and organ, the other a series of programs by the Chorus, made up of folk music of the various nations. At these concerts explanatory notes on the selections performed are distributed to the audience. The Chorus has recently sung *Hiawatha's Wedding Feast* by Coleridge-Taylor, *Cavalleria Rusticana*, and is now preparing *Samson and Delilah* to be sung in connection with the annual Spring Festival, when the New York Symphony Orchestra will play. The Glee Club gives, annually, a public concert, and does much extension work. On May Day the University always gives a fête which attracts crowds, thronging the campus, with music and folk-dances as prominent features.

Lincoln celebrated its first municipal Christmas program last year on Christmas night on the Capitol grounds. One hundred and seventy-five small Christmas trees, and two which measured thirty feet each, were arranged on the north of the Capitol, and before this, amid brilliant illuminations, a choir of thousands of people, led by Carl Frederick Steckelberg, and accompanied by the Fifth Regimental Band, sang familiar Christmas carols and hymns. The words of the songs sung were thrown upon a sheet of canvas hung in sight of all.

One of the striking features of the city's community life is the St. Paul's Oratorio Chorus, an organization which has an average membership of 130, and is accompanied by an orchestra of 40, meeting twice weekly. The orchestra and chorus are under the leadership of Carl Frederick Steckelberg. No fee is charged for membership and none is charged for the concerts given by the chorus. It has this year performed *The Messiah*, *Creation*, and a number of smaller works.

The Matinee Musicale, one of the largest clubs in the state, gives with its Junior division, thirty programs a year, all but three being by local talent. This club has just appropriated a sum of money to be spent in purchasing musical books to be placed in the library of the city High School.

Community band concerts were given each Sunday afternoon and Thursday evening the past summer at local parks. These were free open-air concerts and were attended by thousands. The Traction Company helped to provide these concerts. The singing of songs by large audiences at the city Auditorium is an innovation which will become a municipal institution on Sunday afternoons the coming summer, and is backed by the Lincoln Commercial Club.

One of the most spectacular features of Lincoln's community music is the annual pageant held in June at the Athletic Field of the University of Nebraska at the time of the University commencement. This is also sponsored by the Lincoln Commercial Club. Nebraska talent is employed entirely in creating the pageant, and as Nebraska is rich in legends and Indian lore and music, there is much of beauty and charm to be seen and heard in each fête. Thus are developed at each effort, the artistic powers of the sons and daughters of the city, and that sentiment of civic pride and patriotism which is the prime object of a festival or community gathering, is fostered.

SYNOPSIS OF A COURSE IN MUSICAL APPRECIATION AS TAUGHT IN THE JOHN MARSHALL HIGH SCHOOL, RICHMOND, VA.

Mr. Leslie F. Watson has sent to The Musician an account of a course of study in the appreciation of music which he has arranged for pupils under his care. He says:

"There is no subject, taught in the schools, beyond the 'three R's,' which enters so largely into the everyday life of the people of all classes as music. In sorrow and in joy, in religion and amusement, it is the most natural and universal expression of the emotions. It is the heart language of the entire human race.

"The plan of the course is to give the pupils a bird's-eye view of the origin and development of music from the earliest time to the present; a general knowledge of the different forms of music, and the opportunity to hear and become familiar with the best music in all forms."

The first ten of the following lessons and several others have been tried in class work, and the character of the remaining lessons has been based on the results of those tested. We regret that lack of space prevents the inclusion of the illustrations accompanying the various lessons.

1. Music of the primitive and savage races.
2. Music of ancient civilizations.
3. Beginners of our music system.
4. Sixteenth century reforms in church music.
5. Period, Phrase, Motive, Thematic music, Lyric music.
6. Imitation and counterpoint.
7. Theme and variations. Unitary, binary and ternary forms.
8. Rondo form. Sonata form.
9. The whole sonata. Symphony. Concerto.
10. March form. Overture.
11. Means of interpretation: Voices.
12. Means of interpretation: Voices.
13. Means of Interpretation: Instruments. String section.
14. Means of Interpretation: Instruments. Woodwind section.
15. Means of Interpretation: Instruments. Brass section.
16. What music expresses.
17. National music. Folk-songs and dances.
18. The same.
19. Patriotic music.
20–22. Four periods or schools: The Classic.
23–26. Transition period. Romantic school.
27–30. Modern school.

SCHOOL CHILDREN IN A MAY FESTIVAL

An attractive feature of the May Music Festival at San Diego, Cal., was the singing of a great children's chorus, upwards of 5000, who rendered choruses from the masters, accompanied by a band of 100 musicians. The festival was held May 11–14 and included the most important of local musical organizations. Not the least interesting to the musician is the fact that the festival program included a concert of Chamber music by the San Diego Symphony Quintet, an unusual feature for music festivals which are apt to measure success by the size of orchestras and choruses.

A NEW PUBLICATION BY THE N. Y. BOARD OF EDUCATION

A pamphlet entitled *Suggestions on the Ratings of Regents' Examination Papers in Music* is announced by the New York State Department of Education. This was prepared by Mr. Russell Carter, supervisor of music in the public schools of Amsterdam, N. Y. Mr. Carter has acted as state examiner, and is president of the Music Section of the N. Y. State Teachers' Association.

Literary Methods as Applied to Music Study

A Method for the Appreciative Study of Piano Music, Adapted Either to Individual or Class Work

BY CLARENCE G. HAMILTON, A. M.
Associate Professor of Music, Wellesley College

VII

This series of articles, begun in THE MUSICIAN for January, 1916, forms the basis for a thoroughly practical course in the Appreciation of Music, a subject which is now receiving much attention, and for which no adequate text-book is at hand. Our readers will find Prof. Hamilton's suggestions helpful and well-planned. These articles, revised and elaborated, will be published in book form later.— Editor THE MUSICIAN.

EXAMPLES

NUMBER the measures and play twice as described under Type I.

Ballade in G minor, Op. 7, No. 1.
J. Rheinberger, 1839–1901.

A: FORM

1. The divisions are *A* (1–52), *B* (52–88), *A* (88–142), with two measures of ending. Of these the *A* divisions are étude in style, while division *B* is lyric.

2. *A* is quite distinct from *B*, though the latter is preceded by a purely rhythmic introduction. There is a melodic connection between *B* and the return of *A*, consisting of an upward run and a hesitating downward arpeggio.

3. *A* may be subdivided into a principal passage, *a* (1–16); a transitional passage, *b* (16–27); and a kind of peroration passage, *c* (27–52). *B* consists of an introduction (52–55); *a* (55–63); *b* (63–67); *a* (67–76); and a coda (76–88).

4. Primarily the piece is an étude, with division *B* as a kind of interlude between its assertion and repetition. Considerable stress, however, is laid upon division *B*.

B: MOVEMENT

1. Notwithstanding its minor key, division *A* is joyous and exuberant. Division *B* is contemplative, growing gradually more earnest, but afterwards resuming its calmness. The latter division seems to be a kind of mental reaction after the strenuousness of the first division.

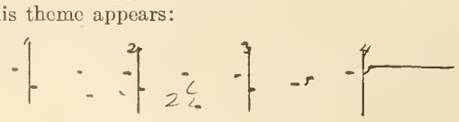
2. No metric change is indicated in the text; but in division *B* the melody in the upper voice is really in 3-4 instead of 6–8 meter during measures 55–80, after which it resumes the 6–8 form. In measures 72–76, the 3–4 meter is especially in evidence, where it is most strongly contrasted with the 6–8 meter which persists throughout in the accompaniment.

3. The calmer mood of division *B* suggests a more moderate pace (*più moderato*), which is several times again held back at the indications of *ritenuto*. With *A*, the quicker tempo returns.

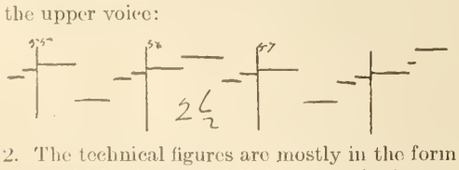
4. A perpetual movement in sixteenth notes pervades division *A*, with jerky pairs of eighth notes, in the slower part. More deliberate rhythms, in eighths and quarters, make up division *B* until near its end, where there are traces of the coming quicker rhythm.

C: SUBJECTS

1. In the upper voice of division *A*, measures 1–4, this theme appears:



Division *B* begins with the following lyric theme in the upper voice:



2. The technical figures are mostly in the form of waves, which rise and fall in arpeggio intervals. Some of these waves are short, as in measure 1, where there are two; and some are longer, as in measure 28, where there is only one, or in measures 23–25, occupied by a single wave.

3. An abrupt and jerky melody introduces the piece (1-4), soon passing, however, into quick instrumental figures. This theme is afterward suggested in the bass, beginning with measure 28.

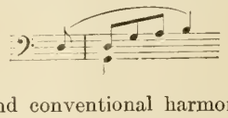
4. In division *B* the lyric melody lies generally in the middle register, although as it grows in intensity it rises in pitch, transcending the ordinary voice limits (71-76).

D: ACCOMPANIMENT

1. At the beginning we find the accompaniment below the chief theme. Soon upper and lower parts become mingled, and after measure 27 the upper voice serves as a kind of florid embellishment to the theme, heard below it. Throughout division *B* the accompaniment is below, in either the bass or the tenor register.

2. Sometimes running passages and sometimes single notes form the accompaniment in division *A*. A quiet swinging figure, one measure in length, is constantly repeated in division *B*.

3. Accompaniment and theme are mingled on apparently equal terms, in division *A*. Although of simple structure in division *B*, the accompaniment is closely united to the theme by its constant suggestion of the latter in the little upward figure:



4. Plain and conventional harmonies prevail in division *A*. There are several emotional changes in division *B*, such as the entrance of the key of B in measure 63 and the fluctuation between major and minor in measures 76-80.

E: STYLE

1. There is a steady growth of interest in each division, although the unity of style is preserved by the continual appearance or suggestion of the leading themes. Reference has been made to the imitation of the melody by the accompaniment in division *B* (see D: 3, above). Noteworthy also are the striking points of similarity and contrast between the themes of the two divisions: at the beginning of division *B* (55–56) the melodic outline is the same as in measure 2; while, on the other hand, the choppy theme of division *A* is altered to a smooth, lyric flow in division *B*.

2. During division *A* a steady growth in intensity takes place. In division *B* the changes of key noted above are supplemented by degrees of loudness that range from *pianissimo* to *fortissimo*.

3. In division *A* the climax point seems to occur in measure 35, since the following measures are in the nature of a coda. Apparently the point of greatest emotional intensity in the piece occurs, however, in measures 72–76, of the lyric portion.

4. Lying well under the fingers and involving no extreme difficulties, the technical usefulness of the piece appeals to pianists and piano teachers. Although the piece is essentially of a serious nature, its compact expression and melodic smoothness commend it to persons of refined musical judgment.

5. Form and melody are perhaps the most striking factors, although the rhythms are apt and sufficiently varied, while the harmony is conventional but strong.

6. See the next example.

F: COMPOSER

1. Joseph Rheinberger, German by birth, was a student at the Royal School of Music in the city of Munich, where most of his after life was spent as conductor, organist, and especially as teacher. Of his compositions, which embrace works in all the large forms, the twenty organ sonatas are perhaps the best known.

2. Accepted lines are followed in the structure of this piece, although its terse and logical style is distinctly German. There is genuine personal expression in division *B*, of a manly, direct type, that is free from all mannerisms or sentimentality.

3. J. Fuller Maitland, in his book entitled *Masters of German Music* says of Rheinberger, "It is hard to mention a single work of his which is not perfectly suited to the medium for which it is intended. His pianoforte pieces are models of their kind in this respect."

II

Les Sylvains (The Fauns), Op. 60.
C. Chaminade, 1861—

A: FORM

1. *A* (–17), A^{1} (7–13); *B* (13–28); A^{11}(28–34); *B* (34–49); *A* (49–55), A^{111} (55–61); Coda (61–70). The *A* divisions are lyric, and the *B* divisions étude in style, while both styles are combined in the coda.

2. Each passage has a distinct ending. The *B* divisions follow directly after the *A* divisions, although there is a wait after each *B* before *A* returns.

3. There are no important subdivisions.

4. The lyric.

B: MOVEMENT

1. A swaying, tranquil movement characterizes the lyric divisions, while that of the étude portions is sprightly and active. Hence we have an alternation of contrasting moods.

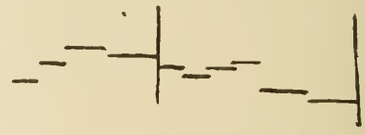
2. No change of meter is indicated, although the quicker effect of the étude divisions suggests a divided beat.

3. In the étude divisions a livelier pace is called for.

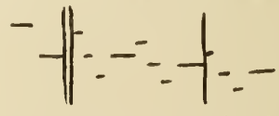
4. That of the lyric style is even and regular while that of the étude style is fitful and irregular.

C: SUBJECTS

1. Here is the lyric theme of the first two measures:



The étude division starts as follows:



2. Light, fragmentary arpeggios, in both hands or divided between them.

3. It does not, except in the coda, where the styles are combined.

4. The melody appears sometimes in the middle register, as a contralto voice, and sometimes an octave higher, where it is brighter in effect.

5. No.

D: ACCOMPANIMENT

1. When the melody is in the middle register the accompaniment is on both sides of it, otherwise the accompaniment is below. In the étude division there is only a suggestion of an accompaniment.

2. In division *A* the lower note of each chord is taken on a regular beat of the measure, while the other notes, grouped together, are played in syncopated rhythm between the notes of the melody. In the *B* divisions the accompaniment is in frag

ntary snatches of single notes and arpeggio
res.

. It forms a rich background in the *A* divisions;
le in the *B* divisions it is merely a foil for the
er part.

. That of division *A* is sweet and sensuous.
t of division *B* is more straightforward and
ise.

E: STYLE

. The piece is well proportioned, and there is
ie development of the technical figures in the
de division. On the whole, however, the
llectual interest is slight.

. A tender, impassioned melody absorbs the
ention in division *A*. Unexpected, will-o'-
-wisp effects pervade division *B*, with dainty
ches such as the glissando run in measure 20
l the airy, vanishing arpeggio in measure 27.

. Measure 11 contains the culminating point
the lyric portion, reached again in measure 32,
l in measure 59, where it is reinforced by a high
e. A more startling climax occurs, however, at
beginning of measure 25 (also of measure 46);
l in the last four measures of the coda a similar
ct is heard.

. The emotional warmth and delightful con-
sts, together with the facile technic of this piece
ve made it deservedly popular.

. Melody is perhaps the chief factor, although
thm is a close second. The harmonies, though
chromatic warmth, show no special originality.

. Both pieces which we have examined are
nt and pianistic: but while the *Ballade* satisfies
intellectual sense of beauty, the *Fauns* appeals
efly to the physical emotions. Thus the one
tifies our desire for well-knit, logical structure,
ile the other charms by its tenderness and grace.

F: COMPOSER

. Mme. Cécile Chaminade, a thorough Parisian,
won distinction by her piano playing, as well
by her compositions, which consist chiefly of
no pieces and songs.

. In general structure this piece follows con-
itional lines. Personal feeling is evident in the
ic melody; while French tendencies are seen in
naïve and *chic* turns of the étude portions.

. In *Music* for November 1897, a writer (Mrs.
osby Adams) aptly says: "Chaminade has not
dained to use heaven-born melody and clear
ythms, so unmistakable in their swing that even
uninitiated are carried along with the charm
the movement."

MPOSITIONS OF THIS TYPE FOR FURTHER STUDY

ahms, *Intermezzo*, Op. 117, No. 1.....V
opin, *Impromptu* in A flat, Op. 29.....VI
Nocturne in F, Op. 15, No. 1.....V
uré, *Fourth Impromptu*, in F minor.....VI

ANSAS CITY SUNDAY AFTERNOON CONCERTS

The Sunday afternoon popular concerts in Kansas
ty proved an undeniable success, the five con-
ts attracting a total attendance of more than
,000. In all these concerts the Kansas City Or-
estra was assisted by home talent and
luded vocal music. The number is to be in-
ased next season. Last April the Kansas City
mphony Orchestra, Carl Busch, conductor, played
program for the teachers and pupils in the 6th and
h grades, and the High Schools of Kansas City,
o., Kansas City, Kans., Independence, Mo., and
psedale, Kans.

THE HARP AS AN INSTRUMENT FOR SELF-EXPRESSION

BY ELLA WHEELER WILCOX

[Apropos of the cover picture on The Musician for June we print the following from a letter by Mrs. Wilcox, addressed to her teacher, Edith Davies-Jones of New York, in which she explains why she took up the harp instead of pursuing some simpler studies.—The Editor.]

A desire for musical expression has been growing upon me for years until it became a demand. Music in the home is an important factor ever, and especially in life's afternoon when the home attracts more than the outside world. The harp has always seemed to me the most artistic, the most sympathetic, and the most melodious musical vehicle in the world, and even the simplest achievements thereon, more gratifying than greater attainments in any other musical direction. The harp is the exquisite, refined mother of a bold, brilliant daughter, the piano. Unless one is a genius, a Paderewski, a Joseph Hofmann, an Alfred Newman, an Ethel Leginska, it is impossible to derive or give a large amount of pleasure in comparison with the immense amount of physical and mental application

ELLA WHEELER WILCOX AND
EDITH DAVIES-JONES

which any degree of skill upon the piano necessitates.

The harp is essentially the woman's instrument. Had I a daughter, had I several daughters I should want them all to study the harp. Almost all other instruments tempt young students to play frivolous music. The harp leads toward loftier heights. While it requires a lifetime to become mistress of the harp and to express all its marvelous mechanism holds in the way of profound harmonies and exquisite melodies, yet the sweet old airs and familiar sacred music which, on the piano, would be of little interest to player or listener, afford a delight to both when well done on the harp. As an accompaniment to the voice it is perfection, adding to and never attempting to drown a singer's art, as does the often aggressive piano.

Ragtime airs can be played upon the harp, but they are as inappropriate as the cake-walk dance for a royal princess.

There is a peculiarly spiritual quality about the harp. Its very shape and its glowing color stir the observer with poetic and reverential emotions. One feels there must be truth in the tradition which associates the harp with heavenly voices.

There is, too, a very human quality about it. We take it intimately to ourselves as we take no other instrument. The haughty piano we touch only with our finger tips; the wailing violin reposes against the shoulder and cheek; but the adorable harp is held in a close embrace, while we caress its strings with loving familiarity.

The harp exerts a powerful moral influence on its real lovers. It teaches concentration, continuity of purpose, patience, and perseverance. While it holds perhaps opportunities of great achievements only to the young, it holds inexpressibly sweet joys for the mature, in the way of quiet entertainment and tender communion, in peaceful home hours, when the loud call from the great outside world has lost its appeal. Even the sight of it, in any home, lifts the mind from the sordid, petty and commonplace, to thoughts of beauty.

Mechanical inventions have, to some extent, cheapened the piano and lessened the importance of its study. We can listen to wonderful compositions by great composers, without seeing the instrument or the player; but one-half of the beauty of harp music lies in the picture which it presents.

Scales and exercises, which on most instruments are a torture to hear, are inoffensive on the harp, because of the wonderful beauty which lies in every stringed tone. Even the striking of a false chord is not painful to the ear, as in other instruments. It is like a grimace, or a look of melancholy, on the face of a really beautiful woman. She is still beautiful, even though her beauty is marred by the mood which would ruin the charm of a plainer face.

I wonder that all mothers of means, eager for their daughters to acquire accomplishments, do not start them very young in the study of the harp. I wonder that mothers, whose children have outgrown the home, and who are left with a sense of loneliness, and lack of occupation, do not take up this study: I wonder why widows of leisure, who are childless, or whose children are married, do not study it.

The harp holds companionship for the lonely, romance for the temperamental, beauty for the artistic-minded, and religion for the devout.

THE CHOICE OF TEACHING PIECES

BY ERNEST FOWLES

The following must be regarded as determining factors in the choice of music:

1. Form. The simple three-part piece is the most helpful in inducing a consciousness of musical shape.

2. Technic in the physical sense of agility, etc. Occasionally give pieces of slight technical calibre to advanced players. In this way you will throw them back upon early principles.

3. Special difficulties. Should we rely on pieces which are devised to overcome particular difficulties? We should distinguish between mechanical and mental weakness and keep these two things apart in the student stage, though they merge as the student becomes an artist.

4. The mental power of the student. This is often an indefinite quantity, and the fact should be carefully recognized by the teacher. It is for this reason that Bach and Beethoven are sometimes unattainable ideals.

5. The esthetic trend of the student. The matter-of-fact mind and the sentimental outlook will always be with us. All true teaching is complementary, compensatory, and in no department of selection is the need for care greater than here. For example, we should complete the outlook of the sentimental student not by giving Chopin but by falling back on the classics.

6. The harmonic perception of the student. Selection must to a very large extent be dominated by the aural capacity of the student. Don't give Debussy to one who cannot discern a common chord.—*The Musical Herald.*

SYMPHONY RUSH

BY LUCY M. BUKER

On Friday afternoon and Saturday evening, May 5 and 6, the final programs of the thirty-fifth season of the Boston Symphony Orchestra were given.

"Symphony" is a Boston institution, and Bostonians are proud of it. They are even more proud of "symphony rush" on Friday afternoons. It is different from other rushes, so different that it is enjoyable. Moreover, it is distinctly not plebeian; the "best people" go, and the rushers consider themselves more knowing, in a musical way, than the season-ticket holders.

It is very easy to get the habit and become a confirmed "rusher." At first you are nervous and afraid you will not get in. You hurry up Huntington Avenue at eleven-thirty, to find a dozen people sitting comfortably on the steps in the bright sunshine, eating lunch or reading. You have a very good time, and go again—a little later. Then you begin to take chances, arriving later each time, until there comes a day when you are shut out. After that you are wiser.

The regular comer soon takes pride in being a part of the rush. He dresses up for it, as does everyone else except a few "artist fellows"—long-haired musicians who carry bulky volumes of the score. He recognizes the other regular comers: the lady with violets on her hat, who talks German to the man beside her; the pale youth in spectacles; the short, black-bearded, fierce-looking foreigner; the lame man; the group of girls from the Conservatory; the two old ladies.

It is pleasant to be in that line; to see so many people, some coming for pleasure and some for study, but all willing to stand in line an hour or more, and wait another hour inside, for the sake of hearing the music. Many of them do it year after year.

On stormy days, the crowd is not quite so large, but at most of the concerts, except the two or three just before Christmas, the rush always reaches its limit of five hundred.

The waiting is never monotonous. People hurry past to the end of the line; friends greet each other; on the step behind you, some young men are discussing the merits of two composers whose works are to be played this afternoon; beside you, a college girl is reading *Notre Dame de Paris;* the flower-vender passes up and down calling, "Vi'lets, lady? Fresh vi'lets?" Sometimes a suffrage automobile drives up, and two or three women speak to this ready-made audience; sometimes the city foresters trim the slender trees along the Avenue; sometimes a college-boy performs his initiation stunt, carrying a toy parasol, or selling soap.

At ten minutes past one the moving-up begins, and you are made happy by finding yourself much nearer the door than you thought you were. Another move, and the people file slowly in. The guard comes toward you, and you turn and enter the magic doorway. Your quarter clicks into a hand full of other quarters, you take a program from one of the half-dozen attendants, and hurry up the two flights of stairs to sink breathless into your favorite seat—everyone has a favorite seat—straighten your hat, and watch the other people come in. The balcony fills up rapidly. People take out their reading again, and settle down. You read the program, which takes nearly an hour.

Then the lower part of the hall begins to fill. As the time shortens, people crowd the aisles. You lean over the railing to watch them. They may enjoy the concert, you think, but they miss the fun of rushing. Symphony is a regular occurrence with them. It is not something to be anticipated and remembered, a pleasure which one must sacrifice a little comfort for.

The first gong rings, and the orchestra begins to come in. The harpist has been there long before, playing beautiful scales and arpeggios. The drums boom, clarinets sound, and violins squeak shrilly. The din increases, and the crowd pours in at the doors. The gong rings again, the doors are closed, and a sudden hush falls.

Then Dr. Muck comes in and takes his stand on the conductor's platform. You clap your hands.

Silence again, then faint sweet introductory notes from the violins. The other instruments take up the theme, and "symphony rush" is over.

———o———

"ALWAYS B♮, SOMETIMES B♯, NEVER B♭"

BY WILLIAM B. KINNEAR

Something like the above heading is often used as a bit of pleasantry in giving friendly advice, and is intended to be read "always be natural, sometimes be sharp, never be flat." It illustrates a misuse of a musical term, or as some would have it, a common use of an undesirable term.

In the National Education Association there is a Department of Music Education, the membership composed largely of public school music supervisors. These teachers, dealing with children of every degree of musical capacity and incapacity, realized the deplorable lack of uniformity, the often bungling inaccuracy of much in music terminology, and as a result the department chairman, in 1906, appointed a committee to consider and suggest improvements. Reports have been submitted at the annual meetings from time to time, and a number of recommendations have received department approval.

Among these adoptions is one that has been stated in these words—"Natural: Not a suitable compound to use in naming pitches. Pitch names are either *simple,* B, or *compound,* B sharp, B doubl sharp, B flat or B double-flat, and there is no pit named 'B natural.'"

"Natural" is undesirable as a term in naming pit because it is both misleading and superfluous. is superfluous because if a simple letter name sufficient designation for a tone, no compound c make it stronger, but is an encumbrance. "Natur is misleading because it seems to imply a force r possessed by the simple letter, another misconc tion. Pitch B means the same thing as pitch natural. Then why use "natural"? Sharp and fl on the other hard, are necessary compounds pitch naming, sharp meaning a half-step high flat a half-step lower pitch than that named by simple letter. B flat means a half-step lower pi than B.

Much of the confusion concerning "natur grows out of the dominance of keyboards and no tion signs in music teaching. White keys prima sound tones with simple letter names, and staff grees with only a clef in force represent sim name tones. These conditions are met first in mentary teaching and study, and staff degrees this primary pitch naming have been called natu the white keys naturals.

These designations ignore the fact that keyboa are arranged for convenience of eyes and fing chiefly fingers, and that piano strings and or pipes and reeds know no such distinctions; t the staff is primarily for the eye, its various mod cations of meaning by sharps and flats requir additional exercise of mind. No black key sou a tone with a simple letter name, but any white may sound a tone with a compound name—E sh G double-flat, etc. The staff with a seven sh signature is in just as natural a condition to re sent tones of C sharp major scale as in the p staff (with clef only) to represent tones of C ma scale.

The contention that "B natural should be u when the notation suggests it" (for example, "sl four" in F major) seems to assume that the determines the pitch name, whereas the sign sh be named for its function in indicating a condit In no case is a pitch name determined by the n tion sign employed, but the sign is named for w it does in the notation.

Whether the older name "natural," or the ne name "cancel" is preferred for the sign which nuls or cancels a sharp or flat effect, neither necessary or desirable compound in pitch nam because a staff degree under effect of this sign its primary simple, plain meaning, and represen pitch with a simple letter name. "B cancel" is thinkable, "B natural" is undesirable.

EFFICIENCY OF PLANS AND IDEALS

BY THOMAS TAPPER

Being No. 11 of the Efficient Music Teacher Series

I

MANY of us have wondered what we were expected actually to do when we were directed, in the days of our Ambition, "to hitch our gon to a star." Naturally it is quite easy to inpret the command, but in doing so the star seems fade in brilliancy and we become more and more are of the wagon, which persists in looking up us and asking: "Well, what about me?"

The wagon is a very present trouble, though elp in time of need.

But the efficiency experts have not overlooked nor have they forgotten the star. They treat th as exact efficiency principles. The one is cluded under Plans (that is the Wagon); the er under Ideals (where the stars shine).

There is much to be said about Ambitions and eals that, as we say it, sounds plain and simple ough; but plain and simple as it is, we do not nsciously employ it as a tool in every day living. e have ambitions as to the music work and serv- we want to perform, but we fall so far short of that the less said the better. It is difficult to ake all this convincing, difficult to bring home to rselves how little we use the resources that are entimes placed ready at hand for us. And all cause we slump into a way of being, doing, and ing that is not the best or the easiest. For ample:

We live in an ocean of atmosphere, one hundred les deep. This sea of air is life-giving. We ve only to breathe it to find that it is fresh, pure d health-giving. Winds move it and freshen lightning cleanses it; by the sea it is wonderlly purified. All that nature asks us to do is to the lungs by breathing hungrily and deeply, d, lo! the wonder of its power to oxygenate the ood and make us well is before us. But:

1. We do not breathe deeply or hungrily.
2. We do not know that it cleanses the blood burning waste.
3. We do not drink it in realizing its life-giving wer.
4. We do not seek the health of it out of doors, it we sit in a small room breathing our own breath id that of our friends over and over again.
5. We breathe in short breaths from the top the lungs.
6. We never fully empty the lungs.
7. And therefore we carry around with us year ter year a lot of foul, stale air that rests comfortly at the bottom of the lungs because we do not ow how to breathe it out.
8. And so the blood is not oxygenated.
9. And the waste of the body is not burned up it should be, but poisons the blood, lowers vitality, id makes us look sick.

If this is clear, it shows in just one particular, amely, in regard to breathing, that:

We live far below our privileges.

Is it not likely that we realize upon our possilities to no greater extent in anything else?

We play a little. Why not a little more and a tle better?

We serve the public a little, just enough to tickle ir egotism. Why not a little more so that the rvice shall rise to the level of significance?

We read a little every day. Well, why not a tle more, systematically arranged, ambition-lfilling, a definite-point-to-reach reading that will ow in the countenance, in the words of our lips, the hopes of our hearts, and in the impulses of ur Ideals.

II

We do all these things in just the same way that we breathe. Not out in the ocean of atmosphere a hundred miles deep, vital, moving, stimulating, with its ozone and its sparkle. No, not that way, but in a room heavily laden with the impressions we have made upon it for hours past.

And now a few words about Plans and Ideals.

To hitch our wagon to a star is the statement of an Ideal; in that sense it is a perfect statement. But to make the *hitch* is too much of a job for anything like immediate accomplishment. And this makes it a plan so big that we cannot handle it.

Let us observe that a great Ideal and a poor Plan are a helpless partnership.

And now let us compare Ideal and Plan in music with the art of breathing in the atmospheric sea. The way we breathe and the way we do not breathe are comparable to the work we do and the work we could do if we studied how.

One more illusion: We get about so far along in life and then our watchful neighbors begin to hear us dropping such remarks as these:

1. Well, I used to be just as ambitious as she is.
2. Oh, it's all very well, but she will settle down and take it easy when she is a little older.
3. I never like new-fangled notions. Why don't they stick to the old ways.
4. Yes, Efficiency is all right. But the man who talks about it is as great a criminal as the one who brought English sparrows into the United States.
5. Take my word for it, you can't improve on the past.

And so on, just breathing from the top of the lungs, while the lower portion designed to oxygenate the millions of cells and keep them full of Ambition are as dead as the famous door nail.

III

I met a man sixty years of age a few days ago, who literally looked forty. He acts forty, works forty, thinks forty, has the reasonable ambition that stimulates forty, and the energy that makes Ambition realize every day. He is not a music teacher, but if he were he would dynamite himself and his activity. He is a significant man because he believes these truths:

1. Power increases with use.
2. A man's profession is simply bubbling over with potential Ideals, thicker than poppies in a wheat field.
3. Ambition dynamizes those who believe in it.
4. Ideals are prayers while Ambition is the Faith that works for them.

But prayer without work!

For twenty centuries (and perhaps for aeons longer) men have prayed without work until at last we seem no longer to believe in prayer. Just as Plato's men living in a cave would not believe in the world of sunshine and warmth, of growth and of glory, so we do not believe in the efficacy of prayer *plus* work.

IV

Every reasonable being should have Ideals, and Ambitions to attain unto them.

Age should not be held to be a hindrance, nor should any previous condition of servitude.

We are only just beginning to realize the enormous potentiality that lies in the profession of the music teacher. Hitherto we have regarded it as a means for earning a little money by giving little lessons. Now we see that it is a way, a means, **a divine privilege for awakening the life principle in those about us, for increasing their degree of livingness.**

Little as the conservative one may be inclined to believe this next statement, it is seriously, solomnly, sacredly true that the more we give of ourselves in guiding the footsteps of others into greater livingness, the more ways we can find to increase ourselves; the more we employ it as a means for enthusing and inspiring others, the more reward there is added unto us. It positively never fails. You cast Service upon the water as bread, and, before you know it, it has returned to you bringing the rest of the feast along with it.

This lazy time of the year, these summer months, is a literal Godsend to the efficient-minded teacher. She looks over her equipment. There is the star up yonder, the ever-present reminder of the Ideal. And here is the Wagon which for a few months past has been jolting and creaking a little more than usual.

Will it—the Wagon—stand another winter?

Surely. It is a good, substantial wagon of the conservatory music education type; well built and reliable. But being a wagon it does naturally depreciate. Is it fair to let it, however, cover the route for 1916-17 with its joints loose, its frame wabbling, creaking, and groaning at every bounce on the road? Pupils reasonably get tired of the racket of such a conveyance.

But once she gets out the tools with which to make the necessary repairs, it soon becomes again a first-class, dependable, easy-riding, always-on-time sort of a vehicle. And the tools are those she used to use when the wagon was newer.

1. Ambition, to strengthen the framework.
2. Ideals, to point the way for its passing.
3. Service, to rubber-tire it.
4. Vision, to keep the star everlastingly in sight.
5. Increasing skill, to make the hitch so tight that the knot will not slip.

There was once a carefree sort of a wanderer named Happy Hawkins, who confessed to liking his job, but who observed that it never attracted his attention much. We are all amazingly like that. We think music a fine profession. If we are a male we love to be called The Professor; if female, we expect to be referred to as The Artist. And yet even so degreed, we fail to remember our calling and, the first thing we know, something else has caught our fancy. In other words Music may beckon as hard as she will, but the Happy Hawkins in us makes it impossible for her to get our attention.

Finally, it all sums up into this:

There is a one hundred per cent way of preparing for work, of planning for it, of building its Ideals, of constructing Ambition to sustain the Ideals. And there is a hundred per cent of excellence of way in journeying. But as we (settling a little more in life) begin to breathe just off the top of the lungs, leaving that pocket of foul and stagnant air below, so we begin to live just off the top of our profession. We no longer breathe deeply into it, searching, scrutinizing, planning, building, creating.

And yet isn't the simple truth of it all so absolutely inspiring that it sets us in motion even on a hot summer's day?

1. We may always improve in our art.
2. We may always expect to do Service, deepening it, giving it fuller value.
3. We may always possess a little more and yet a little more land, for there is plenty of it.
4. We may learn what the "new schools" are as they come along, and they are always coming along.
5. We may be part of all that is to be just as we have been part of all that is past.

The procession of the days moves majestically onward. It is our own fault if it carries us along as dead freight.

CORRECT, BEAUTIFUL, AND EFFECTIVE PIANO PLAYING

BY GUSTAV L. BECKER

II

As to "the right way" of piano playing, anyone will admit that a musical performance is apt to become less beautiful, though possibly still "effective" to uninitiated ears,—in proportion as it is deficient in correctness, that is, as it fails to accord with the authoritative indications and evident intentions of the composer. Though one may "read between the lines" of a work, no one should feel warranted in altering or effacing the correct original text, unless he feels justified in considering himself a superior composer.

Accuracy as to text, should be the law—obeyed gladly and as a matter of course.

Agreeing with advanced ideas, we will wish to build up our proficiencies on the constructive, psychological principles,—so rich in the desirable mental working material, as to leave but little room for anything faulty or deficient.

To this end we must proceed very soon, not only to form in a clear and definite way all the useful, good, and beautiful art concepts, but should, with a view towards the manifold possible forms of artistic application, develop an abundance of energy. We should learn to direct discriminatingly, in the most appropriate and effective manner, the active force thus made available. This will call for reliably pre-conceived judgment as to scope and effect of motion. This may be gained from both example and experience, taking into account the elements:

Direction, velocity, force, and distance of motion, as well as a recognition of the precise moments for starting and ending a motion.

Lists of the common faults of piano-players have been compiled with particular reference to amateurs and the average undeveloped student.

Believing that almost anyone, with plenty of work to do, will develop most naturally along the lines of least resistance, as well as those of greatest need and desire, some of the best teachers of years gone by have sought to arouse the latter conditions of mind and direct them towards that which seemed most ideal in the art and, for the rest, to keep a more or less close watch for the presence or first appearance of any of the aforesaid "faults," so that these might at once be corrected and the pupil be strongly *warned* against a repetition of them. A more effective system, however, was one which called less attention to the faults, or what *not* to do and dwelt encouragingly, convincingly, and perseveringly upon what is *good* or *best*, to do, instead.

Among the shortcomings of the older method, one might say, is that it left the pupil *too much* to his own resources, unguided, just when he most needed guidance, for instance, toward correct impressions; while in other ways it placed numerous *inhibitions* along the path of his most natural and spontaneous development, these prohibitions, by sheer power of suggestion, often bringing about an acquisition of the very fault they were designed to forestall.

The improvement then is found in the fact that the teacher, though fully aware of the possibility, or even actual presence of faults or faulty tendencies in a pupil's mental and physical equipment, brings to bear the corrective or *diverting* and *constructive influences*, without verbal reference, even indirectly, to the fault, tendency, or deficiency. At the same time he impresses upon the pupil's mind more strongly than ever *the desirability of the right way*, explaining also most clearly the inherently correct mental and mechanical process of thus doing the desired thing. Furthermore he should *illustrate* the right way by actual example, and then let the pupil go through a drill, in detail before doing so in the complex, giving careful guidance and sufficiently frequent, *correct repetitions*, until the aimed for success is achieved. When this is reached it shows that now the pupil may be depended upon, when studying alone, to know exactly how doing the required thing in exactly the right way feels, looks, and sounds. Of course it would be much easier simply to say "Don't!" But there is such a thing as "paving the way" for adequate attainment. In fact, a suitable preparation in detail, long enough in advance of any attempt at a complex task, in almost every sincere attempt will lead to successful accomplishment; especially if, with the effort, there goes concentration of mind and a clear understanding of what is wanted.

It should be no discredit, if at first such a performance proves to be a very deliberate and slow one. Doing the same thing just as perfectly at greater speed, need after that be only a matter of gradual acceleration and growth, just as one gains greater assurance with a feeling that reliance may be placed upon correct habit.

Certainly "Practice makes perfect," provided it is the right kind of practice!

Some good qualities and virtues of playing are naturally engendered through an appeal to some inner sense, such as that of neatness and orderliness, of punctuality, of the desire to be consistent and logical, or a well developed sensitiveness for what is well balanced or in good harmony—a sense for the symmetrical.

A colorless or monotonous style of performance may be dispersed by convincing the pupil of the enlivening and often fascinating influence of variety and contrast—yet within the bounds of unity. The elements of esthetic and emotional effect in the art should be revealed to the pupil as soon as feasible, also making him acquainted with the artistic means towards producing these effects.

There are, for instance, rhythmic effects which are indicated by certain note values upon certain stronger or weaker measure beats, or shown to be influenced by special dynamic signs or terms, which would fail, as effects, if the relative note values were not strictly adhered to, if the proper stress were not given where it belonged, or if the speed were the least bit too slow or too fast. If a pupil has the right idea or ideal of the required musical effect, a great deal is already gained toward the complete artistic performance. Some faults arise simply from the fact that the average human being is not perfectly balanced in his menta faculties.

Thus one has a quick ear and a slowly perceivin eye; another is endowed in contrary manne another, with both good ears and eyes, has, as ye clumsily moving hands; possibly one other ha great power of impulse, but a small amount c deliberation and control; and still another is nearl always calm and deliberate, often too much so, t the point of apathy or indifference. We need en thusiasm to attain any kind of success! Ther are some whose enthusiasm is like a flash in the pa of short duration! Let us all admire those whos enthusiasm is coupled with perseverance!

Yet if enthusiasm, unguided by sober judgmen based upon thorough knowledge and ripened ex perience, should mislead us into paths of music error, then of what value would perseverance b

The teacher's part is to study the pupil's latent a well as manifest mental qualities and their state c capacity for development, and then to utilize c discount them when making his plans for the pupil advancement.

Some faults or deficiencies arise from trying t much to learn to play by imitation, and not eneug from the knowledge of the art and the inner need it as a means for expression. The imitated impre sion is often not sufficiently clear, or is soon, part, forgotten, leading to some haphazard, b faulty substitution.

Illustrative example, of the perfect performanc followed by an attempted imitation, is often great value for giving the *finishing touch*, followi the process of detailed structural analysis and t attainment of technical proficiency. Illustratio or demonstrations by the teacher, during the earli stages of development of a composition to be learne should be given rather at the tempo in which would be wisest for the pupil, for the time being, practise it. The pupil might otherwise be t strongly tempted to imitate the speed of the pe formance and general effect, rather than the mo important points, whereupon the results weu most likely, be disastrous.

It is one of the most valuable things a teacl can do for his pupil, to teach him how to study a practise to best advantage, so as to accomplish much as possible within a given time,—doing c thing at a time and gaining the desired resu before leaving it.

"STUNT" PRACTISING

BY WILBUR FOLLETT UNGER

Did you ever attend a vaudeville performance and see a juggler perform some trick such as spinning a tray on his finger or doing some wonderful balancing feat, without experiencing the desire to try the same stunt as soon as you reached home? And then, on reaching home and attempting to imitate the juggler, did you ever fail to discover to your astonishment that the trick was not so easy of performance as it appeared? And then, further, did you not wonder to yourself, speculatively, how many, many times—in fact, how many hours, days, weeks, months, aye, years, the performer must have *repeated* his act in order that it appear easy to the audience?

To bring the simile home to music study. Haven't you heard a great artist render some tremendously difficult piece with consummate smoothness and ease until you grow angry with yourself that you are unable to do the same?

Suppose, instead of becoming angry, you try getting down to work and seeing how many times you can make yourself repeat the passage or piece which you desire so earnestly to play smoothly. Take that much pride in yourself and in your work. Have the satisfaction of being able to afterward say "I really tried hard!" This is what is meant when you hear it said of a great artist, "He work hard."

It is true that this kind of "work" involves limited patience, endurance, strength, and tenac of purpose. But then, without these qualit how could you hope to be a success at anything

If you, who read this, chance to be a teach and are willing to try the following suggestion, y will find an increased efficiency in your pupils' wo and both you and your pupils will enjoy the cre tive work:

Invite all pupils to partake in a sort of conte the idea of which is to see who can practise the m on a given subject. (Parenthetically, note tha suggest the extending to them the *privilege* of do this, rather than forcing them to do it.) Let e pupil select his own particular "stunt" to pract preferably the most difficult passage in his piece else, some technical exercise which he individua needs to perfect. Then let him keep count of ev time that subject is repeated between lesso counting first by tens, then hundreds, and bef they realize it, they will be counting by the th sands. From personal experience, I know that can be done, and enjoyed.

Moreover, it is interesting to note how the "stu practice of one pupil will start others going. Bef long, you will be delighted with the enthusiasm t this idea will arouse among all your good pupils

AUTOMOBILES AND MUSIC

BY LAURA WILLIAMS

One has become accustomed, perhaps, to the country doctor dashing up to the farm-house door in his automobile, to the farm hand motor-trucking to market, or to farmers' wives and daughters speeding to the nearest town, to be back again that same day.

What about the music teacher?

The general opinion may be that music teachers are such poor individuals, rich in nothing but hair, that not one of them could ever possess a car of his own. If chance, or some kindly disposed relative should bestow upon him the wherewithal with which to purchase a machine he—the music mad individual—would probably blow himself up and—well—there'd be two less noisome things about.

If any teacher is fortunate enough to own a car or to have the use of one, now is the time to get the benefit of it.

Take the car and scurry about the towns just outside your city. You'll be surprised at the pupils you can gather together. In the spring and summer the school children will be eager to have the opportunity of studying with some one from the city, and if you are a conscientious teacher you will be able to do remarkable work with them.

Lesson Costs Per Minute

At $1.00 for a thirty minute lesson, each minute costs the pupil three and one-third cents.

At $1.50, each minute costs five cents.

At $2.00, six and two-thirds cents.

Mister or Madam Teacher, are you giving your pupils full value for each minute of the lesson?

Take a hint from a grocer who never charges for the bag:

When he sells you an article by weight, he always places a bag of the same size on the weight side of the scale.

If you waste a minute make it up to the pupil by good honest instruction.

This year a young man teacher, feeling keenly the competition in his city, got out his little car on the first springlike day and started off for the nearer towns. He is now teaching twelve pupils in one town and eleven in the next, and they are all going to continue with him through the summer.

Coming from the city and being a really educated musician he charges one dollar and a half a lesson and every pupil pays cash each time.

That's not so bad, is it? Figure it out. He teaches two days a week. No studio rent! No losses! The only expense being plenty of gasoline.

It's going to be a great day for the little country pupil when the city music teacher stops his car at her front gate. And the struggling city teacher is going to be better able to hold on to his oozing courage and enthusiasm for his calling.

By the bringing together of the city artist and the country child, music that is beautiful and real will be studied until little by little, country and city, cultured and uncultured, will come to understand and appreciate that which is true music.

So, if you are one of the lucky ones, out with your car and help the work along; and incidentally fill up your pocketbook. Try it.

NOTES ON THE MUSIC IN THIS ISSUE

July is one of two months in which musical work is the least in amount of the whole year. And yet one must not think that all lessons are suspended. Here and there teachers are busy, for some parents have found it wise to keep the children at their music during the summer months when there is no school work to distract the attention and occupy the hours otherwise available for practice.

And even if lessons are not kept up it is worth while for parents to have the children do some playing each day. For this reason we have aimed to make the music section of The Musician for July especially helpful in the matter of easy melodious music which the young musicians may learn passably without the special supervision of the teacher. Just note the large number of bright little pieces which have unusual technical value as well.

Tarantella in D minor, Op. 284, by Carl Wilhelm Kern, if played up to the tempo indicated by the composer, calls for agile fingers and accuracy in placing them on the keyboard. As in all pieces which are played at high speed the strong accents are usually found at every other measure, rather than on the first beat of every measure as in slower tempo. The middle section must be given with breadth, the arpeggios in the left hand with special smoothness and light touch. This number will repay considerable practice during the summer vacation. It is brilliant and strong, and, at the same time, worth while musically.

After school, Op. 16, No. 1, by Cedric W. Lemont, is suggestive of the formerly popular two-step march movement. It is to be played with animation and real enthusiasm. July is "after school," and if the youngsters are inclined to celebrate this piece will help them to make up a good program. In the 29th to 32d measures notice that the successive fourths in the right hand are played with the same fingers. This is an interesting passage and is worth learning carefully as the player will have occasion to use this fingering in other pieces later.

Consolation, by N. Sokolovsky, is from the pen of a Russian composer. It is lyric in style and the melody must be made to "sing." The position of the fingers in playing the keys G E D B G in the opening phrase is useful for practice; and the same applies to similar passages in other measures. Notice also the successive fourths in the right hand beginning in the last part of the second full measure. Players should observe all such passages, for it is characteristic in this little piece, being used quite frequently.

Danse hongroise, for four hands, by Edouard Mathé, has the real character of the gipsy music. The composer has given special interest by putting the theme of the middle section in the *Secondo* part, the *Primo* supporting it with brilliant chords. The rhythm is similar to that of the familiar *Humoreske* of Dvorák. Take the summer to learn this for a recital program in the fall.

Summer seas (*Barcarolle-valse*), by Charles Huerter, is for the more advanced players, the work of an American composer who is rapidly winning high esteem for his delightful and playable music. It will repay the time necessary to make it a part of one's repertoire, and thus become available for a program of American compositions.

Badinage (*Menuet badin*), by Edouard Mathé, is literally a "playful" or "jocular" menuet, and the music well follows the indications of the title. It lies easily under the fingers, and, all in all, is a charming little piece in the classical style. Let the accents be sufficiently marked to indicate the dance quality of the minuet; but do not make the successive accents equal in dynamic power. Contrast is necessary in this as in other forms of art presentation. The Trio is to be played very legato, especially in the accompaniment.

Dolly's waltz (*Puppenwalzer*), Op. 27, No. 1, by Miram Lewin, is from the Russian repertoire of easy teaching pieces. In the way of harmony we find a little more variety than is customary in the easy teaching piece. Therefore this music is a preparation for the modern music which is so much more chromatic than the older music. In measures 4–9, left hand, there is a progression in chords of the sixth, A-C-F, G♯-B-E, etc. These successive chords may be played with the same fingers. Notice the phrasing in the middle section, the short motives are characteristic.

Punch and Judy polka (*Guignol polka*, pronounced *Geenyol*, hard G), by Fernand Lemaire, is by a well-known French composer, and may be considered as descriptive music for certain parts of a Punch and Judy show, which is very popular with French children. Notice the metronome direction, which, altered to quarter notes means that 184 quarter notes are to be played per minute. Follow carefully the marks of expression, both as to tempo and degrees of power (soft and loud). This is an attractive little piece.

The alphabet, by N. Ladoukhine, is by a Russian composer. The theme is found in the first eight letters of the alphabet. Our readers must keep in mind that the Germans—the Russians follow them in this—call the degree B♭ by the letter B; B♮ is given the letter H. The theme is mainly in the left hand. In measure nine and similar passages keep the melody note prominent.

Dream of summer (*Rêve d'été*), by Frank H. Gray, is a delightful violin piece for the advanced player, for it calls for double stopping, although the lower notes may be omitted if the player finds difficulty in the execution. It is worth learning and lends itself well to full, powerful tone production.

Prelude in A, by Alfred Hollins, is from the pen of a noted English composer-organist. Notice the free use of imitation in different registers. We consider this a useful piece for the church service or the recital.

A bag of whistles, song by Bainbridge Crist, is a song with an Irish text, by an American composer. This song has been sung in concert by the noted baritone, Louis Graveure, under the title *My father and mother were Irish*. It has a humorous touch.

A song of Glenann, is a fine Irish folk-song, arranged for concert use by William Arms Fisher, and included in the recently published *60 Irish Songs* (Musicians Library), which has been so well received by well-known concert artists, such as Christine Miller, Reinald Werrenrath, and others.

Come unto me, ye weary, sacred song by A. H. Behrend, will be welcome to the choir singer for it has charm of melody with a touch of the descriptive which makes the text very effective. It will please an audience.

CONCERNING THE SLUR

Students are often puzzled because they find a staccato mark over the second note or chord under a slur, and imagine all sorts of wonderful interpretations. Yet if the ordinary rendering of the slur and the real meaning of the staccato mark are kept in mind the whole thing is plain. A slur—properly so-called — occurs once but over two notes or chords, the second of which is to be shortened and made light. That is sufficiently well-known amongst pianists, but some editors cannot let well alone, and in their desire to insure the proper break add the staccato mark. Let it be remembered also that a staccato mark means a detachment, not from what *precedes*, but from what *follows* the note over which it is placed. The conclusion of the whole matter is this: Forget all about the dot, and play the slur as usual.—*Musical News* (London).

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

LOOKING out over the field of musical endeavor at this time of the year for items of special interest one cannot fail to be attracted to the work which is being done in various places under the direction of many different teachers, with great divergence of purpose.

Even the most conservative musician, as well as those who have contended that the teacher needs the summer for rest, must admit that summer music study is now a permanent thing in our educational scheme. It is no longer an experiment, no longer a fad. On the contrary many prominent teachers and educators consider it one of the most significant and important phases of educational work, and are giving it careful and constructive thought.

NORMAL COURSES

The writer of this note has had the privilege of attending a class session of a summer music school. Here were gathered some forty young men and young women to discuss questions of technic and methods with a view of learning the best and most efficient ways of doing the things necessary. The director announced the subject of the morning, presented it in a short statement, and then opened the session to questions, himself calling on various students to give their views. Following this certain compositions were presented, after which members of the class criticised the performer exactly as would be done if a teacher were giving a lesson. Of course the performer was allowed to defend his technic or interpretation.

Here was an effort to realize exactly the atmosphere of the studio, to pick out the faults of performance and devise methods of overcoming them. Efficiency of teaching methods and lesson time were aimed at. Alertness of ear and mind were inculcated, and readiness in thought and speech were sought.

BUILDING REPERTOIRE

Not all summer students wish to be teachers, however. There are those who feel the need of a better repertoire or of a polishing and strengthening of the interpretations they have prepared. Therefore it is a fact of much significance that we find some of the world's greatest artists in some quiet spot surrounded by a few highly talented, ambitious young artists who are seeking the secrets of the master. It is a worth while result that the repertoire builder of the summer makes the concert artist of the next season.

TECHNIC SPECIALISTS

No one feels so keenly as the average teacher how necessary is the possession of an adequate technic if professional standing is to be kept reasonably secure against competition. Every year some young man or young woman comes into a town, fresh from the studio of some great teacher, and dazzles the public with the brilliance of his technic. But unfortunately this condition does not always last. With the cares of teaching and lowered nervous and physical energies, the technic loses its fine edge and becomes dulled. And the young teacher fails to find the time to keep up the practice so necessary. Therefore, after a year or two, he concludes that the summer vacation was really meant for the busy teacher of the winter, who means to keep himself technically efficient.

In addition it offers an opportunity to study some special system which has claims upon the attention of teachers with definite educational purpose. In fact the present writer is of the opinion that it is worth while for a teacher, at least for one summer, to give almost the entire period to improving and strengthening his technic.

ELEMENTARY WORK

Some months ago we printed on the Editorial page of THE MUSICIAN an article with the caption *There is plenty of room at the bottom*, the theme being the absolute necessity of the highest quality of teaching service in the beginning stages of music education. It is possible, maintained the article, to grow horizontally. To become the finest elementary teacher is a worthy ambition.

It is pleasant to record that we have received comment on that article. And this comment, together with the fact that a number of devoted and scholarly women have chosen to labor with little musicians, leads us to call attention to the splendid work which is being done in primary courses, and open to American teachers who are willing to specialize in elementary training.

THE CLASS OF ONE

Here and there, in quiet retreat, we find the musician who is using the summer to work out his own problems. He knows just what he wants to do and has the strength of character to keep himself at work a definite number of hours daily. This may be the elimination of faults, the acquisition of certain desired excellences, the choice of new teaching material. The writing of new compositions, an improvement of his business methods, one, two, or all of these items.

This class of ONE is a big class, and it is right to express the hope that you, too, are a member of it. How great the possibilities of accomplishment are! One added to one other, the process repeated innumerable times, and we have the great mass movement which determines success. There is a tremendous potency in this idea of ONE. But you must be the ONE. No other person can replace you!

PUBLIC SCHOOL MUSIC

It is but a few years since the educational music magazine paid attention to the work in music as conducted in the public schools. But thanks to the devotion and enthusiasm of a few we are changing all that. Every summer a large body of school music workers get together in classes, not merely in methods, but in real musical work as well. They are becoming better musicians as well as better teachers in their special subject. Music as a special school subject means a wider field for the private teacher and school of music.

It is well to speak enthusiastically about the progress we are making in music in the United States. But when we analyze this progress and try to value the different factors we will find that summer music study and teaching has a big place.

GETTING A START IN TEACHING

EVERY year new teachers are added to the number already engaged in professional work. It would be interesting to know, year after year, the percentage of success experienced by those who take up the work of teaching. It is to be hoped that the ratio of foredoomed failure is not so great as in commercial lines, upwards of 95 per cent.

The young teacher who is trying to establish himself must look at the question from the point of view of business methods. Quite a number of questions should be raised and answered before one begins a campaign to secure students. First of all, is there a reasonably large public to which he can appeal, from which he has reason to expect patronage.

What will he offer to those patrons which will lead them to him rather than to some other teacher.

His work must be as good as that of others, or better,—that is, in comparison with other teachers in his class.

His work ought to have at least one feature which the others have not; something distinctive, what advertising men call "a good talking point." And this point must be one which will at once appeal to the average parent.

Having the ability to give service equal to that of other teachers, and superior in some respects, the young teacher should make this fact known to the public.

Therefore we lay stress upon the fact that the young teacher must advertise—there are more ways than one—if the general public is to know about him. Good pupils are good advertisements, and it is not necessary for a teacher to draw upon many families for enough work to keep him busy.

But advertising of the right kind will make his work known to ten times the number of families he can reach by quieter, more exclusive methods. In planning to work up a paying class of pupils do not overlook the value of general as well as local advertising.

The SINGER and HIS ART

HOW TO SING

IV

BY ARTHUR DE GUICHARD

Under the broad and comprehensive title *How to Sing*, a series of articles appeared in The Musician for February, March, aud April of this year. But they treated chiefly the material part of singing, comprising the mechanical means employed in the technics of singing by which the artistic interpretation of words and music may be manifested.

Those articles explained, therefore, the Science of Singing. Its technics consist of: The education of the ear—the most important, yet the most neglected of all; the vocal apparatus; breathing; phonation, or attack and resonance; vocalization, or vowel formation; articulation and word formation. Of these, articulation and word formation belong really to the domain of the Art of Singing; yet, at the same time, the technical practice involved in the act of articulation and word formation has its scientific side.

But the possession of the Science of Singing, the knowledge of its technics, does not make one a singer, any more than the possession of a fine piano makes one a pianist. Intellect, a musical intellect allied to individual sensitiveness (usually denominated "temperament") is the chief factor in the Art of Singing.

The two are inseparable. The art is greater than the science; but if the art tried to live without the science, the voice would die an early death. It has as well been said that "the science of the mechanism is the foundation of the building, but the art of singing is the building itself."

QUESTIONABLE GENIUS AND INSPIRATION

Many persons believe that all they have to do in order to become singers is to take a few lessons in voice production and placement (otherwise attack and resonance). They do not care to waste their time learning how to read music, how to pronounce their words, how to acquire style, and to interpret! They have been told by adulatory but ignorant friends that they have excellent voices, and they believe that their natural genius (!) will do the rest. This is one reason why there are so many mediocre professional singers: They do not work at their art. They do not study the art of singing—the soul of song; they learn something about tone production, and leave the rest to "inspiration," which may or may not (usually "not") manifest itself.

This article takes under consideration the Art of Singing, that is, the musical intellect assisted by its humbler but indispensable servant, the Science of Singing.

The Art of Singing embraces: Articulation, words, rhythm, phrasing of words and of music, style, taste, expression of voice and of face, gestures (when permissible), and declamation. Each will be considered in turn.

Articulation is the skeleton or framework of diction.

Still more, articulation is the singer's chief asset in attack and purity of tone. If an initial consonant be sounded swiftly and strong, the vowel that follows will have a purer, clearer, surer quality. If the student will observe this rule, taking care to release the consonant by letting the tongue swiftly resume its normal position (*inert*, on the floor of the mouth, lightly touching the lower, front teeth) he will thereby place his voice correctly.

Many think that the study of articulation and of words is only an elementary study. Whereas, it is, most assuredly, the highest point of the singer's art. Can there be any doubt about this? Let it be considered briefly:

What is the difference between song and instrumental music? One has words, the other has none. To make a song intelligible therefore, the words must be made intelligible. When a singer so maltreats his words that they cannot be understood, he produces the effect of endeavoring to sound a melody with his voice, as an instrument might give it, but with accompaniment of unintelligible sounds which should be words, but which only serve to spoil both tone aud melody—for all the world like the futile endeavors of a dumb person trying to speak and emitting only dissonant incoherencies.

ARTICULATION SEEN AS WELL AS HEARD

Articulation should be so perfect that it might be seen, that a deaf person could read it on the lips, by the perfect word formation. The teacher of diction to Mme. Sarah Bernhardt and to many other world-renowned artists is stated to have said at a lesson: "You wish to tell a friend a secret; but there happens to be someone there, in the next room. What do you do? You stand in front of him, making your voice as small as possible, and you try to articulate as clearly as you can, endeavoring at the same time **to show him your words by their lip formation.** Your friend will watch your speech quite as much as he listens to it." If singers would practise this lip formation of words, their diction would soon show a remarkable, not to say a much-needed, change for the better.

CAUSES OF IMPERFECT ARTICULATION

The chief feature, the determining element in perfect articulation is the consonant. First of all, the initial consonant which places the voice and imparts the right musical color to the vowel; then the final consonant which places the word, which finishes it and makes it comprehensible to the listener. The diction of American singers should be the best and most finished in the world, *because* of the final consonants. In French the finals are rarely sounded; there are very few finals in Italian. Consequently, in these languages, tho voice flows on in a liquid way, without obstacle. Unfortunately, in America, we are too much addicted to studying singing with foreigners who know but little English, and who teach us in their own language—nay, we go to them in order that they may teach us to sing that language! Why? What is the matter with our own? Are we not going to sing to our own people in our own tongue? Is singing to be always an exotic art?

Thus, learning to sing those languages first of all, we acquire the habit of paying no attention to the final consonants of our own language. I give this argument for what it is worth, knowing that there is much truth in it; but I do know also, without trying to cast the blame elsewhere, that our own national every-day speech is imperfect and very slipshod. We swallow our finals, or we do something else with them, for we do not articulate them. We invariably say "an' " for "and"; "no' chet" for "not yet"; "goo' bye" for "good bye" and "goo' ni' " for "good night"; and a multitude of other atrocities too numerous to name here.

CARELESS SPEECH MEANS BAD DICTION

One thing is very certain: We cannot give any clearness, precision, and distinction to the words we sing, if we give none to the words we speak all day.

We must first correct our speech if we would sing our words correctly, so that they may be understood without difficulty and without tension of mind by our auditors.

A young man came to me a short time ago to study singing. He had a foundation for a good baritone voice, but it was so obscured by a faulty emission that purity of tone seemed almost impossible. When I did at length succeed in obtaining some good tones and sent him off joyfully to practise them, he would return with the same old defects—the good tones having again disappeared. It was not very difficult to discover his besetting fault: His daily speech was nasal. so nasal that every word he uttered could be heard vibrating *in his nostrils*. **It was useless to attempt to make him sing pure tones unless I could make him speak pure tones;** therefore I proceeded to correct his speech. Remember that his singing practice would amount to only half-an-hour to an hour per day, whereas his speaking practice would occupy several hours, so that the latter killed the former.

However, it is highly satisfactory for all those who have contracted similar bad habits of speech, to learn that the young man has been able to rid himself of his nasality, so that he not only speaks well, but he has uncovered a very pretty baritone voice with a future. But, what a struggle for both of us!

PURITY OF SPEECH

The moral of the foregoing is that purity of speech, *especially in the English language*, is absolutely necessary to purity and clarity of diction—of which articulation is the chief factor. I repeat that **the consonant is the determining element in perfect articulation, and perfect articulation is imperatively necessary if we would avoid singing balderdash and gibberish.**

Amongst the professional singers who have come to me to study repertory, and some even to study how to teach, I have learned that the chief objection they have to exact articulation is that it would injure the quality of their tones! They all try to sing as if they were executing a vocalise ("executing" is the right word, for they were cutting off heads and tails in their endeavor not to destroy the line of vowel souuds)!!! It is only by dint of much argument and practical demonstration that I am able to show them their mistake, and to make them finally understand that **the precise and complete articulation of consonants adds precision to attack, greater expression, strength and color to the word or syllable, and sets up a wave of**

sympathy between them and their audience that would otherwise be wanting.

A HUMOROUS EXAMPLE

That fault of trying to reduce a song to phrases of vowel sounds only is so much exaggerated that some singers have actually chosen among the vowels those which seemed to best suit their voices—that is, according to their own ideas. I well remember sitting, one day in the Manhattan Opera House, with Oscar Hammerstein whom he was trying out some singers, who were seeking engagements in his company. Among others was a young man with an excellent voice, pure, round, and resonant. But he belonged to the band of tone-deluded ones who choose their own special vowel and who keep their mouths to the one set shape that will produce the tone of their choice. This man kept his in the shape of an elongated capital O, without once changing it. Good quality voice but, of course, neither diction nor articulation. "Not a bad voice," said I. "Ugh!" replied Oscar; "will he never shut that mouth!" The young man probably wonders to this day why he was "turned down."

THE TRUE ARTIST

The artist is not he who is endowed with a fine voice, and who, sacrificing words and all else to its sound, tries to impress the audience with its beauty (he is only a vocal *instrument!*); but **he is the artist, who having only a small voice, is able to make every word and every letter intelligible, to excite the sympathy of the audience by the appropriateness of color and expression imparted by the perfection of articulation.**

A celebrated composer, whose operas and songs are sung in every civilized country of the globe, has written: "We are altogether mistaken as to the function and rôle of the voice; the means is taken for the end and the servant for the master. We forget that, in reality, there is only one art, *Speech*, and only one function, *to express;* consequently, a great singer should be, above all, a great *Orator*." The name of the composer is Gounod.

Thus, we must learn to articulate clearly in order that we may speak distinctly; and we must learn to speak intelligibly with complete articulation in order that we may sing words which convey meaning and sympathetic expression to our hearers.

(*To be continued*)

SONG STUDY

BY FREDERIC FIELD BULLARD

MANY singers have the gift of rendering songs at sight with expression and finish as well as with accuracy. Whether by study or by intuition—usually by the combination of both—these artists are able to grasp the thought and intention of poet and composer as soon as the eye rests on the notes; they appreciate at once the significance of the measure or passage about to be rendered, and anticipate intuitively what is to follow.

The amateur is apt to rest content with his accomplishment of clever sight-reading, while the professional gives prodigally of his time and labor toward the perfecting of his performance, however apt he may be at *prima vista*. The artist singer seeks the fullest knowledge and expression of the thought of the song-makers, and will endeavor to add, if possible, to the effectiveness and beauty of the song by any means at his command.

The simple directions for song study given in this informal article may be of assistance to students and singers who feel the need of such help and guidance; professional results cannot be promised, for intuition and technic so perfect as to have become intuitive will always accomplish results superior to all others. A reasonable degree of ability to read music and of vocal technic is presupposed. And it should be borne in mind that these are the suggestions of a musician, not of a vocal teacher.

If you are looking for songs which have passed the acid test of artists of high standing, consult the third cover page of this issue of THE MUSICIAN.

The first suggestion is more important than all that follows.

Read the *words* of the song carefully before a note is sung!

Learn the character of the poem, understand its meaning, locate its climax.

Bear in mind that, with few exceptions, the words are the most important part of a good song. Usually the poem is the inspiration of the composer. It is the exception when a song without words inspires a poet to make verses thereto, and it is even more rare that a poem is found to fit perfectly a previously completed melody.

When the meaning of the words has been learned, read the music, *together with the words.*

Find the *musical* climax, and note especially whether the poetical and musical climaxes come at the same time. This will be the case with the majority of good songs, for it is normal for the composer to strive for it.

Seek also for passages wherein the music intensifies the effect of the words or develops beauties not suggested by the text; for a weak and colorless sentence is sometimes made strong and glowing by the musical phrase to which it is wedded. There are even rare cases in which silly poems have attained absolute dignity as songs by virtue of the music made for them.

Decide also what portions of the song are relatively unimportant. The effect of climaxes will be increased if they are contrasted with less intense periods, with passages rendered in a narrative manner, or in *mezza voce*, or with an appearance of self-restraint.

It goes without saying that technical difficulties should be practised and studied until they are mastered. This article does not deal with the purely technical side of singing.

Finally, learn the *accompaniment* of the song as well as the voice part. If one does not play, he should have the piano part played to him as often as is possible or necessary, until he has learned all he can of what the piano has to say, both for itself and in support of the voice. Good songs are often duets for voice and piano, and the accompanist has frequently as much to express as the singer. If one were to claim that the average accompanist gives more thought to the words of songs than the average singer, his position could, I think, be successfully defended and would be borne out by the facts.

When the singer has thoroughly acquainted himself with the content, the intent, and the difficulties of a song, then, and not until then, he may attempt a performance of it,—that is, he may then essay to sing it.

He may then endeavor to realize its moods, to be swayed (or seem to be swayed) by its emotions, to enter into the spirit of the composition.

He may then more safely trust to impulse, feeling, intuition.

And in so far as he possesses temperament he will forget self (or seem to forget self) in the interest and joy of interpreting the thoughts of the song makers, as well as in the mere animal delight of making sweet sounds.

A NEW WORK ON THE TONSIL *

SOME months ago we made reference to two works by Dr. Faulkner, *The Tonsils and the Voice* and *Tonsils and Adenoids*, which set forth certain facts and views on the subject of the tonsils and the part they have in the functions of our bodies, and, in particular, their bearing in a healthy or diseased condition, upon the use and purity of the voice in singing.

It is well known to professional voice users that a number of surgeons advocate the excision of the tonsils whenever these organs are not in a healthy condition. And other medical men, including Dr Faulkner, incline to the opinion that injury to the body may result from the removal of the tonsils. The book under consideration presents the latter phase of the subject, and calls for the thoughtful consideration of the singer and the teacher of singing.

The following are among the deductions presented by the author and will interest every professional voice user.

The faucial tonsil plays an important rôle in the mechanism of voice production.

Tonsils enlarged or diseased through a wrong method of voice production may be cured by the institution of a correct method.

Removal of the normal faucial tonsil interferes with the natural mechanism of the voice.

The mere absence of the faucial tonsil impairs and weakens, and the presence of adhesion, scars, and contractions incidental to its removal, interferes with the mechanism of the voice.

Beautiful voices accompany large tonsils.

Persons who have large tonsils are generally healthy.

THOUGHTS ABOUT ENSEMBLE SINGING

BY LESTER S. BUTLER

A QUARTET was rehearsing and the listener was amused to hear the corrections of the director.

"You do not sing in tune," he exclaimed "That is E flat. You sing something else, I should say, between D or E. What's the matter with you?"

The speaker was not a vocalist, and had only superficial knowledge of the voice as an instrument, or he would have known that the censured singer was forcing the voice which caused the wrong intonation, one approaching but not true to the pitch of any of the letters mentioned. The demonstration continued for a short time with little improvement, until the director lost patience and ended the rehearsal by telling the unfortunate offender to take the music home and learn the tune.

Curiosity as to the prevalence of such conditions led to investigation, and it was found that this quartet was one of many student organizations, being "coached" by instrumentalists, with no special vocal training, throughout the city. Information from a wider area made evident that the practice is common almost everywhere. Inquiry as to the cause for this state of affairs brought forth numerous reasons: The supposed knowledge of style, one "coach" possesses; the prospect of an engagement held out by another who had a "pull" with the church or organization where he was director or choirmaster; the permission to use a name for advertising purposes, and so on. But none of the students questioned had an idea that it made any difference, from a vocal musical standpoint whether their "coach" had a personal knowledge of the voice or not.

* *The Tonsil and Its uses, Vocal, Mechanic and Physiologic* By Richard B. Faulkner, M. D. The Blanchard Co., Pittsburgh, Pa. Price $1.00.

THE HERMAN KLEIN PHONO-VOCAL METHOD

Based upon the Famous

School of Manuel Garcia

Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

TEACHER OF SINGING
Baritone - - - Lectures and Recitals
114 West 72d St. New York City

This was surprising, as the investigator supposed that every student should be taught that a teacher should be capable of imparting knowledge in the technic of the subject he essayed to teach, when such instruction became necessary to secure the effect desired. And here is where the harm may easily be done students of singing by "coaching" with vocally untrained instrumentalists.

Nor is theoretical knowledge on the part of the "coach" a sufficient recommendation. Anyone directing ensemble singing should have an intimate knowledge of the capabilities of the voice in general, and that knowledge of each member of the quartet, choir, or choral body, in particular. While this may seem impossible in the case of large choruses, the competent vocally trained conductor will recognize an undefinable tone quality from the different sections of his chorus that one not so trained would never hear.

And this leads to the logical conclusion that the best results from ensemble singing can never be attained under one not vocally prepared. That he must also be a thorough musician is self-evident.

The vocally trained "coach" knows the correct theory of blending the voices under his care. This knowledge is not found at the keyboard or in bowing the violin. It is a subconscious sense developed by hard, unremitting toil with one's own instrument, the voice. It has to do with that, by some, tabooed term, "placement" of the tone in the mouth. An incident may strengthen this statement.

A production of Mendelssohn's *Hymn of Praise* was being given. Two of the soloists were vocalists of fine attainment whose voices carried their words to the extreme limits of the large hall. In one of the numbers, a trio, a third singer sang the second soprano. She was a pupil of a prominent teacher of New York, but her "placement" was so faulty that her voice was lost in the superior, yet rightly subdued resonance of the other singers, whose "blend" and forward "placement" was almost faultless. She remained outside the circle of tone and her voice seemed a lost member of the harmony.

It would be well for those teachers who advocate such "placement," to spend time and, if necessary, money, in attending political, and other meetings, where speakers try to make themselves heard by very large audiences, many times under conditions that to a singer using that "back placement" would prove futile effort, and note carefully that in every instance where the voice "carries" as desired, it comes directly from the lips, and is not driven through the posterior nares, or obstructed in any other removable way in its passage from the initial point, the vocal cords, to the listener's ear.

Again, let small children, those who have been left with their voices unforced and natural, sing. Hear the delightful "carrying" blend, the limpid purity of light, bright resonance issuing from mobile lips, and carefully notice that th muffled instrumental effect so much in vogue among adult singers, is entirely absent, and decide if such tone quality, deeper, fuller in maturity, but still clear, artless, normal in its bewitching beauty, is not worth preserving.

Years of work with children and adult classes and choruses, training them to sing in solo and ensemble, long ago convinced the investigator that vocal teachers should endeavor to instil in the minds of their patrons, and pupils, that the voice is a unique instrument, that its quality is different in each individual, and that the individual timbre must be preserved, or the distinguishing element in the voice, that by which a person speaking is known, will be lost, and recognition through singing vocal utterance will be impossible.

All these individual timbres, however, are tractable and easily blended, if the purity of resonance is kept unimpaired. Otherwise a disturbance in the tone-mass becomes vividly apparent, and the composite tone loses in beauty and effectiveness. The true compound of a quartet blend is the extreme difficulty sustained by the ear in separating one voice from its associates, when simple chords are sung.

If competent instruction along these lines is given students of the voice they will refrain from joining an organization under a director, or "coach," not competent to protect them from vicious local habits and a vitiated tonal atmosphere.

For we receive impressions, and if these are repeated many times, they become a part of the fibre of our being. We cannot rid ourselves of them without great effort, and when we think they are gone, they return unbidden like the ghost at the feast. Our mental, esthetic, and moral training are vital things, and our worth as members of the community largely depends upon our early training in these subjects. If our teachers impart the right ideals, and the true is made indelible in its outline, then we become in maturity well prepared to perpetuate those precepts and ideals.

On the other hand, if our early impressions are left to be gathered from questionable sources the aftermath will be disappointing and unsatisfactory. In the realm of esthetics this is vitally so And as our ideal of a musical voice and tone are, our concept of these is, so will our strivings be toward the highest, or the less worthy ideals.

And our instructors must be the source of much of our early knowledge, if then, they give us false impressions, "what will the harvest be?"

———o———

THE SCOOP IN SINGING

BY C. J. BRENNAN

SOME consonants make the "scoop" easy, that ugly little preliminary climb to a note which ought to be attacked direct and clean. Poor attack in general is a matter for the voice trainer and outside the present discussion. But there are cases in which the attack of vowels is correct, and yet with certain consonants a scoop is heard.

The sub-vocal consonants lend themselves most readily to the scoop. The usual fault is that singers make too much of the sub-vocal element which starts the consonants, and they do not sound it *at the same pitch as the vowel* which follows the consonant, so that when the "explosion" occurs (or, in the non-aspirants, the consonant "opens out") the vowel is ushered in below the required pitch. The rapid adjusting of this fault in pitch of the note makes the scoop.

When the scoop occurs in connection with a strong consonant the fault often lies in the fact that the singer does not obtain a clear mental perception of the pitch of the note to be sung before attempting to sing it.

The explanation of the faults suggest the remedies in each case, for obviously one must mentally grasp the pitch of a note before singing it, as the ear cannot be of service until the note is sounded, and this is too late for the attack; and equally obviously the sub-vocal tone of a consonant starting a syllable must be made at the same pitch as the first note of that syllable. — From *Words in Singing.*

CONDUCTED BY HELENA MAGUIRE

A MUSICAL DIALOGUE

In the issue of The Musician for December, 1915, we published a little dialogue entitled *The First Lesson*, representing, in a humorous way, a little girl and her experiences at her first lesson. Mrs. Olga Fisher, of Corona, L. I., sends us a letter in which she says:

"I used *The First Lesson* at my Musicale two weeks ago, and the parents, relatives, and friends enjoyed it very much." We can believe that it made an attractive change in a musical program.

———o———

HOME RECITALS FOR BEGINNERS

BY MAE-AILEEN ERB

[Why cannot some of you little beginners work up a recital like the one described in this article this summer, and have it all ready to give when teacher comes back, and music starts up in September? H. M.]

Very often, when recital time is drawing near, the busy teacher will find that she has a number of small pupils, beginners, whose playing is not yet sufficiently advanced to give pleasure to anyone, except, perhaps, the pupils' own parents and fond relatives. To place these youthful aspirants on the program would only serve to lengthen it and weary the audience.

Yet these tiny tots must not be slighted. To solve the problem I would suggest individual Home Recitals, which each small pupil could give in his own home with just father, mother, sister, and aunts, with perhaps an interested friend or two as his only listeners.

The teacher, who quite likely will not be able to attend these six or eight Home Recitals should, however, carefully coach each child in the order of his program, and in the "piano manners" necessary for a recital, as the bows, and intermissions between pieces, etc. Blank program forms filled out by the teacher would also add to the child's pleasure and sense of importance. While these recitals will, of course, be of the most informal kind, they will, nevertheless, prepare the pupil for his appearance at a "real" recital next year.

The program should consist of just what the child has been working on most recently. The following outline will serve as an example:

AT TABLE

I. One or two table exercises. (With metronome.)

II. An exercise of treble and bass notes read with metronome.

AT PIANO

III. Technical work:
- Chord study
- Extended crossing (metronome set to quarters, eighths, and sixteenths).
- A scale or two (metronome set to quarters, eighths, and sixteenths).

IV. Two short études.

V. Several attractive little pieces.

The recital is a valuable incentive to careful practice for the beginner as well as for the more advanced pupil. Therefore the Home Recital is an excellent plan. It satisfies the pupils' desire to show others what they can do. It shows the parents and those directly interested in each particular child what progress that child has made. And, by not tiring those uninterested and by pleasing those interested, it proves to be a good advertisement for the teacher.

———o———

A MERE CHILD, BUT A MUSICAL MARVEL

BY BERTHA SNOW ADAMS

When one comes upon little Alberta jumping rope in the front yard or roller-skating at top speed along the sidewalk of her home street, one thinks only what a splendid specimen of healthy, happy, irresistible childhood she is; and this fact is delightfully emphasized when, in a sudden burst of exuberance, she whisks one away to a sunny bow window where a semicircle of nine dolls holds a silent carnival of nations, their unblinking eyes fixed the while on a tiny round table upon which an array of cups and saucers suggests afternoon tea. But when she seats herself at the piano, and her firm dainty fingers go wandering with ease and assurance through the intricate mazes of Weber's *Rondo* in E♭, or Beethoven's *Variations* No. 1, Op. 15, the realization that the blonde-haired, blue-eyed, pink-checked child is no ordinary performer, comes with a rush.

When scarcely more than a baby Alberta used to beg to be put up to the piano, and, if allowed to do so, would sit by it for hours not pounding out an ear-splitting jangle of discords after the manner of most infantile improvisers, but softly playing harmonious triads and tuneful wisps of melody. Her extraordinary musical talent first attracted attention throughout the northwest when as a diminutive soloist of seven, she played at the Tacoma convention of the Washington Educational Association; her selections being *March* and *Chorus* from *Tannhäuser*, the *Miserére* from *Il Trovatore* and Krug's arrangement of the *Sextet* from *Lucia*. Many advanced students find these compositions by no means easy to execute; yet the little pianist rendered them without notes and with never a slip, although at the time she had taken but twenty-four lessons.

October 15th, 1915, she celebrated her tenth birthday, and March 24th of the current year, she gave her first public recital—"Not because she is a finished artist," Mr. Schofield, her teacher, explained to the eager audience that filled the hall; "that is out of the question at the age of ten; but because there are so many friends who clamor to hear her play."

ALBERTA EDTL

Without a trace of nerves or self-consciousness, the child took her seat at the pianoforte and opened her program with Mozart's *Concerto* in C minor, her teacher playing the orchestral parts on a second instrument. Other numbers were Bach's *French Suite* in E major, Handel's *Harmonious Blacksmith, The Butterfly*, by Lavallée, *Poupée valsante*, by Poldini, *Elfin Dance*, by Grieg. Although the Mozart concerto covers fifty-five pages, Alberta played it without notes—indeed, the little girl's memory is as much a marvel as her interpretation and technic.

Her repertoire comprises over fifty pieces, all classics, and all masterpieces; and she plays everyone of them without notes and without mistakes.

When asked what she was going to do this summer the juvenile genius gave further evidence that at heart she is a delightfully normal little girl.

"I'm going to stay outdoors and play from

morning till night," she answered promptly: "because when fall comes I've got to get in and practise like everything—my teacher says so. You see," she added demurely: "I'm going to be a concert soloist when I grow up, and I've got to begin studying for it right away, because it takes *lots and lots of hard work.*"

———o———

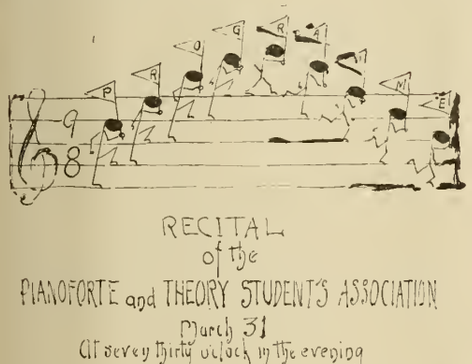
TWO SUGGESTIONS FOR SUMMER

The first suggestion has to do with playing out-of-door musical games. We publish this month three games which do not need pencils, paper, or material of any kind, and which will be excellent to help you keep in your minds what you have learned about music during the winter. And if you play these games often enough they will add to the list of composers, songs, instruments, and instrumental music about which you already know.

Try them!

The second suggestion is for the cool and shady corner, and the idea was sent to me by the Pianforte Students' Association of Newtonville, Mass.

For their recitals the members of the Association each designed three program covers, and they were so good that their teacher wrote me it was difficult to choose which one to send in to The Musician as a sample of these children's work.



Now why cannot you little readers of this department put your wits to work and design some programs for your recitals and club meetings next winter, using your club name, or motto, or whatever may seem appropriate to you, and have so much ready when the year's work begins again.

Here is the sample sent me from Newtonville.

1. *After School* .....Lemont
2. *Little Bo-Peep* .....Lemont
3. *Jolly Jig* .....Fletcher
4. *Boy Scout March* ....Grant-Schaefer
5. Song: *Tenting on the old Camp-Ground* .....Kittredge
6. *Minuet* .....Mozart
7. *Vieille chanson* .....Borowski
8. *Little Coquette* .....Sartorio
9. *Spring Song* .....Schumann
10. *Electra* .....Kern
11. *Drifting* .....Comins
12. *Morning Glory Mazurka* ..Demangate
13. *March of the Bersaglieri*....Sartorio
14. *Valse caprice* .....Newland
15. *Nocturne* F minor .....Chopin
16. *Polonaise* Op. 46, No. 12.MacDowell
17. *Sonata* No. 1 in D major ....Scarlatti

SUMMER MUSICAL RECREATION FOR OUT-OF-DOORS

THREE SAMPLE GAMES

BY ELIZABETH A. GEST

(No pencils or paper are required for the following games. The first develops concentration and memory.)

I.

"I WENT TO A CONCERT"

Have the children sit in a circle or row. The first child says, "I went to a concert and heard *Unfinished* symphony by Schubert."

Second child, "I went to a concert and heard *Unfinished* symphony by Schubert and *Moonlight* sonata by Beethoven."

Third child, "I went to a concert and heard *Unfinished* symphony by Schubert, *Moonlight* sonata by Beethoven, and *The Rosary* by Nevin."

Each child repeats, in order, what has been said and adds one more composition.

If a mistake is made in order, or a composition left out, he is "out," and the one staying "in" the longest wins. If the children are very young the composers' names may be omitted.

II.

"QUICK-WITS"

The children sit or stand in a circle. The first child points to anyone in the circle, saying, "Name a composer" (or a song, an instrument, a singer, an opera, etc.), and counts ten quickly.

The child pointed to must name that which is required before ten is counted, or he is "it," and points to another and counts.

This should be played quickly, and the things to be named should constantly change.

III

"SING A SONG"

The children join hands in a circle, with one "blind-folded" child in the center. The circle "goes around" until told to stop by "it." (The one in the center.)

Then "it" points to some one and says, "Sing the first measure of *Old Black Joe* (or any familiar melody that he chooses to call for), and he must guess from hearing the voice who is singing.

If he does not guess correctly he is "it" again. If correct he changes place with the singer, and the one guessed is "it."

———o———

MAKE YOUR OWN MUSIC ROOM

The following letter tells how one girl actually did it.

My dear little musical friends:

I wonder if all or any of you have a real studio, a nice, roomy, quiet place where you may read, practise, and really work at your musical studies without interruption? It seems to me that the old idea of having to practise in the parlor, the living room, or just wherever the piano happens to be placed is a very unsatisfactory one. And I'm sure you will agree with me once you take the situation into your own hands to improve.

Let me tell you how I made my studio, turning an unused end room of our house into a source of pleasure and benefit.

This room is not a large one and it's rather an odd shape, much longer than it is wide, having been built for an entirely different use; but I find that it serves its present purpose well.

When my mother gave me permission to use it as I chose there was only one thing there to give me a start on my studio furnishings—a matting on the floor; but quite a good start I'm sure.

I had the finished room well pictured in my mind before beginning the actual work and I determined that the most apparent idea illustrated there, next to usefulness, should be harmony—harmony of color and design.

The woodwork was of medium oak, the walls a delicate tan, and the matting on the floor was of a natural straw color in which were woven small figures of green and brown. Now with these suggestions so plainly made, how easy to select a color scheme for the furniture and for the minor details of the room. I chose medium brown, for service, dark green, always restful to the eyes, and a pretty shade of yellow, rather light and harmonizing nicely with the more sober colors, to add an attractive note of brightness to the whole.

The question of color being thus disposed of I began thinking of design, and, taking into consideration the size of my room and also the nature of its use, I quickly decided that simplicity must be seen in everything. Nothing ornate or showy about a real work room; never! I would have my studio a model of consistency and one in which any music teacher might be glad to invite her pupils for a lesson or club meeting.

Yes, simplicity of design was important, and here a happy thought came to me. Since it was all to be so simple, and remembering my tom-boyish fancy for the use of carpenter's tools, why not make the furniture myself, (for besides the piano there would be little needed) and so be sure of having each piece exactly to my taste? And what was the use of being able to draw and paint if not to make my own pictures, just as I should make my own cushions for lounge and window-seat because I could sew a little? No reason at all why I should not, and oh, the pleasure I derived from doing these things, from the fact that almost everything which went to the furnishing of that room was made by my own hands, and the experience I got in making them!

The lumber for the pieces of furniture I made, namely, desk, bookcases, small sofa, chairs, window-seat, etc., I bought at the saw mill, already dressed, and had a carpenter help me with cutting the heaviest pieces; the rest then was easy enough.

For instance, in making the desk I used for the lower part, the legs of an old discarded table, and so had to make only the upper part. This I did by using pieces of the right

dimensions to form an oblong box. With the inside of the box divided by thin partitions I made two rows of small compartments, "pigeon-holes," the upper row for letters and papers, those below for pens, pencil, stamps, etc. The top of the desk I put on in two strips of equal width joining them together by means of small brass hinges, so that the front one of these could be folded back on the other when the desk was opened. The front side of the desk was of one broad board fastened at the bottom with brass hinges and supported, when opened, by stout brass chains running from the extreme corners of this to the upper front corners of the "box." These chains were of course put on the inside, so that they could not be seen when the desk was closed. Now a thick layer of blotting paper was put on the inside of the folding front, leaving a generous margin, to make a good pad for writing, and when the whole desk was stained a pretty oak, then varnished to give it a gloss, and made secure by a small brass lock, I'm sure I had a desk of which any girl might well be proud.

The bookcases were even easier to make than the desk, because instead of going to the trouble to cut and put together boards for outer frames, I used plain packing boxes, selecting these carefully to make sure that each was strong and that the wood was perfectly smooth and free from knots, so that it would look well when stained and varnished. These boxes were oblong, about 1¾x4 feet, and to convert them into bookcases I simply turned them upright taking out the bottom ends and inserting three or four shelves.

The other pieces were made with equally as little trouble and all stained alike except the window-seat at the end of the room. This was made of boards the length of the window and just about one foot high, the windows opening almost to the floor. It was softly padded on top, covered all over with plain tan cretonne and finished with a short plaiting of this across the front and ends. The plaiting was held in place by tiny brass head tacks, and the seat made comfortable with sofa pillows of the cretonne stenciled in green and yellow and finished with cords of the same colors.

At the four windows I hung dark green shades, and cretonne curtains which I stenciled across the lower ends in brown, using a most appropriate little design found in an old book of stencils—a tiny violin and bow.

Now came the selection of pictures and I saw at once that on account of the small wall spaces I could not have large ones or many of them. I wanted musical subjects mostly, although I am interested in other branches of art, especially sculpture and painting. I decided to put up a few pictures of the masters of these, of whom I had been studying. My father is a portrait painter and I hung a framed photograph of him directly over my desk with small panels of artists and sculptors on either side.

Portraits have always been easier for me to make than landscapes and other pictures, and so I felt perfectly at home while doing busts of composers, pianists, and singers. These were all made from good photographs, only much larger of course, and some were done in oils, while others were only crayon sketches or pen and ink drawings. My number of pictures being limited, I had to choose my favorites for subjects, and when they were at last finished and framed, I was quite proud of my likenesses of Bach, Beethoven, Liszt, Wagner, Handel, Haydn, Schubert, Mozart, Mendelssohn, Chopin, Brahms, Verdi, Rubinstein, Paderewski, and a few other composers and pianists, besides those opera stars of whom I could get pictures suitable to copy: Melba, Tetrazzini, Farrar, Homer, Caruso, Scotti, etc.

I chose few ornaments of any kind to adorn my room, but I placed on the tops of the little bookcases, four small, white marble statuettes of musicians, and two full-length statues (about 20 inches high) of Beethoven and Mozart I stood on small pedestals at either side of my desk. These figures were of antique bronze, and all were bought with the proceeds of my "early efforts" at verse and story writing.

Placed conveniently near the lounge was a little low magazine stand, which, like the bookcases, was made of a box, only this had no back to it; just a simple outer frame with several little shelves to hold my MUSICIANS. (For no studio is complete without musical magazines you know; they're almost as important as regular practice hours.) For the top of this stand I made a bookrack, such as you've often seen in catalogs, to hold notebooks, pronouncing musical dictionaries, and other light weight books. The ends of the rack I carved in a simple design with my initial "C" on one end. I did not stain it for it was made of soft white wood and very smoothly sandpapered, just as the mission candlestick was, which I carved from a piece of wood for the top of my desk.

By this time I was so interested in woodcarving that I determined to see what other things I could fashion with a plain pocket knife. And the result was a small guitar and a banjo, with tiny spool-wire strings, a violin with strings and a real little bow, besides an orchestral harp with thread-wire for strings. The "post" of this was carved and when I had it all sandpapered and bronzed it was pronounced such a good imitation that, although all these things were mere toys (about 15 inches long), I left them in my studio on exhibition to my friends. And I had lots of fun making them.

Ever since I began my studio I have been working on my library too, buying one or two books at a time, and I now have quite a good collection, on the history of music, piano playing, biographies of composers, and musical dictionaries. And I have also added some valuable reading to this collection, by means of scrap books containing clippings and prints from the musical magazines for which I subscribe. I have several of these books, one called *Music and Musicians*, another *The Opera*, still another *The Orchestra*, and a fourth for *Miscellaneous* clippings. There are so many helpful and instructive things we wish to preserve without getting an accumulation of magazine "back numbers," and I've found the scrap-book the very easiest and best way to do this.

I used the *Ideal Scrap Books*, and these have in the front of them, blank sheets which are lettered throughout the alphabet, so that each piece inserted may be indexed, and so, quickly found at any time.

I have told you now something of my own studio and how I went about making it, and have written this letter to encourage you to make one for yourselves, because I know how you will enjoy working in it or having your club meeting there. There is nothing that makes for progress in music like working in a musical atmosphere, and what I have accomplished may be done by any of you who make up your minds to work. Do things for yourself!

Do you think I would feel half so proud of my studio if I had merely walked into the stores and bought everything for it? Not at all. As it is, I take pride in it because the entire room is the expression of myself, my individual thoughts, and the results of a little effort in the right direction. Try this plan yourselves, selecting if you choose something to guide you, but be original in your ideas, and if possible, improve on your model.

VIRGINIA CARTER.

THE BIRD CORNER

(From *A Bird's-eye View of the Birds*, by Herbert Job)

EVERY normal child loves stories of wild animals, and the time has arrived when, except for a few squirrels, rabbits, and the like, birds are practically the only animals which can ordinarily be found in the wild state.

The healthy boy naturally delights in woodcraft, in being able to know and hunt out the denizens of the wild, and now birds are about the only denizens there are. This desire to know wild things is a healthful impulse, which ought to be fostered, but instead of arming the boy with a gun to go forth and kill, we now teach him the names of the wild birds and how to find them. He goes off with young companions on a healthful and exciting hunt, and returns aglow with excitement over the new species he has traced out and added to his list, or the photographs he has taken with his own camera.

Besides affording healthful exercise the quest of wild birds furnishes opportunity for the kind of original research which cultivates observation, and it is this power of observation which is the foundation of success in business or professional life.

Our boys and girls need to be interested in these feathered migrants not only for their own pleasure and profit, but for the good of the nation also.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

A TOAST TO THE VIOLIN

BY RALPH WYLIE

Miracle of color, form and sound,—in such deli-
acy framed that the thumb of a child might splinter
he frail body to ruin, yet artfully planned to bear,
hrough long ages, such strain as would soon bring a
trong man low.

Stained with colors that rival the play of leaf-
ltered sunlight on forest pools. Warm, reddish
ues, fine gold, rich brown, half-shrouding its grains
1 mystery, through hues interchanging,—softly
aming to each vagrant, shifting ray of light.
tivaling the opal in variety and, like the mind of a
aid, gently tricking the cold gaze of the analyst's
ye.

Chiseled in the symmetry Phidias knew,—given
ore lines of beauty than live in the rose—a mere
ox—infinitely simple, yet complex beyond the
ower of Helmholtz to compute.

Jewel worthy the setting of fair woman's hand—
sk not to be conquered in ten men's lives.

Out-compassing the voice and out-speeding it,
s the blue swallow distances the slow-winging
ow. Attuning itself, with equal ease, to dancing,
reaming, laughter, and love. Voicing the spirit of
attle and chase or caressing our ears with the
ndernesses that only sweethearts of twenty know.

Moulded slowly by deft, firm hands; pondered
eeply and long by skilful brain; nursed into being
y soul loyal to truth and by heart long stilled ere
indication could come. Now, mellowed by age
ke that spirit of youth that sometimes gleams from
wrinkled face, a lesson in fibres singing the songs
lives given ever to hopeful trial.

Voicing and waking all human moods save
nity, envy, lust, or hate. Ofttimes abused, yet
atient withal and therefore, triumphant; oft
jured sore, yet healing again to sing us ever a
veeter song. Child of heart's planning and in-
ite care; of flashing inspiration and patient toil—
an's nearest approach to the craft of God—

The Monarch of Music—Here's to the King!

ecial attention to technic and interpretation, and
oad, sound musicianship.—The Editor.]

SCIENTIFIC TONE PRODUCTION

BY PETROWITSCH BISSING

INTRODUCTORY REMARKS

A treatise on tone production according to science not only serves as a direct means of acquiring irrevocable control of those elements which form a basis of a beautiful tone, but affords interesting knowledge to those players who unconsciously employ such principles at times. Location of bow attack on the violin string to bring out the best possible tone from the instrument is determined by natural laws. The importance of an understanding of these points is too frequently underestimated and such knowledge is not deemed necessary by many teachers; but by thorough and complete study of the subject we find a solution of the puzzle that some violinists play, sometimes a wonderfully rich tone, and at other times a widely different effect is given.

Were we to mention the numerous prerequisites conducive to a good violin tone, we might begin with the instrument, its equipment and adjustment, the well-balanced bow and the rosin; then the bow arm, left-hand technic, right-hand finger pressure on bow stick, the combined or sympathetic relationship between right and left hand, and so on *ad infinitum*. In the discussion about to follow we will assume that all these essential points are understood and at our command: where these terminate, scientific means begin.

ESSENCE OF TONE

While it is not possible or practical to attempt to measure string lengths to the necessarily exact proportions while playing, some may learn, through incessant practice and close observation of tone effects, the embodiment of points controlled by these principles as required.

In so far as the performer is concerned TONE QUANTITY depends entirely upon right arm hand and finger control; again, arm, hand, and finger control depend indisputably upon absolute muscle control which is developed through conscious rhythmical exercise.

TONE QUALITY depends upon innumerable conditions and circumstances, the most important of which is precise and definite location of bow attack, ascertained entirely by the length of the vibrating string or portion of string.

In many violin schools we are told that the best tone may be produced from the violin by drawing the bow about one and one-half inch from the bridge; while in as many other schools, no mention whatsoever is made regarding this highly important point. The latter named instruction books do the least harm. We also read occasionally of individuals speaking or writing in a similarly indefinite or positively inaccurate manner. No valuable results are to be obtained according to laws governed by science if approached in a manner "about" so or so; positive and accurate are the measurements.

EXACT POINT OF BOW ATTACK

We prove through science that the bow cannot be drawn at the same distance from the bridge for both high and low tones. If we attempt to play a low tone with bow as near the bridge as for a high one we have a nasal, reedy tone; if we bow too far from the bridge when fingering a high tone we have a loose, wobbly tone, audible friction of the bow, and interference of the string vibration.

The manner of procedure which I will give at this time is imperative for the best possible tone and may be applied by any player, but may also be accomplished unconsciously by some performers, at certain times. I cannot emphasize too strongly, the fact that it is not possible for one to follow exact measurements while playing; therefore we can say one may make the bow attack at about such and such proportionate fraction of the string length for a certain pitch, but we cannot say that "about" this or that distance from the bridge will produce the pure tone. When the best possible tone is produced, we are certain to have attacked the string at the proper fractional distance from the bridge.

The bow should invariably be drawn at the seventh harmonic of any fingered tone on any string ($\frac{1}{8}$ the vibrating string length from the bridge). This law presents to us a conclusive fact.

Taking for a standard, a full sized violin whose strings from bridge to nut are 13 inches long, the bow must be drawn $1\frac{5}{8}$ inches from the bridge (considering the outer edge of bow hair).

When playing the first octave tone above any open string the bow should be drawn $\frac{13}{16}$ of an inch from the bridge as indicated on line number 7 of accompanying diagram; when playing a tone two octaves above any open string the bow should be drawn at $\frac{13}{32}$ of an inch from the bridge, as indicated at line number 13 on diagram.*

From this law, provided by nature, we are able to establish the location of bow attack for all intervening tones, proportionately calculated on all strings. The idea that distance for bow contact should vary with strings of different thickness, is erroneous; whether we play G, D, A, or E string the bow is drawn at a distance from the bridge equal to exactly $\frac{1}{8}$ the entire vibrating string length; thus we avoid checking of the vibrations. Proof of this statement lies in these statistics:

For example, our low G is produced by 192 vibrations per second; we draw the bow $1\frac{5}{8}$ inches from the bridge and the $\frac{1}{8}$ of the string length between the bow and bridge is such length that would vibrate at the rate of 768 vibrations per second or, in other words, would be capable of producing a tone three octaves above the fundamental tone (a perfect 22d). The number of vibrations of the string length between bow and bridge should equal, when divided by four, the number of vibrations of the fundamental tone to be produced; hence there can be no interference or disturbance of vibrations; audible friction of the bow is eliminated; and consequently a tone of purity is the result. From this ratio all other figures are reached.

Attentive practice and careful observation of the tone qualities, will in time, teach us to feel the exact location for bow contact while playing; and we soon gain such control of the bow arm that without any conscious effort we divide the string into accurate lengths even in playing scales, just as the well-trained vocalist, who has never seen his throat operate, by constant observation of tone quality from the beginning of his training becomes able to shape his vocal organs for the production of such tone qualities as he desires, without any conscious effort while singing.

Tone may be produced from a string by attacking on any of the following string portions, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{1}{6}$, etc., but it is found that $\frac{1}{8}$ of the string length allows vibration of perfect freedom and enables the best possible tone of desirable quantity and quality to be produced. Some peculiar effects are required in some few works, such as playing very near the bridge or over it, to produce imitative sounds, but

STUDIO, KIMBALL HALL - - CHICAGO, U. S. A.

in this discussion we touch those points which concern a pure tone only, according to the highest conception of a beautiful tone.

It must be understood that no one would attempt to establish a standard of tone any more than we would consider certain defined conditions to fix a bounded degree of technical proficiency capable of satisfying. Competent authorities may present conditions and facts of a fixed and efficient gauge and provide adequate material under systems, schools and such titles as we find in the abundance of helpful violin literature, but there is no limitation placed on any effort. The individuality may supply unbounded resources; yet this does not dispute the incontrovertible fact that tone production is based on science and one with proper tone conception may, with skilfully directed practice, become able to attack the violin string at its correct partial length and with the bow hair at the proper angle to bring forth an even vibration; and a good tone is ultimately acquired.

In playing harmonics on the violin string the point of bow attack is determined by the pitch to be produced and not by the fingering. For example: If we wish to play the first G above the staff as a harmonic on the G string (by having left hand in 1st, 2d, or 3d, position) the string is stopped lightly at such portion of the string as we would finger middle C as an ordinary tone. Therefore the point of bow attack is the same as if we were actually fingering the pitch of the given harmonic as a fundamental tone.

TONE AS A MATTER OF PERSONAL OPINION

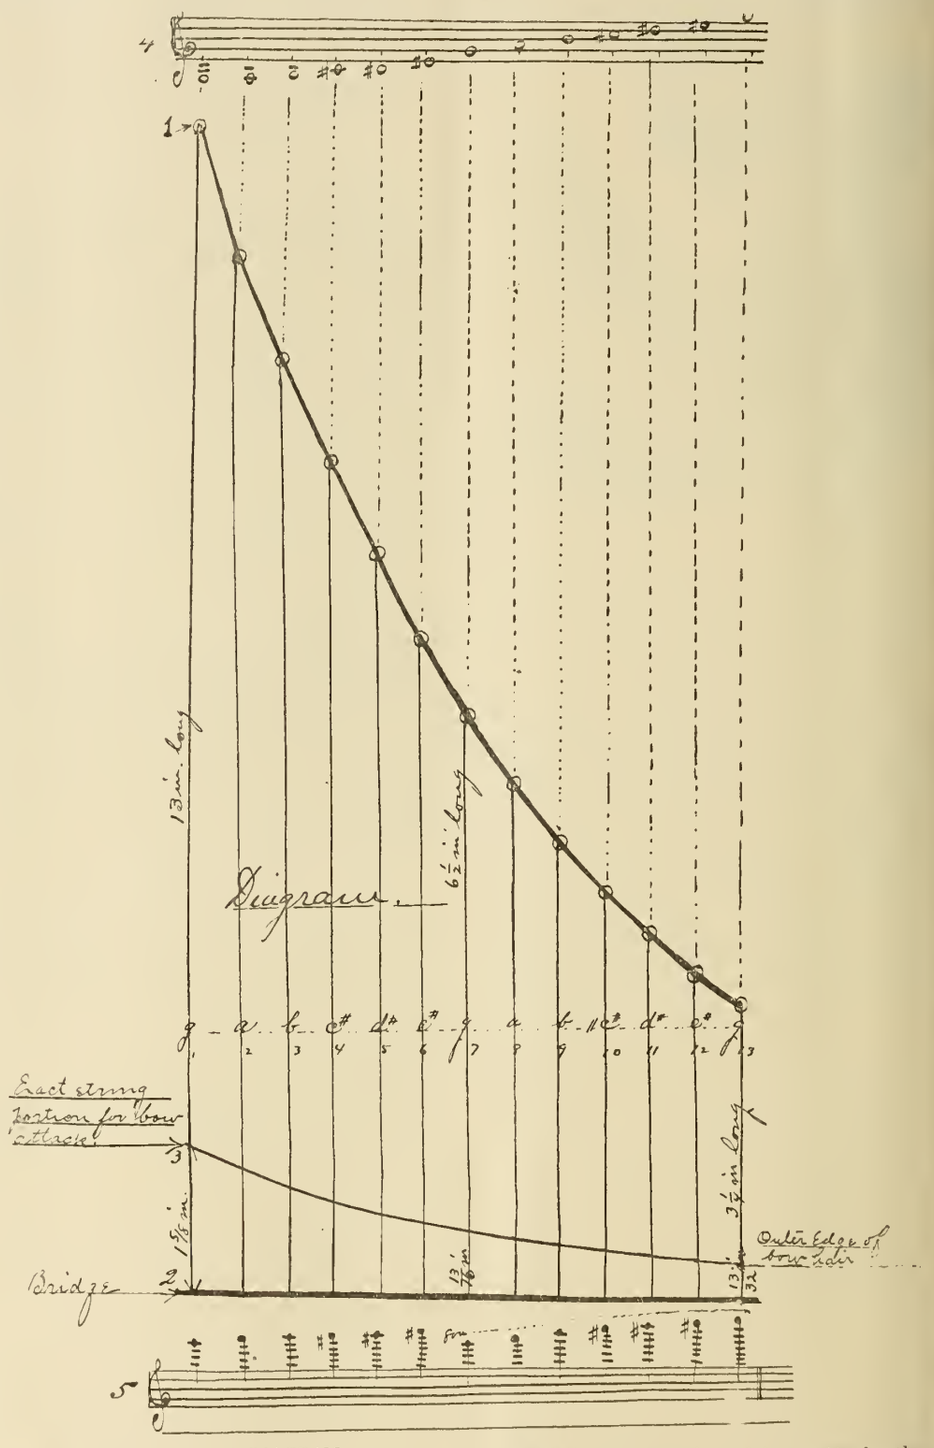
The one who is unable to recognize or rather has not the gift of tone conception may be taught to develop as good a tone as one who has, but he will not know when and where to employ the principles which govern its application; this must be felt.

Every player should nurture and reach out for his IDEAL tone. Ideal in its true and literal sense represents that which exists in imagination or fancy rather than of realization. Our desired tone is an ideal as a model of excellence, and it is the striving to reach this ideal that enriches our efforts. Once we are completely and fully satisfied with our tone it tends to lose its vitality to a certain measure.

Although a tone that satisfies the musical ear is possible to be accomplished, and the ideal tone which literally speaking is but fanciful or visionary, may become an actual reality, yet the artist is ceaselessly seeking to attain his imaginary model of perfection which extends and grows as he gains. A personal opinion of tone quality may be true or it may be false, but science based on laws of nature is infallible.

FINAL REMARKS

Regarding harmonics, we have this further proof of definite points of bow attack: A violin string may be set into free vibration at any point of its exact partial parts that are capable of producing overtones (harmonics). However, experience proves that $\frac{1}{8}$ is most practical and unfailingly produces the best tone of far carrying power and of pure resonant quality. Since the distance from the bridge for bow attack is determined by the vibrating string length, when the location for accurate bow attack is apart as in playing octaves and tenths, the high tone should be favored. In this condition we find the reason for two-part melody being more complete and beautiful when played on two violins than when played on one instrument.



EXPLANATION OF DIAGRAM

The diagram represents a scale in whole tones on a single string. In giving string lengths for the different tones, I have considered a 13 inch string (ordinary length from bridge to nut). The straight lines extending downward from the small circles appearing on curved line 1, indicate the length of string required to produce the tones as given on staff above No. 4.

The curved line No. 3 represents the exact line of bow attack for outer edge of bow hair, for each portion of string when playing the tones as indicated in No. 4. The heavy line marked No. 2 represents the bridge. Example No. 5 shows the characters or notes which represent the tones which would be produced by vibration of string lengths between bridge and exact point of bow attack: the string portion between location of bow and bridge must be such length as is capable of producing a tone four octaves higher than the fingered tone. The open string is 13 inches in length, the string length between outer edge of bow hair to bridge for the open string, low G, is $1\frac{5}{8}$ inches, small figure 1.

From the tone one octave higher the string length between bow attack and stop (small circle) is 6½ inches long; the length from bow to bridge is $\frac{13}{16}$ of an inch, line No. 7.

The vibrating portion of string for the second octave above G on same string is 3¼ inches in length and the length between point of bow attack and bridge is $\frac{13}{32}$ of an inch, line No. 13. All other lengths are of relative proportions to the

1916-17 Tour and Management of Alma Voedisch, 1425 Broadway, N. Y. — Personal Address. 2 W. 88th Street, N. Y.

THE MODERN ORCHESTRAL CONDUCTOR

At the meeting of the Music Teachers' Associa-on in Buffalo, last December, Mr. Theodore piering, the eminent violinist, teacher, who has so proved his high ability as a conductor, delivered address on the subject which appears as a cap-on to this note. We quote a few extracts from is address which has been reprinted separately om the book of Proceedings of the Association:

The qualifications of a conductor are so manifold, d the modern requirements so enormous, that is indeed difficult to present much more than a ere outline of the most important qualities which a nductor should possess. It is self-understood at a rigid schooling must precede his actual trance into practical service. In my estimation seems more practical to obtain this experience as member of an orchestra than by graduating from e piano bench into the conductor's chair. . . . here have been notable exceptions, of course, but en like Von Bülow and Mahler are not measured the scales devised by mortals.

Conductors who come from the ranks . . . ving themselves passed through the ordeal of nanging with suspended breath" on the con-uctor's baton, learn to give as clear and concise a gnificance to their beat as possible.

It is not essential that a conductor forego the e of his score, but it is important that he prac-ally know his score by memory (for this knowl-ge lends freedom to his interpretation), and that have the ability to divine the composer's in-ntions by reading between the lines of the score.

I should like to lay especial stress on the signifi-nce of executive talent (the ability to organize) hich, especially in the new fields of orchestral en-avor, is of such great value to the conductor as ell as to the community.

THREE NEW PIECES FOR VIOLIN BY LEO ORNSTEIN

The name of Leo Ornstein carries with it the ea of modernism in the extreme. Hitherto his ork in composition has been confined to the piano which instrument he is a master of extraordinary ill.

Last May Mr. Ornstein appeared in the capacity composer for the violin in several concerts in ew York, when his *Three Russian Impressions for Violin: Olga, Natascha,* and *Sonia,* were played Miss Vera Barstow, as was also a sonata for olin and piano, Op. 26, by Mr. Ornstein, who as at the piano.

Violinists who are interested in works of the odern school will be interested to know that the *ree Russian Impressions* are soon to be issued by e Oliver Ditson Company, publishers of The USICIAN.

THE UNITED STATES MARINE BAND

[The following account of this finest of American military bands is taken from an article on the subject by Edwin Litchfield Turnbull, in the Baltimore *Evening Sun.* Readers of The Musician will be glad to have definite knowledge of this splendid organization.—Editor of The Musician.]

The Marine Band came into great prominence as a concert organization under John Philip Sousa, who was succeeded as bandmaster about seventeen years ago by Mr. Santelmann, to whom belongs the credit of having brought the band to the highest point of efficiency.

And it is a matter of great importance, for the sake of military band music in this country, that this present high standard should be rigidly maintained by the United States Government. Today the Marine Band is unquestionably the finest in the United States and ranks among the famous bands of the world.

No other band in this country is organized upon so strong and permanent a basis. Some of the musicians have been playing together for thirty years or more, and under the careful drilling and excellent musicianship of Bandmaster Santelmann, with four or five rehearsals a week the year round, frequent concerts, and an extended annual tour, it is not surprising that the organization has developed a remarkable *esprit du corps* and virtuosity.

The full military band, when playing open-air concerts, now numbers sixty-five musicians and the string orchestra for indoor music about fifty.

THE THUMB IN BOWING

If a careful watch be kept on a player whose tone is weak, it will invariably be noticed that the thumb is not bent inward; the chances being that it will be bent outward. It is useless trying to get power of tone without an inward bend of the thumb. (When the extreme point of the bow is in position on the strings the bend of the thumb is not so pronounced.)

It is very difficult for the beginner to acquire the correct position for the thumb, as the two thumbs are in sympathy with each other. When the left thumb is pointing outward the right thumb has a tendency to do the same, that is, to curl outward; but this is an error which must be rectified if tone be sought. For when the bow thumb is bent inward as directed, the left thumb has a tendency to turn over the fingerboard. Therefore these directions must be adhered to so as to get independent action of the thumbs.

Another point about holding the bow must be carefully observed. The first finger must not curl around the stick, and the latter must not press on the third joint of the finger. This is one of the most common and serious faults in holding the bow.

The student should try this experiment, as it would be as well to make the point clear: The first finger should be placed so that the stick rests between the second and third joints; at the same time curl the finger round. Hundreds of players do this, and it is useless to attempt any of the fancy bowings with the finger in this position, as the tendon is tightened, which makes the wrist stiff, further progress being out of the question. By placing the stick on the finger so that it presses between the first and second joints, any bowing becomes possible, as this method of holding the bow does not tighten the wrist.—From *Violin Playing and Adjustment.*

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGALL

LOUIS MARCHAND

BY HARVEY B. GAUL

Louis Marchand (1669-1732) was a brilliant and dissipated figure in the organ world of the seventeenth century. He went through life like a skyrocket. His rise was remarkable; his descent sudden, and in darkness.

At the age of fourteen he was appointed organist at the Nevers cathedral, which post he held successfully for a number of years. While at Nevers he was offered a half dozen churches in Paris, and, according to organ annals, he accepted them all. He was organist to the Court at Versailles, of the Jesuit Church in Paris, and four other parishes. How he managed to hold them is a mystery, unless, like a performer in vaudeville, he spread himself out thin and "did them two a day."

Success and prosperity went to his head, so that he became drunk with fame. His behavior became so malodorous that he was deposed and found it convenient to leave Paris—to the advantage of Paris.

It is not every organist who could add to the gayety of nations and make a Roman holiday for two countries, as did Marchand with his Bach tourney.

Rameau and others considered Marchand the greatest improvisateur of his day. In this opinion the doughty Marchand concurred.

He could not imagine anyone improvising, fugally, and contrapuntally, so well as he. So he went to Dresden to meet Bach in competition. The result is well known to all readers of Bach. The contest was not held for the simple reason that Marchand fled. Bag and baggage, he folded his tent like the Arab, and softly stole away. He left Dresden ignominiously to escape certain defeat.

He returned to Paris somewhat chastened—his vanity clipped around the edges. When he became established in the city of light he was exceedingly popular as a teacher. Louis Daquin, a pupil of his, was appointed organist at St. Paul in preference to Rameau. Marchand received a *louis d'or* ($5.00) for each lesson. Considering this period, this *ought* to make him just as good as some of the American teachers who demand ten dollars a lesson, and this in the limousine age.

For all his popularity and income from teaching, he died in extreme poverty. He was extravagant and dissolute. In his meteoric career he enjoyed great reputation as a performer and yet the few compositions he left behind mark him as a man of most superficial attainments.

HIS FIRST SUNDAY AT THE ORGAN

BY CHARLES N. BOYD

Mr. J. Augustus Smith, a brown-eyed, gentle-voiced young man of eighteen years, who brushed his hair straight back from a chaste brow, was led from childhood by one overwhelming ambition. He wanted to be an organist—not a pianist who played the organ Sundays to pay the millinery bills of an ambitious wife, but a real organist. The congregation would early crowd the church to hear his voluntaries, his fingers would idly wander over the keys until they fell into a beautiful melody, which, from a low and far-distant beginning, rose and swelled to a grand triumphant paean. Great waves of sound would surge through the noble edifice, the world and its carking cares would be forgotten in the uplift and inspiration of his playing, the audience would realize heaven upon earth.

Having thus early hitched his wagon to an Open Diapason, John Smith (as he was known in prior years) began to make the small round of the churches in his vicinity to hear the organs. There was something about the tone of the instrument that thrilled him, but he could not enthuse over the organists. They seemed to him a prosaic lot who took little pleasure in their work, and would even cut a postlude short when most of the congregation were out of the church.

"Just wait," thought John, "until I preside at the organ. The minister will depend upon me as his chief source of inspiration; the choir will breathlessly await my nod or gracious smile; and the congregation will hang upon my every note."

A tired young woman who went from pupil to pupil with an enormous roll of technical exercises and "playing pieces" was engaged by Mother Smith to give John his first piano lessons. He was not a specially good pupil. Lazy finger work and poor feeling for rhythm marked his progress through the first and second grades, and his teacher gave him little encouragement for pianistic success. Piano exercises galled John's proud spirit; he did not care for the tinkle of the piano, and longed for the day when the rich organ tones would roll out beneath his caressing touch. Therefore he soon gave up piano study and practice, and the tired young woman was glad to give John's hour to Mary Brown, a little girl who practised very diligently and counted aloud without any reminder from the teacher.

When John's school days were over he obtained a situation as general utility clerk in a drug store. Often, as he pasted a stamp on an envelope for a customer, or gently motioned the location of the city directory, people would notice the faraway look in those deep brown eyes.

Finally the young man's hopes seemed to be in a fair way of fulfilment. Through the kind offices of an old man of his acquaintance John "got the use" of a small, old-fashioned tracker action organ in an out-of-the-way church. Thither he repaired in the evening after the labors of the day and for hours would play to himself in the dim light afforded by one gas-jet. Again his artistic spirit rebelled at technical exercises, and anyhow it was easier to improvise than to read notes. As one foot was needed for the swell pedal, the other had to supply all the pedal notes.

Encouraged by this progress John changed the style of his name to J. Augustus Smith, invested in a white waistcoat, and began to look for a church which needed an organist. He decided that a genius who had been able to bring his playing to such a point without a teacher's restrictions should be invited to at least a three-manual organ, with a salary of, say, a thousand for the first year and gradually rising thereafter. (At the apothecary shop his salary was two hundred and forty dollars a year.) But the three-manual organs were scarce, and a lot of mechanical, routine, piano-teaching organists seemed glad to play them at almost any salary.

At last a turning in the lane brought J. Augustus an opportunity. It was only a two-manual organ, and the salary was small; altogether an uninviting proposition, but J. Augustus reasoned that when he had played in that church a few months the then thronging congregations would gladly pay for a new four-manual organ, and make a large raise in the organist's salary a pleasurable matter of course. The committee told J. Augustus that he might display his powers the second Sunday in May, and he felt that his appointment began with that date.

The sordid details of the choir rehearsal may be omitted. On Sunday morning the minister, choir and a handful of the faithful were present at the hour appointed for the beginning of service. Rather against his own preferences, the organist's judgment had dictated a safe choice for a voluntary, one that everybody liked, the *Pilgrim's Song of Hope*. He began; part of the choir were audibly hunting the anthem for the day, and others were discussing matters of dress. This lack of attention rather worried the new player, and when he reached over for the Swell four-foot Flute he drew instead a healthy Cornopean. Alarmed at this sudden accession he hastily pushed a button and reduced the Swell to Aeoline.

Then the minister, who could not hear very well, decided the voluntary was at an end, rose and announced that the service would begin with the seventeenth hymn. Chagrined at the outcome of the voluntary, J. Augustus hastily threw on full Great to Pedal, and began to "give out" the hymn on a few soft Swell stops. In the second part the pedal part looked low and inviting, so he treated the audience to a couple of notes with Pedal coupled to full Great before he found the Great *piano* combination. Then when the congregation began to sing its only support for a while was the Great Dulciana and Melodia.

During the prayer which followed the hymn the organist was occupied in selecting stops for the anthem. He decided that as the beginning was very soft a couple of soft stops on each manual would suffice. The choir started softly and all went well till the fifth bar, when J. Augustus mistook the crescendo for the swell pedal, and obliterated the choir before he realized what was wrong.

At last the interminable service was over. When J. Augustus finished his postlude the chairman of the music committee, a prosperous butcher, told him that they felt that he needed more experience before taking charge of such a large and important instrument, and that the committee had decided to award the position to a young lady, Miss Mary Brown. Such being the case, he need not report for the evening service.

THE SHORTEST WAY WITH CONGREGATIONAL SINGERS

BY ORLANDO A. MANSFIELD

Some little time ago proceedings were taken by n Episcopal clergyman in England against one of is lady parishioners on the ground that she was onstantly disturbing the congregation by her offenive manner of joining in the responses and psalmdy with a most strident, blatant and distressing nmusical voice. The case excited considerable inerest at the time, the more so as it was by most eople regarded as a novelty. That it was not so, owever, is proved by the fact that as recently as he 18th century one good man was "presented," or ummoned before a judicial court, "for that he ingeth the Psalmes in the Church with such a jestiulous tone and altitonant voice, viz,—squeaking ke a pigg, which doth not only interrupt the other oyces, but is altogether dissonant and disagreeing nto any musicall harmonie; and he hath been reuested by the minister to leave it, but he doth obtinatilie persist and continue therein." Unfortuately the punishment of the culprit is not recordd, but if it were anything like as thorough and etailed as the indictment it must have been at once oth serious and severe.

THE IMPORTANCE OF BEING EARNEST

BY ROLAND DIGGLE, MUS. DOC.

This may seem a strange title for an article adressed more especially to organists, and yet how ew of us are really in earnest in our desire to give he church and congregation whom we serve the ery best service of which we are capable.

I wonder how many business men would hold heir positions if they gave as little attention to heir work and to pleasing their employers as a arge per cent of organists do. I am speaking more articularly to the organist-choirmaster who reeives only a moderate salary, one who, of necesity, has to devote considerable time to teaching and ther work outside his church work in order to ake ends meet. I suppose there are very few oranists indeed who do not augment their salary y such work, in fact they would be foolish not o; at the same time one should be careful not to et the church work suffer through the outside ork.

For instance you start out by giving up three ays a week to teaching, and three days to the hurch work, practising, helping your choir indidually, etc. Before long you are teaching four ays—five days and ere long six days. In this vent you of course neglect your own practising nd the choir is forgotten except for a hurried full ractice once a week. Under such conditions is it o be wondered at that the church service suffers?

It is impossible to have a well-ordered and well-endered service without as much work on the part f the organist as on that of the minister. Peronally I think more is required of the organist, as n him rests the responsibility of leading the conregation and setting the mood of the service. How an he do this with a few hurried chords on the rgan? Such a prelude often does more harm han good; the same may be said of the postlude and ffertory. Only the other day I heard a Scotson lark march as an offertory, utterly spoiling the ffect of the cantata (Stainer's *Crucifixion*) which receded it. Just a little thought on the part of he organist would have avoided such a mistake.

Then we should be earnest in our desire to give he congregation an opportunity to hear good organ music. How many organists are there who ake the time and trouble to examine the new organ music which is issued from time to time. Too many of us are satisfied to use the same old pieces over and over again. I remember some two years ago attending for six Sundays a large church, not two hundred miles from Boston; as a postlude at three of the six evening services the organist played the *War March of the Priests*. I admit it was in the summer, but even that is not excuse enough.

Again we should be earnest in our endeavor to make the service a devotional whole. See that the anthem fits in with the spirit of the sermon and hymns. Such a service will influence the most unmusical members in the congregation, and they will soon realize that the musical part of the service is, in some way, helping them spiritually almost as much as the sermon. Let us then be earnest in our desire to make our part of public worship worthy of the religion it voices and the God to whom it is addressed.

SUBCONSCIOUS LEARNING

This is a mode of learning which one unfamiliar with psychology is not apt to think of as "study" at all. Subconscious observation by your unconscious minds would be an uncommon way to characterize it. . . . You cannot understand anything worth learning without this factor of mind, the subconscious mind, the great integrator of intelligence. The endless details of knowledge are supplied very largely by this unconscious mental process, this continual subconscious perception and observation by all the senses at once. . . . It is the great planner of our behavior, however, the chief solver of the most important problems of our conduct of life; it is the seat of our motives, the developer of our habits, the associator of our ideas into real and useful knowledge.

There are three chief ways of studying in this process of collegiate learning. In the first place, by more or less conscious seeing and observing of books, diagrams, pictures, and other things that you can get only through your sense of vision. Second, hearing things with your ears, such as lectures, recitations, and talk. And third, by actually actively doing things. . . . Doing, as opposed to receiving, represents the modern method of learning even the most abstract of subjects. The world is becoming aware, and actively aware, that bodily efficiency, one way or another, is the basis of learning.

Take notes of everything worth noting. No matter where you are, whenever you hear anything worth noting make a note of it. . . . It is extremely important to economy that you should keep your notes posted up every day, not only in your notebooks, but in your brains. Examinations will take care of themselves if you keep your didactic material posted up day after day.

Frequent reviewing is of the greatest importance. It tends to integrate things, keeps subjects unified, and puts a whole subject before you at once.

Conversation and discussion among yourselves are extremely important as means to accurate and broad information. Talk things over. Collateral reading always lends interest, and makes you a better talker, which in itself is well worth while in a professional man or woman. From an address on *Eliminating Waste in Study*, by Dr. George Van Ness Dearborn.

Finger passages form a large part of all music. To play them well is to have a great percentage of all music at one's command. This is also true of scales and arpeggios. Therefore practise finger passages, scales, and arpeggio forms.

THE ECHO ORGAN

BY H. C. M.

Is there such a thing as professional courtesy between musicians? The answer is: It depends upon the musicians. Physicians have a code regulating their relations with their professional friends and rivals; this code no doubt simplifies many matters that, otherwise, would be annoyingly complex: and though the general public sometimes scoffs at professional courtesy as merely a device on the part of the M.D. to stifle competition and therefore benefit only his class, it respects the medical profession for its self-control and dignity.

* * *

THE above reflections were inspired by one or two incidents related by a musical friend who came around to the sanctum the other day in a state of great perturbation. It seems that there is to be a wedding in "his" church (we organists always feel as if we own the church where we play!) next month, a wedding in which the "contracting parties" are from wealthy families and the prospective emoluments large. My friend had already entered into the enjoyment of his fee, in anticipation, when he was informed by the bride-to-be that an old friend of the family, Jones, the organist of St. Aloysius, was to "preside at the organ" during the ceremonies.

* * *

MY friend is boiling over with indignation. He thinks Jones is doing something about on the same moral level as robbing a henroost; he considers that Jones has no right to trespass on his preserves; he thinks Jones a cad, an interloper, a man destitute of professional and personal honor, etc.

* * *

SMITH (for the intelligent reader has already divined that my friend is none other than the talented organist of St. Martin's-by-the-Sea) has reason for his complaints, but these and similar matters are to be settled only when musical people respect each other's rights and privileges. Churches are also distinctly to blame in not regulating the use of the church edifice so that the church itself charges a certain fee, including the fees of minister, sexton, organist, and a charge for lighting and heating. In this way the organist of the church is recognized by the church as having a certain right and interest in all matters for which his services are needed. In his turn the organist is grateful to the church for protecting him and collecting his fee. Instead of being in the position of looking for and receiving a tip, he receives a fixed sum known to both the payer and the payee in advance.

* * *

IF this method of dealing with weddings were in use at St. Martin's, Jones might play, but Smith would receive his fee just the same. There is little doubt that Smith's *amour propre* is more hurt by the prospective loss of his fee than by the affront to his dignity!

* * *

I HAPPEN to know—Smith does not know this; I can imagine the rumpus he would make if he did know it—that Jones called on the bride and incidentally (yes, dear reader, *incidentally*) recalled their early years of mud-pie making and other infantile diversions and delicately intimated that nothing would give him greater pleasure than to be associated with such an interesting and brilliant event as the wedding next month. Jones is wise in his generation and will collect his fee in good time. Poor Smith.

WARREN R. HEDDEN, Chairman, 170 West 75th St., New York City

HARDLY had Smith left the room before Robinson, the baritone and successful singing teacher, who has a studio in the new Practical and Manufacturing Arts Building came in to ask me to lunch. As we went down the elevator I thought Robinson looked rather worried and so soon as we reached the street I asked him what the matter was.

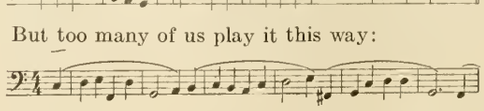
From his recital it seems that he has a pupil—one already in the profession—who has a very pretty voice, true and sweet but not strong. She will never do big arias or dramatic songs, but can do lighter things very beautifully. Robinson is much interested in her singing and feels sure that he can do her a great deal of good in extending her voice, in building up her musicianship, and in enlarging her repertoire. Well, it seems that Brown who has an office in the same building with Robinson, knows Miss —— slightly and waylaid her last week just as she was leaving the elevator from her lesson. Brown began by complimenting her lavishly on her "lovely voice," "charming stage presence," etc. and ended by introducing the serpent into this Eden of adulation by suggesting that it was a great pity that her voice was not larger; that Robinson was a mighty good musician and good organist, but that he did not understand her voice; that he (Brown) would like to see what he could do for her; that his method was sure to strengthen her voice, and that any time she felt that she must make a change,—the rest can be imagined.

Here is certainly food for thought. Is not a code of professional honor needed? Nothing is commoner than for heads of institutions where singing is taught to receive criticisms from singing teachers with an offer to take the work in hand and do it as it ought to be done! Truly this is a queer world.

* * *

I WONDER if there is anywhere any organist who is not guilty of transposing the bass parts of hymntunes so that angular voice-leadings result. Look at the pedal board of any organ you may chance to see in the next few days and note how the lower octave of pedals is ploughed and gouged out. This is the result of transposing notes above the middle C of the pedal board down an octave. The musical results of this practice are often so ridiculous as to seem to make it impossible; but the ploughed pedal boards tell the story. Laziness is at the root of the matter. Here is an illustration of the way it works! Barnby's tune *Laudes Domini* has a fine bass, but it suffers at the feet of all of us. The original is:

But too many of us play it this way:



Many organists would play the last four measures as in the second version because they feel that the vocal bass of the tune is too high for deep sonority. Some players would play the vocal bass literally except in the last stanza, but to make a climactic effect would, in that stanza, transpose it down. In all such cases, however, we must note that the fine upward skip of a minor seventh is missing.

* * *

OUGHT we to forget that in playing the pedals an octave below the vocal bass we are giving the bas a wrong emphasis? This is aside from all question of a distorted voice leading. We are also makin the distance between the organ bass and the othe parts too great. With a 16 ft. pedal stop drawn th pedals are playing *two octaves* below the vocal bas

* * *

THE vexed question as to the usefulness of th organ voluntary is again bothering us all. believe that what we feel most keenly is that in th voluntary no one is under any musical, mora religious, or esthetic compulsion to listen to u When anyone asks Hobson where he plays he i variably replies, "I make a noise Sundays on th organ at the Twenty-ninth Avenue Church. This is Hobson's way of protesting in regard to th way music is treated in the prelude and postlud Personally I feel that the prelude and postlude, used at all, should be as short as possible and i terpreted simply as an esthetic intimation that th service has begun or ended, as the case may be. am therefore not in sympathy with the America Guild of Organists in emphasizing these portions the musical service. It would be well, I believe, the service ended with the benediction by th minister; the "noise," be it merry or otherwis made by the organist after the benediction, a "noise listened to by a few only and by them with irritatio at the banging of doors and the thuds of departe feet, is illogical. The organ prelude, whethe thought of as preparation for the service or as music is likewise unsatisfactory when one takes int account actual conditions. Why not dispense wit both the incoming and outgoing voluntary?

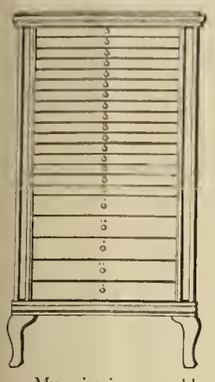
WILCOX SCHOOL OF COMPOSITION

C. W. WILCOX, Director

Dept. "A." 225 Fifth Avenue, New York City



Your Music Valet

My name is Tindale Cabinet. Take me into your employ and I will serve you faithfully and well. I will see that your music is always kept straight and in order. The songs, piano pieces, and the studies in separate compartments; all the music indexed in a neat little book, and everything arranged so that any piece will be at your finger ends when wanted.

I will save you from searching and waiting and annoyance; and will also protect your music from damage.

Any of the gentlemen and ladies whom I am now serving would, I believe, give me a "character", for many of them have very kindly urged their friends to employ me.

I am prepared to take care of small or large collections of music—200 to 1800 pieces or more.

When I come to serve you, my uniform may be any shade of the sturdy and handsomely figured oak; or I can appear in elegant mahogany—as you wish.

My price is reasonable. Terms may suit your own convenience. These details with pictures are given in Catalogue 2.
In regard to engaging me, please address **TINDALE CABINET CO., Ditson Bldg., 8 East 34th St., New York.**

One of my near relatives, a respectable person, also well recommended, makes it his especial duty to carefully attend to Talking Machine Records. His services are highly useful to all owners of phonographs. Further information in Booklet 2-R.

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment—a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

Sohmer

315 Fifth Ave. New York, N. Y.

TEACHERS FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley-Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY-MATHEWS

WHAT are the essentials in teaching to give children poise? So many children will apparently know a thing well but stumble when playing.
F. H. W.

A very difficult question to answer. In fact I doubt any of us can give a prescription that will work nine times out of ten. I do feel that it is not alone through good teaching but possibly more through opportunity to play in public that poise is developed. Naturally a child must be well taught, but just what does it mean to teach a child well? It means one thing to me; another thing to you; and still another to the general public.

My idea of good teaching is so different from the conventional idea that I often hesitate to express it. I do not care how well a child can play in my studio, but how well she can play at home, unless she can duplicate the performance on the platform before an audience. A large part of our modern education is superficial. Our methods are so elaborate that we often lose sight of the *Thing* in teaching plans. The old-fashioned education, where the debating club "and thinking on one's feet" was a part of the high school curriculum, made good citizens. We now turn to music and esthetic dancing to develop the qualities of putting the best self forward in public.

I am constantly handling children in program work and am more and more impressed with the fact that it is not alone good teaching which makes them play, but this opportunity of getting up before people once in three or four weeks and showing the fruits of their study during that period. Naturally a child must be taught to understand the music. This means a certain amount of theoretical knowledge, and that knowledge kept bright by the liberal use of "sapolio." The teacher must safeguard the pupil at every "dangerous" point, and every good teacher knows through her classroom contacts that nine out of every ten children will forget at certain places. It should be the teacher's business to make those dangerous places as solid as possible in the memory.

I have found when children go on the platform with the idea in their minds of saying something, giving themselves expression through this musical medium, of getting a musical message over the footlights, that they go through very much better than if they think of "notes."

I try very hard to have a certain definite interpretation for every musical sentence. The mind must be not on the notes but on certain tonal effects which must be mentally conceived in advance of the fingers. This keeps the child's mind on thinking not what the next note is, which is always fatal, but on putting a certain thought in a certain way.

In other words, if from the time of the very first lessons the teacher bears down on expressive playing, reiterates beauty of tone, accuracy of pedaling, definite dynamic effects, etc., the child will get away from the panic of forgetting and will feel within himself a certain power, because he is saying something that is worth while. He feels his music, therefore others must feel it.

No one has poise unless one has convictions. The difficulty with children in developing this quality is not to develop conceit at the same time; but here again the handling of the lesson period will be of immense service to you. It is very easy for the teacher to encourage a pupil without having him feel that the work is perfect. The pupil must realize that while good work has been done, he has not broken the ice on what is to be done.

* * *

Your advice helped me with a pupil once before, so now I am venturing to trouble you again. I have had merely a few piano lessons, now and then, from country teachers, but for the most part, have delved alone. Yet, curiously enough, I have gone several points farther than any others in my community, where a natural ability to "bang" ragtime outranks the musical skill that can be acquired only through careful practice of the best music.

I want to be able to urge, inspire, and help with practical suggestions the young people who need the sort of help I haven't been able somehow to obtain.

In spite of the fact that my own musical education is so fragmentary, I'm not ashamed or afraid to try to teach what I DO know, and I feel encouraged by the fact that my pupils certainly are making progress. I really love to teach—as you may surmise when I tell you that I have to do it after business hours, in the evening—and no matter how jaded I may be at the beginning of a lesson, a pupil never gets beyond two measures of music before I feel my enthusiasm returning. I have never advertised for a class. Pupils have come to me because they like me, or because their mothers enjoy my Sunday pipe-organ work. Music is all one thing to the untrained. An organist ought to make a good pianist, and a good player must be a good teacher!

The difficulty regarding which I desire your help is presented by a gentleman in his thirties who can play third and fourth grade music, but who is very slow at sight reading. He wants me to treat him to a "method" that will painlessly cure the disease. (Being in business, he has only limited time at his disposal for practice.) I've racked my brains for something which will establish the habit of instant response between vision and fingers. Is there no quicker or easier way than by becoming accustomed to the keyboard through much practice of scales and exercises? Couldn't a "touch system," like the touch system for type-writing be worked out?
M. H. H.

I am very glad to make you a few suggestions. The difficulty with the touch system in piano playing seems to me to lie in the fact that we undo the work technically. In order to arrive at any sort of technical perfection the player must of necessity look at the hands, and unconsciously this habit of looking at the fingers grows on us. Of course this is very detrimental to quick reading. I have known pupils to read quickly when they knew practically nothing about the theory of music. In fact, most of the old-fashioned players were good readers, while they knew very little about theory. Memorizing everything has ruined our quick readers.

This has come about, not so much because we do not look at the notes, as because we have destroyed the taste for reading. Of late years we are all working to make our children and our young people play like artists. No one has any chance of interpreting until the notes are in the mind.

Where teachers used to assign three or four different things for a lesson, they now assign only two with possibly some technic. It is not enough for the pupil to play a composition through, but he must make it mean something, so the emphasis is placed not on the WHAT but the HOW. The effect of this has been to cut down the volume of reading and it also more or less discourages a taste for reading. In the old days if we read anything through once or twice, we felt we knew all about it. Now we know it takes weeks to digest any first-class work.

If I were helping to develop a good sight reader, I should certainly cut down the memorizing. I would use an elementary book like Mokrej's *Sight Reading Book* with his suggestions as to the touch system, and along with that do some scanning of rhythms. Scale playing and chord playing in key are useful, but not so helpful as generally supposed. The main thing is to crowd in the new

OUR COURSE WILL

Make YOU a Thoroughly Proficient Piano Tuner

by means of correspondence lessons, accompanied by mechanical aids that make our lessons easily understood and far more practical than other forms of instruction. Our patented Tune-a-phone starts you correctly.

No doubt. No error. Makes you master of the tuner's art. Diploma granted. Course guaranteed.

M. H. Collins, Jayess, Miss., says: "I was very doubtful about your ability to teach piano tuning by correspondence, but when I had received the first lesson the doubt vanished."

J. Hodge, Kingston, Ont., writes: "I am tuning for a large factory, which shows that what you teach is up to date and thorough."

R. O. Logan, Clarkston, Wash., says: "I make from $5 to $15 a day tuning."

material and get a fair impression of the composition with one reading. I should select material to begin with which was a grade too easy. Duet and accompanying work will help; remember the main thing is to create an appetite for reading, then the pupil will keep on the job.

* * *

Is it advisable to use the four forms of the Mason *Two Finger Exercises* for first grade pupils?

C. W.

I use only the third and fourth forms in the first grade. While the principle of the second form is used in other exercises, I do not introduce it in the Mason way before the second grade. The fourth form is invaluable in grade one if used through the diminished chord. The third form should be used sparingly, as it tends to develop stiffness unless properly taught.

THE BERTHA FEIRING TAPPER CLUB

An association in memory of the late Mrs. Bertha Feiring Tapper has been formed in New York, with a branch in Boston composed of former pupils who live in that city. The members will have occasional meetings on the plan of Mrs. Tapper's Saturday afternoon classes, in which ensemble music will be the principal feature.

A fund is being raised to establish two scholarships in her memory, one in New York and one in Boston. The officers of the Club are Miss Pauline Mallet-Prevost, president, Leo Ornstein, vice-president, Mrs. Claire Raphael Reis, secretary. A request is made that pupils of Mrs. Tapper who have not been notified will send their names and addresses to Miss Prevost at 1155 Park Ave., New York.

THE SAN DIEGO MUSIC TEACHERS' ASSOCIATION

This flourishing local association was organized in 1912 as a branch of the California State Association, with about forty members. A letter from Mr. Albert F. Conant, of San Diego, who was the leading spirit in the organization of the Association, advises us that the membership now is beyond the eighty mark. Meetings are held monthly with a musical program at each meeting.

The 1916 convention of the State Association is to be held at San Diego, July 5–8. About twenty concerts and lectures are included in the program. Interesting educational features of the convention are "a report of a committee on standardization with recommendations to provide an efficiency test for teachers who seek membership;" 2, a plan for giving credit in the High School course for music study carried on outside the school; 3, report of a committee on music extension work, to be carried out with the co-operation of the Extension Department of the University of California.

The Panama-California International Exposition has appointed July 6 as "Music Teachers' Day," and six concerts will be given at the open air organ pavilion.

Mr. Conant says: "Our experience shows that a convention of this nature furnishes a stimulus not only to local teachers, but to the community in general; creates a demand for more and better music, lifts the standards of excellence among the performers and elevates the ideals of the listeners."

BOOK NOTES

Primary Elements of Music. By Inez Field Damon. A. D. Barnes Co. Price 32 cents.

Here is a handy little book for students, especially those who get their music study in the public schools, for it covers the rudiments of music sufficiently for intelligent sight singing. Used in conjunction with the regular class work in note reading it should prove effective. The author is supervisor of music at Schenectady, N. Y.

Bach's Chorals. Part I. The hymns and hymn melodies of the "Passions" and oratorios. By Charles Sanford Terry. Cambridge University Press. G. P. Putnam's Sons, American representatives. Price 75 cents.

Throughout the four works Bach makes use of forty old hymns or hymn-tunes. In the book under consideration the author presents the original form of the tunes together with very interesting bibliographical material. The reader who is interested in choral music will find here much to keep his attention and will understand why choral works in the form of Bach's oratorios have so great a hold on the German public.

———o———

GENERAL NEWS ITEMS

Michigan Music Teachers' Association held the annual convention at Battle Creek, June 27–29

Syracuse was the meeting place of the New York State Music Teachers' Association this year, the convention being held June 20–22, Mr. Frederic Schlieder, of New York, presiding officer. A prominent feature of the program was the series of conferences on piano, voice, violin, and harmony similar to those in New York last year.

The Spartanburg (S. C.) Music Festival was held May 17-19, at Converse College, under the direction of Mr. Edmon Morris. The New York Symphony Orchestra, Walter Damrosch, conductor, assisted. The choral forces were the Converse College Choral Society, 250 voices, and a children's chorus of 50 voices, and the principal choral works were Handel's *Messiah* and Donizetti's opera, *Lucia di Lammermoor*, in concert form.

The following open air choral performances are noteworthy as showing the trend toward "big" musical events. *Elijah*, at Boston, given at the Boston National League baseball field; Verdi's *Requiem*, at the Polo Grounds, New York; *Aida* at Franklin Field, University of Pennsylvania, Philadelphia, June 6; *Siegfried*, at Forbes Field, Pittsburgh, June 28

Mr. Bryan Lathrop, late president of the Chicago Orchestra Association, bequeathed a trust fund of $700,000 to the Association to serve as a nucleus for a school of music in Chicago, in conjunction with the Orchestra.

The General Federation of Women's Clubs held its thirteenth biennial convention in New York May 24–June 1. The meetings of the department of music were held May 27 and 29. Dr. Frank Damrosch, Dr. Frank B. Rix, Mrs. Edward MacDowell, Arthur Farwell, Havrah Hubbard, and Dr. Otto Kinkeldey were among the speakers.

Music has a prominent place in the program of the Winona (Ind.) Assembly this year: July 31 and August 1 the San Carlo Grand Opera Company, August 14 and 15 the Russian Symphony Orchestra, three concerts.

The *Evening Mail* of New York has opened a department devoted to music in the home, under the direction of Henry W. Hart. The Victrola and the player-piano receive special attention.

Clara Louise Kellogg, American prima donna of former years, died at New Hartford, Conn., May 13. She was born at Sumterville, S. C., July 7, 1842, and studied music at New York, making her debut in 1861, with success. This was followed by appearances in England where she won popularity as well as in the United States. In 1887 she married her manager Carl Strakosch.

Who's Who in Music is the latest project under way. It is intended to be an "international biographical dictionary of living musicians, will contain upwards of 10,000 names, and include an appendix concerning orchestral and choral organizations, as well as educational institutions with musical courses." The editor is Mr. César Saerchinger, and the book will be issued by The Current Literature Publishing Co. of New York.

Adolph M. Foerster, a prominent Pittsburgh composer, has sold to Library of Congress, Washington, D. C., three original manuscripts, Wagner themes from *The Flying Dutchman, Lohengrin,* and *Tannhäuser;* an excerpt from Liszt's *Psalm, No. 1,* and a page of the song *Umsonst*, by Robert Fra

SCHOOL OF
PIANO TUNING
Piano Tuning, Regulating and Repairing taught by expert; thorough, practical instruction in repair shop; short course; low terms. Day and evening. 20th year. Circular for stamp.
ALEX. SCHEINERT, 2849 N. 11th St., Philadelphia, Pa.

The University of South Dakota with the assistance of citizens of Vermillion, under the direction of Ethelbert W. Grabill, dean of the College of Music, gave its seventh annual May Festival, May 20, 23, and 24. Mendelssohn's *Midsummer Night's Dream* and Coleridge-Taylor's *A Tale of Old Japan* were the choral works. The final program included Beethoven's eighth symphony and Saint-Saëns's concerto in A minor for 'cello.

The Lowell (Mass.) Choral Society, 175 voices, under the direction of Eusebius G. Hood, of Nashua, N. H., gave its annual spring concert, May 9, with the Boston Festival Orchestra assisting. Deems Taylor's cantata, *The Highwayman*, which has won favor during the last two years with audiences in many parts of the country, and Gounod's *Gallia* were the principal choral numbers.

Nashua, N. H., held its fifteenth annual music festival, May 18 and 19 under the direction of Eusebius G. Hood. The choral forces were the Nashua Oratorio Society, 100 voices and a High School Chorus of 150 voices, with the Boston Festival Orchestra assisting. The choral works rendered were: *The four winds*, by Carl Busch, *Fair Ellen*, by Max Bruch, *A Tale of Old Japan*, by Coleridge-Taylor, and *The chambered Nautilus*, by Deems Taylor.

Keene, N. H., well-known many years ago for its summer music festival, of which the late L. O. Emerson was one of the conductors, is still the home of choral music. May 18 and 19 the Keene Chorus Club, 250 voices, under the direction of Nelson Griffin gave its annual festival, singing Grieg's *Olaf Trygvason* and Verdi's *Requiem*. A special feature of the Festival was the concert by a chorus of 250 pupils from the high school. The orchestra was made up of former players in the Boston Opera House Orchestra under Louis Eaton. Much of the success of the Festival is due to the generous support of the President, Mr. Edward F. Holbrook, who personally pays the expenses of the finest soloists on the ground that a festival is for the people who are unable to go to the large cities to hear the great artists of the day.

The Theodore Presser Choral Society assisted by the Hahn Conservatory Orchestra, gave its annual spring concert, June 3, under the direction of Mr. Preston Ware Orem. Cowen's *Rose Maiden* was sung by the Society.

Max Reger died in May of paralysis of the heart. He was born at Brand, in Bavaria, March 19, 1873. He studied at Weiden, later at Sondershausen and Wiesbaden under Riemann. He was considered by many musicians as a contrapuntal genius of the highest rank The. dispatch was dated May 12, but the date of death was not specified.

Impromptu dances are a delight wherever there is a Victrola

The Victrola is always as ready to play as the young folks are to dance.

It is just the kind of music they want—all the newest dances. The kind of music every one appreciates—perfect in tone, volume and rhythm. The faultless playing of famous bands and orchestras whose superb dance music brings joy to the heart—and feet.

And on the Victrola it becomes the delight of countless thousands.

There are Victors and Victrolas in great variety from $10 to $400. Any Victor dealer will gladly demonstrate them and play the latest dance music or any other music you wish to hear.

Mahogany or oak

Mr. N. J. Corey, a well-known musician of Detroit, issued in May the first number of *Art and Artists*, "a monthly magazine of all the arts." It is an attractive issue in brochure shape.

The Litchfield County (Conn.) Choral Union held its annual festival at Norfolk, June 6–8. The program included the following new works: *Hora mystica*, a new symphony by Charles M. Loeffler and a suite for piano and orchestra by Percy Grainger. Brahm's *Requiem* and Haydn's *Creation* were the principal choral works. The Philharmonic Orchestra of New York assisted.

The Chicago Madrigal Club's annual prize competition for the W. W. Kimball Prize of $100 is announced. The poem *A Spring Ditty*, by John Addington Symonds, is to be set in madrigal form for a chorus of mixed voices, *à cappella*. Full particulars of the conditions of the contest may be obtained from D. A. Clippinger, 1210 Kimball Building, Chicago.

SUMMER SCHOOL ANNOUNCEMENT

Fannie Church Parsons

Will Hold Her Annual Summer School for Students and Teachers this Year in Chicago, July 5—August 5

Every day will be a Red-Letter Day for new ideas.
Each of the one hundred twenty hours will be filled with instruction to the students' utmost profit.
Pleasant location; quiet surroundings; and most reasonable prices.
Mrs. Parsons is known throughout the Musical World as the originator of the Kindergarten Idea of presenting Music. Her inventive genius, coupled with pedagogic intuition, made innovations in piano instruction inevitable. This system makes a specialty of Rhythmic work, Audition and Interpretation.

HARMONY
3-YEAR COURSE IN ONE MONTH

Many years of teaching along most advanced lines have now resulted in the publication of a text-book which presents equally original ideas for teaching Modern Harmony. This plan makes the pupil HEAR, SEE, FEEL and UNDERSTAND all the usual and unusual chords of a tonality.
Mrs. Parsons will present her new course in Picture Harmony in connection with her Normal Work, which has been revised and greatly enlarged.
Enroll with the originator and get the benefit of her methods first hand.
Further information and literature sent upon request.

Address **FANNIE CHURCH PARSONS COLLEGE—4040 Ellis Ave., Chicago**

JUST PUBLISHED

Keyboard Harmony and Transposition

By ANNA HEUERMANN HAMILTON

An original, vital, inspiring method of teaching harmony founded on the principle:
TO EXPERIENCE IS TO KNOW

This NEW presentment of Classic Harmony ANSWERS the long, insistent, urgent DEMAND of all educators for a means of INCORPORATING a LIVING, WORKING knowledge of Harmony into the daily MUSIC EXPERIENCE of the pupil.
This EMPIRICAL HARMONY is the exact antithesis of the outworn "THEORETICAL" Harmony. Knowledge of chords involves CONSTRUCTIVE work in chords based upon classic example. Each volume establishes UNDERSTANDING through explanations that are
PRAGMATIC in their PRACTICALITY.
CRYSTALLINE in their CLEARNESS.
ALL-ENCOMPASSING in their SCOPE.

PRELIMINARY STUDIES IN KEYBOARD HARMONY AND TRANSPOSITION **$0.40**
For the Earliest Grades. (No previous knowledge necessary.)
A simple, ingenious explanation of degrees, intervals, major and minor scales, elements of fundamental harmony and transposition based on key consciousness, with reference to preparing the pupil for the more serious study of harmony.

KEYBOARD HARMONY AND TRANSPOSITION. Volume I ..... **.40**
Vol. I includes Principal Triads, Principal Dissonant Chords, Secondary Triads, Passing Notes.
The work in this volume aims to secure equal ease and familiarity in all keys, direct relationship of harmonic knowledge to music—involving analysis—and furnishes practical cadence drill and many clever suggestive teaching devices.

KEYBOARD HARMONY AND TRANSPOSITION. Volume II ..... **.40**
Vol. II treats of Suspensions, Anticipations, Modulation, Altered Chords, Organ Point.
Volume II offers clear succinct explanations of many of the harmonic problems which usually remain hazy and unsolved in the ordinary music experience. Subjected to the drill in this volume these difficulties give way to a disciplined, growing scholarship designed to pave the way to original modulation.

These books are equally well adapted to class or private lessons—piano and organ

IE NEW BUILDING OF THE OLIVER DITSON COMPANY, 178-179 TREMONT STREET

Few business houses in the United States n look back over more than eighty years of stence, a period which covers the tremenus growth of the country, in population, in alth, and in development of resources, aterial and intellectual. When the firm of rker and Ditson was formed, in 1834, ston had a population of less than 100,000 d musical culture was in its infancy. Today e population of the metropolitan Boston aches close to 1,500,000, and grand opera and mphony orchestras may be heard in all tions of the country.

In the first half century of its existence e firm's location was on Washington St., e great thoroughfare, north and south. But business gradually extended southward the ad of the firm followed from the original ation, in the shadows of the old State House d the Old South Church, to nearly three cks away, always keeping in touch with the rrent of retail trade. When narrow Washton Street became congested, broad Tremont eet, one block to the west, and facing the nous Boston Common, with its terminal tions for electric lines, became a great shopg center, with the Ditson music house in the siest part.

The pressure for increased space to carry on a business which sends its product to all parts of the United States and Canada, as well as across both oceans, has again necessitated a move on the part of the Oliver Ditson Company, and, accordingly, arrangements, have been made by which a ten-story structure will be built at 178–179 Tremont Street, one block to the south of the well-known "150."

This new building, according to the plans of the company and the architects, will be "the last word in efficiency and service," and, we may add, it will be one of the handsomest structures in the city. The front will be of white marble and in the renaissance style, which seems admirably adapted for a building which must stand for art as well as for trade.

The Company will occupy six of the ten floors, each with an area of nearly 6000 square feet, the combined space of floors and basement representing the equivalent of an acre on one level, about one third more than in the eight floors of the present building. This will enable the Company to take care of its growing retail and wholesale trade in sheet music, music books, Victor Talking-Machines and records, and musical instruments.

Visitors to the present quarters have always remarked on the magnificent view from the offices of the top floor, across the Common, the Charles River, Cambridge, and the beautiful suburbs beyond. This will not be lost in the new location, but rather extended in range, for the Common, the finest breathing space in the business section of any city, is still immediately in front.

It is expected that the building will be ready for occupancy during the summer of 1917.

AMERICAN CONSERVATORY of MUSIC

Chicago's Foremost School of Music and Dramatic Art

John J. Hattstaedt
President and Founder

Offers Courses in Piano, Voice, Violin, Public School Music, Dramatic Art, etc. Superior Normal Training School, supplies teachers for colleges. Diplomas and Degrees.

WITH THE SCHOOLS AND TEACHERS

(*Continued from page 444*)

Pupils of Mr. F. Addison Porter, head of the Normal Department of the New England Conservatory, gave a recital of piano music, May 18. Several concerted works were included in the program.

Miss Fay Foster, composer and pianist, was honored with a reception at Montclair, N. J., April 22. A number of her songs were presented by guests.

Miss Gertrude West, pianist, gave a recital at McKendree College, Ill., May 15. Mr. F. M. Church is director of the music department of the College. The Commencement exercises were held June 2.

Mr. Allen H. Daugherty, of Boston, gave his annual pupils' recital June 2. Ten of his advanced pupils presented the program. Mr. Daugherty has organized a summer music school for girls at Holderness, N. H., which will combine the pleasant feature of camp life with a musical atmosphere.

The May programs at the University School of Music, University of Arkansas, carried the number up to 526, under the direction of Mr. Henry D. Tovey.

Mr. Henry P. Eames, director of the piano department of the Cosmopolitan School of Music, Chicago, presented a piano concerto program played by seven of his pupils, May 20.

Pupils of Miss Belle Andriessen, twenty in number, gave a piano recital at Beaver, Pa., May 13.

The Chicago Musical College, Carl D. Kinsey, vice-president and manager, now in its 50th year, commenced a five weeks' summer session, June 26–July 29. The normal training courses will receive special emphasis.

Mr. Ottmar Moll sends us a number of programs given by his pupils at his St. Louis studios. He is assisted by Ernst C. Krohn and Miss Gertrude Hennemann.

Miss Carrie Delle Hosmer, Orange, Mass., arranged six piano recitals by her pupils, May 14, 20, 21, 22, all the numbers being memorized.

The Society of American Musicians presented a series of eight Sunday afternoon programs of Chamber Music at Chicago, May 28. The program included vocal selections from pageant music to *Sacred Tree of the Omahas*, by Henry P. Eames.

Roland Hoyle's pupils gave a recital of vocal music at Haverhill, Mass., May 5. Several choral numbers were sung.

Knox Conservatory of Music, Galesburg, Ill., Wm. F. Bentley, director, will be opened for special summer work, June 13–July 25.

Mr. Frank Le Fevre Reed, director of the School of Music, University of Texas, sends The Musician a number of programs of the past season. Especially interesting are the series of historical recitals covering the period from the 17th to the 19th centuries.

NEW YORK NOTES

BY EVA EMMETT WYCKOFF

"Caliban by the Yellow Sands," staged in the Stadium of the College of the City of New York, has formed part of the Shakespeare celebration. The Masque was written by Percy Mackaye, the music by Arthur Farwell. Forty-seven professional actors and actresses, and in all, 1500 people, took part, and gave their services, hoping the outcome would warrant the establishment of a permanent outdoor theatre. This desire has been qualified as these performances, extending over two weeks, have meant the bringing together of thousands of people, rich and poor. Caliban is the charact in *The Tempest* and by portrayals of scenes fro Shakespeare's plays, and dancing of the peop from earliest times, "on the green," or yellow sand this hideous character was mentally and spiritual developed into a superman.

"Katinka," a musical play, enjoying a lo run at the Lyric, is so much above the avera musical comedy, both in music and singers, th it forms a combination of harmony and melody, which Rudolf Friml, its composer, should be prou

The Institute of Musical Art held its commen ment concert in Aeolian Hall, before a large a well-pleased audience. The program was giv by the candidates for diplomas. They were Mari Kahn, Helen Whiteman, Charles Vardell, a Marie Roemaet.

Mr. George Dostal has been engaged to si for the Rubinstein Club next season.

Isabel Irving gave a recital at Teachers' C lege, Columbia University. She has a clear, w poised voice and together with her accompani Walter Kiesewetter, gave a pleasing program.

Engelbert Roentgen, the Dutch 'cellist, a brother of Julius Roentgen, formerly associat with the Kneisel Quartet, has just recently arriv in this country from Amsterdam. Mr. Roentg will begin a concert tour in October and will heard in recital in New York later in the season.

This fine music satchel with THE MUSICIAN $2.00

BOSTON INSTITUTE OF PUBLIC SCHOOL MUSIC

A complete course of training for Supervisors and Teachers in public and private schools. Circular on request.

MRS. ADA J. DANFORTH

Faelten Pianoforte School

30 HUNTINGTON AVE. - - BOSTON, MASS.

THEODORE SPIERING, a great violinist, conductor, and teacher, has won wide acknowledgment and distinction. The past season has been the most successful of his career as a teacher, and next season he will travel all over America in concert and recital. Mr. Spiering has recently won success with his *Artist Studies* for the violin. His *Five Impressions* for the piano have brought him much favorable comment from some of our greatest pianists.

LOIS MAY ALDEN, who plays the violin and piano, and teaches singing besides, manages the *Trio of the Garden*, which is composed of violin, harp and piano. Helen Möller in Greek dances accompanies the Trio on its tours.

THE Sittig Trio composed of Frederick Sittig and his two talented children, Gretchen, violinist, and Hans, 'cellist, gave a charming concert in the Ball room of the Plaza Hotel. They were assisted by Margarete Ober of the Metropolitan Opera Company, who was accompanied by Arthur Arndt, her husband. Her singing was most delightful. The Sittig children are simple and unaffected, and Gretchen especially is very talented, while Hans plays well, but not so spontaneously as his sister.

KATHLEEN HOWARD is a brilliant example of the American singer, who goes abroad for her operatic experience, competes with the native artists on their own ground, and makes good. Last summer she created the contralto rôle in Horatio Parker's prize opera, *Fairyland*, at Los Angeles. This season she has devoted to concerts, appearing with many of the largest organizations of the country, notably with the Boston Symphony Orchestra, in Providence and Worcester. Her return to opera will be made in the fall as a member of the Metropolitan Opera Company.

LOUIS GRAVEURE, the singer who was signally so successful the past season, was recently married to Eleanor Painter of light opera fame.

ARTIST pupils of Sergei Klibansky, the well-known New York vocal instructor, gave a recital on May 31st at the Auditorium of the Y. M. C. A., West 57th Street.

Each of the singers showed the results of excellent training. There were numerous encores, in many instances resulting in a repetition of the number, so clearly was the demand. Claire Rivers played fine accompaniments.

NEW YORK UNIVERSITY will have a department of music in connection with the Summer School which is to be held July 10–August 18, specializing in courses for the training of teachers and supervisors of music. The department will be under the direction of Mr. Arthur J. Abbott, of Buffalo. Edmund Severn, well-known violinist and teacher, will be a member of the faculty.

SECULAR SONGS

HIGH VOICE

CLASS, F. MORRIS
The hermit. [A minor] [C♯-*a*]..... $0.60
A song of unusual dramatic power and breadth, big in style, for concert use.

ENGLISH AIR
So sweete is shee (17th Century). Arr. by Wm. Arms Fisher. [F] [F-F].... .30
A charming air, especially suitable for recital use.

RENAUD, EMILIANO
I dreamed that you were leaving me (*J'ai reve que tu me quittais*). [A] [d-g♯]..... .60
In the modern French style, 5-4 rhythm.

RIKER, FRANKLIN
A song of love [F] [c-*a*]..... .60
A broad, swinging, melodic style makes this an attractive song to singer and hearer.

SCHMIDT, LOUIS
Never again. [A♭] [d-*a*♭]..... .60
In waltz tempo, light and airy in style, humorous text.

MEDIUM VOICE

BUSCH, CARL
The challenge of Thor (*King Olaf*). [A minor] [a-F]..... .60
A big, virile song, best suited to a baritone voice.

CAPUA, EDUARDO DI
O sole mio (*My sunshine*). [F] [c-F].. .40
A favorite Neapolitan folk-song, charming melody.

CLASS, F. MORRIS
The hermit. [F♯ minor] [b♭-F♯]..... .60

ENGLISH AIR
So sweete is shee. [E♭] [E♭-E♭]..... $0.30

FISHER, WILLIAM ARMS
Swing low, Op. 17, No. 2. [G] [d-E].. .60
In negro dialect, and based on negro melodic ideas, but worked out in a highly artistic manner.

GRANT-SCHAEFFER, G. A.
Disillusion. [D] [b-F]..... .40
A short lyric song of high quality.

LULLY, JEAN BAPTISTE DE
Gloomy woods, in darkness receive me (*Bois epais, redouble ton ombre*). [F] [d-F]..... .30
From the classic French opera repertoire.

LANG, MARGARET RUTHVEN
A cradle song of the war. [D minor] [d-F♯]..... .60
A fine song for the present day. It might be a Belgian mother's song.

SALTER, MARY TURNER
The wind's tale. [A minor] [d-E]..... .50
An excellent piece of descriptive writing.

SMITH, WILSON G.
Pickaninny snuggle song. [G] [(b♭) c-D]..... .40
A slumber song in Southern negro dialect; simple in melody and style.

STICKLES, WILLIAM
I chose a rose. [B♭] [c-F]..... .60
A charming song in the better-class ballad style, easy and melodious.

LOW VOICE

FISHER, WILLIAM ARMS
I know not why, Op. 17, No. 3. [A♭] [b♭-E♭]..... .50
A song of concert quality, short but dramatic in intensity.

SACRED SONG

HIGH VOICE

WOOLER, ALFRED
Be brave, be strong! [E♭] [E♭-g].... .60
A fine song for church use, with strong climax.

PIANO SOLO

DELACOUR, VICTOR
Heart whispers (*Parole? du coeur*). III-IV..... $0.50
An interesting teaching piece in the drawing-room style.

FRYSINGER, J. FRANK
Dancing nymphs (Mazurka). II-III .40
Dance of the midgets. II-III..... .40
Dance of the Flowers (Waltz). II-III .40
Three useful and charming little pieces in dance rhythms, just the thing for lesson assignment and recital program use.

KERN, CARL WILHELM
Fall in line (March), Op. 318, No. 5. II..... .30
The fox hunt, Op. 318, No. 6. II.... .30
Two easy teaching pieces for young players; in dance rhythms.
Love in May (Idyl), Op. 274. III.... .40
A melodious recreation piece, in the intermezzo style.
Pretty Polly (Polka de salon), Op. 313. III..... .50
A lively piece, full of melody, rather brilliant in effect when played at a fast tempo.

NUSSBAUM, S. HAMILTON
Hungarian Dance. III..... .60
Full of the gipsy character, and makes a useful teaching piece; has passages in thirds which offer good technical drill.

SGAMBATI, GIOVANNI
Intermezzo, Op. 21, No. 4. IV..... .60
A fine concert piece by a prominent Italian composer.

VIOLIN AND PIANO

BLACKMAN, ALEXANDER
La castanera..... .60
Intermezzo..... .60
Two pieces of moderate difficulty but effective enough for recital use. *La castanera* is in the Spanish style.

MISCELLANEOUS

BURLEIGH, CECIL: Sonnets of Autumn, Op. 27. (Piano)..... $1.25
Seven pieces of poetic and descriptive character, in the style popularized by MacDowell.

VICTOR TALKING MACHINE RECORDS FOR JULY, 1916

SUMMER recreation life is now in full swing. As usual music, in some form, is in demand for nearly all of the various activities. And the noticeable feature of this activity is that it is greatest along the lines which are represented in a passive attitude; that is, letting others make the music—orchestra, band, quartet, trio, etc., player-piano, and, probably, most of all, the Victrola.

It is a favorite saying that people will not like music which they do not know well. If the musical taste of the country is to be improved, it must be accompanied by greater knowledge of the best music; and this knowledge ought even to reach the stage of familiarity.

The July Record list includes a number of high-class compositions performed by artists of high distinction, and the family which has a Victrola in the summer home may hear the world's best and greatest music as often as they may wish. Here are a few numbers worth testing:

Braslau, Sophie, contralto: *Birds in the night*, a lullaby, with music by Sullivan, the famous composer of light operas.

Caruso, Enrico, tenor: *My bride shall be my flag* (*Mia sposa sara la mia bandiera*), by Rotoli, sung in Italian, a soldier's song which has special aptness to present-day conditions.

Culp, Julia, contralto: *Dank sei dir* (*Thanks be to thee*), an old song by Handel, revived, and used with success in recent performances of the oratorio *Israel in Egypt*.

De Gogorza, Emilio, baritone: *Non è ver* ('*Tis not true*), by Mattei, a sentimental song very popular twenty-five to thirty years ago; it is a gem in the Italian style.

Destinn, Emmy, soprano: *D'amor sull' ali rosee* (*Love, fly on rosy pinions*), an air from Verdi's opera *Il Trovatore*; it is an expressive song, with a touch of sadness.

Elman, Mischa, violinist: *Chanson Louis XIII* and *Pavane*, two pieces in the old French style, by Couperin, transcribed by Kreisler; charming music exquisitely played.

Gluck, Alma, soprano: *Nightingale song* (from *The Tyrolean*), with bird voices, by Charles Kellogg, a waltz song by Zeller, a popular German composer of a generation or more ago.

Kreisler, Fritz, violinist: *Berceuse romantique*, Op. 9, the composition of Kreisler himself, brought out in his recitals the past season.

Martinelli, Giovanni, tenor: *Ouvre ton coeur* (*Open thy heart*), a Spanish serenade in the Spanish style, by Bizet, composer of *Carmen*, and one of his finest songs outside his works for the stage.

McCormack, John, tenor: *Sing! Sing! Birds on the wing*, a simple little love song, full of sentiment and charm, by Nutting.

Schumann-Heink, Ernestine, contralto: *Das Erkennen* (*Recognition*), by Loewe, a song of mother love which the great prima donna renders in the finest style.

Williams, Evan, tenor: *When the boys come home*, a song with a military flavor, by Oley Speaks, an American composer. Williams is at his best in this.

Witherspoon, Herbert, bass: *Off to Philadelphia*, a famous Irish song, delivered in splendid style by the distinguished American singer.

Zimbalist, Efrem, violinist: *Harlequin's* ... *nade*, from *Les Millions d' Arlequin*, a favorite ... by Drigo, a violin number of great smoothness ... beauty of tone.

Marsh, Lucy Isabelle, soprano: *Just a-wea... for you* and *His lullaby*, two songs by Carrie Ja... Bond, issued as a double-faced record.

Cheatham, Kitty, soprano: *Dixie land*, by ... mett, and *I'se gwine back to Dixie*, by White, ... songs in negro dialect, sung in Miss Cheath... inimitable style.

Christine Miller IS SINGING

GOOD NIGHT by Mary Turner Salter
THE NIGHTINGALE by Ward Stephens
THE NIGHT HAS A THOUSAND EYES by William Arms Fisher
TO ONE I LOVE by Louis Victor Saar
A WOMAN'S LAST WORD by William Dichmont
EXPECTANCY by William Stickles

THE MUSICIAN

OLIVER DITSON COMPANY
15¢ a Copy BOSTON, MASS. $1.50 a Year

NEW CHORAL WORKS OF QUALITY

SECULAR CANTATAS MIXED VOICES

The Merry Wedding

By PERCY GRAINGER

Cantata for Mixed Voices and Orchestra

Price, 60 cents, postpaid
For Rent, Orchestra Parts, Full, $6.00 per Month

First performed by "The Musical Art Society" of New York, under Frank Damrosch

"Its melody has the strong swing of many of the Scandinavian folk-songs of the chivalric type, and there is rich variety in its manipulation."—H. E. Krehbiel, in the New York *Tribune*.

The Highway Man

A Cantata for Baritone Solo, Chorus and Orchestra

Ballad by ALFRED NOYES
Music by DEEMS TAYLOR

Op. 8

Issued in two editions—with Chorus for Mixed Voices and with Chorus for Women's Voices (three-part). The Baritone Solo, Accompaniment and Orchestration are the same in both editions.

Time of performance, about 30 minutes.

Price, 75 cents, postpaid
For Rent, Orchestra Parts, Full, $6.00 per Month

First performed at the Fifth MacDowell Festival, Peterboro, N. H., Aug. 19, 1914, when it registered "An emphatic and resounding success."

The Chambered Nautilus

Cantata for Mixed Voices—with Piano, Organ and Orchestra

Poem by OLIVER WENDELL HOLMES
Music by DEEMS TAYLOR

Price, 50 cents, postpaid
For Rent, Orchestra Parts, Full, $4.00 per Month

This Cantata was first performed in May, 1914, by the University Heights Choral Society of New York City.

Hakon the Strong

(A Ballad of the North)
Music by GUSTAVE LAZARUS

Price, 50 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Solo voice: Baritone. Time, 15 minutes.

English and German text. Poem by Fr. von Sallet.

This work tells, and effectively illustrates in music, a saga like story of mighty exploit, love and catastrophe. A robust voice is required for the solo part. The cantata is in three short divisions.

An arrangement of this work has been made for men's voices by the composer, and will be found listed under that heading also.

The Djinns

(Ballad)
Music by FRANZ C. BORNSCHEIN

Price, 50 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Solo voice: Baritone. 20 minutes. Continuous.

Text is translation from Victor Hugo by John L. O'Sullivan.

Awarded a (divided) first prize in the competition inaugurated by the Mendelssohn Club, Cleveland, Ohio.

A fine pictorial subject that for choral treatment, and the music makes strong and moderately colored use of it. A work the first impression of which will be vividly retained by an audience.

The Wreck

By WILLIAM REED

A Cantata for Tenor Solo, Chorus of Mixed Voices and Orchestra

Time of performance, about 10 minutes.

Paper, price, 40 cents

The poem deals powerfully, though not specifically, with the "Titanic" disaster. It has a largeness of tragic import which is reflected in the sweep and force of the composer's music. The form is that of an antiphon between a solo tenor and the responding chorus; and the closing choral passage has breadth and dignity.

SECULAR CANTATAS WOMEN'S VOICES

The Highway Man

A Cantata for Baritone Solo, Chorus of Women's Voices (three part) and Orchestra

For description and price, see Secular Cantatas—Mixed Voices.

The Knight of Toggenberg

(Ballad)
Music by W. W. GILCHRIST
Price, 50 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Solo voice: Alto. 15 minutes. Continuous.

Poem translated from the German of Schiller.

An affecting romantic legend of feudal times is here musically interpreted with a vividness that is, by turns, forceful or tender. The atmosphere of spellbound narration is admirably maintained throughout.

A Spring Cycle

By EDVARD GRIEG
Arranged by FRANKE HARLING

For Women's Voices

Price, 75 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Songs selected from Grieg's works, such as are associated in music and sentiment, have been arranged for chorus of women's voices, with solos interspersed. There are six numbers, all in the composer's most captivating vein, and take in performance half an hour

Zorah

Music by FRANZ C. BORNSCHEIN
Price, 40 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Solo voice: Soprano. Continuous.

Poem by Frederick H. Martens.

The picturesque text, dealing with a desert raid and abduction, gives the composer opportunity for Oriental color and dramatic effects in his music. There are two extended and very expressive solos for soprano, and the choral effects range from languorous rhythms to the vivid accents of combat and exultation.

SECULAR CANTATAS MEN'S VOICES

Hakon the Strong

(A Ballad of the North)
Music by GUSTAVE LAZARUS

See description under Secular Cantatas—Mixed Voices.

This work was originally written for mixed voices, and will be found listed under that heading also.

The Liberty Bell

(Ballad Cantata)
By WILLIAM G. HAMMOND
Price, 40 cents, postpaid
For Rent, Orchestra Parts, Full, $3.00 per Month

Solo voice: Baritone. 15 minutes. Continuous.

The music aids with masculine forcefulness and spirit in the telling of the story of the first Independence Day, and of the suspense broken by the Liberty Bell's proclamation of a nation's rebirth. About nineteen pages of chorus-writing.

PRACTICAL ORGAN SCHOOL

BY RINCK-ROGERS

Being the practical Organ School of Johann Christian H. Rinck, revised and rearranged, and with new matter, edited by James H. Rogers.

Ditson Edition, No. 304. Price $1.25

WHAT EXPERTS SAY

"I shall take great pleasure in recommending it to my pupils."—EDWIN ARTHUR KRAFT, concert organist.

"I shall use it with my organ pupils in place of the first two books of Rinck's **Organ School**, as Mr. Rogers' original contributions are of great value; and his directions about pedaling and phrasing will be very helpful to a student beginning the study of organ."—W. M. FILLEBROWN, Director of Music, Virginia College.

"I regard it as particularly useful in the altogether too numerous cases of pupils who come to the organ without adequate study of the piano and, hence, are slow and inefficient in their organ manual work. The contributions of Mr. Rogers are of distinct value to the work."—SUMNER SALTER, Williams College.

"The Rinck-Rogers Organ Method, in this new form, should find a large sale, as it is too valuable a work to allow to pass from circulation."—ALBERT RIEMENSCHNEIDER, Baldwin-Wallace College.

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Single Copies.....$0.15
Subscription Price, Per Year..... 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in the United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured*, money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew.

We do not send receipts for subscriptions. On the wrapper of the first issue sent after your order is received is the date to which your subscription is paid. This is a receipt.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of *The Musician*. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of *The Musician*.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in *The Musician*, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

TAPPER'S GRADED COURSE

FOR THE PIANO

Edited and Arranged by THOMAS TAPPER, Litt. D.
Author of Tapper's First Piano Book

The only course that provides all the necessary lessons in Theory, Music Writing, Melody, and Form, **when** and **where** they should be given

What a Progressive Teacher Says: "I have never approved of a Graded Course, because I could never find one worthy of serious thought, but I am delighted with Tapper's Graded Course, and I shall recommend it upon every opportunity."
SARAH I. McCONNELL,
Conservatory of Music of Muncie National Institute.

Among the Distinguished Editors of the Work are: M. Esposito, E. R. Kroeger, M. Moszkowski, John Orth, Albert Ross Parsons, I. Philipp, Xaver Scharwenka, W. H. Sherwood, August Spanuth, Bertha Feiring Tapper

The Course Consists of

1. Graded Studies (Grades 1 to 7) . . . . — The Graded Studies constitute a course in technics, and in all problems that develop therefrom.
2. Graded Pieces (Grades 1 to 7) . . . . — The Graded Pieces offer the most pleasing recreations and repertoire selections, grade for grade with the studies.
3. Manuals for Grades 1, 2 and 3 . . . . — The Manuals contain graded lessons in Music Writing, Melody, Analysis, Form, and Music Theory, *applied to real musical composition.*
4. Four-hand Collection, Nos. 1 and 2 . . — The Four-hand Collections are for the double purpose of sight-reading and for ensemble work. They may be used from the third grade.

Price of each grade, $1.00, postpaid. Liberal Discount to Teachers

MADAM
ANITA RIO
on her present concert tour is specially featuring
TEN MOTHER GOOSE JINGLES

WITH NEW MUSICAL SETTINGS BY
ARTHUR E. JOHNSTONE

The North Wind Doth Blow	One Misty, Moisty Morning
Dance a Baby Diddy	Goosey, Goosey Gander
Twinkle, Twinkle, Little Star	When I Was a Little Boy
There Was a Crooked Man	Little Bo-Peep
Pussy Cat, Pussy Cat	Dance, Little Baby

PRICE COMPLETE, 60 CENTS, POSTPAID

My dear Mr. Fischer:
I have sung the TEN MOTHER GOOSE SONGS by Arthur E. Johnstone in ten different cities and each time they have made a decided hit! This week I did them at the Cornell University for 300 school children and also for the High School children at Conard, N. H. I hope you will advertise the fact that the Mother Goose Songs are a great novelty and sensation. Sincerely, ANITA RIO.

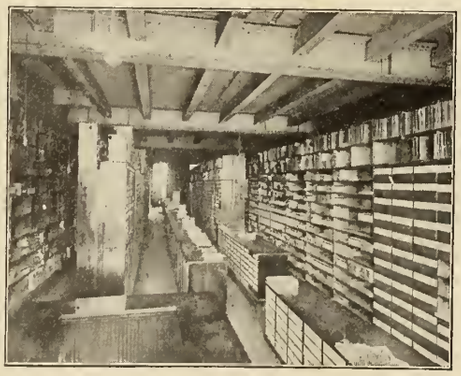
Willis-Cincinnati
MADE SUCCESSFUL BY THE TEACHERS
THEREFORE EVERLASTINGLY FOR THE TEACHERS.



WILLIS SERVICE

is more forcibly illustrated by this cut showing one of our splendid floors than by anything that has ever been written or said. Besides visualizing parts of a mammoth stock, it suggests good tone, a necessarily good clerical force, a smooth system—in a nutshell, the wonderful machine necessary to operate a truly great music store.

IT ALWAYS PAYS progressive musicians to learn all they can about good things in their business. A postal will bring useful literature—the kind you are glad to get—that tells all about Willis Service.

ON TO PLATTSBURG
March
By Herbert W. Lowe
Piano Solo .60 – Published also for Band and Orchestra
Boston - Oliver Ditson Company
New York - Chas. H. Ditson & Co. · · · Chicago - Lyon & Healy

THE COVER DESIGN IN THREE COLORS

THE LATEST PATRIOTIC MARCH SUCCESS

On to Plattsburg

By HERBERT W. LOWE

Piano solo (special price) .30 Postpaid
Piano, 4 hands 75
Mandolin orchestra
Orchestra parts and piano .55
Brass band 50

March with the boys on to Plattsburg,
Swing into line and hike away;
There's one place for us and it's Plattsburg,
One time--and that's today!
March on; ev'ry road leads to Plattsburg.

There's work for all to do
Under the Flag--
Glorious Flag--
The Red, White and Blue. *David Stevens*

THIS march is already a big favorite with Harvard assemblages. It is typically American, magnetic and irresistible in rhythm, with melodies which at once catch the ear and haunt the memory, for they express the ardor and energy of patriotic America.

Summer Reading and Study

*** RESONANCE IN SINGING AND SPEAKING**
By Dr. Thomas Fillebrown
Price, Cloth, **$1.25,** Postpaid

"His directions for deep breathing are, perhaps, the most lucid and valuable ever printed; they are important, not only to students of singing who have to become professional breathers, but to all who wish to enjoy perfect health."
Henry T. Finck in The Nation.

SOME STACCATO NOTES FOR SINGERS
By Marie Withrow
Price, Cloth, **$1.00,** Postpaid

"Suggestive and stimulating. The book will be of value to every student and teacher of vocal art."
New York Times.

***EARS, BRAIN, AND FINGERS**
A Text Book for Piano Teachers and Pupils
By Howard Wells
Price, cloth, **$1.25,** postpaid

"A wonderful little work, absolutely unique, and remarkably complete in every department; it shows deep thought."
William Hatton Green, Philadelphia.

*** OUTLINES OF MUSIC HISTORY**
By Clarence G. Hamilton, A. M.
Price, Cloth, **$1.50,** Postpaid
Used as a Text Book in leading Schools and Colleges in the United States

"This work is truly named outlines of history, for we have seldom or never met with a history so denuded of all superficial verbiage and so consistently true to its title. Baedeker at his best is diffuse and rambling beside this collection of irreducible facts.

"We have often wished for just such a work as this, to which we could turn in a hurry for a date or a fact without having to wade through a lot of gossip of secondary importance."
Musical Courier.

*** PIANO TEACHING, ITS PRINCIPLES AND PROBLEMS**
By Clarence G. Hamilton, A. M.
Price, Cloth, **$1.25,** Postpaid

"Very clear and full of shrewd advice. You have succeeded in a really hard undertaking, and made something that will be very helpful indeed. It is a book that is interesting reading even for such an old hand as I."
Arthur Foote.

*Note: These volumes are contained in the Music Students Library a series of Educational Text Books suited to the requirements of the average student and covering every essential branch of musical instruction. Catalog free on request.
THE MUSICIAN, price $1.50 per year, will be found helpful and inspiring to Teachers and Students.

OLIVER DITSON COMPANY, BOSTON
Chas. H. Ditson & Co., New York **Lyon & Healy, Chicago**

SIX NEW VOLUMES

FAMOUS HALF DOLLAR SERIES

Price, each, 50 cents, postpaid
Will be sent for examination.

Forty First-Year Piano Pieces

A glance at the titles reveals the appeal made to the imagination of young pupils by the pieces in this volume. They are fresh in feeling and interest, but of proven practical value. All are Ditson copyrights, graded I and I-II, and arranged in progressive order.

Forty Favorite Airs in Easy Piano Arrangements

Sung and whistled by generations of Americans, these melodies, in excellent new arrangements (Grade II), afford attractive teaching material for the average young pupil. It is a collection, too, that he will be glad to have for recreation playing.

Thirty Second-Year Piano Pieces

Well-known writers of teaching material are represented in this volume by the most popular of their pieces in Grade II. A pleasing variety in style and mood is secured in this selection from Ditson copyrights, and all possess genuine musical quality.

Twenty Third-Year Piano Pieces

Selected on the basis of proven popularity as teaching numbers, these Ditson copyrights form an excellent collection of graceful, pleasing compositions in Grades III and III-IV, by present-day writers.

Twenty Modern Songs

For High Voice **For Medium Voice**

This list, representative of the finest lyric utterances of modern European and American composers, includes with a few well-known songs others of equal beauty that are expressive of many moods and sentiments.

Songs with Violin

For High Voice **For Medium Voice**

Composers of several countries are included in this well-balanced collection of thirteen songs with obbligato. Some in a quiet mood form a contrast to others that are spirited outbursts of feeling.

"The best book for beginners I have ever handled, and the cheapest also."—(Signed) Sister Irene.

"A most delightful book for children, and carries them through the early difficulties of music in a pleasant yet thorough manner."—(Signed) Agnes H. S. Ritchie.

H. R. KRENTZLIN

SYSTEMATIC FINGER TECHNIC. Progressive studies for the earlier grades by CARL CZERNY. Selected, arranged and augmented with studies after motives from CZERNY. Three Books. Each.....**$0.50**
(Schmidt's Educational Series No. 97a-c)

Book I. 50 Short Studies for the First Grade.
Book II. 40 Studies Progressing Through the Second Grade.
Book III. 24 Studies for Technical Advancement.

FERDINAND MEYER

THE PUPIL'S FIRST ETUDE ALBUM. 53 Easiest Etudes. Price.....**$0.75**
(Schmidt's Educational Series No. 70)

Studies by Gurlitt, Lynes, Sartorio, Eggeling, Franke, Parlow, Schytté, Wolff, and others.

MEDIUM GRADES

CHARLES DENNÉE

75 EIGHT-BAR STUDIES FOR THE INTERMEDIATE GRADES. Adapted, edited and arranged in progressive order. Price.....**$0.75**
(Schmidt's Educational Series No. 115)

"Seventy-five of the more difficult passages in standard works used in studios, each passage fingered and with other hints furnished as to its simplification, will help many a learner over the 'one hard place' of which he so frequently complains."—*Pacific Coast Musical Review.*

PROGRESSIVE STUDIES IN OCTAVE PLAYING. (With special preparatory exercises.) Price.....**$1.00**
(Schmidt's Educational Series No. 37)

Selected from the works of Gurlitt, Parlow, Wolff, Eggeling, Biehl, Foote, Lynes, Spindler, Bach, Mozart and others. The preparatory exercises and a number of new studies have been specially written by the editor for this collection.

ERNEST A. DICKS

SIX SPECIAL STUDIES. Staccato, Cantabile (Melody Playing), Part-Playing, Octaves, Double Notes, Grace and Delicacy. Price.....**$0.75**
(Schmidt's Educational Series No. 125)

"I am using the 'Six Special Studies' by Ernest A. Dicks, and find them valuable and interesting to pupils. They are certainly amongst the best of recent issues—technically and for musical content."—(Signed) E. W. Hanscom.

CORNELIUS GURLITT

Op. 185. 7 SPECIAL STUDIES. Gavotte (Octaves), Capriccietto (Thirds), Scherzetto (Double Notes), Nocturne (Arpeggios), Impromptu (Left hand alone), Barcarolle (Trills), Scherzo (Staccato)..**$0.75**
(Schmidt's Educational Series No. 127)

MORITZ MOSZKOWSKI

Op. 91. DEXTERITY AND STYLE. 20 Modern Etudes. Two Books. Each..**$0.75**
(Schmidt's Educational Series No. 117a-b)

"We cannot too warmly recommend these Modern Studies of Moszkowski. It is rare to meet with technical works of value which have so many musical beauties."—*Musical Courier.*

ALBERT RENAUD

Op. 145. TECHNICAL ADVANCEMENT. 20 Studies (Third and Fourth Grades). Two Books. Each.....**$0.75**
(Schmidt's Educational Series No. 111a-b)

"Both useful in a technical way and rather novel in design. It will repay teachers who are looking for something different in the way of piano studies to examine them carefully."—(Signed) James H. Rogers.

NICOLAI VON WILM

Op. 256. PHRASING AND AGILITY. 12 Etudes. Carefully marked for delicate effects of light and shade and the use of the pedal. Price.....**$0.75**
(Schmidt's Educational Series No. 77)

"Studies of such all-round value are hard to find, or at least this has been my experience during the ten years I have been teaching. It is a real pleasure to recommend the book."—(Signed) Mrs. Howard E. Goodsell.

The Human Side of Development in Singing

Told by ALMA GLUCK to William Armstrong

ART IS MANY-SIDED

NO one in any art can live away from associations and surroundings that stimulate observation and imagination. The painter annot depict a landscape alive with color and atmospheric effects by remaining shut up in his studio. fe must get out into the open, amid scenes that waken inspiration. Again, responsive to demands f his art.

No one needs to live life more fully than the inger who would give living expression to his ong.

By this is not meant what some vaguely describe s sounding depths and scaling heights emotionally. uch experiences come unbidden aplenty; but ose who nurture them as sole stimulus never go ientally beyond the boundaries of an opera aria. Emotionalism has its place, and a big one, in the nging of songs and *lieder*, but like the rich, glowing ffects in certain landscapes, can only be applied here actual requirement for its use exists. To the nger the field of song and the *lied* is as sumptuously aried as is that of landscape to the painter. But iere are as many great things in a quiet, low-keyed ood as in a warm, flamboyant one. And so, to the nger, the eternal emotional *I* is not the sole phase f life to be considered. Others quite as big, and uite as necessary, abundantly present themselves.

Psychological development must proceed breast of the emotional one.

Take, as single instance, Brahms' *Immer leiser ird mein Schlummer*. It is not alone needful to ave suffered deeply oneself to give that song in all s wealth of meaning detail, but one must have bserved keenly and sympathized strongly with hers, even to the point of noting that reflection physical pain existing alongside the mental agony be read into its delivery.

It is ungenerous to say that singers are selfish id self-absorbed. Some may be; but such remain iefly singers of notes, not real interpreters. Their mpathy is oftener confined to self-pity, abundantly isting with the self-centered, and which, in the terpretation of a song, aids to nothing beyond a kly sentimentality.

There are as many moods in songs as there e moods in life.

Composers grasp those moods according to their dividual mentality and capacity of heart. But in e case of the very great ones sincerity and underanding of those moods, however varied, is genuine. ith the singer an understanding vitally to interet them must have been learned not alone from lf-contemplation, but from contemplation of any outside sources.

One life may hold almost every kind of experience; it to do that it must have been lived so long that

ALMA GLUCK

freshness of voice has ceased. Consequently, just as the student turns to authoritative sources for authentic equipment in his special branch, the singer, to learn interpretation, should turn to life, not only his own, but all life about him.

And he must see with his heart as well as mind.

The single query of, "How are you today?" is capable of as many variations in expression as go to make the interpretation of any song. Yet the self-absorbed may grasp very few, indeed, of these variations, because the individual addressed has no place or at best a casual one in his life. Those who have failed to make their very own the interests of people about them exist within narrowed confines.

However, this learning through associations is a privilege granted to the genuinely interested. To such persons knowledge is brought almost unconsciously through human feeling which leaves the heart inspired by it the bigger, and the mind reflecting on it the richer.

No trait shows in the voice more conspicuously than artificiality, unless it be insincerity.

Even the artificial and the insincere themselves readily detect it.

There is a type of mind broadly intellectual, gifted with insight in many directions, so far as its possessor alone is concerned. But give one of this type the text of a song requiring deep human feeling in delivery, and there will be only limited response, though that same individual will give what may be termed "the eternal emotional" with triumphant outcome. Only, unfortunately for him, all the songs required in a repertoire are not of "the eternal emotional" in content.

INTERPRETERS AND SINGERS

If regard for genuinely human qualities could be developed along with the development of tone, so properly considered as a precious asset, we should, perhaps, have as many great interpreters as we have great singers. In keen analysis of some whom we prize as great interpreters, and whose slender vocal endowment we regret, in the next breath, we should find, undoubtedly, that they have in high degree a human understanding and big-hearted sympathy. This is not imputing any lessened value to command of perfect tone, so noble a possession in art, but rather an acknowledgment of the fact that even without that glorious gift a lesser vocal endowment can give a bigger message, one which, combined with perfect tone, would be a greater message still

* * * * * * * * * *

On the part of Madame Alma Gluck there were no years of battling upward for musical acceptance, years such as are commonly regarded fruitful for the development of human sympathy and insight. Yet the other afternoon in a talk on the singer's art, she touched upon thes very traits as factors inseparable from a complete equipment. More than that, she gave reasons for her withdrawal for a year from the concert stage, to which she returns this season, that should prove of interest to every earnest singer.

In a single appearance as débutante at the Metropolitan Opera House in Massenet's *Werther*, Madame Gluck won a distinctive place in music. When she came out on her début night it was to her an experiment rather than an optimistic vision of success, and she was, perhaps, more surprised than any other next morning to find herself the center of musical interest in the New York newspapers. At no point, then or since, has she rested satisfied. At first it was a craving for completer finish in her acting, next it was desire for certain vocal gain under the direction of Madame Sembrich. Always the worth-while things in life contributory to the life artistic stirred her energies, and it is safe to say that this restless ardor will indefinitely continue.

THE ARTIST WHO DOES NOT MOVE UP

The worth of association with people, and a broad human sympathy, it will be noted presently, are held by her as factors indispensable to any whose highest aim it is to prove a sincere medium in expressing the composer. Being logical, Madame Gluck spoke first of a type in which self-contemplation to the exclusion of all else stifles hope. And that type includes those singers who attain to a certain degree of success, yet never get any further. Madame Gluck said this, bearing on the theme:

"Such artists suffer from mental auto-intoxication. Charmed with compliments, they are lulled

into self-complacence. They accept with satisfaction the place accorded them, not pausing to think of other and bigger things to be done beyond in order to hold the public firmly through an overgrowing authority in what they do. Instead they are, as it were, content to plagiarize themselves, to work on what they have done, and become mimics of themselves in consequence. Sadly enough, some become even their own caricatures in the process. Persons of this type, at the outset of their careers inspiring both hope and admiration, inevitably stop before they are great people.

"Live in other people's lives. The more one understands virtuosity in writing, in painting, in motor cars, or in anything which goes to make the world more beautiful and livable, the more certain is a corresponding individual development to follow.

"Music makes a circle about one that chokes.

"One must break through and get into those ever widening circles beyond. And in the life of our busy world there are so many circles, each complete within itself, whether in art, science, literature, or mechanics! Each one of them offers tremendous gain to the musician who, through adaptability, intellectual appreciation, and sympathy, lives in them, and learns mentally and humanly to know different people and the different set of interests which engage them.

"Music alone, like any other calling followed solely, narrows and cramps. Besides, music, to be at its best, reflects all life. A comprehensive thing it is, and properly to interpret it we should know not only music as an art, but all that we can mentally and spiritually assimilate and bring to it.

"Above everything stands need of a sympathetic knowledge of our own kind, which can come alone through associations founded on love and interest in people with whom our lives come into contact.

"Success in music or in anything, works in two ways: It either stimulates or stunts. That trite expression of the blessings of adversity should be qualified in its meaning, for a certain degree of adversity is good. It stirs up courage; it strengthens determination to fight; but continuous adversity kills the soul. After all we are but children. We work for a prize; and if that prize is too long withheld some of us are not strong enough to keep on striving, and stop.

"When my husband, Mr. Zimbalist, and I decided to withdraw for a year from concert appearances, it was through desire to give ourselves up absolutely to mental growth in other things outside our music. Friends said to us that our withdrawal meant a degree of forgetfulness on the part of the public, and that new artists would spring up to take our places. But alone through that very struggle we are bound to be the gainers.

"Success in art always means a continuous beating through barriers.

"To attain to worth in anything means ready willingness never to stop, but to battle through a new barrier as soon as the one intervening has been passed.

PROGRAM MAKING

"As to allowing audiences to dictate to singers what they should sing, that is an individual matter. The public is a great teacher, but to some it is very harmful. It is not pedantic, it takes what pleases it. But when the public is tired, it turns away.

"In the age in which we live, there is no excuse for staleness and repetition in the selection of songs for a program. We have so much more to choose from than singers had even fifty years ago. But in this matter of selection one should choose things of a variety to touch all. To accomplish it we should keep well in mind that the public is divided into two classes, our masters and our children, the very musical and those who have not gone so far in art. Therefore we must learn from the masters and teach the children.

"Certain things there are, however, which touch all equally. Take, for instance, as only two examples, *Du, du liegst mir im Herzen*, and *My Old Kentucky Home*. I believe that in the farthest corners of the world, India, Japan, anywhere, sung from the heart, they will go straight to the heart with or without an understanding of the words.

TO LEARN AND TO TEACH

"In short, considering the two divisions of an audience, I should say that it is the duty of the singer to learn from the one half of it, and to teach the other.

"But it stunts an artist and robs an audience to pander to mere popularity in selecting numbers to sing."

"One should please those who are in a receptive state for good things, and those who attend concerts because they love music and are in a receptive state to be taught its value more fully.

EARLY DEBUT NOT DESIRABLE

"If art is well based, if one has a firm foundation, one is master of the public. And, for that reason, it is safer to err in presenting oneself later rather than earlier before audiences Not until one dare look at the public and say, 'I have this to offer to you with authority,' should one leave the studio. Art must not smell of the candle. What one does technically must be done with absolute freedom; one must have worked so long that it is second nature to do things well without premeditation.

"To think always of the tone while singing cramps the singer and her song.

"What did Schubert care for the individuality in anybody's voice? I look on the singer as a medium of expression for the composer's music, and not a mere searcher for good tone effects. In our natural speaking voice we say what we truly mean in tones that come from the heart. It is the same where the singer's music becomes a sincere medium of expression, the word colors itself unconsciously.

STUDY AT HOME

"If any were to ask me whether, after the present war is ended, Americans would in future study always at home instead of abroad, my answer would be, 'I hope so.' This is my reason:

"While studying music one should live and not neglect the other side of life away from art. The warmth of friendship, the sacrifices in life that relatives make necessary, form a great part of the future artist's development. Such must have friendly intercourse with human beings. In a foreign land, among a strange people, and likely in narrowed circumstances which bar freedom in associations, these conditions cannot exist. The prime thing is to live a perfectly natural and normal life while one is studying, and nowhere can that be done so well as in one's homeland.

MORE THAN ONE TEACHER

"In isolated cases great singers have had but a single teacher. In my opinion, however, one should have several teachers to gain full development. And here in America we have a wealth of teachers, in addition to the many who come to sing and play to us.

"In this latter connection I would say that, to my way of thinking, a singer learns more by listening to a great violinist than by hearing a great singer. When I want to sing a phrase of four or five bars I always imagine that I am a violin. From such pianists as Paderewski, too, the singer by listening may learn so much in clarity and color, particularly in Chopin.

"In short the whole matter of a rounded musical training resolves itself into the fact with which I started: All lives contribute to our art, all art to our lives as artists."

THE NATIONAL EDUCATION ASSOCIATION: DEPARTMENT OF MUSIC EDUCATION

ANNUAL CONVENTION, NEW YORK, JULY 5-7

THREE organizations are prominent in the field of music education in the public schools—the Music Section of the National Education Association which usually meets early in July; the National Conference of Music Supervisors, meeting late in March, and the Public School Music Section of the Music Teachers' National Association, which holds sessions during the Christmas holidays. Each of these organizations approaches the subject from a slightly different point of view, but all are working heartily and aggressively to strengthen the course of education in music.

It is undoubtedly true that the subject of public school music has most vital interest for all who are engaged in musical work, not merely those who have charge of music teaching in the public schools. Educators, music teachers, those with a conservatory connection as well as those working privately, and even well-known critics attached to leading daily papers, are giving the matter wide discussion and sustained thought.

The system of granting credit in a school course for music study carried on outside the school has gained the attention of all organizations of musicians, and the problems incident to making this scheme simple and practical are being worked out in various cities and towns.

Another question of moment to school music is that of the material used and how it shall be adapted to school purposes. A very pronounced effort is being made to do away with direct technical instruction in music in the first three grades, confining the work entirely to the singing of music of the folk-song type, memorizing the words and tunes thus to gain a solid musical experience before beginning technical training. This question is being discussed with much interest.

Closely connected with the general problems of school music work is that of community music work, in which, by force of circumstances, many school music supervisors are taking a leading part, as will be noted from the articles and notes which appear in THE MUSICIAN from month to month.

High school music has a very important problem, namely, the organization and working out of courses in music appreciation, the latter involving ways and means to present adequately the master works of the great composers, and thus pointing the way to the introduction of mechanical devices such as the talking machine and the player-piano.

An abstract of the program follows:

Wednesday: *Ideals of music teaching in school and college*, by Thomas Whitney Surette, Boston. *Absolute music in the elementary school*, by Frederick H. Ripley, Boston. *What should be the equipment in music of the secondary school graduate; what should the graduate take into home, college, community?* by John F. Ahern, Springfield, Mass.

Thursday: *The child voice: The responsibility of the community*, by Henrietta Baker-Low, Baltimore. *Community music*, by Edgar B. Gordon, Winfield, Kans. *Music in a democracy: The spread of the community music movement*, by P. W. Dykema, University of Wisconsin. *Music in the normal school*, by Frank A. Beach, Emporia, Kans. *Music education and public libraries*, by Dr. Otto Kinkeldey, New York Public Library.

Friday: *The psychology of esthetic experience related to music*, by Margaret Floy Washburn, Vassar College. *Music appreciation*, by Leonard B. McWhood, Drew Theological Seminary. *Mechanical inventions as an aid to the teaching of music*, by Prof. Leo R. Lewis, Tufts College. *The folk song*, by Miss Luise Haessler, Hunter College, New York City. The session closed with an organ recital at the College of the City of New York by Prof. Samuel A. Baldwin.

MUSICAL EXAMINATIONS

BY J. LAWRENCE ERB

Among the most important problems which onfront the teacher in a conservatory or collegiate music department is that of the creation and aintenance of the proper standards. There is othing easier, for instance, than to vary, by a ide margin, the requirements for diploma or rtificate, according as one is in a different frame mind or condition of health or attitude, perhaps, toward the candidate. Yet, to be of any al value, a diploma or certificate must represent some definite attainment and a considerable egree of uniformity in the measuring of that attainment.

Then, too, in the college musical department, here credit toward an academic degree is given r practical musical courses, there must be a irly definite and well-graded system of standds, to apply intelligently to the music work. ne very potent reason why so many colleges ve held out so firmly against the giving of ademic credit for practical music courses has en the difficulty in finding a sufficiently detailed d inflexible set of standards to take music out the realm of "snap-courses," and put it where belongs, among the most important disciplinry forces in the curriculum, without at the same ne detracting from its universally conceded thetic, cultural value.

The fault has been largely with the method of aching music. Usually music teaching means e of two things; a dreary grind of technic, a dizzy whirl of pieces. Of these the former undoubtedly of value as a disciplinary process, ile the latter has possibilities on the esthetic, at least, on the emotional side. It seems ther the unusual thing to find, either in the nservatory or in the college, or outside of m, for that matter,—anything like the all-round ining which is given, for instance, in English, th its spelling, grammar, rhetoric, composition d interpretation courses among others.

Of course it will be urged that the college, pecially, is particularly interested in the theoical courses and that the practical courses not really fit its curriculum. Nearly ten years college music teaching (following an equal m of private teaching) furnish convincing evince to the present writer, that, on the conry, the practical courses may be made to fit st admirably into its academic scheme. The ief difficulty involved is method, and the thod, where a number of different teachers concerned, as in a conservatory or departnt faculty, depends largely upon a careful and elligent system of examinations.

The present writer's knowledge is of necessity nfined largely to the results of his own experice, particularly in the institution with which has been connected continuously for over ht years; but, as his methods have, on a numr of occasions, been asked for by earnest stuits of the subject connected with other instiions, he feels justified in setting them down length, but without too great detail, for the istance of such as care to make use of them.

First, then, as to the scope of the examinans. In a properly organized conservatory or sic department, such courses as theory, harny, history of music, counterpoint and appretion in its various phases are handled in varis classes where the customary class methods plicable to any subject from agriculture to logy may prevail. It is in piano and organ violin and voice that the difficulties arise.

The plan pursued by the present writer divides work of each practical course into three phases, *a*, the musical work proper, consisting of the playing (or singing) of prepared pieces; *b*, the mechanical, disciplinary technic work, and, *c*, the sight-reading phase, developing quickness of perception, facility of expression, and accuracy. Each of these is of equal importance, and none may be slighted or omitted.

Examinations are held at the end of each semester though in conservatories not connected with a college once a year might do equally well. It is neither necessary nor expedient to go into details here as to number of grades and the percentage considered necessary for passing. These must vary with the institution. It might be of interest, however, to explain that any pupil who fails to pass in any one of the three subjects is conditioned, but may work off the condition and regain standing, if done during the next semester. But a pupil who fails to pass in more than one of the three is marked as having failed and must take the semester's work, or its equivalent, over, or, at least, will get no academic credit for it, and no advance in standing.

As for the manner of conducting these tests, each examination is divided into two parts. The first consists of a certain number of prepared pieces which are performed before an audience composed of such students as care to attend, and must be done, if not entirely, at least predominantly, from memory, and must be at least a creditable and reasonably accurate performance in order to pass. This part of the examination is really popular, for it amounts to a student recital. Usually a number of candidates appear on the same afternoon or evening, and often printed programs are used.

The second part of the examination consists of a thorough test in scales, arpeggios, trills, chords, and the various technical materials *with the metronome,* at a tempo gauged to fit the various grades. This is followed by reading at sight of two or three pieces of an appropriate grade of difficulty. This part of the examination is held usually in the presence of the examiners and the candidates only, no other students being present.

The examiners are usually the director and the various instructors in the department being examined, though sometimes others of the faculty take part and it might be well occasionally to call in someone outside the faculty.

Of course this sort of a system takes time and energy, but the results will justify the expenditure. And it will soon be found that the students take a more serious view of their work, and appreciate better the justice and reason for the honor paid the musician who not only possesses natural ability but who has cultivated that ability by persistent and systematic and well-rounded study. In other words, it tends to remove the false values which so often attend mere superficial facility or sensuous appeal, and to develop the proper standards of true musicianship and artistic performance.

VON FLOTOW

All of the readers of The Musician know of the popular opera *Martha*, and are more or less familiar with some of its music. They will undoubtedly be pleased to see a portrait of the composer, Friedrich Freiherr von Flotow, who was born in Mecklenburg, April 27, 1812, died January 24, 1883. He studied in Paris, 1827–1830, was professor of composition at the Conservatoire, and composer of a number of successful light operas. After several years in his home he returned to Paris, where he began his professional career. He wrote about twenty-five works for the stage, but only two, *Martha* and *Stradella*, endured. His style was Latin rather than Teutonic, his rhythms clever and graceful, his melodies simple and easy of appreciation.

Martha is one of the few light operas in which the great stars of the opera delight to appear. And it is a favorite with the general public.

NEW YORK CITY BOARD OF EDUCATION PUBLIC LECTURES

In co-operation with the American Guild of Organists, the Board of Education of New York City has arranged a series of organ recitals in school auditoriums in Manhattan and Brooklyn. These are for adult persons living in the community, and school children are not admitted.

CHORAL COMPETITION IN THE PUBLIC SCHOOLS.

Competition between choral organizations has never obtained very much vogue in the United States, except among our citizens of Welsh and German nationality. The Welsh *Eisteddfod* and the German *Saengerfest* are both familiar to our people.

It has remained for a Boston musician, Mr. Samuel W. Cole, head of the Public School Music Department of the New England Conservatory, and director of music in the schools of Brookline, Mass., an important suburb of Boston, to adapt the idea to the work in his schools.

For two years he has held annual competitions in which the pupils of the various seventh and eighth grade schools meet in friendly contest for a prize. Even in this short time good results are manifest in greater interest on the part of the pupils in their regular music work, and in an improvement in the quality of their singing, in tone as well as in the concerted work which is at the foundation of choral singing. At the first contest several schools were distinctly inferior to the others. At the second competition, in June of the present year, the six choirs were so closely on an equality that the winning school had comparatively few points above the others.

We place this suggestion before our readers with the comment that inter-city competitions of school choruses are well worth inaugurating and carrying on, just as much so as the athletic contests which are so well supported by the public. The impetus to a finer art and sustained interest in school music will be considerable.

Readers of The Musician who are interested in this movement can address Mr. Cole at the New England Conservatory of Music, Boston, Mass.

YOLANDE MÉRÖ

A Talk on Conditions in Piano Playing

REPORTED BY HARRIETTE BROWER

(All rights reserved)

"IT seems to me your art has grown, broadened and ripened to a wonderful degree, since you have been in America," I said to Mme. Mérö, as we sat chatting in her music room one forenoon not long ago. "I was deeply impressed with this fact on hearing your recital here this season. As I remember, when you first played in New York, some six years ago, you were all fire and flame—all temperament. Now it is temperament perfectly controlled, though the fire is there, just below the surface. But it is held in fine balance, tempered by unerring taste and skill. You have lived deeply in these years."

"I am older and more matured," said the artist, with her brilliant smile; "I have toned down some of my early enthusiasms. Then I have been a great deal before the public and have played much since I first came here; several tours in this country and one in Europe have been made in that time. It is six years since I had played a recital in New York, and I must confess I was a little anxious. The longer one is before the public, the more reposeful one can appear, on the outside, yet there may be an increasing anxiety below the surface. But we learn not to show it outwardly. It is the nervousness that grips one before going on that is so distracting. As soon as I have begun, played myself out a little, grown familiar with my audience and established a sympathy between us, then I am perfectly at home and do not think of the listeners."

"Lovers of piano music are grateful to have most of the great pianists here with us at present," I remarked.

"Ah, I assure you there are many more over there than here. I could name perhaps two dozen, some of them among the greatest artists we have, some whose very names are unknown on this side of the water. Do not forget that Rosenthal, de Pachmann, Busoni, Lhévinne, D'Albert, Sauer, Schnabel, Hambourg, Carreño, Dohnanyi, Moisiewitsch, Galston, Bachaus, and others are still in Europe. Some of them may not greatly care to come to America; others you will hear later. Those who are here like it and realize the spirit of enthusiasm manifested here.

"What you have found, that pianists have much more to say for themselves and their art than the vocalists have for theirs, is no doubt true. The reason is not far to seek. Is it not because the pianist must be a highly educated person, knowing the many sides of his art? He must not only have mastered the technical side, but must have a knowledge of harmony, form, and counterpoint, and also know something of composition in order to understand the construction of the composition he plays. Then he must know many other things besides music,—literature, poetry, art, life.

"To speak of the mechanical side, think of the years of exhaustive study which must be spent to acquire a modern technic for the piano. A person, however, with a beautiful voice, who spends two years or so with a good teacher, can sing in concerts and even go on tour. With perhaps thirty songs and a couple of arias, one is considered ready to come before the public. But to learn thirty songs would hardly match the labor bestowed on one Chopin étude. Then think of the repertoire a public pianist must have!

PIANIST OR SINGER

"On the other hand, the pianist is at a disadvantage when measured with a singer. Singing is always much more popular with an average audience than piano playing. The "tired business man," wishing to be entertained, will turn out to hear a singer render an aria and some nice English songs, when he could not stand the strain and mental fatigue of listening to a piano recital. This happens all over the country and is a condition we pianists have to contend with. It may not be the condition in New York or in other music centers, where there is a large musical public, where there are many who know and love piano music. Of course musical appreciation has increased greatly, and the understanding of piano music is making wonderful strides, yet for all this the pianist must choose his programs very carefully in order to interest and not weary the average audience."

STUDYING A NEW WORK

"In learning a new work, how do you go at it?" she was asked.

"I play over the piece a number of times, in order to see how it is constructed and to become familiar

with the composer's ideas: then I work them out in detail. I do not say to myself: Now I shall add this piece to my repertoire, therefore I will begin at once to memorize it, first one hand, then the other; then both together. No, I study the content of the piece as a whole, then each point in detail. The result is that, almost before I know how it has happened, I know the notes from memory. This seems to me a better way than to start at once to memorize the notes. For in the effort to do this and to play without them, in the early stages, one may miss many signs and marks which would otherwise be observed, if the printed page were before one. This does not mean that I am averse to committing the music away from the instrument; for I often do this on trains during my travels from place to place.

MEMORIZING A CONCERTO

"In studying a concerto, I first begin with the score, for I must know every note of each instrument of the orchestra as well as my own piano part. The player who does not do this is likely to come to grief during performance in public. It is a great responsibility, this playing with orchestra; much greater than playing solos. For in the latter instance one may cover a slip more easily. It is true one should be able to improvise a passage when playing with orchestra, but this seems to me more difficult.

KEEPING TECHNIC IN REPAIR

"In regard to keeping my technic up to concert pitch, I can say that I do not now practise scales and technical forms outside of pieces. Of course in earlier days I had to do a great deal of pure technic study. But now I find all I need in the pieces themselves. When I have mastered the special forms contained in the piece, I have those and the piece as well.

MODERN MUSIC

"I have not added very much so-called modern music to my repertoire, perhaps because it does not always seem beautiful to me. It may be interesting, impressionistic, symbolic, but not satisfying as is the music of Chopin, for instance. Very few of the extremely modern things make me feel I cannot rest without learning them—that I must play them.

"I have been interested in the work of the Russian Ballet, and the modern compositions they have illustrated, the music of Petrouchka, for instance, and some of the other selections. In Schumann's *Carneval*, it seems to me much more might have been done with it in a choregraphic way than has been accomplished. There is such a great variety in the various scenes, as you know, but as given by the Ballet, some of the best are left out. It does not seem a desecration to me as it does to some people, to see the *Carneval* pictured in the dance. For we have become somewhat accustomed to this through the work of Duncan and others. We have had Beethoven's *Seventh* symphony, the Mendelssohn *Spring Song*, and various Schubert and Chopin pieces portrayed in the dance. Why not the *Carneval*, or any other selection, if by such doing the music is presented more vividly to the imagination.

OLD MUSIC

"I am fond of the old music, pieces which one seldom hears of nowadays. One composer whose music is much neglected, is Philip Emanuel Bach. I have found some lovely and little known things of his. Here is one, a *Rondo* in E major." And sitting down to the piano, Mme. Mérö illustrated as she talked. "I also play the *Organ* concerto in D minor, by his brother, Friedemann Bach. It has been arranged for piano by Stradal.

"Then there are some fine things of Handel (outside of the *Harmonious Blacksmith*). One is the set of *Variations* in D minor, another is a *Gigue* in G minor, both of which are little known. A *Passacaglia* by Frescobaldi has been arranged by Stradal also; and I use a *Gigue* by Hassler. One cannot place more than one or two of these old pieces on a program with safety. I shall add the sonata Op. 110 to my list very soon.

"Next season I shall not make such a long tour as I have done this year, for I want to rest a little. I will play return engagements in the places where I have appeared this year, and perhaps give a couple of recitals in New York."

———o———

THE HARTFORD, CONN., SCHOOL CHORUS

THE music department of the Hartford public high school has been under the direction of Mr. Ralph L. Baldwin for a number of years, and during this period there has been a definite growth in the choral work done by the schools.

May 29 the Choir of the Public High School, 630 voices, with orchestra accompaniment, gave Mendelssohn's oratorio *Elijah*, a work which taxes the ability and skill of a chorus of adults. It is astonishing to the person who has never heard a well-trained, large chorus of high school boys and girls what splendid effects are produced. From a good school chorus to a strong community choir organization is a small step.

THE WORD MUSIC—ITS ORIGIN, INTERPRETATION, AND MISAPPLICATION

BY ORLANDO A. MANSFIELD

By the majority of people, musical and otherwise, the term "music" has been tacitly supposed to be of the same antiquity as the art itself or, at least, the same age as the Anglo-Saxon tongue. As a matter of fact, the term was not used in England until about the middle of the 13th century. Roger Bacon, writing about that period, employs the terms *musicales* and *musicalia;* while another variation, *musicalis,* is, probably, no earlier than 900. Of course these forms, in common with the French *musique,* were derived from the Latin *musica,* a word which, in its turn, came to the Romans, as most of their art expressions did come, through a Grecian channel. The substantive *musica* will be familiar to readers of Cicero, and these will also recall the Ciceronian adjective *musicus,* for example, *musicae leges,* "rules of music," and the substantive employment of the same expression, *musicus,* "musician," also the neuter plural, *musica,* "music."

Probably this term had its derivation from *Musa,* which, in addition to being used to denote the goddess of music or a muse in general, was also employed to denote song or poetry, and, like the Greek word from which it was derived, was used to embrace all the arts over which the nine muses presided. Before leaving this classic ground it is interesting to note that Plautus, in his comedy *Mostellaria* (The Spectre) writes, *"musice hercle aetatem agitis,"* a phrase which may be idiomatically translated as meaning, "You are in clover," "You are indeed living luxuriously at another's expense." Here the word *musice* is used to denote "splendidly," luxuriously, or pleasantly. This adverbial treatment of the term is very rare, and is said to be the only use of the word made by that particular writer.

And if there has been more postulation than proof concerning the origin of the word "music," the former element bulks even more largely when we come to discuss the meaning of the term. That it has meant anything more than a series of definite sounds in succession or combination will be to many a matter for surprise. Yet so modern an authority as the *Century Dictionary* gives, as legitimate meanings of the word music, "lively speech or action; liveliness; excited wrangling; excitement; diversion; sport; and sense of the ridiculous." The latter meaning, concerning which we shall have something more to say presently, is peculiar to New England; while that of excitement is an American colloquialism. The *Standard Dictionary of the English Language* gives as colloquialisms of the United States the following meanings of the word music, "—heated argument, lively or passionate discussion, and excitement; also as a New England colloquialism the meaning "amusement, relaxation or recreation, fun"; and hence "appreciation of the humorous or the droll."

It is the opinion of the present writer of this article that these meanings derive from the Pilgrim Fathers and the settlers of the early Stuart periods. These all spoke the Elizabethan English, the best expression of which is to be found in the Authorized Version of the Scriptures. Here the word is translated, in one case "music" and in the other "mocking," is used in the sense of sport, laughing-stock, or object of ridicule. Thus in *Lamentations* iii, 14, the prophet declares, "I was a derision to all my people; and their song all the day." Then in v. 63, of the same chapter, we have the complaint, "I am their musick," which, in the Revised Version, is made to read "song," as before. Now whatever may be put down to the credit or discredit of the Pilgrim Fathers, one thing concerning them is certain, viz:—that, like Apollos, they were "mighty in the Scriptures." So we may safely conclude that it is to their acquaintance with, and affection for Scriptural parlance and quotations that we owe such use of the word music as would make it mean sport or diversion.

Dr. John Ogilvie, in his *Comprehensive English Dictionary* of 1864, defines music, *inter alia,* as "an, entertainment consisting in melody and harmony." Here it will be noted the idea of sport or diversion is by no means wanting. In some parts of England today an injunction to children to "cease your funning," or to be serious, is often conveyed in the expression "cease your gamut." And in regard to the use of the word "song" as employed in the book of *Lamentations,* who has not heard the expression "sold for a song"? Meaning, of course, sold for a trifle.

The *Century Dictionary* also draws attention to the fact that in golfing "music" denotes the degree of suppleness in the shaft of a club; for example, W. J. Travis, in his *Practical Golf,* says, "The more music there is in the shaft, the greater is the liability to slice or pull."

In Ireland "music," amongst other things, was held to mean the reverse side of a coin, because the latter bore the Irish harp. Hence, "skull or music" would be equivalent to the English "head or tail."

Shakespeare uses "music" as identical with a band or a company of musicians. "The music is come, sir." "Let them play." "Play, sirs." *II, Henry IV.*

Here, perhaps, is the best place for us to utter our protest against that abuse of the term "music" which would make it stand for the pianoforte. Who has not heard of the atrocious expression "music lessons," when "pianoforte lessons" was intended? And who, at one time or another, has not seen an advertisement from some more or less ill-informed teacher announcing that he or she gives "lessons in music," or requesting "music pupils"; when, in each case, "pianoforte" was meant? We hear a great deal nowadays about the tyranny of the organ, the tyranny of the choir, etc. Now, here would be a capital illustration of the tyranny of the household instrument!

By the plural form, "musicks," the 17th century organists and organ builders often designated the short keys of the organ, now termed "black keys," but in those days made more frequently white, the long keys being at that time generally black. And although puns on the substantive are few, it has been reserved for one of Mr. Louis Wain's 20th century creations of our feline friends to be described as "mew-sick."

The expression "band of music," meaning a company of musicians, is as old as the days of good Queen Bess. Only in those days the word was spelled "musitions." Thus William Swayne, in publishing the *Psalter* of his friend William Damon, in 1591, describes the deceased psalmodist as "late one of her Maiesties Musitions." But the phrase, "a piece of music," is quoted in Dr. Joseph Wright's *Dialect Dictionary* as meaning a musical instrument. In this sense it is still used in remote country districts in England and is in common use in the United States, where many English provincialisms are still unconsciously current.

A worthy farmer in the west country of England once appealed to the writer of this article as to whether in a local church orchestra the serpent was not superfluous. "We doant nead that there peeas of baas music," said he. And because the performer on that "baas peeas of music" felt it his duty to continue to "praise the Lord with instruments," sundry and divers members of that congregation betook themselves, ecclesiastically, to fresh woods and pastures new.

The expression "to make music," used in the sense of performing music, generally in a more or less familiar way, is by no means obsolete, nor need we hope that it will ever become so. To us it sounds genuine. It rings true.

The verbal use of the term "music" is now, however, practically obsolete. "To music" has been interpreted as meaning "to influence by music; to set to music; to describe musically; or to produce music"; or even "to entice or seduce with music." Thus in Timothy Davies' *The Gentleman Instructed* (1713), the reader is warned against being "fiddled and musick'd into Hell."

And now from the verb to the adjective. Spenser uses the word "musical" as synonymous with the music in the line

"To fetch home May with their musical."

Shakespeare uses it as identical with "humorous" in *I, Henry IV:* "Then should you be nothing but musical, for you are full of humours." This Elizabethan use was undoubtedly carried over to New England, where, according to the *Standard Dictionary,* "musical" is still the New England slang for amusing, funny, or absurd. Our opinion finds confirmation from John Pickering, of Boston, who, in 1816, in his *Vocabulary and Phrases Which Have Been Supposed to be Peculiar to the United States of America,* asserts that in his day, in New England, "musical" was used in the sense of "humorous." We wonder whether this is the sense in which the word is intended to be understood when we see it in the advertisement for a lady one of whose requirements for a certain position is that she "must be musical"?

But, seriously, does this interpretation of the word "musical," and the corresponding interpretation of the word "music," indicate their common origin from the word "amuse"? Such is the opinion of the *Century Dictionary.*

From the feline to the equine is not a far cry, so we next note that in the Cumberland fells, or valleys, of good old England, a horse with defective breathing, technically known as a "roarer," is often termed "musical." "The weak point about that pony," said a friend on one occasion to the writer of this article, "is that he is so musical."

An absolutely improper use of the word "musical," whether spelled as above or disgraced with a final "e," for example, "musicale," is its application to a musical gathering or a concert. This vile and mongrel term, so regrettably popular in America, was cordially detested by the elder D'Israeli, who described the expression, in his *Curiosities of Literature,* as a cant term "still surviving amongst the confraternity of frivolity." Would that his pungent strictures could help towards ridding us of this objectionable hybrid.

In conclusion, let us note one or two other obsolete expressions. The Editor of the *New Music Review* quotes Mortimer Collins, of 1873, as using the word "musicist." This, however, is not so bad as "pianoist"—an expression we once heard from a college professor. Then Thomas Moore speaks of "musicianesses," which need not surprise those of us who are familiar with the dialects of the West of England. There a male performer is often termed "musicer," "musicianer," and even "musican." According to the *Standard Dictionary,* "musicianer" is still used in America as a disparaging term for a musician. But the terms "musicry," meaning the art of music; "musicness," the quality of being musical; and "musicate," to set to music, are all practically dead, although the latter has a Latin origin, *musicatus,* meaning set to music. Fortunately for us, the English language is sufficiently rich in musical expressions, or in terms wherewith to denote matters musical, as to render it quite unnecessary for us to deplore the loss of these expressions or to desire their resuscitation. Nor need we vex our righteous souls as to whether music shall be spelled with or without a final "k." All we need concern ourselves about is to see sharply to it that we have, as Shakespeare would express it, music in ourselves.

THE MUSIC SUPERVISOR AS TOWN OFFICER

A Study of One Phase of the Community Music Question with Suggestions for Team-work in Musical Development

BY THOMAS TAPPER

I

THE establishment, here and there, of school credits for music study conducted by the private music teacher will result in at least one beneficial condition, namely, a more intimate working relationship between the Supervisor and the private teacher.

In the effort to bring this about, a number of interesting problems are destined to arise. Some will be found to be highly commercial and instigated by outside influences. Others will be found to be nice problems in tactful, resourceful, and just distribution of opportunity and patronage. But all will be found worth facing and resolving for the sake of the practical working basis that is bound to result.

We have in previous issues of THE MUSICIAN presented Community Music from the point of view of the private teacher; illustrating by actual instances how the teacher who is gifted with some degree of altruism and who possesses a little power of organization, may become of immense value as a factor contributory to Community growth and development. In this article and the one to follow we shall attempt to make clear the more obvious relationship which the Supervisor of Music establishes by his very presence in a town.

First let us inquire what the Supervisor should do preliminary to any specific work in the schoolroom. How shall he establish himself? In what circle of relationships may he participate? To what purposes? With what preparation?

Then in the succeeding article let us observe him at his actual task, working unstintingly for the benefit of others, without any particular payment visible even on the nearest horizon, seeking no reward for his time, trouble, effort, hopes, expectation, grievances, results and probably discouragement.

Assuming that the Supervisor has received a substantial and adequate training, that he goes forth to his work feeling unafraid of its demands, what initial steps must he take, what preparatory tasks must he accomplish in order to set before himself, as on a checker-board, the workground of his immediate activity?

He is not, let him remember, to work for himself specifically; but he is to travel his individual way, seeking to do service as his daily inspiration, and by the doing of service to come into intimate contact with his contemporaries.

What must he do that the pathway into this life of service shall be clear to him?

First of all, he will find in all his practice of school music that he is a teamworker and an educator, that he is only secondarily called upon to fulfil the duties of his office through his musical training alone. Therefore he begins to establish himself first in his community relationship. We will assume that he has just arrived, a stranger in a strange land. His only recommendation to the good will of the people is the fact that he has been elected to labor among them.

Who has elected him? It may seem to him on hasty examination of the case that the Superintendent of Schools has engaged his services. But he will find as he studies the town, that back of the Superintendent there is a Board of Education, a comparatively small body of citizens who fill an office created by the people, guarded, and cared for by the people.

The Supervisor will set then that his immediate superior officer is the entire tax-paying population of the town.

By the mechanism of official positions the citizens have instituted a quiet, unobtrusive way for his entry as a public servant. Let us hope it is not so quiet and unobtrusive that the Supervisor is not aware of the truth underlying its structure. He is the servant not only of all the people; in every family where there are children of school age he is friend, counselor, guide, and teacher. He it is who may unlock the world of music to two generations; to the one as singers of songs, to the other as enchanted listeners to the beauty of song as it comes from the lips of their little ones.

Let us hope that the Supervisor, new to the town where we are placing him, will scrutinize this background of home, family, children, and parents, of present effort and future value in service, and find in it so great a reservoir of inspiration that the troublesome details of the daily grind, as we pitifully call it, shall in nowise swerve him from his task and its glory.

II

The Supervisor enters the school system no less a center of relationship in its circle, than he is in his relationship towards the townspeople.

He cannot plough his furrow straight and alone. He is not merely a musician. He may erroneously think himself, on the other hand, one of many shuttles weaving a fabric, called Education. But this is not the truth; he is an active influence, one of many educators that, as a group, constitute the educational system, and with them he is aiming, not to prepare a child for life, but to fill the child's life, here and now, with hours so rich in inspiration that they shall expand more and more marvelously as the child continues to live.

In short, the Supervisor is not an efficient worker with his preparation in music alone. He must have fitted himself, or be in the process of fitting himself, to be a responsive agent of the full round of education. He will find, if he companions with his Superintendent and other inaugurators of educational policy, that the child in the school is not a singing problem, or a figuring problem, or a reading problem, or a grammar problem. He is a man problem, potential in a child.

The whole process of education is not to educate the child, but to protect the man.

Therefore, it becomes a matter less of the application of the pedagogic principles of music than of learning, by slow, persistent inquiry and experiment, the value of music in life; not of rosy, dreamy, distant life but of humdrum life, of good days, bad days, of well-being and of poverty. He must strive to find out why it is that the natural impulse to sing rests within us. Of that impulse he must make the greatest use; learning by the most delicate manipulation to turn the impulse of song into the terms of educational unfolding.

III

As he finds time, the Supervisor must try to comprehend the industrial and commercial activities of the town whose prosperity means the security of his position.

Being really interested in his professional work as the executive of ten thousand people the Supervisor should not hesitate to try his hand for an evening or two at mapping the town. On this map let him locate the geographical layout of the town, its highways and waterways, its relative areas; mark the places locating industries, institutions, churches, schools, library, and any other significant landmarks. It will not be necessary, let us hope, to suggest that he acquaint himself with the musical activities of the community: its church music, musical organizations, number of music teachers, number of school children studying music privately; and the number of families with musical equipment and with musical possib lities of some sort.

One may attempt to secure such facts as these by direct and careful study and inquiry, which shall result in exact knowledge, or by some other means which may result in very hazy uncertainties. If the Supervisor's methods are those which result in exact information, he will find all he can learn about the community in which he works to be of value to him. People in institutions will gladly become his aides.

He should recognize the work that private music teachers are doing with school children, for it has a value in the public educational plan. The public library is of much possible service to him, and he can be of no less possible service to it; for it should procure some good music literature and music scores to be used in conjunction with class work in music. And he should investigate those communities that have added mechanical musical instruments to the public library as a portion of its cultural equipment and determine its value in his own work

Now all this has not to be done on the day the Supervisor arrives in town.

It may take him many months, if not a year or so, to secure these facts—even longer, perhaps, to make the alliances suggested here. But they must occupy his attention, for they are indispensable to his fullest measure of success.

This constitutes a type of work which, after its kind, is as necessary as that other which must go on persistently, namely, the team work with the superintendent and teachers which shall permit music to contribute its best toward the ideal educational results that the teaching bodies are attempting to secure. This side of educational work includes not only exact information, but the patient application which results from the contribution of a subject like music to the curriculum.

The object is to do the best one can to influence and enrich the little citizen who spends a few years of life in school and a great many out of it.

How, in fact, can the art of music do its best that is, be made to do its best on an assignment of years that devotes, of the three-score and ten, perhaps no more than from the sixth year to the twenty-second, to what we call, in our temporizing terminology, school and college life (though they are years of as real life as we ever live), and yield us a sufficient inspiration that we may sing on our way to the very end of our days, joyous in the power to express ourselves that we once learned as a technic and now use as an art.

This should prove at least suggestive of what the music Supervisor may think and do to prevent the art from failure to find its rightful place in the child's education. Such lines of inquiry as we have touched upon will result in facts of the most important kind.

These facts will, in turn, help to vitalize the music work of the schools, securing for it not spectacular value, but that solid education regard which is an earnest of its worth.

———o———

Action and reaction are well illustrated in the relations of teacher and pupil. Good effort is not useless; careless work will exact a penalty.

A PLAN FOR CREDIT IN MUSIC IN THE CHICAGO HIGH SCHOOLS

In a recent issue of the *Musical Leader* of Chicago, Mr. Glenn Dillard Gunn discusses the subject of granting credits for applied music in the high schools of Chicago. We present for the benefit of our readers a digest of his suggestions.

It is altogether probable that the amount of money spent on music education in the city exceeds the amount expended for the maintenance of the various high schools. In Mr. Gunn's judgment this entitles the interests represented in music education, that is the music schools and private teachers, to a place on any committee which may be formed to draft a plan to recognize the work in applied music done outside the schools. At present credits are granted in theoretical branches, and these requirements should furnish a reasonably safe guide in further study of the subject. We reprint some of his suggestions.

"In the first year of High School music the pupil is required to write and to analyze as to signature and structure all major scales. It is obvious that there would be no injustice in demanding that the instrumental student be able to play these scales fluently and accurately. The High School pupil is required in his first year to define all important Italian terms of tempo and expression. It is evident that the music student, therefore, may be required to demonstrate his understanding of these terms in performance. . . . The High School student is drilled in the three primary triads and he sings a great deal of music which includes far more elaborate harmonization. It is therefore evident that the music student applying for credits may be expected to play with understanding of its harmonic structure anything drawn from the simpler classics."

He suggests such numbers as Bach's two-voice inventions, the smaller pieces in dance form. The classic sonatinas, and the simpler sonatas of Haydn and Mozart "without overstepping the standards now accepted in the High Schools." This in the first year. The second year would admit the simpler works by Chopin, Schumann, MacDowell, and the easier sonatas of Beethoven as well as more Bach.

The teacher of singing and of violin playing would naturally parallel the above in terms of his special literature.

"Credits for applied music should be granted by examination only. . . . Three a year should suffice. . . . It might be advisable to recruit an examining board from the ranks of professional musicians whose services, three or four times a year, could be procured at a reasonable fee."

Examinations and the granting of credits should be controlled by the school authorities, the recommendation even of a reputable school of music not being sufficient ground for giving credit.

"Beyond question," writes Mr. Gunn, "the Board of Education, should it see fit to grant credits for applied music in the Chicago High Schools, will enrich the curriculum of its own institutions and at the same time will automatically standardize musical education for the community. Recognition of applied music on a par with other branches will do more to elevate the musical standards of a community than any other single step that now may be taken."

A GREAT FACTORY BAND

"Why shouldn't music appeal to men and women as well as to children? Why wouldn't a song or a piece of instrumental music light up the day or the week for workingmen and women as well as for the boy or girl in school?" Thus pondered John N. Willys, head of a big manufacturing concern, in planning on a scheme of social life and activity among his nearly 7,000 employees.

His reasoning was sound and the result of his pondering was the formation of a brass band, composed of 50 pieces, which, in the two years it has been in existence, has taken a high place in musical circles of the middle west. Today that band, unique in that it is composed entirely of men and boys who are working in an automobile factory six days a week, with only their evenings, Sundays, and an occasional holiday to devote to music, is one of the best organizations of its kind in the country, interpreting only classical and a small part of the very best of the so-called "popular" music.

A molder, machinist, blacksmith, coremaker, auto-tester or common laborer is not the one most critics would choose as a performer in Mozart's *Twelfth Mass*, Beethoven's *Moonlight* sonata, or any of the other really great works of the masters. But in this remarkable Toledo organization it is from among just those men that the fifty musicians have been recruited. Much of the remarkable success attained by the band is due to the efforts of Gustav Koehler, who was engaged as director when the idea of a band first occurred to the employer.

Because the members of the band have steadfastly refused to become professionals—in the sense of accepting compensation for their services—preferring to play for the love of the music rather than for gain, they were given a generous reward. Entirely at the expense of Mr. Willys, who is president and sole owner of the Willys-Overland Automobile Company, at Toledo, and with their salaries in the various departments of the factory going on as usual, the fifty men and boys were given a vacation tour of one month, last summer, which took them to twenty-four of the principal cities of the western part of the United States, through nineteen states and over 9,000 miles of railway travel. One concert was given in each of the cities on the tour and in some cases two in municipal parks, free to the public.

Among the cities visited on the trip, which started from Toledo June 12th, were St. Louis, Mo., Memphis, Tenn.; New Orleans, La.; Galveston, Houston, El Paso, and San Antonio, Texas; Tucson, Arizona; Los Angeles, San Francisco, Sacramento and Fresno, California; Portland, Oregon; Salt Lake City, Utah; Rawlins and Cheyenne, Wyo.; Denver and Colorado Springs, Colo.; Kansas City, Mo.; Des Moines, Ia.; Minneapolis, Minn.; Milwaukee and Chicago.

A GREAT RECOGNITION FOR MUSIC IN THE UNIVERSITY OF NEBRASKA

The Board of Regents of the University of Nebraska have authorized arrangements for musica instruction on a very comprehensive basis, a department of the theory and history of music being made a part of the School of Fine Arts. Instruction in Applied Music (piano, organ, violin, singing) is to be provided by accrediting private teachers of the city of Lincoln. All teachers so accredited will be recommended by the committee on music and a high standard will be maintained.

Instruction in applied music will be given from two points of view. Any student in the College of Arts and Sciences may receive credit for eight hours of applied music, the maximum for any one semester being two hours.

Students who wish to specialize in music in the university will enroll in the special course in the School of Fine Arts. In this course approximately one half of the student's time will be devoted to music and one half to collegiate subjects.

The course adopted is as follows:

First Year: Instrumental or vocal, 5 hours; Harmony and Theory, 2; Rhétoric, 2; Foreign Language, 5; Chorus, Glee Club or Orchestra, 1; Physical Education or Military Science, 1. Total 16 hours.

Second Year: Instrumental or Vocal, 5; Harmony and Theory, 2; Foreign Language, 5; Physical Education or Military Science, 1; Electives, 3. Total, 16 hours.

Third Year: Instrumental or vocal, 5; Theory and History of Music, 2; Foreign Language (French, German, Italian), 3; Electives, 6. Total, 16 hours.

Fourth Year: Instrumental or Vocal, 5; History of Music, 2; Foreign Language (French, German, Italian), 3; Electives, 6. Total, 16 hours.

In the third and fourth years one hour of the five devoted to instrumental or vocal music may go to chorus, glee club, or orchestra. Requirements for teacher's certificate may be met by electives.

No student who is registered for less than twelve hours of work can receive credit for music, and his credit for music will lapse if he fails to make passing grades in a minimum of twelve hours for any one semester.

The university will not offer a purely musical course leading to the degree of bachelor of music. This sphere of activity is referred to conservatories, for the university plans a co-ordination of musical and collegiate instruction.

All students who desire to receive credits for applied music in the university must satisfy one of the following requirements in addition to the regular entrance requirements of the university.

Pianoforte: Candidate must be able to play Czerny's *School of Velocity* and the easier Haydn and Mozart sonatas.

Violin: Candidate must be able to play the first ten of Kreutzer's forty études, and the easier Handel and Mozart sonatas.

Violoncello, Organ and Orchestral Instruments: Candidates must pass entrance examinations equal to the above grade.

Voice: Candidates required to be able to play accompaniments to simple songs on the piano at sight or they may offer similar accomplishments on other instruments.

The instruction in the theory and history of music will be in charge of Prof. Jacob Singer who has been appointed with the rank of assistant professor. For the year 1915–1916 two courses will be offered in this department.

1. Elementary Harmony.—This course deals with the fundamental principles of melody, harmony, and rhythm. Through exercises in ear training and dictation, the ability to think musically will be developed. The study of harmony will be carried through triads and their inversions, seventh and ninth chords, non-harmonic tones, and simple modulations, and will include the harmonizing of both given basses and given melodies. An accurate ear and familiarity with notation are required for admission. Two hours recitation, two hours credit.

2. History of Music. This course aims to familiarize the student with the main epochs of musical development as recorded in the works of composers down to the beginning of the nineteenth century. Ancient and medieval music will be briefly sketched, but greatest emphasis will be laid on the period beginning with Palestrina and ending with Beethoven. It is suited to the needs of those who desire an understanding of music as a part of liberal culture. No previous knowledge of music is required.

Instruction will be carried on by means of lectures and text books, and these will be supplemented by collateral reading and by musical illustrations. Two hours recitation, two hours credit.

PITTSBURGH HIGH SCHOOL CONCERT

The combined choruses and orchestras of the Pittsburgh high schools gave the third annual concert May 29. Inaugurated in 1912 the orchestras have grown from a membership of thirty-five to more than 300; the choruses from 250 to more than 1300. The proceeds from the sale of tickets is used to purchase orchestral instruments which become the property of the public schools and are lent to pupils for study and practice. The music work in the Pittsburgh schools is under the direction of Mr. Will Earhart.

THE IMPORTANCE OF SIGHT-READING AND SOME HINTS ON ACQUIRING IT

BY ERNST EBERHARD

How many of my readers are there who can sit down and read at sight a simple accompaniment well? A much smaller percentage than there should be, I fear.

But why can't you? What are you studying music for? To learn to play a few pieces by hard practice or to be a musician, to understand music, and be capable of appreciating it? If you really understand music, if it is your friend, then you can read at sight easily; if sight-reading is beyond you, the cause lies with yourself, your utter lack of the appreciation of what music really means. That is rather strong language, but no language can be too strong for the carelessness or laziness of a person who will not take the trouble to spend ten or fifteen minutes, two or three times a week, in reading music.

"But there is no use of my trying to learn to read; my eyes are weak," or some other such excuse is what you offer. Fiddlesticks! Apply yourself earnestly and you can do anything. If you have not the technic to read fast, why read slowly; it will all come in the course of time. Try to understand that if you can read a book you can read music. The difference is that you never let a day pass without reading a few words at least, whereas you seldom attempt to read music.

"How shall I set about learning to read at sight?" By reading everything that you can lay your hands on, your copies of this musical magazine, Beethoven, Chopin, rag-time even; everything should be grist which comes to the mill.

There are a few important helps in reading which you had best understand:

First, learn to know, as nearly as possible, what an interval or chord is going to sound like before you play it. You can best do this by taking one new interval every day, and reviewing the old constantly; trying to comprehend the pitch and effect away from the piano, then perhaps singing them, finally playing them to correct your impression. Then do the same thing with triads, chords of the seventh, and their inversions. This, if you have even average talent and apply yourself diligently, will result in a fair appreciation of the tonal effect of notes in about two months. They will have ceased to represent black dots and will begin to represent definite sounds. Try *hard* to tell the pitch of a note by looking at it; this is important.

Next, take up little beginners' pieces. Read them over away from the piano, and then play them. As you become more and more expert, take up music of a greater difficulty. Try to read by phrases, not note by note. In reading chords, always read upward. Keep your eyes on the music; it is only necessary to glance at the keys once in a while. You will soon learn to *feel* where you are. Do not be disturbed or stopped by wrong notes.

"What is the object of all this preliminary work?" To enable your brain to understand the music at a glance. Your fingers will easily learn to obey your mental promptings, while your brain will never learn to appreciate the gropings of your fingers.

Sight-reading will also help you in learning your pieces. You will be able to read a piece at sight better than you could formerly play it after a month of hard practice. This is certainly a material gain.

Then a good sight-reader is in demand; positions high and low, according to your musicianship, are waiting for you.

Supposing that tomorrow you were to be thrown entirely upon your own resources. Untrained, inexperienced in the ways of the world, what could you do? Perhaps the first thing which strikes most people is, "teach music." But, my dear reader, a class of pupils bringing in enough to support you is not acquired in a day, as you will find out to your cost. Besides it is only the good musician who makes a good teacher, and experience must be gained. You may perhaps attempt accompanying, but positions are not readily obtained until you are known and experienced. If you can read well at sight and are willing to pocket your pride, you can support yourself, even if you are compelled to lower yourself to a position which you loathe. But you will not starve. Gradually you will acquire a class of pupils, high-class work as soloist or accompanist will drift in, and you can give up your distasteful work. Many of the greatest musicians have been compelled to begin this way. Berlioz secured a position as a chorus singer in a place where his competitors were a blacksmith, a weaver, and other "extremely" musical people.

It is much better to have your friends say, "Yes, she is good, can play anything you put before her. She is worth studying with, a very good musician," than "Oh, she is a good pianist, but can't read a simple accompaniment; I don't call that knowing anything about music."

It is rather strange to a good musician to see the misunderstanding of music and music study by students and parents. Many a talented young girl will never succeed, because, although destined for the profession as a soloist and uncommonly gifted, her parents will not make her study *music* instead of piano pounding, saying to her instructor, "Please do not teach her those things because we want to make a concert pianist out of her instead of a teacher." And all those who make a failure as concert pianists become teachers, without any training for it at all. Strange? Not at all. They have contented themselves with playing notes instead of rendering music intelligently and in a musicianly manner.

Harmony, counterpoint, etc., *must* be studied if you expect to be an artist. It is a rather significant fact that there has never been one really great pianist who has not been something of a composer; in fact, most great composers have been great pianists. Clementi, Beethoven, Chopin, Liszt, Rubinstein, Paderewski, perhaps you have heard of their compositions? Don't you think that there may be something in all this talk?

Look around at your friends in the musical line; see what attracts you and what repels you. It is mainly the lack or the possession of *understanding;* draw your own conclusions. Have your little repertoire, but do not be above, or much more correctly, below learning to read at sight and understand music at a glance. For this the study of theory of music and composition is necessary. Are you content to stay on the outside, looking in, or are you going to *know* music as you know your native tongue?

A CIRCLE OF REMINDERS

BY WILLIAM BENBOW

"Lest we forget" is the burden, not only of Kipling's poem—and of every other great poem—but of every teacher's effort. There is nothing new in the teaching of the *Recessional.* The same ideas may have been presented to us a hundred times, but somehow they did not stick, or "call" very loudly "to remembrance." Why the difference? Because it is the art, with which the poet arranged and adorned the material, that makes the poem an impressing reminder. The choice of word, the metre, the rhythm, the rhyme—all these are a part of the attractive means employed. This art of reminding is worth while learning well.

But how can we apply this to our music-teaching? Evidently we cannot be quoting poetry over little points we wish to impress. The student would consider us either eccentric or sentimental, or he would construe it and resent it as a moralizing attitude. But there are short, pithy expressions that have stood many a year's wear and still attract, especially the young. We may legitimately use the poet's trick of rhyme and alliteration.

For example, there is one thing that needs repeated emphasis in the pupil's acquisition of good habits. The average pupil will place his music on the piano rack and at once sit on the piano stool and plunge right in, without taking a moment of forethought as to the height of the stool, or of having both hands in position, or of looking at the signature, or of getting his foot ready on the pedal, etc.

We might call his attention to this by merely saying, "Get everything ready before you begin." That is good enough English, but as a reminder it is very weak. But suppose we say, "Look before you leap" or use Von Moltke's motto, "Erst wägen, dann wagen" (first weigh, then venture). Here "alliteration's artful aid" adds weight to the impression. And, it may be added, this proverb style invites a closer attention, because the pupil recognizes that the wisdom it conveys is not simply the individual opinion of the teacher, but is a bit of racial experience.

Again, every pupil needs a reminder to practise. The old phrase, "Practice makes perfect" is almost too trite, but the Scotch way of putting it, "Mony a mickle makes a muckle," sticks faster.

There are other useful reminders besides those we use in oral instruction. One day a lad, playing a review exercise, stopped short after a certain crucial point, and pointing to an ornamental, semi-transparent sign I had hung against the window pane, said:

"You see, whenever I practised that place, I just thought of that sign, 'Don't make the same mistake twice,' and I made up my mind that my fourth finger must go on the right key in that hard part. With my back to the window all day, I forgot the motto was there, but frequently pupils would refer to it, and that is proof enough of its worth.

There are also effective reminders besides spoken or written words. The Emperor of Germany is an astute monarch. He knows that by mere word of mouth he cannot hope to keep imperial consciousness uppermost in the minds of his subjects. There are too many other vital interests shouting for consideration. But he appreciates the mnemonic value of a picture. So he has about a thousand photographs of himself taken every year, in his different official uniforms, and these are in evidence everywhere in public buildings, stations, shops, etc. One may not have read one of his speeches from one year's end to the next, but one cannot escape his ubiquitous photograph and what it stands for.

What is the use of having a picture or bust of Bach in our studio? Let us see. It is said that J. S. Bach copied the first book of his *Well-tempered Clavichord* three times: and besides suites, partitas and symphonies, he wrote eight volumes of organ compositions, and, almost unthinkable, three hundred church cantatas. Can we put before any student a nobler exemplar of industry? Knowing his life his picture says as plainly as possible, "Let me remind you again of my own estimate of my work when I said, 'I am what I am because I was industrious; whoever is equally sedulous will be equally successful.'"

The highest things in art are not exclusively for the artist and the connoisseur, but for mankind.—*Moritz Hauptmann.*

THE NEW SCHOOL OF PIANOFORTE PRACTICE

BY LOUIS ARTHUR RUSSELL

I

The practice of pianoforte is a fine art. Hours may be spent in the gaining of certain results, where minutes properly used would suffice. How to save this possible waste of time and energy is what we all desire to know, and the new teaching, the modern pianoforte pedagogy has, in a great measure, answered the question.

The great difference between the Carl Czerny type of pedagogy and such teaching as that of Wieck, Tomaschek, Deppé, Pyschowski, Leschetizky, and their like is in the superior place given by the latter class to *thought*. Where results were formerly reached through many repetitions of melodic figures presenting various digital problems, the new teaching reduces the practice of pianoforte to a system of scientific principles, well-defined and synthetic in progression; separating logically, the mechanical from the esthetic or emotional (expressional) elements, properly assigning to each department of playing its practical sphere of importance, and so correlating the physical with the intellectual and spiritual processes as to bring about, quickly and rationally, an equipoise between them, thus fitting the student for artistic playing more rapidly and thoroughly than the former school could have made possible.

The new teaching, properly presented, makes for digital sureness, power, and celerity, and while these mechanical necessities are developing, musical interest of the deepest nature is cultivated. The process is at once delightfully fascinating and quickly productive of conditions which open the way to an enjoyment of the wealth of good music of all schools with which we are so surrounded. The old time platitudes of five-finger figures, etc., are well nigh discarded; the long continued practice of exercises exclusively in C (on white keys) is replaced by a more rational process which acquaints the student, early in his study, with the various keys, and overcomes the old time fear of keys removed from C or in the nearly related tonalities.

PREPARATORY MANUAL TRAINING

The new teaching recognizes the importance of having the mechanical apparatus, the fingers, hands, and arms, first put in training, developing their various pianoforte playing powers, before the apparatus is called upon to do extreme artistic things.

In other words, the pianist is both artisan and artist, and as a painter or a sculptor must have his tools, his brushes, or carving implements in order, before he begins his work, so a pianist needs to have his tools adjusted (sharpened, if you will) before he can do his best work at the pianoforte.

The new teaching recognizes the fact that the longest process for making fingers limber, elastic, and facile, is through the daily repetition of exercises at the keyboard; and it also recognizes the other fact that if the hand be put under mental control and trained, mechanically, for its future pianoforte playing requirements, correct habits of condition, shape, position, and movement are soon so fixed that much of the dreary waste of finger exercises and the like, is made entirely unnecessary. The hand, having been trained to correct pianoforte playing movements, has gained a fine subconscious habit, which may be named (if not natural) second nature, the mind having been trained to a clear sense of the musical and technical intent of a phrase or passage, to the end that the player finds all passages of a certain character alike in the ease of playing, as they are alike in the mechanical requirements for their proper delivery.

RELATION OF THE MECHANICAL MEANS TO THE MUSICAL RESULT

So, when properly guided, the student studies technic along the lines of certain mechanical principles, which fit exactly certain corresponding requirements at the keyboard of the pianoforte in the interpretation of a certain class of passage as set forth by composers in their music.

Experience has taught the deep students of pianoforte literature that the outlines of compositions, with reference to their mechanical content, can be quite closely differentiated and defined, as also can be the processes of playing these various classified figures; realizing this fact, truly synthetic processes of culture for pianists have rapidly developed in recent years, which build technical power and habit, adapted to the exactions of the instrument's literature.

TODAY AND YESTERDAY

A properly planned course of study in pianoforte playing, today, differs widely from what was considered correct a generation or two ago.

The instruction book of former times was of impressive size and contained much material, but seldom offered the student more of real method of study than a few pictures, showing the author's ideas of hand position, form, etc., the book at once entering into the work of "playing." This class of instruction book is rapidly being displaced by the newer and truer methods of today; and even the "maiden-teacher" who teaches for "pin money" and the boarding schools, where the flimsiest of teaching has so long obtained, are, happily for art, looking higher than this popular book of exercise material, known as a "method." Gradually they are coming to a realization of the fact that pianoforte playing is a serious thing, and that its technical study is a deep science, requiring a high order of ability.

The practice process of the modern student of pianoforte is rigorous and exacting: It begins with a training of the body through exercise, that it may withstand the strain of five or more hours of application each day. This is closely followed by a system of hand culture, finger training, etc., directly in line with the mechanics of pianoforte manipulation. This hand training process includes close mental control over nerve and muscle, alongside of a rigid course in rhythmics, accentuation, etc., leading to digital freedom, speedy action, and power.

While this development of preparatory elements of finger action is progressing, always with due reference to the final use of the facility gained, in true pianoforte playing, there is also going on a systematic culture in the mechanical elements, of artistic touch, that is, the various processes of finger, hand, and arm action in the production of the varieties of staccato, marcato, and legato touches.

All of this study, which may be upon a plain table surface, is of a preparatory nature and requires but a short time, before the principles are well enough established with the student to allow his going to the keyboard, where everything thus far learned finds its direct playing application. This work, leading to the keyboard, is of such variety that the student is soon engrossed in interesting music study and the progress is so rapid that in an incredibly short time the average student is prepared for the study of smaller compositions at the pianoforte.

The great advantages following the use of modern systems of preparatory study may be summed up thus:

The physical requirements are of first consideration, and this most important, though formerly entirely neglected item, is treated rationally and synthetically as a necessity for the development of accurate and forceful playing ability. Without this strict preparatory course, the student, unless of unusual talent, flounders through his pieces and seldom accomplishes a really accurate and firm touch or an interesting manner of performance.

This new process of study is logical, it separates the mechanical from the musical training and advances one proposition at a time, thus giving the student a fair chance of mastery over the difficulties of pianoforte playing.

Rhythm and Accentuation, those vital things in pianoforte playing, so seldom accomplished by the old school amateurs, are introduced in this new teaching, with so few distracting items as to make the mastery of them an easy, progressive item of study, which is sure and speedy.

Character of Touch is also so subtly introduced at the table through the study of the "means of delivery," for each touch characteristic, that the artistic result is soon realized when the student reaches the piano, and the average talented student of the new school readily reaches a point where his playing shows character of touch and style, which was formerly thought to be the possession of the public performer only.

While finger and hand manipulation (gymnastics, table exercise, etc.) are continued indefinitely, it must be borne in mind that once a principle is comprehended by the student, without waiting for facility in its use, he is taken to the piano for the final exemplification of the principle as a practical item in interpretation.

Ten Reasons for Studying Bach

By Arthur Traves Granfield, Mus. Bac.

He makes you think logically.
He makes your fingering certain.
He trains both hands equally.
He builds up a touch of solidity and certainty.
He teaches you to find a hidden melody and bring it out.
He creates in you a taste for pure music.
He teaches you independence of fingers and hands.
He develops your powers of penetration and assimilation.
He enlarges your faculty of appreciation.
He builds up for you a solid, profound style of playing that will enable you to approach the master-works of other composers with confidence and a reasonable assurance of success.

HOW GOOD MUSIC MAKES ITS WAY

[In the *Evening Mail* of New York, there is a department entitled *Music in the Home* devoted largely to increasing interest in music as presented by the phonograph and player-piano. In a recent issue Victor Herbert was quoted on the subject of the appreciation of music. We reprint here a few of the ideas he set forth]:

"Everyone responds naturally to rhythm and melody. When the instincts recognize the merit of the simple things it is easy enough to develop a taste for the more complex.

"Let people discover good music for themselves. Don't try to warn or instruct them. I have noticed that the owners of phonographs or player-pianos almost inevitably progress toward a better class of music, and find themselves eventually enjoying the classics quite as sincerely as they once enjoyed ragtime.

"I would say that practically all music has something to recommend it. But its germ of merit may be obscured by certain obviously bad features. A song may suffer through its cheap and vulgar words. A melody may seem weak because it is unoriginal. Often a piece fails to make a lasting impression owing to the musical illiteracy of its composer. This is the fault with most of our ragtime, which, in its rhythmic basis, is perfectly good music.

"We have been very late in making a start in America. But the present generation shows signs of acquiring musical taste and understanding in a natural manner."

EFFICIENCY SELF-APPLIED

BY THOMAS TAPPER

No. 12 of the Efficient Music Teacher Series

I

WE meet, often enough even in these prosperous times, the man who explains his lack of success by a hit or miss random selection from the following sentences, taken from the *Unambitious Man's Practical Guide to Conversation.*

The world is against me.

I am down on my luck.

A man can't get half a chance these days.

What's the use to try to compete with the rich.

The world owes me a living and I propose to get it. (Lying in bed and accepting the package only when all charges are prepaid.)

The boss is down on me.

Favoritism is the whole thing these days.

These merely vary a fact that even the half-thoughtful reader can discover for himself.

As a matter of truth men who employ other men are honestly and sympathetically concerned in their welfare. They seek every conceivable means to make work more essentially valuable to the man and to the institution for which the man labors. They point out (that is, employers point out) every visible doorway into Opportunity. They even teach men how to walk up to the doorway. They show them how to knock. They tell them what to say. They even push them gently in towards the opening as the door swings on its hinges, wishing them good luck. A great number respond and go forward; but here and there some go forward less efficiently than they might. They employ the aids near at hand less effectively than it is hoped they will.

II

There is a road to Efficiency. Business men have discovered it for themselves and are eager to make it a plain and visible pathway for the worker. There has been prepared by Mr. Joseph H. Appel, of the Wanamaker Stores, an exceedingly interesting tabulation, summation, or perhaps plan of the steps along the road leading to Efficiency which we present on this page.

The fundamental truth overlooked by most teachers of Efficiency is that DOING precedes KNOWING. We must not merely Know to Do; we must Do and Do ceaselessly, in order to Know. Then, Doing and Knowing, permit Growing and Living.

We have before us, then, a cardinal principle which may be expressed thus: We may not travel the road to efficiency save in this order of procedure:

To Do	To Grow
To Know	To Live

It is necessary now to see how we may subdivide each of these active principles, for, applied, they lead directly to freedom.

THE ROAD TO EFFICIENCY

DOING

1. ANALYZE—your work, yourself, your record, by the what, why, and how system.
2. PLAN YOUR WORK—schedule it; put it in definite shape on paper.
3. WORK YOUR PLAN—put it into practice; despatch it on schedule time.
4. CHECK-UP—and follow up to see that the work is done.

KNOWING

1. ASK QUESTIONS—take counsel and learn.
2. ADAPT YOURSELF—adapt yourself to conditions or else change the conditions.
3. STANDARDIZE—yourself, your methods, your work, your play, your life.
4. USE COMMON SENSE—reason, judgment, right feelings, true intuition.

GROWING

1. SET A GOAL—form ideals and desires; keep your standard high, raising it constantly.
2. STRIVE TO REACH THE GOAL—and the reward.
3. DISCIPLINE YOURSELF—to do, to restrain.

LIVING

1. CO-OPERATE—give and receive; live and let live; fair play to all for the good of all.
2. HAVE FAITH—brook no discouragement, no matter how hard the road.
3. MAKE YOUR WORK YOUR LIFE—not a means to an end, but the end itself; not a necessary evil, but the supreme good; the complete development of self in a purely unselfish spirit.

Having perceived the trend established by the subdivisions of the four essentials—Doing, Knowing, Growing and Living—it next becomes necessary to learn how to analyze oneself by further subdivision of these four essentials.

To this end study the nine subdivisions under Doing, as given in the following table. Grade yourself by percentages on each quality. Aim to discover in which of the nine qualities you fall below 100 per cent, and make that particular quality the one upon which your efforts shall be directed.

DOING

1. HEALTH—whole; normal; vigor; strength.
2. ENERGY—activity; physical and mental power.
3. UNDERSTANDING—knowing and thinking power; intellect; intelligence; perception and comprehension; skill; good sense.
4. ACTION—the will in command; willingness to do; the body and mind in action; active energy; diligence.
5. ENDURANCE—stamina; backbone; industry; bearing with patience; unyielding; holding the fort; lasting quality.
6. HOSPITALITY—politeness; courtesy; tact; graciousness; charm of manner.
7. CAREFULNESS—with care; serious attention of mind; mindful; heedful; exactness; accuracy, precision; according to rule; celerity; promptness; punctuality.
8. THOROUGHNESS—going "through" to the end; finishing the job; carrying the "Message to Garcia;" following and checking up; planning and systematizing.
9. CONCENTRATION—close attention; focusing one's mind and effort on the thing to be done; "this one thing I do."

We have not taken, nor is it our habit to take, sufficient trouble to inquire into the constituents of Knowing. We work blindly and consequently for no particular point. We read without purpose. We remember without specific intention. We let the imagination play a riot of scenes for us, and so we go forward into the essential conditions of life prepared rather by accident than by intention. Let us then examine ourselves on the basis of a percentage rating to determine our Efficiency in the next given tabulation.

KNOWING

1. OBSERVATION—seeing; not merely looking.
2. READING AND STUDY—including the asking of questions in order to learn.
3. MEMORY—intensified by interest and retained by association of ideas.
4. IMAGINATION—constructive thinking; getting the customer's viewpoint; looking ahead, foresightedness.
5. APPLICATION TO PRACTICE—practical use of knowledge.
6. PRACTICE AS A HABIT—practice makes perfect.

Topsy had no false ideas as to how she came along into the status of her young maidenhood—she just grew up. A logical and significant commentary upon us all. Our growth is not ordered. We take no pains, most of us, to pursue our life's work and interests as Peary persistently pursued, in his quest for the North Pole. North Poles are not lying around loose in various places. And the only one we have is so remotely placed that it seems to be, according to Mr. Peary, a considerable trouble to reach it. It is even so with the objective of our growth. It is no accident. It is a definite, specific condition or value unto which we may attain by exploring as earnestly and persistently, with as much enthusiasm and preparation as did Mr. Peary.

GROWING

1. ABILITY—mental and physical equipment.
2. DEPENDABILITY—character, integrity, reliability.
3. INTEREST—enthusiasm in one's work; earnestness; zeal; eagerness to do and to learn; energetic striving.
4. SELF-RELIANCE—self-confidence; positiveness; poise.
5. TENACITY—grit; stick-to-it-iveness.
6. CONSERVATION—of time, energy, money, opportunity.
7. VISION—breadth of mind and view; open-mindedness.
8. AMBITION—the desire to grow.
9. LOYALTY—to the business; to others: to one's self.
10. FAITH—in self, in others, in business: in one's own convictions.
11. INITIATIVE—doing the right thing without being told; devising ways and means; originality.

And finally to what end and by what means shall Doing yield us knowledge, and knowledge awaken in us the impulse for Growth, as the impulse of the tree organism makes not only for a main trunk division, but for this as the supporter of branches divided and subdivided into well-nigh countless units of energizing, dynamic life? Here then follows Living and its purposes, making for contentment in achievement which inspires to team-work for co-operation.

LIVING

1. GOOD HABITS—purity; temperance; moderation in all things.
2. GOOD COMPANIONS—mental and moral help.
3. SELF-CONTROL—the real self in control; wise use of one's equipment.
4. HAPPINESS—an asset in work; well-being; prosperity; comfort, security.
5. THRIFT—another asset in work and efficiency.
6. CONTENTMENT—equable state of mind conducive to good work; the feeling of one who does not needlessly pine after what is beyond his reach, or fret at the hardships of his condition; at the same time earnestly striving to improve himself and conditions.
7. CO-OPERATION—working together on signal; giving orders and taking orders; the composite; live and let live; give and take.

COUNTING

BY HERBERT WILLIAM REED

Counting aloud is but an audible means of proportioning time. Many a pupil has been compelled to look upon it as the end of all things musical. Were this truly the goal, then banish it forever.

It is only a help in aiding the pupil to produce a succession of beats in rhythmical order. It is a mental proposition first of all, and must be backed up with care and thoughtfulness. Without these elements the pupil is nearly as bad off with it as without it. It may very properly be called, "The outward sign of an inward grace." Without a clear perception of successive orderly beats inwardly, there is no possibility of the counting being accurately timed.

The counting of a great many students may be easily indicated in lines of varying length, thus: 4–4 |—— —— — ——|—— - —— —| |—— —— — ——|. The pupil readily perceives the division of the staff into measures, but rarely discovers by himself that the beats within the measures should be as regular as the following: 4–4 |—— —— —— ——|—— —— —— ——| |—— —— —— ——|.

"What's the use of counting?" is a question often asked. To the earnest student I say:

"It is necessary to measure many commodities. Would you buy silk or ribbon of a salesman who did not calculate the number of yards required? Would you purchase sugar at a store where the clerk made a guess as to how much should go into a bag for a dollar? Would you allow a druggist to fill your prescription if he failed to measure the ingredients of the medicine you are to take? Of course you would not care to do business at places that would put out goods in any such manner. You would insist that things be measured when you do your buying. Is your teacher to be blamed then, if he insists that you measure *time* when you begin to sound notes of different values?"

When pupils simply guess as to how long certain notes are to be held, I remark that I prefer to have my notes *measured*, or *counted*, if you please. If you buy my eggs you certainly want them counted. Well then, be just as generous, and count the notes you deal out to me.

"But I just can't count."

"That is an absurd admission to be made by one who has been going to the public school for a number of years. It is a reflection upon your intelligence. Repeat with me quite slowly and evenly, 'One-two-three-four-one-two-three-four.'

"Now do it a dozen times just as carefully. Of course you can count. You are at the same time exercising care and thoughtfulness, and that is the secret behind all good counting. Tap with a pencil, beat with the hand, pat with the foot, until the steady succession of beats is clearly understood. Try also three-four and six-eight measure."

Long experience in teaching has brought to me many discoveries. Among them is this fact: "I can't count," is often but a polite way of saying, "I won't count." Some pupils come to us, it is true, who have never been taught to count. To them, counting is a perfect enigma.

I lead students through the trying waters every season. Some bring studies and pieces in the more difficult grades which they have learned after a fashion, but have no conception of how to count. It is quite impossible to teach counting with such a grade of material containing every variety of notes. They have already learned to read with a considerable degree of facility, so they cannot be put to work on the first pages of a beginner's book with any satisfaction.

In the first place they must be made familiar with the different note values. Next it is an easy proposition for them to realize that, if a quarter note is given one count, a half note will have two counts, a dotted-half three counts, and a whole note four counts. If an eighth note is allotted a count, then a quarter has two, a dotted quarter three, a half four, and a dotted-half six counts.

A hymn-book contains excellent material for beginning the practical work. At first, select hymns containing only quarter, half, dotted-half, and whole notes. One thing must be insisted upon, namely, the counting must be regular and the notes must be played to fit the counting. Every measure must have the same number of counts, and the counts of one measure must be just as long as the counts of every other measure. This sounds like child's play, but it is instruction which must be repeated over and again before the habitual rhythm-perversionist learns to "keep time."

Gradually more difficult combinations of note-values will be taken up. Make a careful selection of medium grade studies and pieces with the rhythmical feature predominating. It may be months before one can safely be allowed to "go it alone"; but perseverance will lead to the desired end in most cases, and the student will bless that teacher who firmly and persistently insists on counting.

This is a true and faithful saying: "The pupil who will not count gets nowhere."

SOME RECENT BENEFICENCES FOR MUSIC

The royal and practical manner in which Major Henry L. Higginson has stood as financial sponsor for the Boston Symphony Orchestra, has been, during many years, a subject for pride and satisfaction, not locally alone, but the country over. His good example has no doubt stimulated many others to give their mite and to do what they can toward Community development in one or another form.

Latterly, however, music seems to have appealed to the philanthropist more generally than ever before as a channel along which to make his good deeds live after him. An anonymous giver, of Philadelphia, has offered to pay all deficit of the City's Orchestra for a period of five years on condition that there be established in that time an endowment fund of $500,000.

The Associated Press has reported the gift of the late Bryan Lathrop of $700,000 for the founding of a National Conservatory of Music in Chicago, in connection with the Chicago Orchestra.

Another donor and well-wisher of Chicago, Mrs. Elizabeth Sprague Coolidge, has given $100,000 (the second in this amount) to the Chicago Symphony Orchestra Pension Fund.

Readers of The Musician will recall that less than a year ago the Cincinnati Symphony Orchestra was made beneficiary by M. Cora Dow in the sum of $700,000. Truly these are great sums, but as nothing in respect of greatness to the influence they will have upon civic life.

Don't Skip the Steps

BY GEORGE HENRY HOWARD

"Line upon line, precept upon precept, here a little and there a little." This is a good motto for every student who aims to avoid ramshackle processes in building up his education. Joseph Stransky the conductor of the New York Philharmonic Orchestra, recently said, "I notice that in this country people use elevators whenever it is possible. I hold that (in musical education) every stair is necessary." That is wise counsel. I have seen students lose thousands of dollars' worth of opportunities by the neglect of such valuable advice.

A NEW INVENTION FOR HAND DEVELOPMENT

Our attention has recently been called to an English device for stretching the hand and strengthening the fingers and the wrist, now on the market under the name *The Techniquer*. This invention has received favorable comment from the musical press of England; among the notices we see one from our esteemed contemporary *The Music Student*. It is well known that many persons who have passed the age of youth find trouble in securing that pliability of muscle so essential to efficient technical work on the piano, organ, or stringed instruments, except after prolonged practice of special exercises. The inventor does not claim that *The Techniquer* will render practice unnecessary, but that many hours of useless practice can be saved, and that its use for a period of from five to ten minutes twice per day will produce most satisfactory results. It would seem that it is worth while for teachers and players to examine *The Techniquer*.

A SUMMER NORMAL SCHOOL WITH FREE INSTRUCTION

That the New Hampshire State Department of Education believes music to be an important element in public education is evident from the announcement of the School for Training of Teachers and Supervisors of Music, held in connection with the regular summer term of the State Normal School at Plymouth, N. H. A course of four weeks was announced, beginning July 3, with free tuition to New Hampshire teachers, a small fee being charged students from outside the state.

In addition to the courses in methods, ear-training, music reading, theory, melody-writing, school orchestra, and conducting there was a normal course in violin technic based upon the Mitchell Public School Class Method for Violin.* An interesting feature of the 1915 school, continued this summer, was the community singing conducted by Mr. Abbott on the beautiful lawn below the Normal School buildings. These "sings," held just at twilight, were enjoyed and participated in by the people of the town, the students, and the many summer visitors.

Dr. E. L. Silver was in charge of the Summer School and the faculty of the Music School included Arthur J. Abbott, Belle Campbell, Wilhelmina Keniston, and William Bilbruck.

THE LOCAL CHORAL SOCIETY AND ORCHESTRA

Red Wing, Minn., with a population of a little more than 1000 is not satisfied with developing a good choral society, but, under the leadership of Mr. H. C. E. Schmidt, is developing a local orchestra as well, to assist in the musical work of the community. This orchestra has a membership of twenty-five and is made up of laboring men and school children, for special occasions being strengthened by a few professional players.

The Musician takes pleasure in noting this and other evidences of organization of a community's musical forces. What Red Wing has done can be done in other places, smaller as well as larger. To know that in another town some one has realized a vision which you have had is to be certain that you can do what your dreams call for. It is the initial step in getting the right people together which counts.

We do not take the space in The Musician to mention these things as *news*, but to encourage the doubter, the hesitant musician, to show how others have done things, and what they have accomplished, and, especially, because we want you to do the best you can in your own town.

The Editor of The Musician is waiting to hear from you about music in your town, not personalities, but movements for uplift musically.

*Published by Oliver Ditson Company.

A PRACTICAL PLAN OF INSTRUCTION IN SCALE PRACTICE

BY GEORGE HENRY HOWARD

II

The playing with two hands may now begin in the use of the contrary motion form. The two thumbs may be placed on middle C and the hands be carried in opposite directions (*but not to return*, at this stage of the work). Let the thumb of the left hand be placed farther upon its key in beginning the scale than the thumb of the right, and as the playing goes on the fingers resume their usual locations.

In playing with two hands most pupils are inclined to strike keys more forcibly and thus lose the delicate finger drop (with its artistic tone production) which should have been well learned in the first single finger exercises, and which a little special care at this point will now preserve. Let them be required to play very softly and their good habits of easy finger motion will not be lost. Then, too, the requisite softness of the thumb stroke will need some special care.

These first five scales (C, G, D, A, and E) can be played in contrary motion a total of not more than 20 to 50 times, and if done in the careful manner here suggested can be dropped for the following work.

The scale of B is fingered by the R. H. in just the same way as those preceding; but in the L. H. the way of fingering is reversed, that is, the group of four keys comes first, in descending, and therefore four fingers are used first and three fingers afterward. Why is this done? Simply to avoid putting the thumb on the black key F sharp, which would be awkward. *Two or three times of silent playing* will be useful so as to *realize* the finger-successions, before making the tones. The pupil should observe that the general "plan of threes and fours" is adhered to, although reversed here for the reason just given.

The scales of F sharp and C sharp may be next given, thus completing the series of scales which use sharps. In each of these two scales the pupil must observe the scale itself (as having features not used in the other scales, namely a key with a new name, F now being discarded and the name E sharp being used instead). Next, the pupil must observe the different ways of fitting the fingers to the keys. Our principle of fingering by "threes and fours" is still adhered to, although its application is modified so that the thumb shall not come on the black keys. Silent playing, *with plainly defined finger motions*, should precede playing with tones in each scale.

A review of all these scales with sharps is also usually needed here.

The following plan of learning the regular order of the keys is recommended as the best:

Teacher points to lowest C and says:

Scale of C has no sharps or flats ("black signature"). He then points to 8 adjacent keys, counting them aloud, (C, C♯, D, D♯, E, F, F♯, G), then proceeds, "Next keynote G; the scale of G has one sharp which is F♯. He then points to 8 adjacent keys (being sure to begin with G, the one he ended with before), pointing to G, G♯, A, A♯, C, C♯ and D; the scale of D has two sharps which are F♯, and C♯." We should thus proceed until all the sharp keys have been represented.

Or, if needful to simplify the above routine, the mention of the signatures may be omitted at this time and given in the next lesson as a separate exercise.

This scheme of counting 8 keys, black and white, just shown, the teacher will notice, is by a succession of perfect fifths. It will commend itself by its perfect simplicity and reliability.

The scales which have flats may next be given, and with each scale the plan of "threes and fours" should be clearly observed. The pupil should be led to realize the principle, and never, for a moment, be allowed to be confused because of a *different application* of the principle. Hands should here be used singly again for some days or weeks.

In the scale of F the L. H. has the same fingering as the scale of C; but the R. H. begins with a group of four keys (unlike the key of C) but a group of three keys follows for the upper part of each octave.

In the scale of B♭, the 4th finger (of R. H.) should begin the scale, habitually, until the pupil has become sure of the *regular* fingering. (A few weeks later, in a review, the exceptional fingerings may perhaps be shown, that is, 3d or 2d finger for keynote in R. H., or 2d finger for keynote in L. H.)

The keynote should be understood as belonging to a group of four (F, G, A, B♭), which fact shows the reason for beginning the scale with the 4th finger. And in the L. H. the keynote should be understood as belonging to a group of three keys, (B♭, C, and D), which flat shows the reason for beginning with 3d finger on B♭.

The same principles with their varied applications should be instilled carefully into the mind. Thus mere rules and regulations and printed characters are not alone to be depended upon. Thus discrimination and intelligence may be expected to rule more and more in the mind of the pupil, not only in scale study but in other musical study.

We should also observe that the enharmonically related scales should be studied thoroughly with the purpose of differentiating them, that is, learning to observe each one by itself, and each as contrasted with another.

Thus the scales of B and C♭, although "the same thing" on the keyboard *should be learned as different scales*. With this aim in view the pupil should be required to point to the keys forming the scale of B, naming each one: then playing slowly, naming each one aloud before sounding its tone. Immediately following he should point to the keys forming the scale of C♭ naming each aloud; then he should play the scale of C♭ slowly, naming each key before striking.

He should proceed thus with the other coincident keys until the habit of invariably discriminating between them is formed.

Exercises with two hands in contrary motion may now follow, in one direction only.

After the scales have been practised by each hand in one direction (ascending with R. H. and descending with L. H.) they may be taken in the reverse directions.

It is now necessary to have a little preliminary drill in moving the hand over the thumb; this will prove "an ounce of prevention."

Place fingers of R. H. at (highest octave on keyboard) on the keys F, G, A, B, C. Press down silently F; then move the hand and arm (while the thumb remains down and yields to the hand and arm) until the 2d and 3d fingers touch D and C. The *finger-tips should not be lifted from the keys* during this motion of the hand and arm, but should glide over them lightly. This motion does not need a large amount of drill if good conditions are assured. The same motion should be practised in other parts of the keyboard.

After the hands have practised these singly they may be taken together in contrary motion, beginning far apart and coming together to make an ending. When the motions have been perfected in one direction with one or more weeks of practice, then the scales may be played both ascending and descending in contrary motion.

Now scales in 6ths and 10ths may follow; then minor scales (in the harmonic form, first).

Any plan of instruction which thus combines study and practice, though proceeding with apparent slowness, will yield vastly larger results in three months of work than any plan of drill without study.

Musical Training in the Home

We shall make no real progress in music in this country until we come to consider a training in the rudiments of music as an essential point in the education of our children.

Too often parents excuse their remissness on the ground that their children show no spontaneous desire to study music. Because a child shows no such desire to study reading, writing, and arithmetic, do we for that reason permit him to neglect totally these subjects? No normal child desires to study *any* subject, and a failure on the part of a child to crave a musical education should not be permitted to exempt him from such training.

In my opinion, the average child should begin to study music at the age of eight or nine, and for at least two years devote an hour a day to the exercise of it.

After two years the child's preference and aptitude may safely be consulted in regard to further study. But, in any event, the two years of study have not been wasted, for he has already learned something that will be of use to him all his life.

Musical training, especially in the home, should have a place in the training of every child.

(Bruno Huhn in an address before the General Federation of Women's Clubs, New York.)

PROBLEMS OF THE MUSIC TEACHER

BY PETER F. BIEHL

The greatest problem confronting a music teacher is how to secure new pupils from time to time.

Some may say that a teacher, if successful in teaching the art, will have no trouble in getting new pupils, that his scholars will be an advertisement for him, and new students will come as a result. Which is true in a way.

But this is a day when it is not good policy to sit back in a chair and depend too much on reputations. We must reach out and take the initiative, and in various ways secure new talent. To suggest new ways to obtain them is the object of this article.

No business has been built up into a success without some advertising. The teacher cannot expect people to come flocking to him without first informing them that he is in the teaching profession and open for new pupils.

The tendency in this age is for people to pay attention to that which is brought to them and to forget that which is not. So if the teacher wants to keep his name and profession in good publicity, he will have to bring his name before the people, from time to time. "It pays to advertise" stands good in the teaching line as well as in others.

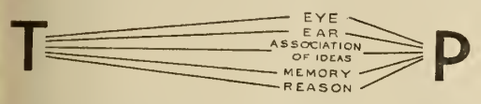
Get cards around among people who are musical and those who have musical instruments in their homes.

It is a good plan to inform every owner of an instrument (the particular kind on which you teach) in the town and surrounding country, by printed card or notice, that teaching music is the teacher's profession. Or a personal call is better, asking if any of their family is contemplating taking up music.

The teacher should tell pupils to advise their friends that he is teaching music, thereby having a working force that will help indirectly. Ask the proprietors of various music stores in the town to display a business card in a conspicuous place in their store, that all buyers of music can see same, when they call there.

DIAGRAMMING TEACHING PROBLEMS

A TEACHER who is a great believer in using a pencil to make a graphic appeal to the eye of the pupil, sends us the diagram reproduced below which he uses to present the somewhat complicated processes which are used in music teaching. For ex-



ample, the Teacher appeals to the Pupil through the eye, the ear, as organs of sense perception; through the law of association of ideas to assist the memory in fixing ideas and principles; and through reason in convincing him of the truth of a statement.

THE MUSICIAN will welcome diagrams of a pedagogic character. Remember that many persons are eye-minded.

A MUSIC STUDY CLASS

PRIMARY work is now considered of the highest importance. The idea once familiar that it is wise to begin with a cheap teacher to determine if the child will be interested in music is no longer held by parents. The elementary teacher is becoming more and more a specialist who wins success with children because she is always "on the job," always looking for new suggestions and devices to make her work better.

Readers of THE MUSICIAN may recall the editorial discussion several months ago under the caption "There is plenty of room at the bottom." Quite a number of letters have referred to this article, and we have reason to believe that it has strengthened those who have already chosen elementary work and influenced others to take it up.

Miss Helen Douglas, of Newtonville, Mass., has sent us a program of the demonstration given in May by members of her Pianoforte and Theory Students' Association, the work being confined to First Grade pupils, so far as this program was concerned. She says in a letter: "The beginners do not come to the piano until after they have thoroughly mastered the rudiments of music. These are taught through various drills and games, the hands and fingers being trained at the same time by exercises in technic. A portion of the lesson is also devoted to ear training, the study of the history of music, writing of scales, melodies, etc."

Included in the program in addition to separate numbers performed by the pupils, were, 1, class exercises in the naming of keys, intervals, sharps, and flats, etc.; 2, exercises in drill of notes, leger lines and spaces, explaining the meter mark, musical terms, etc.; 3, exercise in scale drill.

As suggested before, this kind of teaching requires that the teacher be alert, progressive, and always on the lookout for ideas. Miss Douglas writes:

"I keep my eyes and ears wide open, read everything I can find on the subject of beginners (you have no idea how many splendid articles there are in THE MUSICIAN*), think and plan, and try to improve my method because, of course, there must be a marked improvement each year.

"The pupils have two class lessons a week for two terms, or twenty weeks. The third term (of ten weeks) they have one class theory lesson a week and one individual half hour piano lesson a week."

Miss Douglas is helping THE MUSICIAN to realize its ideal of SERVICE TO MUSIC EDUCATION by giving us an opportunity to tell other teachers of the methods she has used with success.

Every teacher who reads this account has an obligation to her art and her profession to aid in improving conditions. Let THE MUSICIAN place your best IDEAS before others.

*We are glad to know that so many are helpful.—The Editor.

NOTES ON THE MUSIC IN THIS ISSUE

READERS of THE MUSICIAN who keep their copies of the magazine will find it worth while to make a record of the compositions which show usefulness to their needs. This is especially the case with teachers who keep a repertoire record. For example, if a certain issue should contain a piece for the left hand alone this fact should be noted on the card record; so with another piece which contains lesson material for octaves, arpeggios in the left hand, a mixture of scale and broken chord passages for right or left hand, staccato, full chords, etc.

The present issue contains several numbers which have permanent value and should be made part of a teaching repertoire. But it is not safe to rely on memory in these matters. Get the record down on paper or card where it can be consulted when need arises.

If some one urges "I haven't the time to do this sort of thing," the answer is that it takes more time to look up one item not recorded than it does to record ten items. Try it.

On to Plattsburg, by Herbert W. Lowe, after a thorough tryout in Boston and Cambridge,—in the latter city making a big hit with Harvard men—is now being introduced in all parts of the country. It is typically American in rhythmic life and vigor, with melodies which fill the ear and haunt the memory, in a word that kind of music which the public hears with delight and wants to hear again. It is not difficult and sounds at least one grade higher than it really is, owing to its snappy, brilliant qualities. The chorus furnished to the trio is an exceptionally attractive feature, one that will interest the crowd. This March is also issued for four hands, for orchestra, for band, and for mandolin orchestra.

Mazurka, in A minor, op. 33, No. 1, by Emil Rhode, is an easy Grade III piece in which the dance rhythm is to be made reasonably prominent. Technically the most useful portion is in the left hand part of the section marked *piu mosso*. These passages should be practised by the left hand alone until they have been learned by mind and fingers, and can be played at a higher speed than the natural tempo of the piece.

Dance of the midgets, Op. 135, No. 2, by J. Frank Frysinger, is a capital little piece for teaching use. Notice the phrasing in the first two measures, the slur extending into the second measure followed by three staccato notes. A common fault of players in a passage such as that in the first measure will be to give two strong accents to a measure. Only one is required in this instance, on the first note in the measure; no accent on the third as will easily be the case if the pupil is not careful. All these longer phrases should be played smoothly. The composer has marked the second section *mollemente* (softly). Let the melody be made to "sing" with sustained tone so as to contrast with the more broken character of the first and third sections.

Petite gavotte, by N. Sokolovsky, a Russian composer, has several interesting passages, for instance, the fourth measure in which it is necessary to substitute one finger for another while holding down the piano key. This applies to both hands. In music of a polyphonic character it is frequently necessary to shift fingers in this way, and also to pass one finger over another as in the second measure, the second over the fourth, to facilitate the playing of the scale passage in eighths while the thumb sustains the whole note. In the tenth measure the fifth finger passes under the fourth in order to reach the E while the thumb moves from G to G♯. In the sixteenth measure the thumb and first finger pass over the fourth. Practise these unusual fingerings slowly and carefully before trying to play the piece as a whole.

Twilight (*Crépuscule*), Op. 220, No. 8, by Paul Rougnon, is from the French repertoire, a graceful drawing room piece calling for finger facility and a polished style. In learning the piece count six to a measure, and note the leap between the third and fourth counts in quite a number of measures, the chords working out a little melodic figure A-G, C-B, F-E, etc. These chords are marked to be arpeggiated, that is rolled quickly, in the harp style. In the thirteenth full measure and elsewhere the arpeggios in thirty-second notes come on the third and fourth counts and must pass from one hand to the other smoothly. The passage near the close marked *con delicatezza* must be played as lightly as possible, like a feather tossed here and there on a current of air.

Summer idyl, Op. 112, No. 5, by Bernhard Wolff, for four hands, will interest players who like duet practice and prove useful for teachers who conduct classes in ensemble playing. This is not an arrangement of a solo but a piece composed for ensemble. Both parts have interest, for the secondo is more than a mere accompaniment of chords. Therefore it is advisable that the players exchange parts. The general rhythm is that of the German ländler or country dance, not at all rapid, but with clear cut accents.

Prelude, Op. 2, No. 5, by Jules Isserlis, is from the Russian repertoire, with harmonic character of the modern type; generally speaking the composer has cleverly avoided doing the obvious. He has also used to advantage the interlocking position of the hands in playing the full chords at the beginning and elsewhere. This piece is presented without fingering or pedal marking and it is suggested that pupils who are sufficiently advanced use it as a study in working out the very evident problems of fingering and the artistic use of the pedal. The time will be well spent if the possible effects are realized by the player.

Miniature, Op. 30, No. 2, by Vladimir Rebikoff, one of the modern school of Russian composers, is thoroughly representative of Russian musical ideas in melody and harmony. It will be noted that the composer has placed no signature at the beginning, for the reason that there is so much change in tonality. Therefore the executant must be on guard to play exactly what is written. Chromatic signs are introduced as called for by the harmony. The editing is by Constantin von Sternberg, well-known to our readers as a composer and pianist, himself a Russian by birth. This *Miniature* is taken from a volume of music by Russian composers recently published in THE MUSICIANS LIBRARY, edited by Mr. Von Sternberg.

Berceuse, by Mary Knight Wood, for violin, is a charming melodious number of moderate difficulty, except the passages which call for use of the high positions.

Andante pastorale in A, for organ, by William R. Spence, presents a delightful composition, available for use in recitals or the "church service." A practical, convenient registration has been indicated.

Left undone, song by Charles F. Webber, for medium voice, is a simple lyric in which the singer can show a sympathetic style and clear diction, for each word counts in making the song effective.

Disillusion, by G. A. Grant-Schaefer, for high voice, is a song of highly dramatic character, short, but filled with artistic quality, one which will attract attention on a concert or recital program. It can also be had in D for medium voice.

Song to the Saviour, sacred song by Adolph M. Foerster, is out of the ordinary style of sacred song, in that it is not an attempt at producing mere melody but a voice part which shall interpret the changing sentiment of the text. Here is a song to test the power of a good singer, but which contains the spirit of the finest song rendering, that of presenting a message. For low voice in E minor.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

AN EXCHANGE OF IDEAS

HOW "THE MUSICIAN" HELPS TO REALIZE IDEALS

EVERY government embodies certain ideals or purposes which it strives to realize through ideas; every man has certain definite ambitions which he hopes to achieve. And the force which drives both governments and individuals is that of IDEAS.

What potency there is in an idea! It not only supplies the initial energy, the motive force; it also furnishes the power to make the activity continuous. Only for the ideas which men of big brains are giving to the world we should stagnate. Active-minded men and women are clamoring for ideas to suit their purposes. Some of these ideas they gather seemingly from their own efforts; some they owe to eager minds which have proved the value of the ideas and offer them freely to others.

This indicates very clearly the province of an educational musical journal such as THE MUSICIAN, namely, to gather from all possible sources helpful, stimulating IDEAS and place them before those who are interested in that class of ideas. The following paragraphs from a letter written by a reader of THE MUSICIAN, tell how well we have carried out our ideal in this one case:

"I will try to tell you, in a few words, a little something of what THE MUSICIAN means to me:

"I consider it a necessary part of every music teacher's equipment. The advertisements keep one informed in regard to new publications and often offer an opportunity to add to one's library at a "before publication" price, which means quite a saving. The articles are interesting, instructive, make one think, and often cause one to work out new ideas of one's own.

"In reading THE MUSICIAN I do it from two viewpoints, first, how it will help me in my study and teaching; second, how it will help my pupils in their work.

"When I find an article which deals with a point I have been trying to make plain or impress upon a pupil I mark the article, jot down the page and subject on a piece of paper, and hand the latter to the student when he comes for his lesson, requesting him to look it up in THE MUSICIAN and read it before he leaves the studio. It usually impresses the subject on his mind and brings good results.

"The NEWS ITEMS and WITH THE SCHOOLS AND TEACHERS keep one in touch with what is going on and with what other teachers are doing. The TEACHERS' FORUM is also very helpful.

"It is impossible for a constant reader of THE MUSICIAN to be a sluggard, satisfied to move along in a rut, or only take a half-hearted interest in his work. The EDITORIALS alone would keep one wide awake and make one have an intense desire to improve one's work.

"I find THE MUSICIAN intensely interesting from cover to cover. I have not told you half what THE MUSICIAN means to me and to my pupils, but I must stop before I have tired you completely."

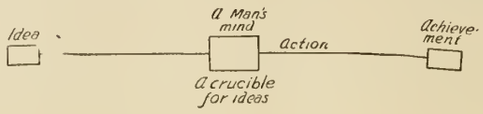
In the same mail with the preceding lette was another which contained the followin short but stimulating comment in line with th other, but without detail. It reads: "I hav been a constant reader of THE MUSICIAN fo more than ten years and owe it much, in mor ways than I can explain. To say the least it to me a great source of inspiration and help.

Perhaps THE MUSICIAN has brought to yo also, some ideas worth while.

—o—

THE MUSICIAN will help you in your ca of your pupils. Read what one teacher say in the first column on this page. Insist th every one of your pupils subscribe for Th MUSICIAN.

THE CALL OF AN "IDEA"



A Pharaoh had an idea. The Pyramid still stands.

Euclid had ideas. Geometry is a science we study today.

Mohammed had an idea. It sways millions today.

Columbus had an idea. America is its expression.

Beethoven felt the surge of an idea. The *Ninth* Symphony is an epoch in music.

Morse and his successors worked on ideas. World-wide activities depend upon them.

Edison had an idea. The phonograph.

You will have an idea,—perhaps one is coming into your consciousness now—which has worth-while qualities. You are the one to work this out.

Your idea may not endure for centuries. It may not create new political, social or industrial conditions. But it will have influence, have value.

Will you respond to the Call of an IDEA?

Here, in a condensed form, is a statement from a young woman who worked out IDEAS which appeared worth while to her, which she translated into achievement:

Three years ago she went to a small city in one of the Middle States, the sixth music supervisor in six successive years. The children had no interest in a subject thus changingly presented to them. Here are some devices used to gain the good will of the pupils.

A series of concerts by the children in the grades; the senior class of the High School to give an operetta; a High School Orchestra was organized; a chorus club in the High School was drilled for a concert in January.

The six concerts of the grades represented a crescendo of interest, the last being given to a crowded house. No admission fee was charged but the proceeds of free will offerings netted enough to buy a set of drums for the orchestra. The Senior operetta was put through successfully, the pupils willingly attending the necessary frequent rehearsals, a handsome net profit being secured.

The second year showed equal success with the concerts by the grade pupils, and additional instruments were purchased for the orchestra. *Pinafore* was given by the Seniors with a net profit of $150. Before the performance the entire cast was taken to a neighboring large city to see the opera given by professionals of high standing.

During the third year the city celebrated its centennial anniversary and the work of organizing and preparing a chorus of 150 voices from the schools and church choirs was placed upon the school music supervisor. The interest raised by the first attempt at community music singing was so great that a carol service of 2000 children was arranged at the Christmas season.

This teacher soon learned one lesson:

The person who seeks an easy life must beware of IDEAS. They eat up time, if one tries to carry them out.

Here is an instance: "When I went to H—— I bargained to work four and one-half days in the week. No arrangement was made for work outside of school hours. *But one cannot watch the clock and succeed. I never measured time* I realized it was my business to make the work a success. To use the expression of the factories I did 'piece work' and not 'work by the hour.'"

She is now in a new field, in one of the larges cities of the country, gaining new experiences enjoying contact with leaders in her profession and gaining power and knowledge for the work which the future has in store for her.

Music Education has a stirring cal for those who will hear.

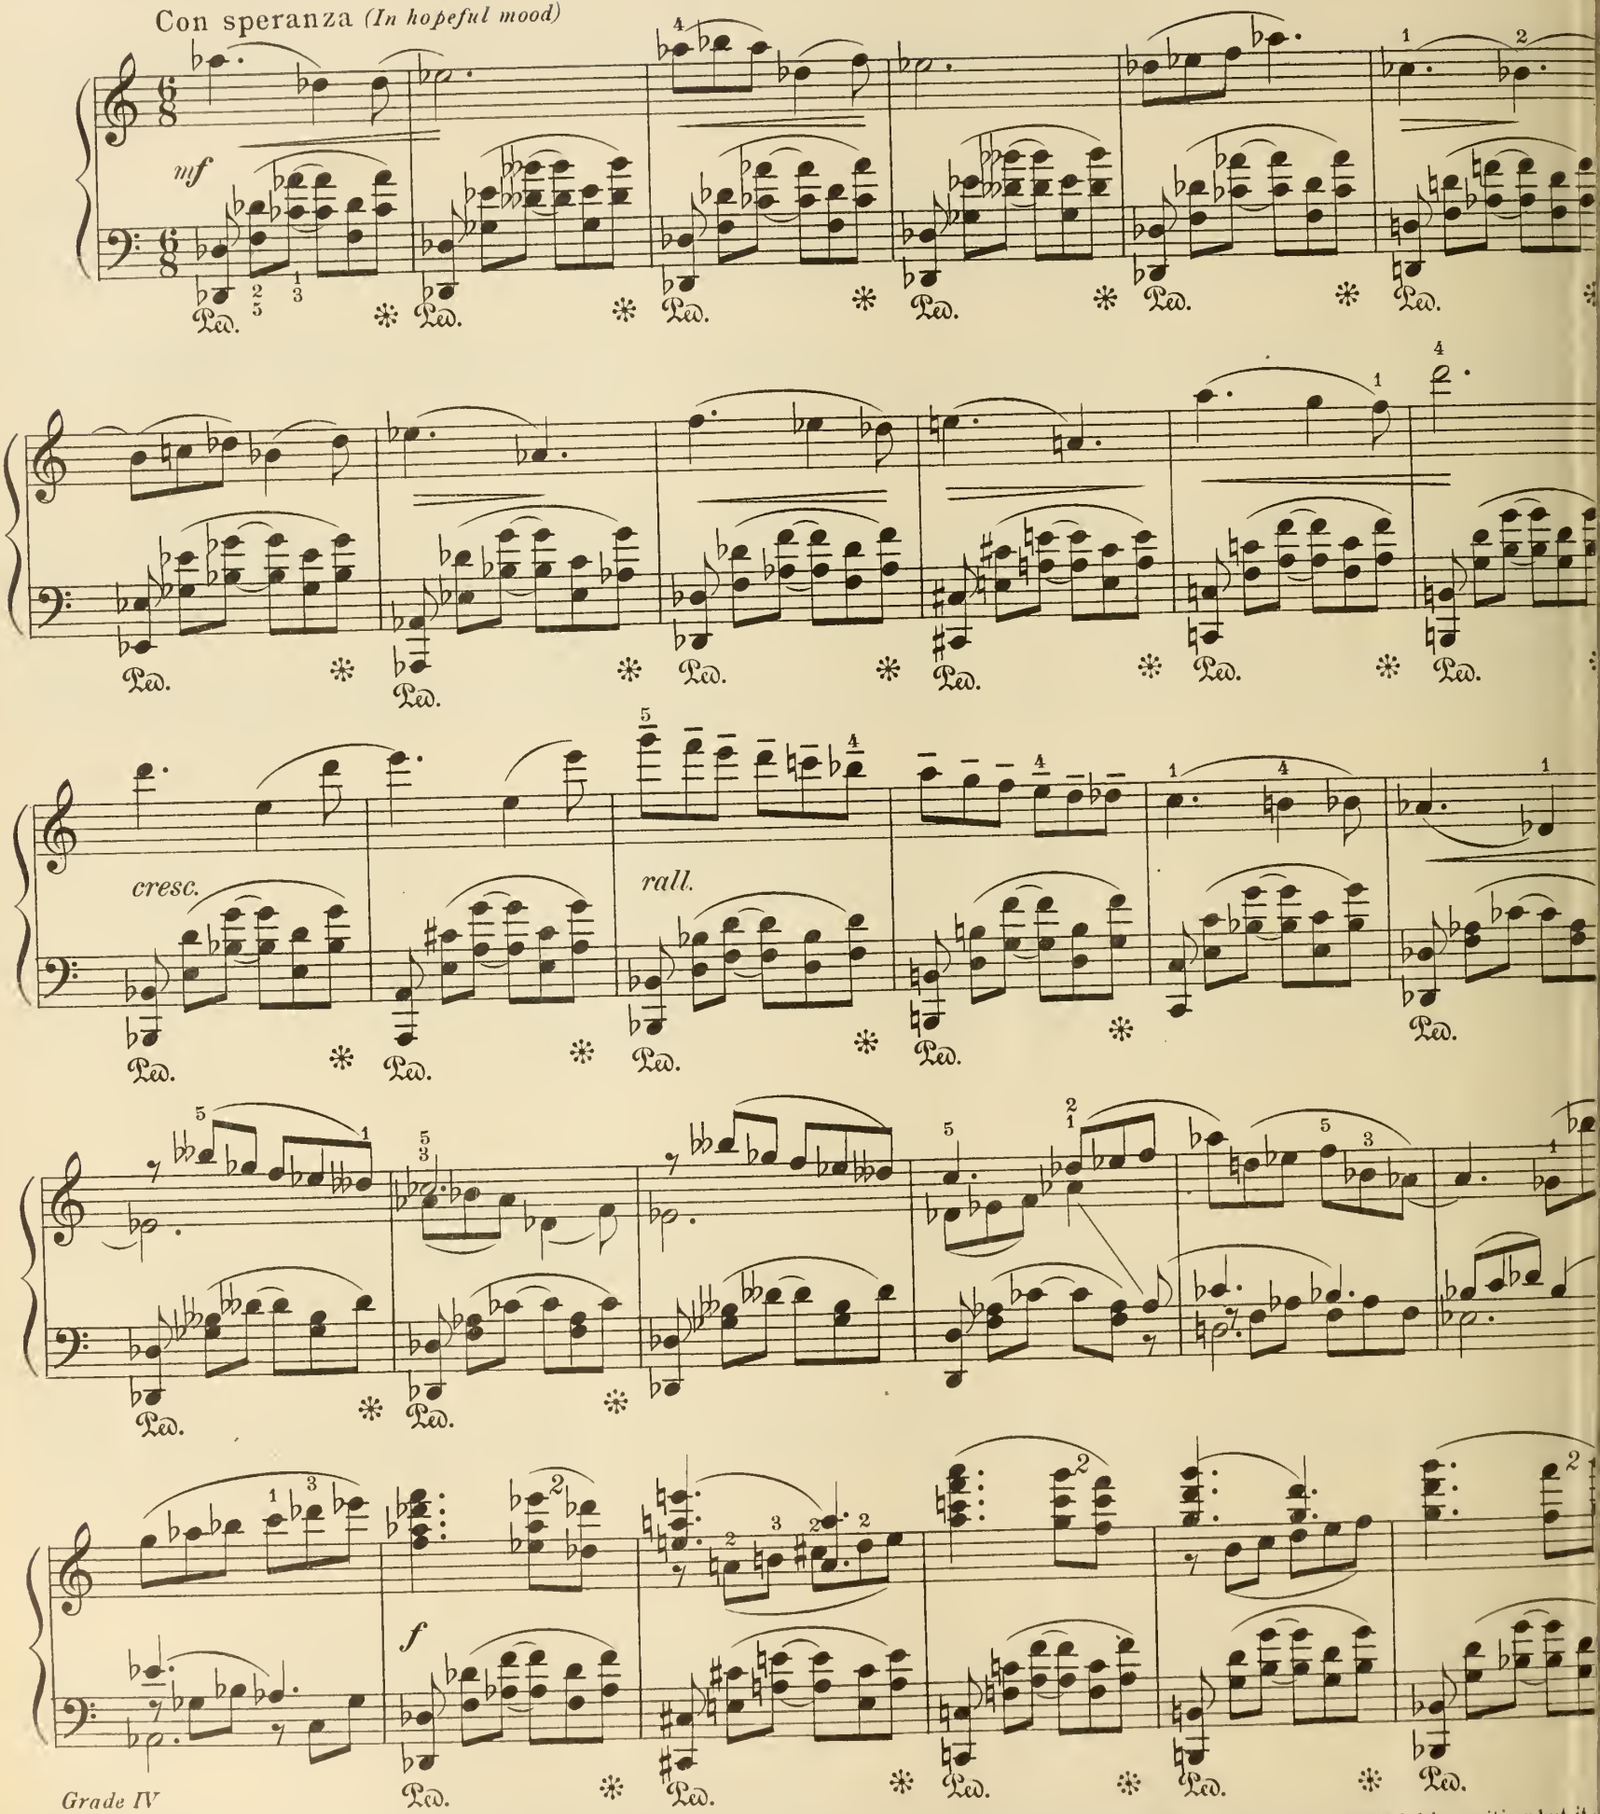
Con speranza *(In hopeful mood)*



Grade IV

Because of the great harmonic freedom in this piece, the composer has placed no signature at the beginning; it facilitated his writing, but it the reader to observe particular care and caution in observing the accidentals. The piece ends like an unanswered question, in the n Schumann's "Child falling asleep."

The SINGER and His ART

HEARING ONESELF

"It is always a critical moment to me," said a teacher of singing, "when I tell a pupil for the first few times that she is not getting the tone I want. Or when I ask for the singing of a short run of three or four tones and I stop her with the statement that the execution is jerky."

"Why critical?" the other party asked. "You seem to make too much of it."

"On the contrary," replied the teacher. "I am concerned that the pupil shall accept my correction implicitly, and not with certain mental reservations. If I tell the pupil that she failed in the legato, or in the attack, or lost control of breath, or showed one of several faults, I do so with the idea that she shall use my correction as a check on her work to help to do better the next time. I must have the confidence and belief of the pupil."

The teacher was perfectly right in what he said. The work of instruction is not merely criticism, but constructive criticism. It is not uncommon for teachers to say to pupils, "Sing the arpeggio of C major, one octave, descend scalewise."

The pupil sings. The teacher says, "No! try again!" And then the pupil repeats, not once but twice, and oftener.

But if the teacher explains in a few, well-chosen words the nature of the failure, the pupil must train herself to listen to every tone and to value her work, not for her to pass final judgment upon it, but to compare with the verdict of the teacher, and thus refine her own judgment.

The present writer cannot conceive how it is possible for pupils of singing to go through exercises and vocalises without concentrated attention on every sound and every phrase of vocal action.

Routine, such as can be secured by frequent repetition of a scale passage or melodic figure, may help to smooth the vocal action. But routine and frequent repetition when the pupil studies intently everything she does, leads to artistic results. And, besides, it trains the pupil for future work as a teacher.

From the first sound in a song or exercise to the end of that phrase, and during every phrase, the singer's attention should be concentrated upon the tones she is making that they may be determined as to artistic singing value.

Therefore when a teacher tells a pupil that she has not sung a tone, a passage, correctly, the latter should not be vexed or mentally say "I know better"; on the contrary she should accept the criticism and use it to help her do better.

You know that two and two make four. You know that seven times seven is forty-nine. But how are you to know whether you are making the best tones your voice can give or are singing a run artistically unless you have concentrated all your attention upon your work and have a true standard upon which to base your judgment? And the second item comes after you have learned to do the first.

THE SOCIETY OF ENGLISH SINGERS

From a recent issue of the London *Musical News* we learn that an organization has been formed with the name which appears at the head of this article, which includes a number of prominent musicians, not all of them singers. The Society issued a circular which contains some interesting statements:

"The present system of education offered in our institutions to those who wish to become singers is inadequate and on unsatisfactory lines." This appears a rather sweeping indictment of the singing teachers in the English conservatories, and it would be interesting to know the nature of the suggestions offered to improve the conditions so sharply criticised.

In regard to lessons the circular condemns the usual half-hour or twenty minutes twice a week and urges that "the number and duration of lessons should be elastic and regulated according to individual needs." This sounds better than it is, in a practical sense. The time of the teacher is valued in terms of money. The slow or careless pupil to achieve a certain grade or marking will require three or four lessons a week, and of course will be obliged to pay for the extra time and services. It will be no easy matter to change the plan of two lessons a week, each of a fixed length.

Another recommendation is that the period of study should be capable of extension to five years. This is a natural outcome of the criticism noted in the previous paragraph. At present if a pupil shows ability to pass through a course of study in three years, which is ordinarily planned to take four, he is allowed to do so. And similarly extension occurs in the case of those who require more time.

An unusual recommendation is the following: "The Society urges the adoption of a system under which the Singing School is to constitute a separate department, supervised by a person specially acquainted with the art of singing and its requirements, and conducted by a body of teachers, each of whom teaches his own subject, or subjects, in agreement with his colleagues." The last five words are especially significant, but about as impractical as anything which can be urged. Every teacher of singing is individual in his ideas and by no means ready, perhaps not even able, to teach in accordance with certain principles agreed upon by a staff of teachers.

American teachers who have advocated the study of theory of music, harmony, and history, etc., will be rather astonished to learn that the Society suggests that "in the interests of the students' physical powers, such theoretical studies as harmony and counterpoint should not be made compulsory." Surely our English brethren will not take the position that singers require less in the way of musicianship than do instrumentalists!

The fact is that if one were to test a group of singers selected at random he will probably find that a large majority of them are dependent upon a "coach" to perfect their repertoires. Few of them are prepared to work independently. It certainly seems a mistake to make any concession in this very important point. And this recommendation does not fit in with the statement as to the subjects which the aspirant for an operatic career should study, namely: "Sight-singing, ensemble singing, repertoire memorizing, piano accompanying, daily instruction in vocalizing and diction, together with dancing, fencing, and stage technique." Harmony is an indispensable basis for quite a few of the branches enumerated above.

"The first duty of every English singer is to sing his own language perfectly. To this end the English language should form the basis of his training."

EXPRESSION IN SINGING*

BY F. W. WODELL

The author of this work is one who appreciates the relation of the other arts, and of psychology, to music teaching and study. He is a student of literature, and of poetry in particular. In addition he has had years of study with good vocal masters, and of experience in teaching singing, as a foundation for the views he sets forth in this volume. His word is therefore entitled to the attention and respect of all sincere workers in the vocal field.

The vocal student who has intelligence sufficient to demand something more definite and well-grounded than the mere repetition of directions to sing now louder and now softer, or faster or slower, with emphasis at this point, or with a special accent at another, will find in this book a statement of principles to guide him in the study of "expression in singing." This fact gives to the volume especial interest and value. The principles are deduced chiefly from the nature of the verbal text, which is considered as "controlling" in the matter of "expression."

When this view is complemented by knowledge of the "construction" of the music, and of the influence properly to be granted, in working out "expression," to the various harmonic, contrapuntal, and rhythmic devices of the composer, we have the information necessary for the finest type of "interpretation."

This is a thought-stimulating and valuable publication.

THE MAKING OF VOWEL SOUNDS

BY HOMER MOORE

There are certain actions and positions of the vocal organs which must be learned and practised to insure accurate pronunciation. Nearly all the vowel sounds must be produced with the tongue gently touching the lower teeth. It should present an oval upper surface conforming to a considerable degree to the curvature of the roof of the mouth. It should never be raised up at the back so as to fill up the throat or hollowed out or creased in the center. No two vowels can be produced in exactly the same place, but all should be brought forward as far as possible and should seem to rest upon the tip of the tongue. During the continuation of a vowel sound the jaw and the tongue must be held still. *Any movement will produce a change in the sound.* The tongue is the principal organ of speech but the position of the soft palate and the opening in the pharynx have much to do with the making of the sounds. (From an address before the Missouri Music Teachers' Association).

**Expression in Singing*, by H. S. Kirkland, Boston: Richard G. Badger.

PHYSICAL TESTS UPON NASAL RESONANCE IN VOICE PRODUCTION

BY DR. E. H. MILTIMORE AND GEORGE E. SHEA

The subjoined tests were imagined by the writer of this article in order to replace theories by facts—in his own case, at least—in the mooted question as to the rôle of the head spaces (nasal cavities and sinuses) in the production of the human voice.

The extreme advocates of nasal resonance—the *nasalists*—declare that man's nasal cavities are meant by Nature to reinforce and enrich the voice, and that in correct voice (vowel) production the cavities are just as important a part of the vocal apparatus as is the mouth. The nasalists affirm that half of the voice ought to be propagated through the nose and out at the nostrils, the other half issuing through the mouth. This method requires that the uvula hang *low* in the mouth during tone production.

Others, less radical, while declaring that the soft palate and uvula should be *high* during voice (vowel) production, do, nevertheless, maintain that the voice's vibration in these head cavities is necessary to the best quality of voice tone and more particularly of those upper tones frequently called head tones.

The present writer's experience as singer and teacher had led him to believe that the mouth and throat form the sole resonator, the nasal cavities being useful only for the formation of *m*, *n*, and *ng*.

So, to prove or disprove his own contention, the writer underwent the following tests, made possible by the skilled collaboration and invaluable suggestions of Dr. Edward H. Miltimore, of New York.

Two other persons were present—one of them a professional singer. Any teacher or singer who desires to reach certitude about the existence of head resonance can repeat these experiments, despite the slight attendant physical discomfort.

TEST NO. 1

PREPARATION: The nasal cavities from the nostrils back to the upper pharynx were packed with ribbon gauze, the nostrils being plugged with cotton, leaving only the soft palate free to rise as usual. However, there was a slight bulge downward of the anterior soft palate where the cotton packing pressed upon it.

The space between uvula and pharynx and somewhat higher was, therefore, free for possible air vibrations.

OBJECT: To learn the influence (vibration or non-vibration) of the air in the nasal cavities upon the quantity, quality, and ease of production of the voice.

RESULTS: Ease of production was in nowise affected, and no appreciable change in the voice could be perceived by the singer himself or by his three hearers.

TEST NO. 2

PREPARATION: A piece of sterilized ribbon gauze was passed—by means of a slender rubber tube—in through the right nostril, down behind the soft palate into the mouth, and drawn forward over the tongue and out of the mouth. The end emerging from the nostril was held immovable; the end emerging from the mouth was drawn more or less taut thus forcibly drawing down the soft palate in greater or less measure during phonation (on Aw).

OBJECT: To determine the possible amelioration of quality, augmentation of volume, or of carrying power (or the contrary of all or any of these) through the enforced utilization—for resonance—of the space of the posterior nares and the nose passages by a singer accustomed to producing tone with soft palate more or less high, and who could, consequently, be said to be ignorant of how to lower the soft palate during phonation.

RESULT: Absolutely negative. The tone was deadened and lost all "ring" and acquired moreover an appreciably guttural quality completely absent from the voice of this singer as habitually produced.

There was a very noticeable effort of the palate to ascend during phonation, but which was nullified by the downward pull of the ribbon passing behind the soft palate.

The upper tones (with the soft palate pulled down) were tried upon a second occasion. They could not be produced at all, and even the pitch of the medium tones—A♭, baritone medium—could not be maintained on a prolonged sound.

TEST NO. 3

PREPARATION: To the mouth end of the ribbon, passing as in Test No. 2, there was knotted a flat piece of glazed cardboard (about 1 in. by ½ in.) and to the knot a piece of ribbon was attached; thus the cardboard shield was in the middle of a length of ribbon passing in at the mouth, back under the lower edge of the soft palate up and forward along the soft palate and the floor of the nose passage and out at the nostril. By pulling upon the nostril end of ribbon and guiding by the mouth end of same, the cardboard shield was drawn against the soft palate, pressing it back and up against the upper pharynx and completely closing the passage from the throat and mouth to the nasal cavities.

OBJECT: The passage from mouth to nose being completely closed by forcible elevation of palate and uvula, to determine whether any effect on voice is produced through an absolute elimination of possibility of nasal resonance and consequent employment of buccal resonance only In other words: Whether in all, or part, of the voice's length there *may be* complete closure of this passage without deterioration or diminution of tone.

RESULT: No effect upon "chest" register from A to E (first space to third space bass staff). First tones of "medium," F to B (fourth line to first added space above bass staff) lose in sonority and a sensation of powerlessness and discomfort is experienced in striving for the usual amount of resonance (and for the usual only moderately elevated soft palate in this register). In upper "medium" (C and D above bass staff), however, no deterioration of tone occurs and on the high, "covered" tones (E♭ to G♭, above bass staff) the voice is rather freer and more resonant than under normal conditions.

TEST NO. 4

PREPARATION: A tampon of dry cotton wadding, ½ in. by 1 in. by 2½ in. was knotted into the middle of a length of silken cord passing in through the right nostril, down behind the uvula and forward over the tongue out of the mouth to the tampon: a quick pull on the *nose end* of the cord—while the palate was lowered—brought the tampon vertically lengthwise behind the uvula (below whose point during phonation the lower end of the tampon could be perceived). This tampon completely closed the passage, preventing any possible tone reinforcement that might occur under normal conditions and hence allowing only buccal reinforcement. Nevertheless, the compressibility of the cotton allowed the uvula and soft palate to rise through a more vigorous effort.

OBJECT: To determine the influence of this post-palatal air space upon the tone in any part of the voice and particularly from E to B (third space to first added space above bass staff), where the soft palate is not so high as for the lower or higher tones of the voice.

RESULT: Negative: The evening of this experiment the voice of the experimenter was somewhat veiled on low G–C but throughout the rest of the voice up to high G♭—on *Aw* and *Eh* (French *è*)—there was no deterioration of quality, diminution of volume, or impairment of ease of production. On the contrary, the higher (covered) tones seemed easier and more solid than usual.

Tests Nos. 1 and 4 satisfy the experimenter that —in his own case, at least—the air space behind the uvula and in the totality of the nasal and head cavities plays a negligible part in the reinforcement of voice tone; Test No. 3 that the ascending soft palate, more or less elevated, is an indispensable factor—following Nature's design—in the production of the best voice tone; and test No. 2 that a lowered palate is destructive of voice tone.

[Bearing upon the above question, we have asked Mr. F. W. Wodell to give a concise summation of the ideas advanced by the authors of a number of well-known works on the vocal art, so that the reader may compare them with Mr. Shea's report of his experiments. If any of our friends follow Mr. Shea's experiment we ask to be notified of the results.—Editor.]

FURTHER REFLECTIONS UPON THE PROBLEM

BY F. W. WODELL

FIRST let me say that experiments must be repeated many times, under careful, expert supervision and criticism, by many different persons, singers of both sexes, before it will be safe to make positive declarations as to results.

The weight of testimony against the implied conclusion of the experimenter with regard to the relation of the space up behind the soft palate (head cavities) to ease of tone production and tonal quality and volume, is considerable and not to be overlooked.

Dr. Thomas Fillebrown, in his book *Resonance in Singing and Speaking*, which contains so much

THE HERMAN KLEIN PHONO-VOCAL METHOD

Based upon the Famous

School of Manuel Garcia

Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

genuine value to the student and teacher of singing, in addition to its discussion of the special subject of the present inquiry, says:

"The true office of the soft palate is to modify the opening into the nose and thus attune the resonant cavities to the pitch and timbre of the note given by the vocal cords and pharynx. To develop the clearer sounds, the soft palate should be drawn forward, allowing a free passage into the nose; it should be closed only to form the consonants which require the forcible expulsion of breath from the mouth. The uvula, the pendulous tip of the soft palate, serves as a valve to adjust more accurately the opening behind the soft palate to the pitch of the voice. In producing a low tone the soft palate is relaxed, and hangs low down and far forward. As the voice ascends the scale the tension of the soft palate, is increased and it is elevated and the uvula shortened, thus decreasing the opening behind the palate, but never closing it. In fact the larger the opening that can be maintained the broader and better the tone. The author was himself unable fully to appreciate this until he had become able to sense the position of the soft palate during vocalization."

Dr. Floyd S. Muckey, in his work, *The Natural Method of Voice Production*, goes thoroughly into the question of nasal resonance and its influence on singing tone. After describing the parts involved, he says:

"Now we have, in the lower and upper pharynx, mouth and nose, resonance cavities, the size and openings of which are sufficiently under our control to enable us to reinforce certain tones or pitches at the expense of the others. In vowel production we vary these cavities so that their resonant effect changes the quality from that of one vowel to another. It must, however, be borne in mind, that these overtones, whose variation enables us to enunciate the vowels and to express the various emotions, are originated in the cords themselves, and that they are modified only as to their relative intensities by the resonance cavities above. . . . Resonance from the spine, jaw, or muscles is simply ridiculous. . . . If we cut off the upper pharynx or nasal cavities by raising the soft palate, there is not sufficient resonance space left properly to reinforce the fundamental tone, and it remains weak. Furthermore, the raising of the soft palate cuts off the small cavities of the nose which are essential to the reinforcement of the highest partial tones, and they are practically 'damped out.'"

Mr. Ernest G. White's *Science and Singing*, an extraordinary book, designed to establish the theory that the singing tone is not generated by the vocal cords, but by the passage of the breath through the "sinuses," he says:

"After many weeks of thought I devised a most simple plan for proving whether the nasal passage is made use of in singing. Let anyone sing, in a quiet natural way, Ah, and let another person take a small mirror and hold it close underneath the nostril, and when taken away the mirror will be clouded with the warm breath which has been coming down the passage. . . . A perfectly free channel down the nostrils will never produce the so-called nasal tone. This tone is caused by partly closing the nasal passage."

The parts of the vocal instrument proper do not act independently. They should be considered as a unit. Especially is this the case with the soft palate, tongue, and larynx. Just so soon as artificial means are used, or artificial conditions set up affecting one of these parts there will be an interference with the normal action of the others. Dr. Frank E. Miller has said (*Science of the Art of Singing*, Lankow), "Disturbances on the surface of hollow spaces (resonators) will be and are reflected on vocal cords. . . . It is an axiom almost that troubles in the higher resonating chamber, nasal cavity, reflect themselves in the anterior part of the vocal bands."

The present writer, therefore, is unable to accept as conclusive experiments involving the insertion of foreign substances into and through the nasal chambers during tests of the influence of "nasal resonance" upon tone production and quality

SUMMER vacation is a good time in which to acquaint yourself with the educational and artistic literature dealing with the voice and singing.

THE MUSICIAN will recommend books to inquirers who will indicate the line of reading and study they may wish to take up.

MAKING UP A PROGRAM

THE singer, and the teacher of singing for that matter, might well afford the time to collect programs for a whole season with a view of studying them for suggestions to help in making up programs. It will not be difficult to get several hundred showing the ideas of artists of high standing, others less prominent, with a goodly number of programs of pupils' recitals.

With some artists variety seems to be the principal aim. Before the present writer is a program which opens with two opera arias, followed with songs by Schubert, Schumann, Rachmaninoff, and Strauss; then a group of Irish folk-songs, and three numbers by American composers. There are critics who may urge that variety is not a sufficient reason for the selection of the program numbers.

Another program of eighteen songs has four old French, four modern French, three Russian, two by Chopin, one by Cyril Scott, and four American songs. This artist would seem to have aimed to keep aside from the beaten tracks.

A third program shows a wide diversity in style, namely: An oratorio aria, two numbers by Bach, one each by Reger and Bungert, two by Schubert, two by Schumann, three by Italian composers, one by Gounod, one by an English composer, and three by American writers.

The teacher or the singer ought to have greatest regard to the character of the various songs. It may chance that one French and one German song will be better than two German or two French. Opera arias are not desirable on certain programs, and numbers by Bach may be entirely unsuitable. It is bad policy for a singer to include a number simply to get the name of the composer on the program.

VOCAL STUDENTS

A common error is the overlooking of the fundamental principles of the art of singing, when the correct thing to do is to look carefully into and master them. **Mastery of principles** must precede any progress in any of the fine arts. It is upon this safe, sure ground that this Studio works, endeavoring to develop all that is best in each individual singer. You are at liberty to come here for a trial lesson for which my regular charge is made. If convinced of its good effects, and you desire to do so, you can remain for further study.

A SUGGESTION TO CHORAL SOCIETY OFFICERS

MR. GEORGE B. NEVIN, the well-known composer, has sent to THE MUSICIAN an account of a concert given at Easton, Pa., by a body of singers under his direction for the benefit of local charitable organizations. The financial management was unique in this respect that the expenses of the concert as well as preparation for it were covered by subscriptions from a number of public-spirited citizens and all tickets were sold before the concert. As a result of the subscription it was possible for the entire box receipts to be turned over to charity. On the back of each ticket was a list of the charities and the holder of the ticket was asked to designate to which organization be wished his money to be applied.

SINGING SONGS IN THE ORIGINAL LANGUAGE

FOLK-SONG material is largely drawn upon in school work for the choruses used in the class singing period. In the Franklin School, Buffalo, a private school of high standing, the 200 children are taught to sing a chorale from the *St. Matthew Passion*, for example, in German and Latin hymns such as *Adeste fideles* and *Filii et filiæ* in Latin. This school also has a large repertoire of Christmas carols, and uses them to special advantage at that season.

The musical work at the Franklin School is under the direction of Miss Amy Graham who has introduced the Dalcroze system commonly known as *Eurythmics*, three or four years ago. As a result of this training from the primary grade up to the high school period the pupils absorb music instead of merely *learning*, and are well-equipped for later work, either as amateurs or professionals.

CONDUCTED BY HELENA MAGUIRE

TWO YOUNG SINGERS

HERE are two little singers who entertain the people at the Israelite House of David, Benton Harbor, Mich. The young artists have the aid of lantern slides and sing with orchestral accompaniment quite a repertoire suited to their voices and age.

SUMMER MUSIC

What time the rose of dawn is laid across the lips of night,
And all the little watchman-stars have fallen asleep in light,
'Tis then a merry wind awakes and runs from tree to tree.
And borrows words from all the birds to sound the reveille.

VAN DYKE.

A YOUNG MUSICIAN TELLS WHY SHE IS STUDYING MUSIC

1. I am taking music lessons because I want to get a good foundation on the piano. I have a good voice, and when I am seventeen years old I expect to take singing lessons. I am now thirteen, and have sung in Sunday-school concerts ever since I was five, always singing from memory and never failing. I am also taking piano lessons because I am very fond of music.

2. I like marches and pieces with big chords in them. I have a book of simple arrangements of the operas. It has the popular airs from all the grand operas. I have been playing these all summer and I am very fond of them. I have a book of Beethoven's simple pieces which I like very much. I like orchestral music. My mother took me to Boston one evening to one of the "Pop" concerts and I enjoyed it very much. I like to play duets with my mother. We play the simple ones in THE MUSICIAN.

3. Sometimes when I am practising my mind wanders and I make all sorts of mistakes, and when I am practising exercises I think how I would like to be out of doors. But when I am practising pieces I think how I shall enjoy them when I have learned them and how some day I shall be able to play difficult music.

4. Of all the things I like to do making music comes second. I would rather play with other children any time, but making music comes a close second.

ELEANOR FRANCES BREED, Lynn, Mass.

A PLAY-TIME AND STORY-TIME LESSON

BY LUCILE CORBETT

THE children's studio was a cheerful corner room on a quiet street. The windows were wide and high, allowing the room to be flooded with sunlight. Flowers were found in every window. The furnishings were simple, and the whole place wore a cheerful, happy air. Everything in the room, including the books and the pictures on the walls, suggested the presence of childhood.

Robert's lesson hour was nine o'clock. It was a lively, jolly youngster who entered the studio.

"Good morning, Miss Shepherd," he said.

Miss Shepherd greeted him with a cheery "Good morning, Robert." She was always full of enthusiasm and interested in every child. A perfect understanding existed between her and each little one who came to her studio. She was interested in his work, his play, and his home life, as well as his music.

Robert was eager to begin his lesson and show Miss Shepherd how well he had memorized it. "I have the three pieces memorized. Can I play them and sing the stories?" he asked.

"Yes," said Miss Shepherd, for she believed in having the child see the story in his mind, and play it just as he saw it. In that way she was able to develop the individuality of each pupil.

First Robert played *The Little Gray Squirrel.** He told how the little gray squirrel in the park begged for nuts, then scampered to his home in the hollow tree and stored them away for winter.

"Good, very good," said the teacher. "Can you play me *The Story of the Sponge?*"† So Robert told the funny little story of the sponge in the bath tub.

"Now," said Miss Shepherd, "*The Horn the Little Boy Blew.*"‡ With flashing eyes and a determined look, Robert told how the little boy blew his horn to drive the cows out of the corn.

"Splendid, splendid," said the teacher. "You have been practising faithfully since your last lesson."

She had won the confidence and affection of the child, and he was eager to please her by bringing all his pieces memorized. She believed in teaching music to children through play and story. She made herself one of them, and nothing was too trivial to interest her.

For Robert's next lesson she gave him *The Wooden Soldiers' March,*** *Two Brave Boys,*†† and *The Dog and the Kittens.*‡‡ She made all explanations clearly and simply, using the child's language. She used new illustrations in presenting the lesson, and in that way kept him interested. She told him to play the stories of the pieces from memory at his next lesson, to think the stories out for himself, to play *The Soldiers' March* as he would play at being soldier, in the *Two Brave Boys* to take the hero's part, and to have a romp with his dog Fido. That was the only way she could teach him to put expression into his pieces.

Each pupil was to her an individual problem to be studied and solved. She tried not only to teach music but also to develop the character of each child and bring out the best qualities in his personality.

Giving him final explanations about the next lesson, Miss Shepherd then marked "E" in Robert's grade book for "excellent," and turned to greet Betty, a wee tot of six, who was just beginning primary work. Robert waved a pleasant good-bye, and trudged away with his music under his arm.

IDEAS FOR THE SUMMER

ON BEING EITHER-HANDED

THERE is a little book by Charles Rea called *The Coming Man*, which will give y children a very pleasant hour if you get from the library. It is all about being "eith handed," as he calls it, and it will amuse y musical children very much, for that is ju what the piano does for you. It makes y either-handed.

It is so odd that the very people who m want you to become good players, with very best intention in the world, make rather difficult for you to become eith handed. I mean of course those dear, lov

The Little Gray Squirrel, Mae Aileen Erb.
†*What the Sponge Said*, Spaulding.
‡*The Horn the Little Boy Blue*, Spaulding.
**The Wooden Soldiers' March*, Albert Rusby.
††*Two Brave Boys*, Bilbro.
‡‡*The Dog and the Kittens*, Spaulding.

grown-ups with whom you live, who will not let you use your left hand for *anything*, either to sew, to write, or to draw, or to eat, or anything else that would exercise your left hand.

But they expect you to use it on the piano just as well as you do your right hand, which is being exercised and trained all day long. Well, what can we do about it?

Why, use the summer vacation to make yourself either-handed. When you have nothing else to do just sit down and do something with your left hand, which you have always been compelled to do with your right hand.

It will seem awfully strange at first, but really it is fun, whether it is holding a crochet needle, left-handed, or playing with a croquet mallet in your left instead of right hand, throwing ball left-handed, buttoning your boots with your left hand. All the hundred and one things which you have been doing with your right hand all year, just turn over to your left. This will not hurt your right-handedness one bit—the idea always being to learn to use each hand *equally*, just as we have to do on the piano. Explain to your elders what your reason is, and I am sure you will go back to practice in the Fall with a pair of hands which will work together on the piano much more happily than hitherto.

TURNING THINGS AROUND

Some teachers give their pupils rewards of merit for good lessons. Some teachers give a gold star for every good lesson, and then a prize card at the end of the year to the pupil who receives the greatest number of stars.

This is all very nice, but suppose you try turning this about for the next year?

Since it is more blessed to give than to receive, and since all the children just love to give things, why do not you plan to give your teacher a reward of merit for good lessons next year?

I have an idea that you will be much more interested in your practice if you know that you are going to reward some one else if the next lesson is a good one, than if you were just going to be rewarded yourself. I think that you would like to be able to give your teacher a little reward card at the end of every lesson, and if you know that she just cannot receive a reward if the lesson has not been practised well—I think you will see to it that the practice is done. For no lesson can be a good one if the practice is not done, and no teacher can accept a reward card from a pupil when the lesson is not a good one.

So why not make up your mind to do this, and prepare for it during the summer days by getting some pretty pink or yellow paper, cutting it into pieces two inches long by one inch wide, and print neatly on each piece the word "GOOD," making enough to last the whole year through, and put them in a box by themselves. You will see how pleased your teacher will be with your plan when you resume lessons.

You know, children, that in *Alice in Wonderland* everything was just turned around as writing is if you hold it up to a mirror, and there is a "wonderland" in music if we only can discover it as Alice did. So why not begin by turning some things around yourself?

A FAIRY RECITAL

Don't you love fairy music almost better than any other kind? I think a recital of fairy music is the very prettiest of all, and if you said to your music teacher that you thought it would be nice to have a "Fairy Recital" she would undoubtedly say that it would be lovely, but, you know, music teachers are very busy people, and while she might *want* to give a "Fairy Recital," she might not be able to spare the time to look up all the music that it would be necessary to get together to make such a recital.

So suppose you use some of the summer days in looking up fairy music! Look through the lists which are printed on the backs of every piece of music you have. Send to the music stores for catalogs which will be sent you free. Go to the library and read the lives of the musicians and the lists of their compositions, and copy into a little blank book the name of every piece of fairy music you come across, with the composer's name.

At the end of the Summer you will have a list of fairy music from which it will be an easy matter for a busy teacher, or a music club to select a program which will make an ideal "Fairy Recital." Read especially about Mendelssohn, Wagner, and Von Weber; all of these wrote lovely fairy music. And there are many, many more.

ELISE AND THE INTERVALS

BY ELIZABETH A. GEST

Elise had just come home from her third music lesson, and oh, dear me! her head was dizzy trying to remember all the teacher had told her.

At the first lesson she had to learn the names of all the keys; and at the second lesson she learned how to hold her hands on the keys—that was bad enough. But—oh, dear me! today she had to do both at once, read the notes and play them!

"It is terribly hard," sighed Elise. "I know I will never learn to play."

"Of course you will. Don't be so impatient," something said to her.

"Well, I have just ten fingers, and there are dozens and *dozens* and dozens of keys. I wonder if my ten fingers will ever be able to run up and down those keys?"

"Certainly, but not today," answered the same voice; "what are you going to practise today?"

"Well, today I have to begin on C and write out thirds and fourths and fifths, and I do not know how."

"That is easy," encouraged the voice. "Didn't your teacher tell you how to find your intervals?"

"Yes, she said something about intervals," confessed Elise; "but you see it was only my third lesson and I just could not remember."

"Well, let's begin," answered the voice. "Did she tell you what an interval is?"

"Maybe she did, but I forget."

"You ought to write down what she tells you if you cannot remember," scolded the voice. "It is the difference in pitch between any two notes. Is that very difficult?"

"No," answered Elise, "but I really do not know how to begin on C and write a third."

"Did not your teacher tell you how to count your intervals?"

"I forget," said Elise.

"Oh, you are no good at all," scolded the voice again. "You know you have to count how many half steps and whole steps there are between the two notes."

"That sounds very complicated. Please help me," cried the little girl.

"You know what a half step is, don't you?"

"Yes, I think so," answered Elise, timidly.

"And you know that a whole step is two half steps, don't you?"

"Yes, I suppose so; but I never heard of a whole step. Teacher called it a whole tone."

"It's all the same," answered the voice; "you see, I am D myself. Strike the D key and then you can see me." And sure enough, as she struck the D key, the voice that had been speaking to her turned into a little fairy and sat right on the D key.

"Now strike the C key and see the fairy come out there," he said, and sure enough, the C fairy sat right on the C key.

"Now how far apart are we?" asked the D fairy.

"Oh, dear. I think you are a whole tone apart."

"Certainly, and how far away is E?" And as he spoke the E fairy popped up.

"Hello," it said, "who wants me?"

"Elise is hearing about intervals," answered D. "Tell her how far away from C you are."

"I think I know myself," answered the little girl. "You are a third away."

"Major or minor?" asked E.

"I do not know," answered Elise.

"Well, you must learn. A major third is four half steps away, and a minor third is three half steps away. Can you remember that?"

"Yes, indeed. E♭ lives a minor third away, doesn't it?"

And as she spoke E♭ popped its head up. "Hello," said E♭.

"Hello," answered Elise. "Soon I will know you all."

"There are many more of us, though, you know. There are diminished and augmented intervals, too."

"Oh, dear me!" sighed Elise again; "I really cannot learn about them today. But I'll try again tomorrow. Will you help me?"

"Yes indeed we will. We are always here and ready to help."

And when Elise went to her fourth lesson she knew all the intervals and could play them and write them.

BACH

BY VIRGINIA CARTER

[This will make a good recitation for a pupils' recital or class meeting.]

Do you know the story of Johann Bach,
The boy who was born at Eisenach?
Sixteen-eighty-five was the date of his birth
And he became famous all over the earth.
Ambrosius Bach was his father's name,
An able violinist he became
Who taught his boy to play, and then
The father died when his son was ten.
An orphan, too young the world to roam
He went to live in his brother's home.
Already he played the violin well,
But in other ways he wished to excel.
So his brother, to make his knowledge broad,
Taught him the organ and harpsichord.
A beautiful voice little Johann had,
And when, as a fifteen-year-old lad,
He sang in the choir at Lüneberg
His voice was admired by all who heard.
When his child voice changed to that of the man
It didn't somehow, sound quite so gran',
And they made him stop singing, but he could play,
And so his position was saved this way.
They say that he early made up his mind
To write only music of sacred kind.
Anxious was he to increase his learning,
So anxious, in fact, that this very yearning
Led him to walk once a long, long way
In order to hear a great man play;
(Buxtehude I b'lieve was his name,
An organist he, of no small fame).
Now after he'd heard this organ played
His leave of absence he overstayed,
And went to Mühlhausen. The music there
He greatly improved thro' his wisdom rare.
'Twas here he was joined in the bonds of wedlock
To his cousin whose name was Marie Bach.
He played to the Duke at the Court of Weimar
And while he stayed there he advanced so far
He gained for himself a very great name,
A genius he was with a world-wide fame.
Oratorios, cantatas, he wrote not a few
And suites for the clavichord—harpsichord, too.
He was a master of the fugue they say
Some of his still being played today.
In seventeen-twenty his first wife died,
But soon he had another bride.
For one year later, so history tells,
He married a singer at Weissenfels.
'Twas Anna Wilken; she'd never shirk
And helped him greatly in all his work.
A happy family was Bach's, I ween,
With twenty children it must have been!
In seventeen-twenty-three he went
To Leipzig, and all his talents lent
To his duties as Cantor. He occupied
Until seventeen-fifty, the year he died,
This same position. But it was the fate
Of this composer, who'd become so great,
The last year he lived, to lose his sight
And it makes us sad to think he might,
If this had not happened, composed much more
Of the wonderful music he wrote before.
Bach was a very good music engraver,
But this isn't all can be said in his favor.
He also planned organs of excellent kind
And a greater master you never will find
Of polyphony. So these things tell
Why the name of Bach is known so well
And is first in every student's heart
Who cares for the highest and best in art.

AN EARLY INSPIRATION

BY ELLA M. POWERS

When I was a little girl nine years old, I came home from school one day and what do you think I saw that astonished and delighted me? A beautiful new piano which was to be all my own. I think it was the happiest surprise I had ever known.

I began taking piano lessons at once. I was very ambitious to play as well as some young lady cousins of mine who were then taking lessons at a well-known conservatory of music in one of our large cities. I could not take lessons where they did, but I quietly studied music in my own little home town.

When these grown-up cousins came to visit us, I would not consent to play to them. I felt the great difference between their long, difficult piano solos and my own little simple pieces; so months passed and I still refused to play to them. I was urged by them, and everyone seemed truly sorry that I showed such an unwillingness to give pleasure to others, for I was naturally the merriest, kindest little girl in other respects. No one knew the real reason, for I hesitated to tell them that it was because I feared they might laugh at my simple music. I truly wanted to please them. But they could not possibly care for my music, of that I was certain.

Every day, when I came home from school, I would take off my hat and coat, hang them up, wash my hands, and then go straight to the piano and play. What a joy it was!

One day my two cousins came to visit us unexpectedly. They hid when I came home from school and I did not know they were in the house.

After hanging up my coat and hat and washing my hands, I went as usual to my piano. I played two of my old pieces. I loved to see if I could play them without a single mistake and I took great delight in watching for every little mark and symbol through the music.

Just as I finished playing the second piece, what do you think I heard? Such a clapping and clapping of hands as never before in our house! My two cousins and some other friends came forth from their hiding places and they hugged and kissed me and said:

"Why child! you played *beautifully!* We had no idea you could play like *that!* Why, that was *lovely!* I couldn't play that any better myself! It was splendidly played!"

Their words astonished me for I knew they meant every word they said. I never forgot the inspiration and confidence they gave me for their genuine delight was evident to me. They said:

"Now do please play some more for us." And I played. I played one piece after another, and they received each with the same satisfaction.

It was all a glorious revelation to me when one of them said:

"Little girl, never hesitate to play your pieces that you know, no matter how simple they may be. It is far better to play an easy little simple piece perfectly than to play a difficult piece imperfectly. Every musician no matter how advanced he may be, appreciates the simple melodies when they are played well."

I never forgot her words and I never hesitated after that. Whenever anyone asked me to play for them I never refused. I did the best I could, and I am sure the happiness I have given to others has amply repaid me for all the effort it has cost me to keep my old pieces fresh in my memory.

Memorizing

BY GEORGE HENRY HOWARD

There is no "one best way" to memorize. That is true because habits are so various, temperaments are so unlike, and natural endowments so radically different. Yet the development of the memory, like all requirements, depends on suitable training. Bacon says, "There is no stone or impediment in the wit which may not be wrought out by fit studies."

Are you weakest in remembering melody, or in remembering chords, or in recalling key changes, or fingering? Strengthen the weakest points, spending more time and thought and labor upon those than other needs.

Make it a rule to have more than one kind of effort upon any weak point. Analysis (that is, taking apart, dissecting) is one kind of needful work. Synthesis (putting together, re-assembling parts) is another kind of needful work.

Comparison is another important and helpful exercise.

Broad generalization, too, needs to be used.

Minute analysis is like microscopic examination. But we need the telescope as well as the microscope in our education. Therefore, comparison, characterization, and generalization must have their place in our training.

THE BIRD CORNER

"ROBIN THE PREACHER"

"I have one preacher that I love better than any other on earth: it is my little tame robin who preaches to me daily. I put his crumbs upon my window-sill, especially at night. He hops on to the window-sill when he wants his supply, and takes as much as he desires for his need. From there he always hops to a little tree, nearby, and lifts his voice to God and sings his carol of praise and gratitude, tucks his little head under his wing, and goes to sleep, and leaves Tomorrow to look after itself.

"He is the best preacher I have on earth."

FROM THE GERMAN.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

THE KEY TO INDIVIDUALITY IN VIOLIN PLAYING

BY VICTOR KUZDO

One often wonders what becomes of all those oung violinists, who, year after year, make their ébuts in the various music centers of the world, and re never heard from again. With music students, , is customary to seek an opportunity for a public earing, after they have—or think they have—nished their studies.

Of course a recital or a concert must be arranged, ı order to be officially launched in the profession. ı most cases such appearances are premature, and ardly justified by the results attained through udy. The great majority of these young aspirants, ven though technically well-equipped, fail to make lasting impression. And why?

Simply because they lack individuality. As on as they realize this, and get resigned to the ct that they are not among the chosen ones, they in the ranks of orchestral players, and teachers. ow the question arises: What is individuality—herwise known as personality?

To be original, to have one's own viewpoint, to esent things in a new light, to do independent inking; in short, to be different from others, that individuality! All of us possess it to some gree, but with most persons it is dormant.

To be original, and to do independent thinking, es not mean to distort a composition, or mutilate contents. It means a new illustration of a sub-t. Your audience does not know what you are nking about while you play, neither can it guess at you mean to convey to them with your music. ıt they do know and feel that you are casting a ell over them, and that they are in your power, be swayed at your will.

If we carefully observe and study people, we will tice that they all have their individual—or per-ıal—peculiarities, their pet ideas, their hobbies, ir notions. Individuality manifests itself even one's bearing; in gait, in voice, in manner, in ture, in facial expression, etc. However, these are unconscious demonstrations of individuality. at artists, in their playing, also reveal this inating trait, unconsciously.

But now let us see how we can awaken, develop, and consciously exercise such a priceless characteristic, dormant within us.

The violinist, of all musicians, has the most wonderful accessories at his command, which enable him to impart the personal stamp to his interpretations, providing his technical skill is ample for the execution of the composition he plays. The four strings represent a quartet of voices, most perfectly blended, yet each different in power and quality.

Therefore, in playing melodies, we must experiment and find out which string will yield the most suitable and pleasing tonal results.

In passage work, various fingerings and positions should be tried out, in order to achieve the necessary clear, smooth, and rapid execution.

Then we have the *portamento* (the glide from one note to another), and the *vibrato* (the shake or quiver of the finger), the *rubato* (the prolonging or curtailing of a note at the expense of another), *marcato* (heavy bow accent), and *tenuto* (lingering) effects.

And again, there is the bow! Within that insignificant looking stick are concealed the greatest possibilities for the mastery of all varieties of shading. The mute also helps, by changing a healthy, normal tone, to a mysterious whisper.

But the most important accessory to a master hand, and master mind, is the violin itself. The proper selection of an instrument is a serious consideration to the player, requiring correct judgment, and long and patient experimenting. Thus having enumerated all the accessories at the disposal of the player, and which should be summoned to his aid, we will now point out the way to the evolution of original thinking.

Every composition has a title. It is supposed to indicate what the author meant to describe. The title itself is sufficient for the suggestion of a picture, or a story.

After the composition is technically mastered, put your violin away, sit down and think over its contents. Read the notes mentally, and see what they mean to you; also read "between the lines," as you sometimes do when you receive a letter from some one who is dear to you. The picture, or story, which you have conceived, will create a mood, and your mood will be reflected in, and give "atmosphere" to your playing. Your imagination will be in full control of your faculties, giving free vein to your interpretation.

Treat all violin music, as a song without words, for which you have to invent words. If you play a "lullaby," you should need no directions from the composer as to how to bring out its meaning. You know that the title calls for a simple, tender rendition (possibly muted), with lingering effects here and there, and a gradual slowing up of the tempo and diminishing of the sound.

If you play a mazurka, you know it is a jolly Polish dance, and therefore has to be played with spirit and dash, and with vigorous rhythmic precision. If a minor strain occurs in the same piece, you will naturally think of Poland's lost independence. This phase of history would call for the expression of pathos upon your violin. Subdued vibrato, with an occasional portamento, would produce the effect desired.

In the playing of a minuet, you must recall the days of olden times. You have seen many paintings (or copies of them) representing couples in rococo costume, dancing this old-time favorite. You observed the grace and elegance of the dancers. Put yourself into the place of one of those gallant cavaliers, be gentle, persuasive, and trip lightly.

A sonata by Handel should fill you with dignity, seriousness, and spiritual power. A concerto will bring to mind all kinds of visions upon which you may elaborate.

A Bach fugue is musical mathematics; hence it should be performed with great clarity and exactitude, the strokes sharply accented. Think of calisthenics. What they do for the muscles, the fugue will do for the brain.

A technical "stunt," or bravura passage, should put you in mind of a dazzling juggler, or a daring acrobat, who is always at perfect ease, and never fails to land right.

If you have a simple melody, make love to your violin through it. Talk to your violin in a caressing tone; just as you would to your sweetheart.

A glissando run should remind you of a graceful skater. An *andante* (or adagio) *religioso* should create a devotional state of mind, recalling, for instance, a beautiful ceremony at a cathedral. A scherzo would call for a picture of dancing fairies, or the merry making of children. From these similes, one can see the endless possibilities of imaginative pictures.

In playing we do not have to follow, slavishly, all marks of bowing, fingering, expression, etc. Don't be a machine. Don't be the servant of another man's ideas. The marks in the music indicate but one man's way of playing it. We must remember, that many roads lead to Rome, and the one most frequently used may not be the most picturesque. To play as prescribed, is academic (matter of fact) reading. It always compels respect, sometimes even admiration, but never stirs, or moves the listener. Emotions do not recognize rules and regulations. They burst forth when the mood created by you, prompts their escape from your inner self. Your message to the humble and poor, and to the rich and proud, will be announced at these inspirational moments, with the power and force of Gabriel's clarion.

Let me impress upon you once more, the vital importance of pondering over your violin solos. This is the only way you can paint a picture before your mind's eye, and so create the mood that will make you play the violin as only the immortals do!

If you are clever enough to acquire sufficient technic for the execution of your concertos, you are certainly bright enough to awaken and develop your slumbering individuality.

THE REPAIR SEASON

Now that the music season, teaching as well as playing, has given way to vacation time it is suggested that violinists have their instruments carefully overhauled and put in first class condition again. An arduous season's work plays havoc with the correct adjustment of a violin, as all players well know. Just a little out of order in one point, a little at another. But the total is considerable. The trouble is that the loss in efficiency is gradual and therefore rather unnoticeable.

The wear and tear of the season may have affected the nut or the fingerboard or the neck may be out of true. The sound post may have slipped just a little. The bridge may not be set exactly right. A joint may be opening a little. The bow may need rehairing. All of these are easily adjusted by a good maker or repairer, and the present is a good time to have it done.

A VIOLINIST IN KHAKI

Among the English violinists who are serving in the army is Frank Thistleton, author of a valuable work, *Modern Violin Technique*, from which The Musician has made some very helpful quotations. He was a pupil of Wilhelmj and Arbos.

PETROWITSCH BISSING
Violin Virtuoso---Composer---Master of Instruction
Author of SYNTHETICAL VIOLIN TECHNIC (the acme of material for left hand), CULTIVATION OF VIOLIN VIBRATO TONE (indispensable to the violin student).
STUDIO, KIMBALL HALL - - CHICAGO, U. S. A.

When he first enlisted it was with the Artists' Rifles. After being sent to France he was transferred to another regiment and at present holds the rank of Captain. As suggesting that the artist temperament does not unfit a man for soldiering we learn that Captain Thistleton is a qualified bombing officer, and instructor in the use of the machine gun, bayonet fighting, and physical drill.

MICRO-PECULIARITIES OF ROSIN

BY JAMES SCOTT

The well-known and highly appreciated product adopted by violinists to give a better gripping power to the hairs of their bows, and thus rasp the strings of their instruments to better advantage, is indifferently called fiddler's resin, colophony, and rosin, the variety being likely to arouse the idea that they are various substances, whereas they are all the same in origin and constitution. Qualities may not be identical; but that is not the same as composition.

We are all familiar with the viscid, translucent, yellowish exudation which occurs on sticks of firewood. This material, rightly classed as turpentine, is the source of rosin. It is developed in all species of coniferous, or cone-bearing, trees, such as firs, larches, pines, and spruces; and occurs in numerous narrow tubes that pass up through and along all parts of the trunks and branches. So abundantly does it sometimes form that it frequently bursts from these canals, and percolates between the cells of the wood and bark, appearing outside the latter as small, hardened globules, or elongated tear-shaped nodules, which become opaque white owing to the process of oxidation set up by the oxygen of the surrounding air.

All the resins, which are somewhat acid in character, contain carbon, hydrogen, and oxygen, and usually a small percentage of sulphur. Their degree of solubility, however, in such solvents as alcohol, ether, benzine, and petroleum spirit varies. In connection with their hardness and melting points differences are detectable. These matters have a bearing on the subject of rosin, since some from other sources than the proper one may be sold, possibly mixed with it, and prove inferior to the typical kind.

American turpentine is obtained from *Pinus australis;* French from *Pinus pinaster;* Russian from *Pinus sylvestris;* and Venice from *Pinus larix.*

For purposes of manufacture the trees are deliberately gashed, so that the turpentine contained in them may be freed as much as possible; and it is then gathered after it has oozed out, along with that to be obtained from natural cracks, and is submitted to a process of distillation. It is placed, along with water, in a suitable apparatus, and upon the application of sufficient heat its constituents are separated, volatile products passing over in conjunction with the steam evolved (or steam may be added) and condensing or settling in specially arranged reservoirs. When the latter are cooled, the steam subsides as water, on the surface of which floats a colorless oil or spirit, this being the powerful "turps" used as a blistering agent, and for the dissolving of paints and varnishes.

There remains behind, in the place where the resin was deposited, a residue which is removed, refined, and fused, consisting finally of rosin or colophony. That is the broad process by which the substance is obtained. Resin contains undesirable coloring matter, and aromatic acids capable of crystallizing. To remove these as far as possible it is customary to add to the retort one part of carbonate of soda per one hundred parts of resin, after the oil has been distilled off. The soft mixture is then stirred, allowed to cool, and filtered through cotton cloth. Next it is washed, and dried successively in air and a water oven.

Treatment of the resinous product differs somewhat; but unless such care as is described above is given to it, the result is liable to contain acid matters, besides other minor impurities; and these naturally accelerate the destruction of the bow-hairs and gut-strings.

Oil or spirit of turpentine—by the elimination of which from the resin leaves rosin behind—consists of a mixture of what are called terpenes. These are compounds containing only carbon and hydrogen. It would be out of place to describe them more fully here; but they are mentioned because the "turps" which they compose has the capacity for absorbing oxygen from damp air, and thereby becoming reconverted into resin or true turpentine.

Speaking in a technical sense rosin consists principally of abetic anhydride. An anhydride, by the way, is a substance—they are very numerous and different—which in conjunction with water constitutes an acid. It will be understood, therefore, that although rosin is nominally insoluble in water, it is capable of chemically combining with it, and acquring corrosive properties.

Rosin readily melts; and burns, when ignited, with a dense mass of smoke. A kind of oil is left after such treatment.

Pure white rosin is obtainable when turpentine is gently and carefully heated in an open vessel, enabling the volatile oil or spirit, and other ingredients, to pass away in a vaporous state. Brownness is occasioned by increased heat; and if this is continued the substance can be rendered quite black. A pretty experiment may be made by blowing finely powdered rosin through a small, narrow, paper cone into a candle flame. Showers of brilliant sparks will then occur.

A characteristic feature of rosin is the manner in which it fractures. No matter how small are its particles they will exhibit, upon magnification, arrangements of lines or crevices suggestive of shells, hence the effect is called conchoidal.

Suppose we have a nodule of rosin like a rough bead half-an-inch in diameter. This we break into smaller pieces, every one of which will bear the patterns delineated, concavities corresponding with the detached convexities. If these scraps are crushed still minuter we shall still be able to find the same formation in the granules. The white dust which covers the larger pieces of rosin shows the lines distinctly. The sharp edges and corners are responsible for the rasping effect produced by the minute specks of powder rubbed on to the bow hairs, and transferred to the gut-strings. They gradually get rounded off, and thus lose their power. An excess of powder interferes with the scales on the hairs, so that care ought to be used in this respect.

Friction tends to soften the rosin and force it beneath the scales on the hairs, where its presence is advantageous. When the turpentine is oozing from the trees, insects, fungi spores and threads, seeds, bits of leaves, pollen, and many other things stick to it. These objects remain, as well as scraps of bark and wood, in the rosinous residue; and may be found in the commercial rosin by melting the latter on a piece of glass. What their influence is upon the strings one cannot say; but when they happen to be sharp claws, or thorny pieces, they cannot do good.

VIOLIN CLASS WORK IN THE BOSTON PUBLIC SCHOOLS

A public exhibition of the second-year violin classes in the public schools of Boston was held June 16, and was participated in by nearly 200 children coming from the eight grades of seventeen schools. These pupils began their violin work September, 1914, under the instruction of Dr. Albert G. Mitchell, and therefore represent second year training. During the year the lessons are given weekly, but owing to the fact that the lesson days coincided with certain holidays the total number of lessons was only twenty-five. It is to be understood that the teaching is entirely by classes, all exercises and melodies being played in unison.

Dr. Mitchell gives us the following statement: "The course of study was outlined with a view to teach fundamental technical matters and to drill in rapid reading. No attempt was made to perfect a few show pieces. In brief it has been a 'setting up' period."

Eight numbers were played, selected from *The Public School Class Method for the Violin,* by Dr. Mitchell. These various pieces were chosen to illustrate various technical points, for example, a study in the third position in various keys; a *Tarantella,* forming a study in compound duple time; a *Ländler,* exemplifying the use of the octave harmonic taken by portamento; a melody showing the portamento in slow tempo; a theme from a symphony, calling for several changes in position and the portamento; minuet (by Beethoven), a study in rhythm and the third position, also the staccato and tenuto strokes; *Rondo* from a symphony containing groups of sixteen notes in quick time; March (*Old Dorchester*). The violins were supported by a piano, four brass instruments, and a drum.

The most impressive point was the tone of nearly 200 violins played in unison. It was really thrilling equally with the tone of a large chorus of voices. Therefore we can assure the teacher, who has refrained from organizing a chorus of violins because of a fear that the effect will be tame, that the contrary will prove to be the case.

A prominent violinist and teacher, referring to the printed diagram which is placed on the neck of the violin to show the exact points which are to be pressed by the fingers in order to secure good intonation, claimed that "the pupils will become dependent upon the fingerboard charts." The present writer took occasion to examine violins at random among the pupils and found that in many cases the charts had been taken off, after being used for a time and wearing out. As Dr. Mitchell put it: "The visible method proved vastly quicker in producing results than the slow, very slow aural." The fact that two pieces were read at sight when the players had to keep their eyes fixed on the music and would have been unable to watch a fingerboard chart. Other objections offered were: 1. That the work could carry the pupils only a limited part of the road to good musicianship. (On this point the present writer learned that quite a few children have taken up violin study under private teachers.) 2. That there is a lack of rhythm in the schools. The demonstration did not show this, for the numbers played introduced a variety of rhythmic figures. 3. That much time is given to sight reading. At any rate the young players had learned to read with fair precision.

Dr. Mitchell says that he has striven for breadth of tone, to teach a good position in holding the instrument and use of the bowing arm, and to arou

Personal Address. 2 W. 88th Street, N. Y.

he boys and girls to a love for music and interest n the better class of music.

Referring to the question of holding the violin ıp—avoiding a drooping position—to the position)f the left arm, the shape of the fingers of the left ıand, and the use of the bowing arm, the writer of his article is inclined to believe that as high a degree of efficiency was shown by the 200 boys and girls as they would show in a test of what they can lo in writing, arithmetic, grammar, spelling, geography, etc. And, very probably, the average would show higher. The results were praiseworthy, considering that it was impossible to give individual ıttention to the pupils.

Here are some of the results: Many pupils have nvested in better violins and better bows. One ather has asked Dr. Mitchell to get a $25.00 violin or his boy. One of the boys has earned and saved $7.00, which he invested in a bow. Quite a number)f the boys and girls attended "Pop" concerts—Dr. Mitchell took twenty himself—and then discussed he playing and the players' positions, etc., with heir teacher. One little girl said, "After supper ather asks sister and me to play duets." Another vas delighted because, with two of her friends, she vas invited to play at some neighbors' houses.

Is it worth while? The best way to find out is to ry. If your schools have no provision for violin nstruction, perhaps it is your chance to start the novement. Dr. Mitchell has issued his class teachng material* which has been made available and ıas already been introduced in a number of schools.

That there is a way of getting at most people, if we can only find it?

———o———

PASSING FROM A LOW TO A HIGHER STRING

Passing from the first string to the fourth string and at the same time refraining from sounding the intervening strings is difficult. Practice should be developed along the following lines:

Play nearly a full bow and stop. Then pass to the fourth string with that part of the bow which remains without making the slightest sound, at the same time retaining the pressure on the bow. The same principle holds good for the up bow.

This should be practised slowly until some measure of success be attained, then gradually increase the speed. The same principle is applied to passing from second to fourth string, and fourth to second; only, of course, fourth to first and first to fourth passes are the most difficult, there being more space to traverse.

———o———

STEADINESS OF THE LEFT HAND

One of the most serious faults in violin playing is to slant the hand back from the wrist to finger notes near the nut. If the habit be acquired of moving the hand backward and forward, using the wrist as a pivot while fingering, it will be the means of hindering the progress of the student to a very great extent. Teachers do not need to look to see that this movement of the hand is taking place, as there is an unevenness in the passage being played which clearly indicates that this fault is present. It is therefore imperative that the hand be kept perfectly steady while fingering.

In addition, the left hand should be in such position that the fingers are in line with the strings, so that the hand is not turned out at right angles to the fingerboard.

The fault of putting the fingers down in such a way that they fall in at the first joint is a common one, and the consequences will be disastrous if it be not promptly checked, and care taken to see that they go down on the fingerboard, having the shape, as near as it can be described on paper, of three parts of a square.

The majority of teachers have a very trying time getting the third and fourth fingers of a pupil's hand to go down on the string with the proper formation; and the difficulty is supplemented by an additional trick which the fourth finger has of sinking underneath the neck of the violin when the third finger is put down.

This fault is readily cured if the proper treatment be adopted, for it is due to the fact that when the third finger is put down on the fingerboard and the fourth finger is level with it, the little finger loses its power to stay in its position and sinks, —the third finger, during this period, in all probability having fallen in at the first joint. If the fourth finger, however, be held higher when the third finger goes down, the fault will be promptly cured.

Steadiness of the hand is important so far as ordinary fingering is concerned; but it also applies with added force to the fingering of chromatic scales, which depend so much on absolute steadiness of the hand for their success. All fingering should be done from the fingers, and the back of the hand should be practically inert.—From *Violin Playing and Violin Adjustment* by Winram.

CONDUCTED BY H. C. MACDOUGALL

JOHANN PETER SWEELINCK

BY HARVEY B. GAUL

Johann Peter Sweelinck, or Sweling, or Swielinck (the Dutch were changeable spellers), was born at Deventer, in 1562. He was so famous as a teacher of organ that he was dubbed "the organist maker." He was organist at the Cathedral in Amsterdam, and the Amsterdamers considered him the greatest organist in the world, which he undoubtedly was. When he was scheduled to play the Cathedral was thronged.

In early life he went to Venice and became a pupil of Andreas Gabrieli, the organist, and of Zarlino, the eminent theorist.

Sweelinck is the founder of the great German School. Through his long list of pupils, and compositions his influence is felt today. Some of his pupils were Jacob Praetorius, Heinrich Schiedeman, Samuel Scheidt, and Jan Rieken, sometimes known as Johann Adam Reinken, Reinke, Reineke, and Reinicke—the spelling depends upon the historian. This list is as formidable as those of Lemmens and Guilmant.

He was a prolific composer for the organ. Historically his works are of the highest importance. They contain the first known examples of independent use of the pedals in a fugal part.

His compositions number toccatas, fantasias, variations, a *Praeludium*, *Toccata* and *Echo*. His style was strictly contrapuntal embellished with inordinate ornamentation, due to the period and his early Italian training. Canon, syncopation, and ricercare effects were his medium, and he used them in a way that made posterity acclaim him. His pupils, to a marked degree, copied his style. Scheidt and Reinke borrowed freely.

Sweelinck was a most industrious worker, and generally beloved. He had friends in Italy and in England, they even published some of his works in London. His following in Holland was such that the merchants borrowed two hundred florins from him, which they invested in various business ventures, with the idea of establishing a pension fund. After some years, he received forty thousand florins as the result of the investment.

He died in comfortable circumstances and nationally revered. The moral in his life, is this: Let your friends borrow two hundred florins.

THE STUDY OF ANTHEMS

BY WILLIAM REED

That the rendition of anthems is often apt to be general rather than particular is partly due to the fact that in their preparation the artistic atmosphere and a certain expressive flexibility have been more or less overlooked.

Especially is this so in the case of the more poetic and apparently easier ones.

These, smoothly, written and containing few, if any, external difficulties sometimes offer considerable scope which, when recognized and exploited effectively, constitutes a sure test of a choir's efficiency. A consideration of what points are included may be thus summarized:—

I. Clear, but unexaggerated pronunciation; especially of words sung in the high register of the voice.

II. Approximately—simultaneous breathing in the different parts.

III. The well-graded duration of *cresc.* and *dim.* effects.

IV. Some "give and take" during the general *tempo;* this will obviate mechanical performance.

V. The addition of desirable expression markings.

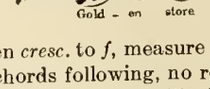
VI. Suitable voice-color, according to key, register, mood, etc.

By way of illustrating these points, two familiar anthems are here considered—

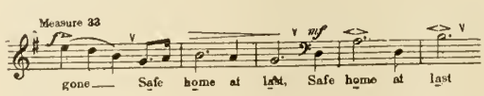
The Radiant Morn, Woodward.

In this and other similar part doublings, the voices affected require careful blending.

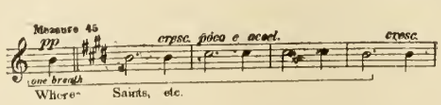
The moving parts should be distinctly enunciated, though not *staccato*, the sustained notes in opposition being given their full value.



In the sudden *cresc.* to *f*, measure 25, as well as in the emphatic chords following, no roughness should occur. Honest tone-quality will give the marked effect desirable.



pronounce the *o* and *a* naturally and musically.



The note x needs care as to tonal emission and pitch. Voices which cannot take it agreeably should sing it *mp.* or omit it entirely.

No forcing of the emphasized notes (measures 54–56) which should be sung with a full, natural enunciation.

Slight <> effects on the sustained notes (during the general *cresc.*) as above added to S. and B. will assist the movement of the A. and T. parts and cover any inequality.

Measure 62 in strict time and with homogeneity of tone quality.

The first division of this anthem suggests the use of a subdued, somewhat veiled tone color which becomes more clear in the second and bright in the third. The organist will bear this in mind and registrate accordingly—always including a register or two which will unobtrusively assist the maintenance of pitch.

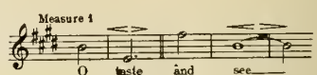
O taste and see, Goss

In a different style to the foregoing.

The printed dynamic indications are few and somewhat indefinite.

The opening measures of the *Verse* (or *Quartet*) passage require perfect balance and evenness, together with a soft, clear tone color.

The leads:—



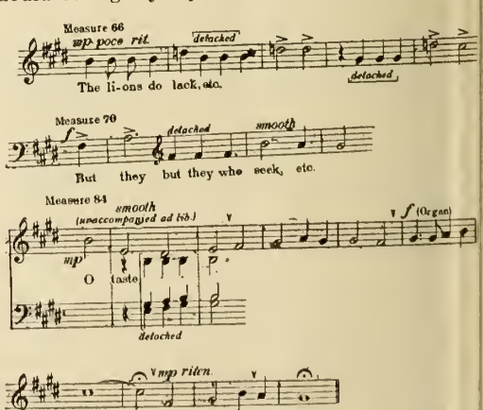
require pure tonal enunciation, without a suggestion of *portamento.*

During the measures which follow, a moderate *cresc.* is needed to lead to the *f.* The chorus repetition (*mf.*) of the whole section is to be similarly treated.

Pronounce *fear—feer* not (*fe-ar*), roll the *r* slightly

The three measures for bass alone (measures 50-52 gain in effect if sung in a declamatory style an *poco rit.* Strict time to be afterward resumed.

Measures 58–66 in strict time. The S. and T should watch the A. and B. parts and *vice-versa* In order to prevent a gabbling effect, the syllable should be slightly separated in pronunciation.



Considerations such as the above are perfect legitimate. They not only assist the interpretati of anthems, but materially advance the all-rou efficiency of a choir individually and collectively— fact which the singers themselves quickly reali

In all choral work, intelligent insight and go voice quality are the points to be kept mainly view. Others are included.

SUBSTITUTES IN REGISTRATION

BY WILLIAM BENBOW

A part of the letter reads:

"The *Canzona* you assigned me for the next lesson calls for a Gamba on the Great, but I haven't any. What shall I do?" This is a type of a very frequent letter, especially if the teacher has not been wise enough to have on file the specification of the organ on which his pupil practises or plays for service. Another recurring complaint is that the Oboe in the pupil's organ is so much more strident than the one in the teacher's organ.

Almost all these troubles arise from the fact that the pupil usually has but a small organ to begin with in his first studies of registration. How disenchanting and benumbing it is to have to try some beautiful bit of poetry that we heard at a recital upon a large organ, on a small instrument of limited resources.

So for this purpose we can work on the old classification of the four qualities of tone in the organ—organ, flute, reed, and string.

We can clear a good deal of ground by saying that the organ or diapason tone has no substitute. We must recognize that we are not always getting the same article, when we pull the Great Open Diapason in one organ and then in another. One may be hard, white, and strident, and the other may be hooty or horny. But there is a definite consensus that we want a big, solid, rich tone. Fortunately, we are very rarely called upon to find a substitute as almost every organ has a Great Open Diapason. Occasionally, however, one may find that in the registration indicated by English composers, the Second Open Diapason is called for, and it may help the novice to know that sometimes the stop assimilates closely to a heavy flute tone. A combination of Great Melodia or Clarabella with the Swell Open Diapason would approach the effect. This, in lieu of a bad Oboe, would give a fair suggestion of a French horn effect, specially in such passages as the opening section of the usual arrangement of Wagner's *Pilgrim Chorus*.

Coming to the flute section, the ubiquitous Great Melodia will have to wear the mask for Concert Flute, Doppel Flute, Clarabella, and the general direction, Gt. 8 foot flute. If there should be a contrast between a 2nd Op. Diap. and an 8 foot flute called for, one passage might be given on the Great with Sw. Op. Diap. coupled to Gt. 8 foot flute, and the 8 foot flute passage may be assigned to Sw. St. Diap., coupled to Gt. 8 foot flute, in order to emphasize the contrast. Sometimes our modern builder makes the Melodia so mellow that we are reminded of the young lady who felt complimented when the local paper spoke of her voice as mellow, but was taken aback, when directed to consult the dictionary, to find—mellow: over-ripe, soon rotten. Consequently, when the Melodia is called for, except by the most recent writers, we must think of it as demanding more body than the shrinking, "timorous dove" that is now often labeled Melodia.

On the other hand, we meet in old organs with a Clarabella type that is too lusty. Often in that case, we can play close four part work on the 4 foot flute an octave lower than written. The same expedient can be used on the Swell, for frequently the Sw. Stop. Diap. is thick and stubby, whereas the 4 foot flute, an octave lower, is clear and distinct.

In a small organ the trouble with the reed one develops from the necessity of giving the organ one "general utility" reed. It is difficult to play three rôles in but one costume. The Sw. Oboe has to disport itself as the plaintive shepherd, or strut abroad as the *Trompeter von Säkkingen*, or as the fullback when team-play calls for a crash. The average builder reasons that where there is only one reed, it would better be strident enough to be felt in the full organ effect, as such an effect in the usual church service is much more in evidence than the occasional Oboe solo in the preludes, etc., that the organist contributes.

Under the circumstances, what shall the young organist do, when the Oboe is called upon to pose as the piping shepherd? To begin with, let us remember that distance lends enchantment to the skirling of the bag-pipes—the less you hear of it the better it sounds—so the first thing to attempt to get is the irreducible minimum of reed effect. Use the Oboe alone, and close the Swell box tight. If it is still too assertive, the Oboe will have to be discarded in favor of these combinations—Sw. Op. Diap. and 4 foot Violin; Violin Diap. and Salicional; St. Diap., Salicional, and Sw. 4 foot to Sw. A dash of tremulant may help.

But, on the contrary, if you have to despair of the distant, plaintive reed effect anyhow, why not use the Oboe as it is, with, possibly, a 4 foot Flute or 4 foot Violin for a change? At least you can then give some light and shade with the Swell pedal, with a possibility of an echo effect in repeated phrases, common to pastorales.

Another suggestion is this: It often happens that a good oboe passage can be played an octave lower with Oboe plus 4 foot Flute and 4 foot Violin, giving something of a bassoon or English horn effect.

For the light, delicate string tone there is no substitute available. As even the smallest organ will likely have Sw. Aeoline and Salicional and Gt. Dulciana, we need not despair of approaching the shimmering, elusive tints so frequently asked for nowadays. Few students realize the latent possibilities of these three stops, modified by the three factors; Sw. to Gt. Coupler, the Swell pedal, and the tremulant. Given a well-constructed Swell box, there is not a stop in the organ that has such a dynamic range as the Aeoline. With these three stops and three factors we may work out 720 different combinations. This is Twilight Land and it takes the ear a while to accustom itself to the shadows. Your Aeoline and Salicional with the Tremulant will give you a substitute for the Vox Celeste which will probably satisfy everyone but yourself. Add to this the Sw. Diap. and a light 4 foot Flute, and you have a workable combination which is not an imitation, but a substitute for the Vox Humana in its usual domain. A 4 foot Violin will be better than the Flute.

In the quieter sections of many modern reveries, nocturnes, etc., there are smaller sections where one light string effect is contrasted with another, such as a Salicional effect after a Vox Celeste. In such a hymn-like passage, a beautiful effect may be got by the 4 foot Flute plus Aeoline, played an octave lower than written. If the organ has a Sw. 4 foot to Gt., as most modern small organs have, try the Gt. Dulciana plus 4 foot to Gt., with the Aeoline on the Swell; or Gt. Dulciana, Sw. Salicional and 4 foot Flute, plus Sw. 4 foot to Gt., and play an octave lower.

Many small organs have no Gamba, a stop frequently wanted. If for a solo effect, try

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS: MIXED VOICES

GAUL, HARVEY B.
No. 12,932. **The light at eventide**.....$0.12
A pleasing setting of the familiar hymn, *The day is gently sinking to a close*, which begins with a solo for alto or bass. The varying sentiment of the text is well interpreted by the music.

REED, WILLIAM
No. 12,948. **Love divine**..... .16
Melodious and interesting in the chorus sections, with two fine solos for soprano and bass. It is a good festival anthem.

WEST, JOHN E.
No. 12,927. **My song shall be of mercy**..... .16
A new anthem by a famous English composer, broad in style, vigorous in rhythm, and just the thing for a special or festival service.

ANTHEM: MEN'S VOICES

No. 12,950. **Jehovah reigns in majesty** (Psalm 99) .16
In the "full anthem" style, with section for quartet or semi-chorus. A festival number.

PART SONGS: MIXED VOICES

BULLARD, FREDERIC FIELD
No. 12,988. **Faith to win.** (Arr. by L. R. Lewis).. .06
A fine song, in march rhythm, for public school use, to be sung in unison, with a second part *ad lib.*

OLD ENGLISH AIR
No. 12,940. **Pretty Polly Oliver.** (Arr. by L. G. Chaffin).....$0.12
A popular old English song arranged for four-part chorus of mixed voices. It has a "war" flavor.

PART SONGS: WOMEN'S VOICES

FEDERLEIN, GOTTFRIED
No. 12,981. **Heigh-ho! Summer has come**..... .16
For four-part chorus, melodious, light and graceful in rhythm, in the English glee style; to be sung unaccompanied.

NEAPOLITAN BARCAROLLE
No. 12,885. **Santa Lucia** (*Over the rippling sea*).... .10
A three-part arrangement of this favorite melody.

PART SONGS: MEN'S VOICES

BANTOCK, GRANVILLE
No. 12,924. **City of Chow**..... .12
The text is from the Chinese, and the composer has followed it with music of an oriental flavor.
No. 12,926. **Lady of the lagoon**..... .12
Text from the Chinese, the music full of harmonic change and exotic character. It is a fine concert number for a well-trained chorus.

BURTON, ALBERTA N.
No. 12,929. **The burro**..... .10
A humorous number, with an imitation of the burro's "aw-ee" very cleverly introduced.

Twenty-one Hundred in use. The highest grade instruments at moderate prices. Specifications and estimates on request. Write for catalogs.

M. P. Möller, Hagerstown, Maryland

either Open Diap. or Violin Diap. plus Oboe or 4 foot Violin on the Swell; or Gt. Dulciana and Melodia, coupled to Sw. Salicional, with, possibly, Sw. 4 foot to Gt. to simulate the upper partial notes of the Gamba.

Several suggestions have already been given as to the usefulness of the Sw. 4 foot to Gt. Its help in arranging for substitutes is invaluable. Here is a Guilmant sonata opening with Gt. Op. Diap. and 4 foot Octave. But our small organ has no Octave. Will our Gt. 4 foot Flute do? Not so well as Gt. Op. Diap. plus Sw. Op. Diap. with the Sw. 4 ft. to Gt. coupler. Or again, here is a florid figuration pirouetting above the theme, the former calling for Melodia and Piccolo. To approximate this recipe, take Gt. Melodia with Sw. 4 foot to Gt. and use Sw. 4 foot Flute alone. Play the theme on the Swell an octave lower with the left hand, while the florid work is taken on the Gt. as written. Again, here is a solid choral opening section where Sw. 16 foot and 8 foot Op. Diap. is prescribed. But we have no 16 foot in the Swell. Couple Gt. to Sw. 4 foot, with Melodia in Gt., and Op. Diap. in Swell, then play on Gt. an octave lower.

The examples that have been given establish the fact that for certain effects there are no substitutes adequate. In most of these impossible cases, however, it was the particular tint that created the difficulty. But in most cases we can approach to the primary color. Where we cannot have lavender, we mix purple and gray; if we haven't the gray, purple will have to suffice. And for most purposes of contrast, it will answer. Yet this should not lead us to be indifferent as to the composer's wishes. Simple justice requires that we approach his color scheme as closely as conditions permit.

———o———

THE ECHO ORGAN

BY H. C. M.

A NOVEL experiment in the interests of advanced organ instruction has been made at the School of Music at Baldwin-Wallace College, Berea, Ohio. The large four-manual organ of the School (74 speaking stops, built by Austin) has two keyboards, one, of the well known Austin type, with tablets, and the other with stop knobs placed on oblique jambs to the left and right of the player, as in the usual arrangement.

Those of us who play on an organ with tablets prefer tablets; those of us who have the older fashioned arrangement prefer that. It is not uncommon to find organists playing one of these consoles and ignorant of the other, proving by "sound reasoning" the almost entire badness of the one they do not use. With the organ at Baldwin-Wallace the student will be able to give each one of the systems a fair trial and determine which one suits his particular style of playing or particular needs.

Organists of the greatest eminence are often found on quite opposite sides in regard to some point like the moving of draw stops or tablets by thumb pistons. One organist (known from Dan to Beersheba) has many times absolutely demonstrated (as he thought) to me the foolishness of the old Hutchings console with stops unaffected by the pistons. Another of my friends, with a keen mind and a genius for mechanics, is on the opposite side,—and equally convincing.

We need to test our theories.

Church Organs

LATEST APPROVED METHODS. HIGHEST GRADE ONLY. ESTABLISHED 1827.

Main Office and Works: Kendal Green, Mass.

Hook & Hastings Co.

BRANCHES

Boston, New York, Phila., Chicago, Louisville, Dallas

CHURCHES in honoring organists with long years of honest work honor themselves as much as their musical servants. My old friend W. B. Colson, of the "Old Stone Church," in the public square, Cleveland, has just celebrated his twenty-fifth year with the church. Four choirs collaborated to make the occasion musically noteworthy.

* * *

AN interesting suggestion comes from James Pearce, Mus. Bac. Oxon.

Mr. Pearce writes: "As an improvement in organ construction I advise two manuals, exactly alike, the two organists each to have his own division of the score. When choral works are transcribed the human voice parts ought to be assigned to separate consoles."

Two things come at once to the mind of a reader of Mr. Pearce's letter: 1, the extra expense of another console; 2, the extra expense of another organist. Some wonderful effects could be worked out by two skilful players.

Will our readers tell us what they think of the suggestion?

* * *

IN looking over the service lists that come to this office—I wish all organists who read this column would send their church calendars—it is often noticed that while the names of the pastor, assistant pastor, deacons, executive committee, deaconesses, superintendent and assistant superintendent of the Sunday-school, leaders of the Bible classes and sexton are printed on the front page, the names of choir and organist are not included. This comes about because the person in authority (usually the minister) has a feeling that printing the names of the musicians emphasizes the music too much, and lends color to the assumption that the singers and organist do their work precisely as they would do a concert.

* * *

No doubt this is sometimes true, but by no means is it always or often true. The average organist and choir singer is a much more sophisticated and broadly educated person than the person of the same profession twenty-five years ago. He knows that he is taking part in a church service and that manner as well as matter is of great importance.

* * *

IN an experience of nearly forty years I have known very few parsons who had liturgical sense. The Episcopalians more often have it than ministers of other denominations; and the splendid Roman Catholic ritual is in itself an assurance of liturgical propriety. In little things many ministers show their lack of esthetic breeding. Take, for example, the minister's part immediately following the anthem. Nine out of every ten ministers will rise and advance to the pulpit as soon as the choir has sung the last word, not waiting for the organ to finish. The minister does not realize that the organ introduction to the anthem and the after-playing are just as much a part of the music as the vocal parts.

* * *

WHEN the minister shows plainly that he thinks of the music as something external to the service, something that he can't get rid of, something that he fails to understand,—it is not strange that the organist and choir fall short of all-round excellence in their relations to the service.

* * *

MR. MILLIGAN, in our valued contemporary, *Th Diapason*, has an article summing up the popularit of certain anthems written by American composer He finds that the most popular are *The Lord is n light*, Parker; *Still, still with Thee*, Arthur Foot *Fear not ye*, Spicker; *Hark, hark my soul*, Shelle *Te Deum* in E flat, Buck; *God, to whom we look blindly* and *Art thou weary?*, Chadwick.

Mr. Milligan goes on to ask "What has become the once popular P. A. Schnecker? Twenty years a his name occurred on hundreds of church calenda through the length and breadth of this land; n only one of his many anthems is proposed as amo the best and that is mentioned but once — his *I cessional*. Dudley Buck seems to have worn better

* * *

THERE are substantial reasons for the continu use of the various Buck *Te Deums* and anthe They are singable, they are easy to execute with fair amount of success, and they do not soar abo the head of the average music lover. We ought remember that when Buck returned from Euro about 1862 he was almost the only American who w able to write music in the manner of the European We forget, too, his more ambitious works, like *T Golden Legend*, *The Light of Asia*, and others.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley-Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY-MATHEWS

ANY help you might give me on the following I shall appreciate very much.

What do you consider the best way of teaching to children the resolution of the seventh chords? F. M.

The very first presentation I give in a manner something like the following:

Place the chords of I, IV, and V in the keys of C, F, and G on the board. Call the attention of the pupil to the fact that the chord of C appears as *one* of the scale in C's family, as *four* in G's family, and as *five* in F's family. Therefore when you find the chord of C in music it doesn't prove anything—that is we cannot judge just by that chord as to the family. But there is one chord in each family which doesn't appear in any other, and that is formed on the fifth degree of each family by adding another third to the regular three-tone chord, thus: C, B, D, F.

The chord is played and pupil "listens." It is noted that the chord has the effect of a question and is, in fact, like a sign-board pointing the way home. Then the chord is played as below, in the first grade way, omitting the third and fifth and the answer is given a third on the "home tone."

This is a very good first presentation but it should be followed by a review in a little different way in class-work in the second grade.

I teach the scale in the second grade with *tonal magnetism* in mind. I show that we have in music tones which have the quality of magnetism, drawing other tones to them, just as a steel magnet draws a steel bar to it.

Then the scale is sung and we find the magnets to be one, three, five, and eight; the action tones two, four, six, and seven. We make a little diagram with arrows pointing from action tones to magnets.

We find that there is one tone which pulls two ways and that is *two*. When we want the feeling of complete repose we draw *two* to *one*, when we desire the unfinished effect we draw *two* to *three*.

We note further that *five* has the qualities of both magnet and action, which is another reason for the importance of the Dominant tone.

A long drill is made by singing the magnets and then the action tones drawing into the magnets.

The principal use that I make, however, of the tonal magnetism principle is in finding the resolution of the Dominant Seventh.

The chord is numbered 5-7-2-4, and then the answer worked out according to the principles of tonal magnetism. That is, *five* can stay where it is; *seven* goes to *eight; two* goes to *one; four* goes to *three*. This gives the complete simple answer to the Dominant Seventh without giving a mechanical rule, and children delight in it.

The same principle will work in the resolution of the Dominant Ninth as well as with the Diminished Seventh in the minor mode.

The very idea that tones can have magnetism is a wonderful help and inspiration to children. By having a cheap magnet in the class room you will have no trouble in getting the attention of the class on it. The boys in particular enjoy it.

The best explanation of this principle that I have seen is in Miss Carolyn Alchin's *Applied Harmony*.

You will have no trouble in having the children understand why the root of the chord has to be doubled if you teach the answer in this way. The pupil feels that *seven* has to be pulled somewhere, and also that *two* isn't at ease unless it is drawn either to *three* or to *one*.

* * *

I am hoping to be able to study piano and have written to a celebrated artist for her terms for lessons.

Her answer to my letter is a form in which she states her business arrangements—price of lessons and conditions—which seem to me to give the student no rights whatever. Will you look over the sheet enclosed and give me some advice? N. K. B.

I have seen the sheet you enclosed before and appreciate your feeling in the matter. There are always two sides to every question, however, and there is no doubt but that the artist teacher must protect himself against pupils who come to the city and take perhaps a lesson or two and then go home and advertise to teach the "method" of the artist in question.

There has been so much abuse of the European study and the Leschetizky Method as well as of other methods that the celebrated teachers are beginning to protect their good names in every way in their power.

There is no reason why any private teacher should not have certain definite and clearly defined rules for entrance to his class-room, just as any school demands advance payments and class attendance.

A music pupil feels that he has a right to an audience with the teacher from whom he expects to take work, though he knows if he went to a school there would be no such opportunity offered him.

The artist intrenches himself behind rules which are amusing to a good business man. On the ground of temperament much is overlooked, and those of us who have had European experience know how the teachers impose on American students. I always feel however that if you are doing business with a house or with an individual, you should conform to the requirements. If you don't approve of them—go somewhere else.

If a teacher should take the ground with me that the first and only thing to be considered in making an appointment for lessons, is the terms of payment for work, I wouldn't consider the teacher at all.

The first thing I want to know would be the work he would outline for me, difficulties to be overcome, and the amount of time such training will demand. The price would be the last consideration. I believe every pupil has the right to know something of the course the teacher proposes giving before any money is exchanged or promises of money.

If a teacher refuses such counsel, I shouldn't care to take my chances under his guidance. It wouldn't be the money that would worry me but the loss of time.

I am very old-fashioned in my ideas of teaching. To be a teacher—"to light candles"—seems to me the most wonderful work a man or woman can have. To give help in the highest sense to those who come under your influence is the most worth-while thing.

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment—a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

Sohmer

315 Fifth Ave. New York, N. Y.

I do not believe that the personal equation can be thrown out entirely, especially in an art like music, which is not only a question of expert knowledge but of making the most of the individual.

The artist teacher very often is not in the least interested in teaching although many of them think they are. But if you will notice they make no sacrifices for the pupils and also very few successes.

It is a wonderful inspiration to be with an artist. There is no question about it, but if you place yourself under his guidance you must expect him to run his business in his own way.

He is not deeply interested in making this country musical, but in getting engagements. You know when you go to an artist you are not engaging work with a specialist in *teaching*, but with a specialist in *performance*. If performance is your goal that is where you should be; but if you are looking for a guide, a philosopher, and a friend, then that is another story.

* * *

I will be grateful to you if you will help me with a boy of twelve, who had some months' work when he came to me—and has the idea that music is mainly noise. He uses a triceps punch on every tone and his wrist is stiff. How can I best lighten his touch, start him on the road to real musicianship, and help him to understand what music really means? M. R.

To correct his misconceptions present all over again the elements in music that are like Life. That is, pulsation, chords growing out of a root, families, and, above all, the principles which govern sympathetic resonance and the pedal.

Give such exercises as the Octave Exercise, first way for relaxing wrist, on page 51, *Mason Fundamental Technics*, fourth form of the two-finger exercise and three-finger Plaidy exercise, with pure finger touch. Be careful that the action comes from the knuckle joint only, and that the tone is not forced.

Select your pieces with great care and avoid any book. Use sheet music only, and technic.

Avoid all tricep touches for a time, using the soft fall with the wrist relaxing whenever possible in chords.

For music use such pieces as *Jolly Huntsman*, Merkel, (2d Grade), *Gypsy Boy*, Schytté, (3d Grade), *The Juggler*, Kern (2d Grade), *Patriotic Song*, Grieg (3d Grade), *Gypsies Are Coming*, Rogers (2d Grade), *Minuet in G*, Beethoven (3d Grade).

OUR COURSE WILL

Make YOU a Thoroughly Proficient **Piano Tuner**

by means of correspondence lessons, accompanied by mechanical aids that make our lessons easily understood and far more practical than other forms of instruction. Our patented Tune-a-phone starts you correctly.

No doubt. No error. Makes you master of the tuner's art. Diploma granted. Course guaranteed.

M. H. Collins, Jayess, Miss., says: "I was very doubtful about your ability to teach piano tuning by correspondence, but when I had received the first lesson the doubt vanished."

J. Hodge, Kingston, Ont., writes: "I am tuning for a large factory, which shows that what you teach is up to date and thorough."

R. O. Logan, Clarkston, Wash., says: "I make from $5 to $15 a day tuning."

THE MUSIC TEACHERS' NATIONAL ASSOCIATION

After ten years of constructive work along true educational lines the policy of the Music Teachers' National Association has evolved a definite character. The State Associations are doing great things with their festivals and discussions of local problems, and are occupying a field which is distinctly their own. It is the province of the National Association to work in co-operation with the various state and local associations, with an eye to the broader aspects of musical educational problems, so that the entire field may be occupied and covered to the best advantage. The National Association is destined to become increasingly a clearing house, to which other associations will turn for information, and in some respects, at least, inspiration.

In order that the National Association may more properly fulfil its functions, standing committees have been appointed to study Community Music, Public School Music, and Standardization, and other committees will be appointed in the course of the summer to study other urgent problems.

Community Music: Miss Kate Chittenden, chairman; Rosseter G. Cole, Waldo S. Pratt, William Benbow, P. C. Lutkin.

Standardization: Charles H. Farnsworth, chairman; Calvin B. Cady, Adolf Weidig.

Public School Music: Ralph L. Baldwin, chairman; Francis L. York, D. A. Clippinger.

Past experience has shown that, while the papers at the annual conventions have been of the greatest value in the study of the various phases of educational work, yet, in the nature of the case, there has not been any really constructive program, but rather a hit-or-miss patch-work of material, which in itself is most excellent, but which leaves out some of the most important aspects of the matters discussed.

Standing committees, on the other hand, working at their leisure, may evolve a constructive program which shall include a complete survey of the subject considered, presenting from time to time the contributions of authorities, and in such a way that nothing of importance is missed, and on the other hand, that there is no unnecessary duplication. It is hoped that the musical profession at large may realize the scope of the task which the Music Teachers' National Association has set itself, for the good of the cause, and may respond by a hearty co-operation both in the steps undertaken, and in the support of the Association in its broader aspects.

There is no reason why the Music Teachers' National Association should not enroll every important and ambitious teacher in America. The National Conventions should, in the course of a few years, become gatherings of as many thousands as there are now hundreds. It is the earnest conviction of those who have been most instrumental in shaping its policies that with a proper understanding of the work which the Music Teachers' National Association is trying to do, the membership is bound to increase rapidly. With the 1916 Convention in New York City, there is every inducement for the largest and best gathering of musical educators that has ever come together in this country. It is in the interest of such a gathering that the Executive Committee is issuing this statement.

The 38th Annual Convention will be held at the Murray Hill Hotel, near the Grand Central Station, New York City, December 27-29.

A CONFERENCE ON COMMUNITY MUSIC

At the University of Illinois, on June 22, was held what is probably the first conference on record devoted to a consideration of community music. It was a part of a *Better Community Conference*, which was organized under the auspices of the University, and whose scope was state wide. The Director of the School of Music of the University presided, and the following topics were discussed:

Community Music: Religious, Patriotic, and in the Home. W. D. Armstrong, Alton.

Music as a Civic Factor: Kenneth A. Bradley, Director of the Bush Conservatory of Music, Chicago.

Music Study for a Better Community: O. R. Skinner, Director Skinner School of Music, Bloomington; M. L. Swartout, Director Millikin Conservatory of Music, Decatur; Henry V. Stearns, Director of Music, Illinois Women's College, Jacksonville.

About forty were in attendance, and at the close of the discussion an organization was formed, with Prof. J. Lawrence Erb as chairman. Mr. Kenneth Bradley was delegated to extend the greetings of the conference to the Illinois State Music Teachers' Association, and to make a report to that body at its next meeting. In addition to the papers named above, Prof. Elias Bredin, Director of the Department of Music, Eureka College, Eureka, read a most illuminating paper on *The Community Music Festival*, in another of the sections. The papers were highly illuminating, and showed a breadth of acquaintance with the subject which augurs well for the future of the conference. Plans will be formulated in the near future for the next meeting.

BOOK NOTES

Brahms, the Man and His Music. By E. Markman Lee. Charles Scribner's Sons. Price, $1.50.

The musician has had need for a short, compact biography of this great master of recent times, which includes a study of his music as well, and a number of anecdotes which have not previously appeared, in a chapter entitled *Brahms, the Man*. The reviewer expresses special interest in the discussion of the methods and principles of the composer as shown in his music in the chapter entitled *Brahms, the Creative Artist*. The student who has yet to make acquaintance with the piano music of Brahms should prepare by reading the analytical comment on his compositions for the piano, and the singer who wishes to become familiar with standard numbers used by the best artists should read Mr. Lee's comment on Brahms' songs.

Chats with Violinists, or How to Overcome Difficulties. By Wallace Ritchie. London: Wm Reeves.

A new book by the author of *Advice to Violin Students*, a well-known and very useful book. In this work Mr. Ritchie discusses in a practical manner and with considerable fulness educational questions such as how to secure accuracy, the violin, its bow and its fittings, reading at sight, memorizing, an extremely valuable chapter entitled *Some Technical Exercises*, with an equally helpful one on *Hand Development*.

We have no information as to price, but since the book is uniform with *Advice to Violin Students*, we judge that the price is $1.00.

Recitative and Its Rendering, illustrated with numerous examples. By R. J. Pitcher. Novello & Company. Price, 50 cents.

The subject of recitative and the proper method of executing it is one of great importance to singers and teachers of singing. One has only to compare the work of a number of oratorio singers of the present to note the apparent divergence in ideas and, one might almost say, the ignorance in regard to the traditional treatment of this branch of artistic singing.

The author treats the subject in three chapters: *Introductory and Historical Remarks*, a few important *points connected with recitatives and their rendering*, *the complete rendering of a recitative with example*.

The Music Student, an English musical publication edited by Percy A. Scholes, issued the following special numbers for April, May and June: Sterndale Bennett, Shakespeare Tercentenary, Alexander Mackenzie.

NEW MUSIC BOOKS

Von Unschuld Method: A graded course of study for the pianoforte, selected, fingered, phrased and annotated by Marie von Unschuld. Augustino J. Powers, Boston, Mass. Price $1.00 net.

A well-planned, well-arranged system of piano study by a famous exponent of the Leschetizky system.

Children's Songs of City Life. By Sidney Dorey Lowe. Text by Anna Phillips See. A. Barnes Co. Price, $1.00.

Most of the songs the children have had to sing are about the open country, the woods, the meadows and fields, the lake and the brook. But here come poet and composer to give our city children delightful songs about the things which they see about them day by day. There is a beauty in the city environment which deserves expression.

PIANO TUNING
Piano Tuning, Regulating and Repairing taught by expert; thorough, practical instruction in repair shop; short course; low terms. Day and evening. 20th year. Circular for stamp.
ALEX. SCHEINERT, 2849 N. 11th St., Philadelphia, Pa.

ngs of Childhood. Little Classics in Song and Verse. Words and music by S. Evlyn Dering. A. S. Barnes Co. Price $1.20.

In this book we find an endeavor to unite in close mpathy with all the pleasures of childhood. he songs depict outdoor summer and winter orts, nature studies, animal, bird, and insect life, tion songs, etc. It can serve as a book of songs r the home and also be adapted for use as rote ngs in the school.

elodious Vocal Exercises, for unison, two, three, and four male or female voices, or both. Preceded by a brief treatise on modern musical notation. By L. Camilieri. The Devin-Adair Co., 437 Fifth Ave., New York.

The author, after professional activity in Athens, ris, and London, located in New York, where he ganized and conducts the New Singing Society, e aim of which is to spread a knowledge of the t of singing and choral practice.

The exercises are admirable, conceived from the lyphonic point of view, each part distinctly elodious and productive of skill both in reading d performing. They can be sung by two parts, prano and alto, one part for women and one for en, or by tenor and bass; the three-part exercises ay be sung by sopranos and tenors on the upper rts, altos and basses on the lower parts; the four-rt exercises can be used by women's voices (the o alto parts reading from the bass clef, or by en's voices (the two tenor parts reading the upper ff, treble cleff); or they can be sung by the ular four parts, mixed voices.

We find the exercises thoroughly vocal and choral, d singers who have used them should be prered for the difficulties of choral works such are taken up by the average choral society. e author recommends the fixed *do* system solmization in accord with the European ctice.

SUMMER SCHOOL ANNOUNCEMENT

Fannie Church Parsons

Will Hold Her Annual Summer School for Students and Teachers this Year in Chicago, July 5—August 5

Every day will be a Red-Letter Day for new ideas.
Each of the one hundred twenty hours will be filled with instruction to the students' utmost profit.
Pleasant location; quiet surroundings; and most reasonable prices.
Mrs. Parsons is known throughout the Musical World as the originator of the Kindergarten Idea of presenting Music. Her inventive genius, coupled with pedagogic intuition, made innovations in piano instruction inevitable. This system makes a specialty of Rhythmic work, Audition and Interpretation.

HARMONY
3-YEAR COURSE IN ONE MONTH

Many years of teaching along most advanced lines have now resulted in the publication of a text-book which presents equally original ideas for teaching Modern Harmony. This plan makes the pupil HEAR, SEE, FEEL and UNDERSTAND all the usual and unusual chords of a tonality.
Mrs. Parsons will present her new course in Picture Harmony in connection with her Normal Work, which has been revised and greatly enlarged.
Enroll with the originator and get the benefit of her methods first hand.
Further information and literature sent upon request.

Address **FANNIE CHURCH PARSONS COLLEGE—4040 Ellis Ave., Chicago**

MR. and MRS. CROSBY ADAMS
Annual Summer Classes for Teachers of Piano
FOR THE STUDY OF TEACHING MATERIAL
MONTREAT, N. C. June 15-28 — CHICAGO, ILL. July 27-Aug. 9
Write for booklet containing outline and strong letters from Teachers who have taken the course.
BOX 9. MONTREAT, NORTH CAROLINA

bership of 85 players under the direction of Walter Henry Rothwell, former director of the St. Paul Orchestra, which gave the first of a series of concerts in the Madison Square Garden, July 11. The soloists were Loretta Del Valle, soprano, and Albert Spalding, violinist.

The following statistics compiled from a bulletin issued by the Census Bureau should interest musicians: In 1914 there were 339 establishments making pianos and organs, with a total product valued at $68,769,476. Included in the number were 325,893 pianos and 2,273 pipe organs. During the same period there were 18 establishments making phonographs, talking machines, and graphophones, with a total value of products of $27,115,916; the number of machines is given as 515,154, with 27,221,290 records.

Arthur Howell Wilson, of Philadelphia, a pianist of much promise, is assistant to Ernest Hutcheson, in the piano department of the School of Music, Chautauqua, N. Y., now in session.

The Russian Symphony Orchestra, of New York, Modest Altschuler, conductor, will give a series of concerts at the Chautauqua Assembly, Chautauqua, N. Y., during the week beginning August 7, to be known as "Music week." The Chautauqua Choir, under Alfred Hallam, and the Community Chorus, of Erie, Pa., under the direction of Henry B. Vincent, will assist.

JUST PUBLISHED

Keyboard Harmony and Transposition

By ANNA HEUERMANN HAMILTON

An original, vital, inspiring method of teaching harmony founded on the principle:
TO EXPERIENCE IS TO KNOW

This NEW presentment of Classic Harmony ANSWERS the long, insistent, urgent DEMAND of all educators for a means of INCORPORATING a LIVING, WORKING knowledge of Harmony into the daily MUSIC EXPERIENCE of the pupil.
This EMPIRICAL HARMONY is the exact antithesis of the outworn "THEORETICAL" Harmony. Knowledge of chords involves CONSTRUCTIVE work in chords based upon classic example. Each volume establishes UNDERSTANDING through explanations that are
PRAGMATIC in their PRACTICALITY.
CRYSTALLINE in their CLEARNESS.
ALL-ENCOMPASSING in their SCOPE.

PRELIMINARY STUDIES IN KEYBOARD HARMONY AND TRANSPOSITION **$0.40**
For the Earliest Grades. (No previous knowledge necessary.)
A simple, ingenious explanation of degrees, intervals, major and minor scales, elements of fundamental harmony and transposition based on key consciousness, with reference to preparing the pupil for the more serious study of harmony.

KEYBOARD HARMONY AND TRANSPOSITION. Volume I ..... **.40**
Vol. I includes Principal Triads, Principal Dissonant Chords, Secondary Triads, Passing Notes.
The work in this volume aims to secure equal ease and familiarity in all keys, direct relationship of harmonic knowledge to music—involving analysis—and furnishes practical cadence drill and many clever suggestive teaching devices.

KEYBOARD HARMONY AND TRANSPOSITION. Volume II ..... **.40**
Vol. II treats of Suspensions, Anticipations, Modulation, Altered Chords, Organ Point.
Volume II offers clear succinct explanations of many of the harmonic problems which usually remain hazy and unsolved in the ordinary music experience. Subjected to the drill in this volume these difficulties give way to a disciplined, growing scholarship designed to pave the way to original modulation.

Thcse books are equally well adapted to class or private lessons—piano and organ

MISS KATHERINE BAILEY, Jacksonville, Fla., sends four interesting programs given at the School of Musical Art, at the close of the past season, 42 pupils participated.

MR. LEROY B. CAMPBELL, director of the Warren, Pa., Conservatory of Music, has sent us a series of most interesting programs played by members of the graduating class of 1916.

THE 15th annual commencement of the West Side Musical College, Cleveland, Stephen Commery, director, was held June 20. Diplomas and teacher's certificates were given to ten pupils. The enrolment for the year was 500, and 85 pupils were present at every lesson.

MISS ALICE J. T. REYNOLDS presented her class of piano pupils in a public program, June 15, at Belmont, Mass.

GRENVILLE COMMOSS gave his 7th annual pupils' musicale at Newark, N. J., June 7. Eleven pupils took part in the program.

THE Choral Union of Baldwin-Wallace College School of Music, Berea, O., under the direction of Mr. Albert Riemenschneider, gave the final concert of the season, June 5. Bach's *Magnificat* was the principal work.

PUPILS of Miss Alma C. Bennett, pianist, gave a recital at the Hotel Majestic, New York, June 2.

CARL FRIEDBERG has been added to the faculty of the Institute of Musical Art, New York, as teacher of advanced students of piano playing.

A NOVELTY in a recital by pupils of Miss Adele Sutor, Philadelphia, was a series of original melodies by the little pupils. They were very favorably commented upon.

AT the commencement exercises of the New England Conservatory, Boston, held June 20, one hundred pupils received diplomas and certificates.

"AGE OF COMPOSERS WHEN WRITING"

BY GUY A. OURAND

So much is heard of the precocity of some of the illustrious musicians that one is apt to gain the idea that a large portion of the masterpieces were composed during the childhood days of the writers. While it is true that Mozart wrote a minuet and trio for pianoforte at five, his symphony No. 1 at eight, symphony No. 22 at nine, and symphony No. 43 at eleven, it is also true that Verdi had reached his eightieth year before giving to the world the opera of *Falstaff*. And from the compositions herein enumerated one finds that the ability to enrich the nations with enduring musical compositions has not been restricted to any particular epoch but is conspicuous at every age from the juvenile to the octogenarian.

At the age of fourteen Czerny, that excellent pianoforte teacher and prolific composer, published his first work. When fifteen years of age Mendelssohn completed his symphony No. 1 in C minor, and two years later created the overture to the *Midsummer Night's Dream.* Schubert's symphony No. 1 in D major appeared at the same period in his life as the overture just mentioned. About a year later he composed more than 200 songs, among them being the well-known *Erl King.* Wagner's symphony in C, the only composition of this character written by him, was finished in 1832 when the composer was in his nineteenth year. The *Reformation* symphony, No. 5, in D major, was written by Mendelssohn when he reached his twenty-first year. At the age of twenty-six we note the appearance of Wagner's *Rienzi,* Mendelssohn's *St. Paul,* and Berlioz's *Symphonie fantastique.* At twenty-seven Sir Arthur Sullivan's *Prodigal Son* is born, and Haydn's first symphony. Still another year and Spohr wins additional fame with *The Last Judgment.* Beethoven's first symphony was written at the age of twenty-nine, as were also about 90 of Schubert's songs, including *Who is Sylvia?*

Very prolific are the ages of thirty-one and thirty-two. When the former age was attained Verdi produces *Ernani,* Mendelssohn a *Hymn of Praise,* Mozart, *Don Giovanni,* Beethoven, his oratorio, *Christ on the Mount of Olives* and his *Moonlight* sonata, Schumann, his symphony No. 1 (*Spring*) in B flat, Schubert. his symphony No. 9 in C major, Sir Arthur Sullivan, his *Light of the World,* and Berlioz, his symphony *Harold en Italie.* With an additional year, at thirty-two, Wagner's *Tannhäuser* became known together with Flotow's *Alessandro Stradella,* Beethoven's symphony No. 3 (*Eroica*) in E flat, and Mozart's symphony No. 543 (*Swan Song*) in E flat, and No. 550 in G minor. Schumann's secular oratorio, *Paradise and the Peri,* was written in his thirty-third year as were Mendelssohn's *Scotch* symphony No. 3 in A minor and Bellini's *I Puritani.* Two years after *Tannhäuser* was written, or at the age of thirty-four, Wagner completed *Lohengrin.* At the same age Berlioz created *The Requiem,* and Dvorâk his *Stabat Mater.* At thirty-five Weber's *Der Freischütz* and Mozart's *Requiem* were heard, together with *The Bohemian Girl,* the most popular and successful of Balfe's works. Mendelssohn's *Elijah,* Bizet's *Carmen,* and Rossini's *William Tell* were written when the composers were in their thirty-seventh year. Verdi's *Rigoletto* was composed at thirty-eight, at which age were written 30 of Mendelssohn's piano pieces, including his *Songs Without Words,* J. S. Bach's *Magnificat* in D and Rubinstein's symphony No. 2 (*Ocean*) in C major. Concluding the thirties is Donizetti's opera of *Lucia di Lammermoor,* written when the composer had reached his thirty-ninth year.

With the composers at the age of forty, Weber's *Oberon* and Verdi's *Il Trovatore* were added to the world's famous works. Rubinstein's sacred opera, *The Tower of Babel,* was composed in the forty-first year of life, as were Gounod's *Faust,* and Grieg's *Peer Gynt* music to Hendrik Ibsen's comedy. When in their forty-third year Wagner created *Die Walküre,* Berlioz his *Damnation of Faust,* Brahms his symphony No. 1 in C minor, and Dvorâk his symphony No. 3 in D major. A year older than these composers was Goldmark when writing his *Country Wedding* symphony, J. S. Bach with his *Saint Matthew Passion,* and Brahms and his symphony No. 2 in D major. Another twelvemonth, at the age of forty-five, we find the completion of Rubinstein's symphony No. 4 (*Dramatic*) in D minor and Michael Costa's *Eli.* Approaching the close of the forties was Raff when he wrote his symphony No. 3 (*Im Walde*) in F major, composed at the age of forty-seven; Spohr's symphony No. 4 (*Consecration of Sound*) at forty-eight; and Gounod's *Romeo and Juliet* and Bach's *Christmas* oratorio at forty-nine.

On reaching the half century mark Raff composed his symphony No. 5 (*Leonore*) in E. Fifty-three years of life enabled Handel to produce his *Saul* and his *Israel in Egypt,* and the well-known melody *Largo,* which was originally written as an air in one of his Italian operas; Liszt the oratorio of the *Legend of the Holy Elizabeth;* and Beethoven the *Missa Solemnis.* Handel's *Samson* and *The Messiah* were written at the age of fifty-six, as was Raff's symphony No. 8 (*Sounds of Spring*) in A. Haydn completed his symphony No. 6 in G major at fifty-nine years of age.

One of the most prominent of modern English composers—George A. Macfarren, wrote *St. John the Baptist* at the three-score mark. Following in close succession is Handel's *Judas Maccabaeus* at sixty-one; Haydn's symphony in G major (*Military*) at sixty-two, his symphony No. 2 in D major at sixty-three; Gounod's *Redemption* at sixty-four and Gluck's *Iphigènie en Tauride* at sixty-five. The Austrian national anthem, one of the best patriotic songs in existence, was written by Haydn when in his sixty-fifth year; a year later he composed *Creation.* Two years before his death, or at sixty-eight Wagner completed *Parsifal.* Haydn's last oratorio *The Seasons,* was finished at sixty-nine years of age. With four more than the allotted three-score years-and-ten, Meyerbeer produced *L'Africaine* and Verdi his *Otello.*

Chicago Musical College

Founded 1867 Dr. F. Ziegfeld, President Emeritus, Felix Borowski, President. **50th season opens Sept. 11.** The leading and largest school of music and dramatic art in the world. 100 teachers. NEW YORK NOTES

BY EVA EMMETT WYCKOFF

THE NEW YORK SCHOOL OF MUSIC AND ARTS offering special summer Teachers' Courses. Ilfe Leech Sterner and his mother, Mrs. Sterner, ve built up a most beautiful home music school, ere students are given every care and attention, l at the same time are recipients of training m prominent teachers.

THE INSTITUTE OF MUSICAL ART, of which Frank mrosch is director, presented its commencement cert at Aeolian Hall. The Institute has its n orchestra, which played at this concert. Di- mas were awarded by Mr. Damrosch. The per- mance marked the progress and class of work ue in the institute.

ALICE GARRIGUE MOTT has left town for the mer.

WALTER L. BOGERT has given up his city work for the summer, and does not resume until October.

SERGEI KLIBANSKY gives many concerts wherein his pupils have opportunities to come before the public and thereby grow accustomed to singing before people. Mr. Klibansky claims to have the "one right way of singing," which he has acquired through much study and research on his own part. This he imparts to his pupils and he can quote the names of numerous singers who have acquired their ability from him.

A MUSICAL festival was given by the pupils of Fay Foster at Hempstead, L. I. The Foster Choral and Operatic Club, under Miss Foster's direction, and with the assistance of Joseph Mathieu, tenor, gave three evening concerts.

THE Polo Grounds were opened for an Open Air Festival, and capable soloists, a chorus of 1,200, and an orchestra of 120, presented Verdi's *Requiem*. The National Open Air Festival Society sponsored the affair. Louis Koemmenich and Arnaldo Conti were directors. Lucille Lawrence, Maria Gay, Giovanni Zenatello and Leon Rothier sang gloriously. The Polo Grounds are entirely too large a place for such a performance to be heard to advantage. It is hoped another year they will seek a more suitable place.

HALLETT GILBERTE, the composer is summering at Melody Manse in Lincolnville, Me.

JESSIE FERMER HILL has closed her Metropolitan Opera House studio for the summer.

THE marriage of Florence Hinkle and Herbert Witherspoon has created a flurry of excitement. They are both well known musically.

CONCERTS are being held in the Parks and Mr. Rothwell will have an orchestra at Madison Square Garden. Columbia University will give its usual concerts and oratorio performances, so that New York keeps up its musical interest even in the hot weather.

MR. EDUARD SCHERUBEL, who was director of the Crescent College Conservatory, Eureka Springs, Ark., for a number of years, and withdrew for a time to devote to special work in Chicago, has accepted a recall to his former position and will take up the work at Crescent College in September. Mr. Scherubel will shortly issue a work on hand development for pianists, a comparatively new field in which he has been making special investigations.

SECULAR SONGS

HIGH VOICE

IRISH AIR (Arranged by Wm. Arms Fisher)
All in the morning early, O. [E min.] [d-*g*] $0.50
A charming text and a tune that is full of melody; just the thing for a program of folk songs.

SMITH, WILSON G.
Pickaninny Snuggle Song. [B♭] [E♭-F] ..... .40
A slumber song in negro dialect, simple and expressive in melody.

Sweetheart, your smile. [A♭] [E♭-*a*♭] ..... .60
Has the serenade quality and is especially effective for a tenor, with ease in singing the tones in the upper register.

TAYLOR, DEEMS
Time enough, Op. 10, No. I. [B] [d♯-F♯] ..... .50
As a sub-title the author has "a man-child's lullaby." The song is modern in harmony and melody.

MEDIUM VOICE

IRISH AIR (Arranged by Wm. Arms Fisher)
Nelly, my love, and me. [D] [d-D] $0.50
A typical Irish ballad, with a pleasing tune.

SAAR, LOUIS VICTOR
A cream-white rosebud, Op. 72, No. 6. [A] [a-E] ..... .50
A song in the "art-song" style, modern in character, with attractive melody.

SMITH, WILSON G.
Sweetheart, your smile. [F] [c-F] .. .60
For description see Secular Songs, High Voice.

TAYLOR, DEEMS
Time enough, Op. 10, No. I. [G] [h-D] ..... .50
For description see Secular Songs, High Voice.

WATTS, WINTTER
Wood song. [D♭] [c-E] ..... .40
A song of nature's beauties, simple and melodious in style.

SECULAR DUET

CADMAN, CHARLES WAKEFIELD
At dawning (*I love you*). Medium and low voices [F] ..... .60
An excellent and effective duet arrangement of a very popular solo.

PIANO SOLOS

GOUNOD, CHARLES
March from *Faust*. Arr. by D. Krug, Op. 196, No. 3. II-III $0.40
Popularly known as the *Soldiers' Chorus*.

KERN, CARL WILHELM
Wild flowers (Waltz), Op. 318, No. I. II ..... .30

A picnic party (Schottische), Op. 318, No. 2. II ..... .30

Dance on the lawn, Op. 318, No. 3. II ..... .30

Minnie Gavotte, Op. 318, No. 4. II .30
Four of a set of six *Miniature Dances for Young Pianists*. They are very effective musically and interesting to young players.

LOWE, HERBERT W.
On to Plattsburg (March), III .... .60
A stirring, vigorous march, with catchy tune and lively rhythm. It has had an instant success.

SCHMIDT, ERNST
Blue-white (March), (*Blau-Weiss*) (simplified arrangement). II-III .. .60
An easy arrangement of a military march which made a big hit when introduced at the "Pop" concerts by the Boston Symphony Orchestra.

VIOLIN AND PIANO

BLACKMAN, ALEXANDER
Romanza $0.75
A melodious number, with opportunity to play big, sonorous tone. The difficulties are mainly incident to the use of the high positions.

MISCELLANEOUS

Exercises in Voice Building. Dr. Horace R. Streeter. (Ditson Edition, No. 32) ..... .60

Twenty-four Vocalises for Soprano or Mezzo-Soprano, Op. 2. Mathilde C. Marchesi. (Ditson Edition, No. 278) 1.00

Thirty Melodious Studies, Op. 52. Carl Alhert Loeschhorn. Book I, Studies 1-10. (Ditson Edition, No. 252) ..... .50
Book II, Studies 11-20. (Ditson Edition, No. 253) ..... .50

"EVERYTHING KNOWN IN MUSIC"

UNDER the title which appears at the head of this sketch Lyon & Healy of Chicago, have issued a souvenir of the new building into which they have recently moved. The first part of the brochure, which is admirably bound and printed, is devoted to a description of the new building and the various departments which make up the business, with fine illustrations showing the main salesroom, the concert hall, the Victor Record salesroom, the magnificent piano rooms, etc., with attractive marginal decorations of a musical character. Then follows a historical sketch of the company with portraits of the founders of the business on October, 1864. Two interesting sketches by Felix Borowski, the well-known music critic, composer, and teacher add value to the book: *Chicago as a Musical Center*, and *The Instruments of the Orchestra.*

We note further that Lyon & Healy has placed at the disposal of a local company of the National Guard, now on duty in Mexico, a Lyon & Healy organ, and that all employees of the Company who are serving in the National Guard forces will receive full pay as usual.

VICTOR TALKING MACHINE RECORDS FOR AUGUST, 1916

MUSIC in the home is in a fair way to become an accomplished fact through the contributions made by the companies who manufacture talking machines, phonographs, etc. A bulletin recently issued by the Census Bureau shows that in 1914 over 500,000 instruments of this kind were made, and more than 27,000,000 records, a plain indication that the great mass of people are buying. Here are some especially interesting new issues by the Victor Company.

Garrison, Mabel, coloratura soprano: *Lullaby* from *Erminie*, by Jakobovski; and the *Doll song*, from *Tales of Hoffmann*, by Offenbach, the latter an especially brilliant number.

Caruso, Enrico, tenor: *O souverain, o juge, o père* (*Oh heaven, earth, and sea*), from Massenet's opera *Le Cid*, sung in French.

Gogorza, Emilio, baritone: *Musica proibita* (*Forbidden music*), by Gastaldon, a song formerly much used by concert artists.

Destinn, Emmy, soprano: *Die Bekehrte* (*Damon*), Op. 13, No. 1, by Stange, a charming number in the pastoral style.

Farrar, Geraldine, soprano: *Star-Spangled Banner*, the American national air.

Gadski, Johanna, soprano: *Die Lorelei* (*The Lorcley*), German folksong, by Silcher, a classic in the style.

Gluck, Alma, soprano: *Bonnie sweet Bessie*, by Gilbert. An old favorite by a popular singer.

Kreisler, Fritz, violinist: *The old refrain* (*Vienna popular song*), arranged by the violinist, a delightful melody which always pleases his audiences.

Martinelli, Giovanni, tenor: *Mattinata* (*'Tis the day*), a magnificent song in the serenade style, delivered by an artist of the first quality.

McCormack, John, tenor: The *Prize song* from *Die Meistersinger*, by Wagner. One of the finest tenor arias in the opera repertoire, sung in English.

Ober, Margarete, contralto: *Wiegenlied* (*Cradle song*), by Humperdinck, a lovely lullaby by a German master.

Schumann-Heink, Ernestine, contralto: *The mother sings* (*Die Mutter singt*), by Grieg, sung in English, one of the most deeply melancholy of songs.

Williams, Evan, tenor: *Mollie darling*, by Will S. Hays, a favorite melody of bygone days.

Zimbalist, Efrem, violinist: *Chant d'aut* (*Song of autumn*) Op. 37, No. 10, one of T kovsky's most delightful compositions for the p which Mr. Zimbalist has transcribed for the v

Kindler, Hans, 'cellist: *Le cygne* (*The swan* Saint-Saëns, and Rubinstein's famous *Melody* arranged for 'cello, two numbers in which th perb singing tone of the instrument is shown.

In addition are a large number of light voca instrumental numbers by well-known artists, as are in demand by the average public w wishes merely to be amused or entertained music.

Christine Miller IS SINGING

GOOD NIGHT by Mary Turner Salter
THE NIGHTINGALE by Ward Stephens
THE NIGHT HAS A THOUSAND EYES by William Arms Fisl
TO ONE I LOVE by Louis Victor Saar
A WOMAN'S LAST WORD by William Dichmont
EXPECTANCY by William Stickles
THE UNREMEMBERED by F. Morris Class
GAE TO SLEEP by William Arms Fisher
OLD IRISH MELODIES: The Little Red Lark; A Song Glennan; Nelly, My Love, and Me; The Passing of Gael. All arranged by William Arms Fisher.

THE MUSICIAN

SUCCESS IN ART IS ACHIEVED THROUGH PERSONAL EFFICIENCY

DITSON COMPANY
$1.50 a Year

Equipment Unrivaled Service Unexcelled

Conservatories, Schools, Colleges, and Convents
Music Teachers, Music Pupils, and Music Lovers

will find in our catalog everything needful for study and recreation

From such an abundance it is impossible to enumerate more than the most noteworthy, but an idea may be gained from the following, of the variety, scope, and value of our publications

The Musicians Library

(75 Volumes)

This notable series has been planned to embrace all the masterpieces of song and piano literature; to gather into superbly made volumes of uniform size and binding the best work of the best composers, edited by men of authority. Each volume is independent, complete in itself, and sold by itself.

The Musical Courier says: "THE MUSICIANS LIBRARY is a boon to the musician; it is not only the Musicians Library, but it is a library for all people who believe in music, who are fond of the art and who cherish musical ideals."

Ditson Edition

(306 Volumes)

An ideal edition of standard educational works, chiefly technical, for the piano, organ, violin, and other instruments and for the voice. Progressive Music Teachers who use DITSON EDITION will use no other.

Favorite Songs of Famous Singers

(12 Volumes)

These volumes contain the Favorite Songs sung by Julia Culp, Geraldine Farrar, Emma Calvé, Elena Gerhardt.

"In these beautifully printed books the art of the printer and the bookbinder is rivaled only by the art of the composers and of the famous singers themselves."
—**The Musician**

Other volumes of the Favorite Songs sung by world famous artists in preparation

Ditson Dollar Series

(75 Volumes)

Includes the famous Piano Classics, Young People's Classics, etc.

Melodia

By COLE and LEWIS. The most complete, the most practical course in sight-singing ever published. Used in leading schools and colleges. Adopted as a text-book by the Summer School at Cornell.

The Music Students Library

(29 Volumes)

A series of Educational Text-books suited to the requirements of the average student and covering every essential branch of musical instruction.

From **The Music Trades:** "This library is one of the most noteworthy educational series of text-books ever offered to the public."

Half Dollar Music Series

(67 Volumes)

More than half a million sold. Invaluable for Music Teachers and for recreation.

Tapper's Graded Piano Course

(20 Volumes)

Edited by THOMAS TAPPER, author of *The First Piano Book* and *The Music Supervisor.*

"I have never approved of a Graded Course because I could never find one worthy of serious thought, but I am delighted with TAPPER'S GRADED COURSE and I shall be glad to recommend it upon every opportunity."—**Sarah I. McConnell,** Muncie National Institute.

Marzo's Art of Vocalization

and Preparatory Course to the Same

(24 Volumes)

Compiled and edited by EDUARDO MARZO.

"The best thing of the sort that I know."—**J. Frank Botume.**

See page 513 for advertisement of all our catalogs

Our Songs and Piano Numbers are in active demand by leading teachers and professionals. In fact, our catalog in all departments was never stronger than at the present time. We aim for quality rather than for over production and results warrant a continuance of this course.

Absolute Satisfaction has always been guaranteed by us and we shall continue the same high standard in the future.

Our Large Retail Departments in Boston and New York are constantly growing in importance and service. The experience gained in this way we are able to pass on to teachers and dealers in distant cities, for we carry in stock always the standard works of the world and are prepared at all times to fill orders promptly and correctly.

Our Musical Instrument Department is the most important of its kind in

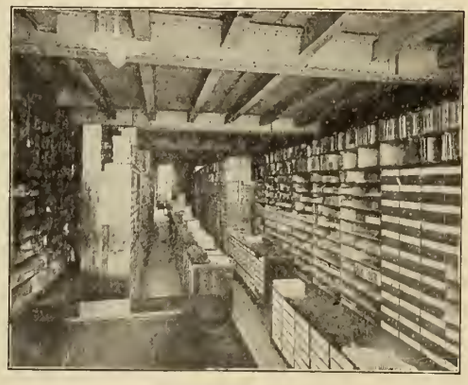
Theodore Spiering, a great violinist, conductor and teacher, has, during the past ten or more years, been a conspicuous figure in the international music world. In each one of the above branches of his profession, he has won world-wide acknowledgment and distinction. As a composer he has only lately attracted attention, his first work to win success having been his immensely difficult artist studies for violin.
This new set of Piano numbers are charming mood pictures of more than average originality and effectiveness and promise to appeal to a very large class of players owing to the fact that they are artistic in conception and technically not difficult.

BOSTON 380 Boylston | CARL FISCHER COOPER SQUARE NEW YORK | CHICAGO 335 S. Wabash

Willis-Cincinnati
MADE SUCCESSFUL BY THE TEACHERS THEREFORE EVERLASTINGLY FOR THE TEACHERS.



WILLIS SERVICE

is more forcibly illustrated by this cut showing one of our splendid floors than by anything that has ever been written or said. Besides visualizing parts of a mammoth stock, it suggests good tone, a necessarily good clerical force, a smooth system—in a nutshell, the wonderful machine necessary to operate a truly great music store.

IT ALWAYS PAYS progressive musicians to learn all they can about good things in their business. A postal will bring useful literature—the kind you are glad to get—that tells all about Willis Service.

THE MUSICIAN

Let Him That Is Without Sin Cast the First Stone

A woman crouched down against the iron fence of the park, sobbing turbulently. Her rich fur coat dragged on the ground. Her diamond-ringed hands clung to the slender, plainly-dressed working girl who leaned close, trying to console.

Dan was the cause of it all. Dan and that chap with the automobile and the diamonds.

O. HENRY

saw, and seeing, understood. That is the secret of his power. With swift sure, strokes he drives his story home. Never a word is wasted. From the first word the interest starts and you are carried on in the sure magic of his vivid sentences to the unexpected climax.

O. Henry has come to fill American Life. Wherever you go—whatever you read—you meet O. Henry. In the news stories from the war, there are intimate references to O. Henry—at social gatherings—at hunt meets—on the road—everywhere everybody knows O. Henry and refers lovingly to his people and his stories.

The founder of a new literature—no wonder the sale goes up and up—higher and higher each day. Long ago he reached beyond the world's record for short stories. 1,500,000 already in the United States. How many in France and England—Germany—Africa—Asia and Australia—we cannot tell. As the years go by our wonder grows greater—as the years go by, his fame grows greater for the wisdom—the understanding—the love—the humor—the sweetness of these pages. Always healthy in their influence—always facing truth when truth has to be told—a bracer to the heart and mind—while the tears and laughter struggle together and neither wins.

Don't get him to read him once—you'll read him a hundred times—and find him each time as fresh and unexpected as at the first. He puts his finger on the pulse-strings of your heart and plays on them to your delight and your surprise. That is the mystery of O. Henry—his power beyond understanding.

KIPLING FREE

And besides to get your prompt action we give you, free, Kipling in six volumes—179 stories—the greatest he ever wrote—the red, red stories of fight and the keen blue stories of peace.

Send No Money Send the books back—the whole 18—if they're not the biggest, the best you ever saw or read. Better than moving pictures—for these are permanent, real moving pictures of life.

25c a week pays for O. Henry. The Kipling is free. Send the coupon before it is too late and put the 18 books on your library shelves and the new joy in your heart.

Don't wait till tomorrow and be sorry. Send Coupon today and be glad.

Most Important Work on Sight-Singing Ever Published

MELODIA

In Four Books or Complete in One Volume
Available for Private Teaching, Class Work, and Self-Culture

Educational Plan arranged by SAMUEL W. COLE, Instructor in N. E. Conservatory, Supervisor in Brookline, Mass. Exercises written and selected by LEO R. LEWIS, Professor of Theory and History of Music at Tufts College, Mass.

USEFUL for SCHOOL SUPERVISORS Everywhere

BECAUSE—

It is Richest in Matcrial for Board Work. Most carefully graded—Most systematically arranged. Most helpful for self-culture. Most representative of classic and modern music. Complete from the simplest beginnings to the end of Professional Training.

In an editorial on "Music in America," THE OUTLOOK, after commenting on the lack of thoroughness and efficiency in educational methods in music, said:—

"Better American traits, however, are beginning to show themselves in some places where music is taught. 'Melodia' by Mr. Samuel W. Cole and Professor Leo R. Lewis, which is designed for instruction in Sight-Singing, indicates how readily and wisely the American can abandon tradition."

Correspondence solicited. Special prices for introduction in large and small lots will be made, for a reasonable time, to Schools, Colleges, and Teachers with large classes. Copies of the work will be sent with return privilege to those with accounts in good standing.

Price, 4 Books, each, 50c. Complete, 1 Vol., $1.50. Prices Include Postage

SCHIRMER'S LIBRARY
of Musical Classics
The American Edition of the World's Masterpieces

Perfectly Edited, Phrased, and Fingered
Engraved, Printed, and Bound in the Best Manner

OVER 1200 VOLUMES

Twenty-five Years ago the firm of G. Schirmer decided to bring out the masterpieces of music in a uniform series.

This idea of a standard American edition of the musical classics was an innovation, as previously a complete set had been available only in foreign editions.

The initial step in this undertaking was the publication of Beethoven's Sonatas in two volumes—a worthy cornerstone of the now famous *Schirmer's Library of Musical Classics.*

This American edition of the *Classics*, through its uninterrupted existence and development, has become a veritable American institution, known to music lovers everywhere.

COMPREHENSIVE

Its marvelous scope has created for *Schirmer's Library* a universal demand. As the edition stands today it represents the best of the entire literature of classical music for the voice, piano, and violin. In it the teacher will find valuable pedagogical material, in many instances not available in any other form. The abundance of recreational material includes Selections from the Operas, "Albums" containing the works of individual composers, also miscellaneous collections of various composers, especially as illustrating some single school or nation. In the twenty-five years of its existence *Schirmer's Library* has expanded to over twelve hundred volumes and others are constantly being added to still further augment its interest and usefulness.

AUTHORITATIVE

Accuracy in editing is the fundamental feature of *Schirmer's Library.*

Among the numerous advantages which *Schirmer's Library of Musical Classics* enjoys is the fact that the accrued knowledge and experience of years are constantly drawn upon for its greater perfection in respect of phrasing, fingering, etc. For example, the task of editing the new edition of Chopin's Complete Pianoforte Works was entrusted to none less than Rafael Joseffy, who knew every note of the Polish tone-poet and sensed every shade of meaning as few other pianists have. This, his last work, was Joseffy's final legacy to the music world, the culmination of his art and skill. Max Spicker, Leopold Lichtenberg, Rudolf Ganz, Franz Kneisel, Arthur Whiting, Heinrich Gebhard, Phillip Mittell, Clarence Adler, Constantin von Sternberg, William Mason, Theodore Spiering, and many others of equal reputation also have been or still are engaged in the preparation of various *Library* volumes. Indeed, the editorial roster of *Schirmer's Library of Musical Classics* is one of rare distinction, including only those amply qualified to preserve the gifts of genius in fullest measure.

PROGRESSIVE

Schirmer's Library has always been identified with the best in engraving, printing, and binding. In line with this attention to mechanical perfection the publishers of *Schirmer's Library* were the first in the field to appreciate the advantage of the new **Offset Process** as applied to music printing. This method permits the use of a dull finish paper so desirable from both an artistic and physical point of view. Everybody who reads music, especially by artificial light, will recall having frequently shifted his music, readjusted the light, or tried in some way to overcome the difficulty. But the glare could not be avoided because it was in the highly finished paper itself. With the dull finish paper, however, the eye strain is entirely obviated. As rapidly as possible the entire *Library* is being brought out in this improved fashion.

INEXPENSIVE

Adhering to the original purpose of furnishing the best inexpensive edition of the musical classics, the popular prices as first established have been maintained even in instances where the publishing cost has been greatly increased.

The prices range from 25 cents to $2.25 per volume, less the usual discount, the majority of the teaching material not exceeding 50 cents per volume. These prices place *Schirmer's Library* within the means of all and justify its claim to being the most inexpensive as well as the most popular edition of the World's Musical Masterpieces.

With a few exceptions the volumes are of uniform size, 9 x 12 inches. Many are to be had in handsome cloth bindings. Fine leather bindings to order.

An Afternoon with Mischa Elman

String Quartet Playing as a Summer Diversion

BY W J. BALTZELL

CHAMBER MUSIC is usually heard in concert halls, and the idea, as visualized to the average reader, means seeing and hearing the Flonzaleys, the Kneisels, the Zoellners, or some other organization which appears *en tour* in various cities.

PRESENT DAY CONDITIONS

Now it is better to hear chamber music in a concert hall than not to hear it at all. But it is quite open to question whether the average concert hall presents conditions for chamber music which are thoroughly favorable. The hall implies the box office and certain other conditions which rise superior to artistic considerations.

A string quartet of high reputation demands a high fee, an expense which can only be balanced by the sale of many tickets at a fair price or a smaller number at a high price. The former means a hall too large to permit the finest musical effects of chamber music to be properly appreciated; the latter restricts the opportunity to persons of wealth and social standing; it acts against popularity.

IN THE CLASSICAL PERIOD

What would Haydn, Mozart, and Beethoven think if they could see the conditions under which the products of their creative art are presented today? How different the whole method would seem.

When they wrote a quartet they certainly did not consider it as a work to be given to a large public in the glare of a brilliantly lighted concert hall as is the case today. On the contrary, they probably looked forward to a trial of it in the semi-privacy of the music room of some cultured, liberal patron of the art, with only the guests of the house as audience. Or perhaps they may have thought of the tryout which four artist friends would give the quartet at the house of some mutual associate, with a few others present to hear.

The central thought certainly was not *publicity*, that word which is so aggressively modern, but *intimacy*.

A MENTAL ATTITUDE

The French make use of the verb *assister*, with the same root as our English "assist," when they indicate presence at a concert or gathering of persons. It is worth while for the person who is present at a concert of chamber music to feel that he is "assisting," that his attitude should be not that he paid his money to be entertained but that he must contribute something in manner, in thought, and in sympathy which shall help the players. One should be in close touch with chamber music to get from it the finest and most satisfying message.

MISCHA ELMAN

Next to the joy of actually playing one of the instruments of a quartet is the pleasure of sitting near by and drinking in, as it were, the stream of tone as it comes from the instruments. Only in the home can one realize the finest conditions under which to listen to a string quartet.

A VISIT TO THE ELMAN SUMMER HOME

It was with anticipation of the keenest pleasure that the present writer accepted an invitation to "assist" at the playing of several quartets at the summer home of Mischa Elman, at Rockport, Mass., August 1, with two other guests, Mr. Constantin von Sternberg, the eminent composer, pianist, and teacher, of Philadelphia, and Mr. William Arms Fisher, a well-known Boston composer, and musical Editor for Oliver Ditson Company.

Rockport is on Cape Ann,—a few miles from the better known Gloucester, center of a great fishing trade,—and the cottage which Elman occupies is several miles beyond at a point locally known as Straitsmouth. From the wide porch one looks directly out on the Atlantic Ocean with an unbroken view as far as the range of vision will admit. Quiet almost as a millpond on that particular day the rocky coast shows ample evidence of the terrific power of the sea when lashed to fury by an easterly gale. From almost every direction the breeze comes over the water and as a result the air is delightfully cool and the temperature favorable to work in summer.

The big music room, with its wide windows to the north and west furnishes an ideal place in which to listen to the playing. Side by side stand two grand pianos, showing another phase of the violinist's executive ability, for he is an admirable pianist as well. In a smaller room, in another part of the house, is a piano on which the writer of this sketch had the pleasure of hearing Liza, a twelve year old sister, play the first movement of Beethoven's sonata in E♭ major, Op. 7, and part of a suite by Bach. The youngest sister, Esther, ten years old, is also a diligent student and well advanced for her age.

THE QUARTET

The players took their seats in front of the door with the ocean in full view, Elman at the first violinist's stand, supported by Adolph Bak, second violin, Karl Rissland, viola, and Rudolph Nagel, 'cello, members of the Boston Symphony Orchestra. In chamber music Elman uses an Amati violin, with beautiful tone, which dominates the quartet yet admirably blends into the composite tone when demanded.

THE PLAYING

There were several points of interest in connection with this playing. First was the fact that they were playing because they enjoyed it, out of sheer love for the art inspiration which the music gave them. It was not a rehearsal in which the dominating purpose was to reach the highest possible degree of refinement of tone, polish in style, and accuracy of execution, but a whole-hearted endeavor to pour out the feelings aroused by the music through the medium of the tones which they drew from their instruments. It was not a cold impersonal presentation of a *super*-music, if the term be allowable, but a highly personal expression in which each asserted himself at times and on occasion yielded precedence to another player. This gave a reading of the works which was full of color and individuality.

When one considers that the quartets were practically played for the first time by the players, so far as ensemble goes, the evident rapport was really marvelous. The quartet style was thoroughly evident, for each player, although a soloist of high artistic rank, admirably merged his work into the effect desired as a whole.

The works played were: Mozart, in E♭ major; Schubert, in A minor, Op. 29; Dittersdorf, in E♭ major.

ENTR'ACTE

During the interval between the second and third quartets we had the pleasure of hearing several songs by Elman, sung by his oldest sister, Mina, who has a soprano voice of fine quality which she uses with a skill and a dramatic fervor which augur well for her artistic future. The latest song, still in manuscript, was a setting in English of a text by Tennyson, called *The departure*. The composer has treated this with a descriptive style and dramatic power which suggests a definite feeling for stage representation.

SOME ELMAN SAYINGS

Mr. Louis C. Elson, writing to the Boston *Advertiser*, described an afternoon of similar character. We quote from this report certain sections which our readers will find of special interest:

Mischa Elman is much more than a great virtuoso; he is a thorough musician. Very few of the world-famous violinists would enter into string quartet playing as a recreation. He told me that he considers the division generally made, between solo and quartet playing, an unjust one.

"True string quartet playing is really a species of solo playing," said he, "if the artists are sympathetic enough to give way to each other."

I have heard,—thus Mr. Elson—hundreds of string quartets in my life, yet I can say that the numbers performed in that music room gave a new and special meaning to the music, and the great artist sang himself into the ensemble in a manner that gave the second violin, the viola, and the 'cello their turns in the foreground.

With all his breadth of repertoire Elman is a true conservative. "I play all the new works," said he, "but I love Mozart now more than ever.

"I cannot understand how anyone can belittle Brahms. I agree with Bülow's saying about the 'three great B's in music.' Brahms was the great B of modern times, but Bach was the great B of all time.

"I do not like to put a Brahms sonata on a violin recital program. The form is so vast and the thoughts are so great that it makes all the rest seem small."

THE CULTIVATION OF CHAMBER MUSIC

The present writer feels it worth while to take this opportunity to add a few words on the subject of chamber music and its importance in our scheme of musical work.

First, every series of concerts ought to include at least one devoted to chamber music. This applies particularly to schools, colleges, and music clubs which stand for the higher ideals in musical appreciation and culture.

Second, concerts by an orchestra or large chorus have a definite place in the musical life of a community. But "big" things are not the only phases worth developing. One must be acquainted with music produced by smaller bodies in small halls, not for the general public, but for the connoisseur.

Third, it is not enough to say that string quartet and other chamber music is "highbrow," and for the musically elect. The average concert-goer can be interested in chamber music if it is adequately presented.

Fourth, musicians in cities which have no resident quartet should endeavor to promote the organization of such a group of players and give them liberal support.

Fifth, amateur violinists and 'cellists will find the highest degree of musical enjoyment in the hours which they may spend in the practice of chamber music.

———o———

Apparently music is showing a tendency to go back to its beginning, to the time when the laws of rhythm did not yet trouble her; it seems that she wishes to free herself, to regain an utterance that is unconstrained, and raise herself to the dignity of a sort of poetic language.—*Schumann.*

SOME COMMON ERRORS

BY WILBUR FOLLETT UNGER

All good teachers have some poor pupils. If only it were known just what makes poor pupils "poor," and how to insure correction of their faults, how fortunate we teachers would be—how much easier our teaching would become!

Some of the poorer pupils, unfortunately, suffer from lack of brain-power; some from lack of time; many from nervousness. Some are poor as a result of ill-health; some from lack of ambition; while with many others the cause is sheer laziness! But taking them all in all, the majority of pupils fail to play as well as some others, or at least as well as they might, because of CARELESSNESS!

Study well that little word that carries such big results: *care-less-ness*,—the state of being without care. Free from all responsibility—think of it! Who are there such, save children and imbeciles! Even little children have certain responsibilities and cares in their little ways. How far more important, then, that students and followers of a great art like music should be willing to take infinite pains and CARE with their work!

Here are some of the more common errors that I have discovered among the average pupils, practically all of them resulting from nothing more or less than pure carelessness:

Guessing at Notes.—Don't guess at the notes,

From left to right: Karl Rissland, Liza Elman, Adolph Bak, Mina Elman, Mischa Elman, Esther Elman, Rudolph Nagel.

taking a chance that they will prove the right ones; deliberately *aim* for them carefully—no matter how slow the progress is. First read them carefully in your mind and know, to your satisfaction, that you are right; then aim and play them.

Inattention at Lessons.—Listen to everything told you by your teacher; it is waste of good money to pretend to take a lesson all the while thinking of something else. Think of every word your teacher says, let it make a lasting impression—that is what you pay him for,—and then follow his advice. Do as he tells you. Don't forgot. Be responsible.

Misjudging Intervals.—Do not carelessly play an octave if a seventh is called for; likewise a fifth for a fourth, etc. *Observe closely!*

Forgetting Signatures.—What crimes are committed in thy name, O signatures! "Oh! I forgot to sharp the F," is a poor excuse. Learn the signature of every key, and keep it always in mind.

Accidentals.—Don't forget that accidentals remain good to the end of the measure in which they occur, but are not carried into the following measure, unless tied. Don't forget!

Poor Counting.—Schumann said that to play out of rhythm was as the walk of a drunken man, and there's considerable truth in that. Do not above all things, play one bar of notes fast, and the next bar of same note values slow. Make yourself play all notes of one value either slow or fast but ALL ALIKE in time; that is, evenly! Until you have mastered the subject, force yourself to count aloud evenly, making your *playing fit the count*, not the count your playing! Take pains!

Misuse of Pedals.—Do not continue holding your foot upon the "sustaining pedal" (so-called "loud" pedal) until long after the harmony has changed. Your ear should tell you when this occurs,—if you but listen.

Full Value of Notes.—Give to each and every note its true value. If one voice happens to be in quarters, another in halves, and another in eighths, etc., note the difference. Use care.

Practising Too Fast.—The easiest and surest way to accomplish good results in music is to practise slowly and carefully, so that the correct impression is fastened upon your mind—a result which would be obviously impossible when you practise too fast. Proceed carefully!

Observing Dynamic Signs.—Do not play in a cold manner,—all of the notes in an equal tone color, but, by observing the signs for expression alter the quality of tone as required to loud or soft —as well as obeying the other signs which call for variety in tempo, touch, etc. Play carefully!

Familiarity with Keyboard.—Learn at the outset the topographical arrangement of the black and white keys and where instantly to find any note or group of notes if you are called upon suddenly to play in the dark. *Prepare yourself carefully* against all contingencies.

Quantity of Practice.—You will find that you have to earn all you get in music: if you practise little, you'll get little results; if you practise much you'll find the results are big. If you *care* enough for results, you'll devote enough time to it.

Nervous Timidity.—Lastly, lack of confidence is one of the most serious faults. While it is all very well to be modest, yet the fact that you *know what you know* must be admitted to yourself. Be careful—but not over cautious. Realize you own ability, and then go ahead—Carefully!

———o———

BRILLANTE E PIANO — IMPOSSIBLE

BY C. P. LAISTER

One of the most difficult shades of expression to infuse into piano playing, for the amateur at least, seems to be the effect of brilliance combined with softness, that is *piano*. It appears to be a prevailing belief that *brillante* implies loudness of tone, and very frequently this error is the cause of excellent compositions being rendered in a manner quite incompatible with their nature.

Now, what may be roughly termed soft brilliance is a most beautiful effect, and one so rarely heard outside of the professional circle, that it is well worth cultivating.

Sydney Smith's delightful composition *Harp Eolienne* is an ideal study in tone which is at once brilliant and soft. I wish that every amateur who cannot play *brillante* and *piano* together could hear this rendered by a first class pianist who can. The delicious runs in the grace notes are an inspiration to the production of the effect in question. If they were not played brilliantly, the whole piece would sound flat; were they played loudly the result would in no way resemble the music of the classical instrument which the composition is supposed to imitate.

To produce correctly this *soft-brilliant* tone, one requires much practice and patience, perhaps more than is needed to learn any other effect; but the resultant skill is well worth the trouble.

WAYS THAT HAVE HELPED

BY BELLA SCOFIELD

Modern efficiency demands that all waste and non-productive elements, shall, through some transforming medium, be turned into products of value. Efficient music teaching would seem to require the transformation of difficulties into stepping stones leading to progress—a procedure which would undoubtedly be a conservation of energy, of both pupils and teacher. My pupils and I are working out our problems along this line; I, hopefully and prayerfully; they, unwittingly, but most enthusiastically.

THE CLASS LESSON

Our chief bugbears were technical exercises and missed lessons. We have been able to overcome the latter by proper application of the former, and the miracle working medium is—class lessons. These are held once a week, in addition to private lessons. Those of my pupils from beginners to those about the third grade meet together at my studio for the usual supplementary class work; biography, elementary harmony, and games for learning and reviewing notes, time values and musical terminology. Each week we have a fifteen minute program, the children playing the pieces and studies learned in their regular lessons. Each week, too, they learn and practise together a suitable technical exercise, which is then listed in the practice books to be perfected for the private lesson and recited at the next class meeting. New work for the class is sometimes given also at the private lesson, the pupil being led to understand that either lesson missed puts him behind the class.

It might seem impracticable to give pupils of varying ages and grades the same technical material, but I find my older pupils benefit greatly by the review of elementary technical principles, and the younger ones attack their problems more ambitiously when they have the example of the older children. There is also the opportunity for such needed individual work as may arise at the private lesson. .

When possible we vary the exercises by grades, for example: advanced pupils play with both hands, beginners alternate; advanced play in quarter notes, beginners in whole, all counting with the metronome (we use the table for preliminary practice, so there is not the apparent discord). The advanced pupils frequently use the five-finger exercise the younger ones have, but with a complicated fingering, or the beginners may pass the thumb under the second finger, the advanced under the fourth or fifth, etc. Sometimes the two sides of the table contest for points, the side winning with the fewest mishaps choose two players to repeat the exercise on the piano. There is now considerable enthusiasm over who will be allowed to play finger exercises.

The difference in the interest and regularity between the pupils attending the class and those living too far away to join is noticeable. I have no present need for enforcing the "pay for missed lessons" rule.

GILT STARS

Another feature used in connection with the class work makes for concentrated practice. A ten cent box of the small gilt stars used by kindergartners stands on my piano, and one is given for perfect recitation of any part of the lesson.

Each pupil has a notebook with flexible cover so that it can be rolled with the music, and to it is tied a small tally pencil, which pleases the children and is always at hand for written work at the class. The front part of the book is used for biographies, interval writing, music definitions, etc. The back contains the practice outline. Each part of the lesson is definitely set down, with any necessary instructions as to counting, expression, or special practice on difficult measures, that might otherwise be easily forgotten. In the case of little tots, practising under mamma's supervision, the outline gives an idea of the home work required.

At the lesson each perfect number, as a scale, étude, or section of a piece, is rewarded by having a star placed after that particular item in the outline. A very hard part is often marked as eligible to a star, which usually stimulates diligent practice, the children reasoning that a few measures should be more quickly learned than many, the star therefore being more easily earned.

PORTRAITS OF COMPOSERS

Careful count is kept of stars in the practice book, and when they number ten, a picture of some great musician is given. These are quite distinct from the Perry Pictures we use in our biography work; many of them are of modern musicians, so that the children become acquainted with contemporary artists they are soon eager to hear. Postal card pictures may be obtained at about five cents each, but we have gathered them from every source. Old programs, advertisements, and the musical newspapers furnish a great many. I do not like to cut my copies of The Musician for this purpose.

SAYINGS OF MUSICIANS

The picture chosen is pasted on a blank page, and underneath is written the name and some saying of the musician. The quotation is made as personal as possible. Janice, lately entered into the *First Study of Bach,* receives a portrait with the words, "You have as good fingers as I. I had to work; whoever is equally industrious will succeed,"—Johann Sebastian Bach; or perhaps the picture of Chopin, followed by his well-known "Always practise Bach. This will be your best means to make progress."

Peter, after long struggle with legato tones, receives this assurance from Rubinstein: "I have sat for hours trying to imitate the timbre of Rubini's voice in my playing," while Mary, inclined to slide through with little effort, reads the concise energetic, "Work, work, yet more work" of Nordica.

My pupils have dubbed these quotations "Personal messages from great musicians," and were delighted with themselves when they noted the result of their careful work; having done their best, the greatest masters gave them advice for further success. They are glad to learn something of the life and work of each new musician received, and we sometimes set aside our biography period for a Modern Musician's Day, each child having some little story to tell the others. I allow them to go to my clipping index and old volumes of The Musician for the material.

Other quotations we are using are:

Before I was a genius I was a drudge.—*Paderewski.*

Cultivate courage. Have a oneness of purpose. Keep at it. Go on trying.—*Maud Powell.*

The barriers are not erected that shall say to talent, "Thus far and no further."—*Beethoven.*

If you have to play before people do not make any excuses; do it at once or not at all.—*Schumann.*

Who go slowly goes safely,

Who goes safely goes far.—*Patti.*

Play in the beginning slowly, firmly, until the new piece has entered into your fingers.—*Rubinstein.*

Do not attempt to practise your whole piece at first. Take a small section, or even a phrase.—*Bloomfield-Zeisler.*

Watch well that you actually hear every little tone that you mean to produce.—*Josef Hofmann.*

In fine piano playing all the details are important.—*Busoni.*

Hard, conscientious work is the only means to scale the ladder of success.—*Schumann-Heink.*

Tone artists...do not ever lose sight of the time.—*Caruso.*

You do not know what you can do till you have tried.—*Maud Powell.*

Remember that velocity alone is not sufficient. Cultivate rhythm, precision, use of the pedals.—*Paderewski.*

Practice missed or skipped is gone forever.—*Emil Sauer.*

Analyze the passage that seems to bristle with difficulties; pick out the most difficult spot, master it.—*Harold Bauer.*

Every day we spend without learning something is a day lost.—*Beethoven.*

Work, study, and wait. It is the only sure road to success.—*Sembrich.*

SOME THOUGHTS ON TECHNIC

BY H. BECKER

Technic is the method by which an artist uses his material to express his ideas and emotions. As applied to the piano, technic is the manner in which the artist manipulates the keyboard to express his own ideas or those of the composer. It is the power to present every portion of a composition in the spirit of the composer—as he in fact would wish were he standing near. That is a good test to apply. It includes effortless sight-reading, full keyboard command, suppleness, pliancy, dexterity, and, above all, mastery over tone-color—the ability to mold tone as you will. A pianist, if properly trained, should be able to express every shade of feeling, gaiety as well as sadness, power and piquancy—in fact, he should be able to produce a full vocalized tone—to make the piano sing.

A system of piano technic must consist of the means whereby every note, singly or in combination, is played accurately, fluently, and with the maximum of effect. The eye, the brain, the hand, the wrist, the fingers, have each to take a part, and it is all important that the performer shall bring these forces into play intelligently according to their relative importance, instead of employing them by a mechanical, haphazard method. Only in this way, in proportion to the ease and speed with which these various agencies work and co-operate, can the quantity and quality of the technic be brought to bear to express with vividness the various emotions such as anger, pathos, joy and sorrow, the true interpretation of which is the greatest pleasure one can derive from piano playing.

Technic is not a matter of muscles, finger flexibility, and stretching power only. It is the power to use these at the keyboard with automatic ease in giving true interpretation to the work in hand. Real technic prevents the harsh mechanical execution which kills the beauty of musical thought. It brings about a suppleness of fingers and wrists so that every gradation of expression from *pp* to *ff* is rendered with the greatest ease and fidelity of tone. By doing the right thing in the right way at the right time real success becomes a certainty. —From *Mind, Muscle, and Keyboard.*

Be sure to read the articles on various phases of Efficiency which are printed in this issue of THE MUSICIAN. At the beginning of the new season is the time to take stock of YOURSELF.

CORRECT, BEAUTIFUL AND EFFECTIVE PIANO PLAYING

III

(A Chapter on the Musical Time Essentials)

BY GUSTAV L. BECKER

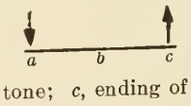
Having in a general way pointed out the path toward such playing, it is now opportune to illumine it more in detail.

If good piano playing depends chiefly upon a keen desire to play well, or even, added to this, upon the mental recognition of all the separate facts and factors that will lead to such a goal, then there might be hundreds of Hofmann's and Godowsky's. But it is not enough to know the path, one must also have traveled it—upon one's very finger tips—from beginning to end!

Of course, it should be only one's real better self that undertakes the journey; and, in order that one may hold securely to the path, according to best intentions, a reliable guide should be at hand, whenever needed. This guide, is manifestly the experienced and competent teacher.

Anyone traveling must give heed to time and space. Similarly, in our musical progress we must give close attention to time moments and time spaces. We should know exactly when to start a tone, how long to continue or when to end it.

This might be made clear to most of us, right at the start, if tones were symbolized—not by "notes," but, according to desired length of tones, by horizontals of varying lengths, with short vertical lines at the beginning and end of each horizontal one, thus:



a, beginning of tone; *c*, ending of tone; and from *a* to *c*, duration of tone.

Instead of this we must learn to distinguish the variously shaped notes, must remember their names and all their relative values, only to find that, as yet, we know but so many words; that the real knowledge of time values comes through hearing and doing! Unless this abstract knowledge of note values is brought into direct contact with certain psychological factors, but small headway can be gained.

One of these factors is the mysterious consciousness of the passing of time, the time elapsing between the flashes of definitely conscious impressions, of successively present moments. And even this consciousness of the "Now" is most indefinable, quite impossible to grasp. By the time one has decided that a certain moment is "Now," that moment has already gone by—forever!

Yet we may retain a short, vivid, and echo-like prolongation of this consciousness of the moment, a species of time-memory, and may then connect such an impression closely to the next coming "Now."

We then learn to compare elapsed and made-conscious time intervals with each other, as to the greater or less regularity of their sequence, and by measure of these comparisons we learn to anticipate, quite definitely, the approaching moment, selected for a more intense consciousness of the next "Now."

It is upon the ability to narrow down to the finest possible point this consciousness of the moment felt to be "Now," that the important element of musical time division called "Precision" depends.

It has been found, through psychological tests, that, with no outer, regularly recurring impressions to guide one, the passing of the shorter time intervals can be determined with much closer accuracy than can any longer ones. Thus eight half notes would be much more difficult to play in even succession (say in 2-2 time) giving one count or beat to each note, than would be eight eighth notes, playing two notes to each quarter count or beat. Therefore a beginner in music should be allowed to subdivide the longer values, for instance counting 8-8 instead of 4-4 to a measure, until, by constant comparison of the longer or less frequently recurring note values with the shorter or more frequent notes, this subdividing may become subconscious yet serving as a guide toward determining more accurately the longer time intervals, while transferring the wide-awake consciousness of the precise moments of entrance of each longer note-value, with satisfying regularity, from one point, across the intervening subconscious ones to each next longer one. The experienced musician, such as, for instance, a capable orchestra player, has his subconscious mind stored full of all kinds of divisions and subdivisions of time, including triplets, quintuplets, and other less usual groupings.

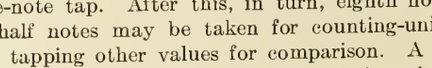
Thus he is constantly "in touch" with passing time and with time proportions. Force of inner nature or habit then, as well as knowledge and good judgment, make him a good "timist."

One of a number of valuable expedients for gaining a clearer consciousness of time-proportions is found in letting the pupil (who does not limp) walk across the floor, at his normal gait, while holding in his left hand a music book containing one of the well-known tables of relative note values,—the respective page being open—while with a pencil in his right hand he will give at first one tap, of a quarter-note value, to each walking step, counting one number to each step, from one to four.

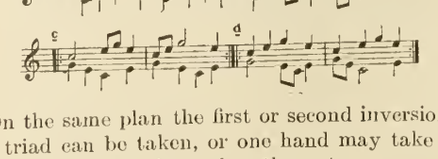
He should be impressed with the importance of having each tap and count coincide precisely with the moment of foot-contact with the floor. This being done, the pupil, while looking at the rows of eighth notes and quarter notes, taps, as regularly as possible, two eighth-note taps to each quarter value walking step. Then, going to the other side of the quarter values, he should tap once for each two steps, preferably upon the left foot step, thus tapping half-note values to the quarter-value steps.

After a lesson or two these comparisons of greater or less note-values with quarter note "units" may be extended to four sixteenth-note taps to a quarter-unit step, and to four quarter-value steps to one whole-note tap. After this, in turn, eighth notes and half notes may be taken for counting-units, while tapping other values for comparison. A familiar expedient is that of simply counting aloud the time units while tapping the incidental rhythms.

It is better, however, to tap the regular beats with one hand at the same time with the counting of them in their regular order of entrance. After this the hands should reverse or exchange their tasks, thus:



After this the problem should be transferred to the keyboard, using the tone successions of some simple broken triad—one hand indicating the regularly recurring beats, while the other hand plays the same tone-successions at the required speed of the rhythmic values, thus:



On the same plan the first or second inversion of the triad can be taken, or one hand may take one inversion different from the other, etc.

In triple time the triad need only be repeated in one direction by the hand taking the regular time beat. Such drills will also help to develop mental concentration, a most valuable factor in all departments of music study.

The important time element, precision, is especially put to the test when some one else than the pupil himself will, by tapping or counting, indicate the regularly recurring time beats, while the pupil indicates the incidental apportionment of rhythmic values. When the pupil taps, all by himself, both the measure beats, in one hand, and the varying rhythmic moments in the other, he may unconsciously adjust his beats (or counts) to the momentarily slower or faster succession of tone entrances in the rhythm part, instead of adjusting the rhythm, as it should be done, in true and fair proportion to the regular beats.

Another application of precision is found where two or more tones are indicated and required to enter at precisely the same moment. This calls for an intense concentration of attention and motive will power at the moment which, at just the required lapse of time, will be "Now!"

To exercise this sort of proficiency such tests and drills may be given when once the one hand and then the other will, *with purpose*, play its tone more or less in advance of the other.

Having alternated doing this with each hand several times it should be noticed whether, in trying to play both hands exactly together, either hand shows a tendency to come in ahead of the other. If so, it will probably, in most right-handed persons, be found to be the left hand.

In such case this should be neutralized by frequent efforts at playing the usually lagging hand intentionally just that much sooner than the other one, thus: habit:

Another expedient consists in having the pupil go through a regular precision drill as follows: One finger of each hand, previously decided upon, takes hold of a key, at an interval of either a sixth or a tenth apart. The keys, held ready, are merely touched, not depressed. The pupil, thus fully prepared to play these two tones at the same instant stores up energy for this purpose while awaiting the teacher's unseen signal—a tap or a distinctly and quite suddenly uttered word of command "Now!"

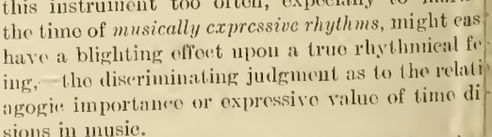
At this moment the pupil shall let all the pent-up energy exert itself without further deliberation or time to consider or favor one hand more than the other. The result is a satisfactory synchronizing of the motions of the two fingers. After this two other fingers should be selected to be put through the drill and to the test, until each finger of one hand has been made to agree, as to playing together with precision with each finger of the other hand.

That one may not overlook any set of fingers, a table of simultaneous finger combinations may be jotted down as follows:

R. 1 2 3 4 5	2 3 4 5 1	3 4 5 1 2	4 5 1 2 3	5 1 2 3 4
L. 5 4 3 2 1	3 2 1 5 4	1 5 4 3 2	4 3 2 1 5	2 1 5 4 3

Subsequently *each two* fingers *of each hand* may be played in legato succession with suitably harmonized intervals, while giving equally close attention to the precise playing together of both hands.

After this, various three, four, and five note successions may be practised simultaneously with both hands with great care as to the aforesaid synchronizing.



For developing an ability to indicate or maintain absolutely regularly recurring time intervals, a perfectly regulated metronome can do good service, especially during absence of the teacher. But to use this instrument too often, especially to mark the time of *musically expressive rhythms*, might easily have a blighting effect upon a true rhythmical feeling,—the discriminating judgment as to the relative agogic importance or expressive value of time divisions in music.

Along with precision as to the moment *when* a tone is to be played, and the exact relative duration value, from note to note, or beat to beat, there is to be considered the need of regulating or determining the speed or tempo.

What may be an appropriate tempo on the av-

age as well as for the time being—in a certain composition? Does the favoring of a momentary effect rob the entire movement of its smooth flow of time and its rhythmic or metrical unity?

In this regard a broad view must be taken, yet not one that might disregard the relative importance of each detail. At times a compromise needs to be made between extremes.

Feeling and judgment for what is *just right* will guide one best after all. The first is partly inborn, but capable of development, while the other is acquired through prolonged culture—of the kind that furnishes constantly the best example and the most helpful influence—favorable to the development of all the mental and spiritual faculties possibly involved in the noble study of music.

NOTES ON THE MUSIC IN THIS ISSUE

SEPTEMBER sends forth a call to take up work again, work for the teacher, work for the pupil. Always and ever before the teacher is the problem of getting the materials to use for instruction. The thoughtful teacher is aware that useful, even quite valuable, new material is offered each year. To stick to a repertoire of teaching pieces selected five or ten years ago is not especially progressive and up-to-date. Only a lack of initiative, which may be called pedagogic laziness, can explain the methods of a teacher who does not post himself by examining new material and thus keep up the interest of pupils. The latter do not enjoy having for lessons pieces given to every pupil of the teacher for a number of years back.

The present issue offers to teachers and players some numbers worth knowing, and we trust our readers will examine them all carefully and list them, properly classified as to grade, contents, and specific usefulness, in teaching.

Intermezzo, Op. 21, No. 4, by Giovanni Sgambati, is from the pen of a famous Italian composer, one of the few of that nationality who studied with Liszt. It is a light, graceful number, polished and refined. The opening theme, which is in the alto register, is piquant and rich in color. But do not overlook the fact that the accompanying chords are to be played staccato, very much as if it were a pizzicato passage for strings. This makes an admirable contrast to the lyric quality of the section in B.

Valse miniature, by Vladimir Rebikoff, shows the delightful charm which so many of the Russian composers manage to put into their easier works for the piano. Note the chromatic character of the opening theme, also the somewhat restless quality of the melody for the left hand beginning in the seventeenth measure. It is passages like these which give special flavor to Russian music. Play this easily and lightly.

Prelude in B minor, Op. 28, No. 9, by G. Hoth, has a trace, it would seem, of the Mendelssohnian character. The pupil will find in this several places in which the fingering is somewhat unusual, for example, in the eighth measure, left hand, in which the thumb slips from A♯ to B; also measure fourteen and elsewhere in which there is substitution of one finger for another during the holding down of the chords by the left hand; and the passing of the fifth finger under the fourth in order to secure smoothness.

Down the line, Op. 16, No. 2, by Cedric W. Lemont, is a charming little march for young players, just the kind of thing to use in gymnastic and calisthenic exercises. Use a strong, firm accent, a decided march swing.

Dancing nymphs, Op. 135, No. 1, by J. Frank Frysinger, is in mazurka rhythm, and, although written by an American, has much of the Polish style. Note the time values in the opening theme, playing the first note as an eighth, not dragging it out to quarter note value. It must have an incisive quality.

A jolly jig, by Percy E. Fletcher, shows us the work of an English composer. It has the style and rhythm of one of the old English dances and must be played with well-marked rhythm. The melody for the left hand about the middle of the piece offers excellent drill in a phase of technic often neglected by teachers and pupils with the result that, in certain cases, the technical skill of the left hand is at least a half to a full grade lower than that of the right hand which has received the major attention.

School march, for four hands, Op. 18, No. 3, by Alois Reckendorf, is a well-written, effective march which we especially recommend for use in school exercises, gymnasium, and calisthenic work. Both the *Primo* and the *Secondo* have interesting parts, and the teacher will find it worth while to have the pupils change from one to the other.

Dollies' lullaby, by Carlos de Mesquita, taken from a set of little pieces published as Op. 126, lies very well under the fingers for which it provides excellent drill. We find this a desirable little piece to use as a test for memorizing, on account of its clear structure and simple form. It is easy, but quite effective.

Memories, by Charles Wakefield Cadman, transcribed for the violin by Karl Rissland, is one of the composer's most delightful songs, a number which has been used in concert by several well-known singers, and most admirably arranged for the violin with piano accompaniment, by a leading member of the Boston Symphony Orchestra. It displays, in a very effective way, the lyric quality of the violin, with the contrast in register due to use in different octaves. The main difficulties are those due to the use of the higher positions and the making of a warm, round, full tone.

Prelude, in E (*Berceuse*), by Alfred Hollins, comes from the pen of a noted English organist and composer, with indicated registration for a three-manual instrument, but which, nevertheless, can be given with satisfactory effect on a two-manual organ with such modification as may be demanded by the stops found on the instrument. This can be used either as a church or a concert number.

Where violets grow, song for high or medium voice, by William Dichmont, is in the high-class ballad style with broad, melodic character offering ample opportunity for the singer to work out fine vocal effects. Here is a song which should prove quite useful to the average teacher as well as the singer who wishes songs with popular appeal and, at the same time, real musicianly quality. Also published for low voice.

Requital, by Emil Wiegand, Op. 10, No. 1, is a song in the modern style, and calls for considerable finesse in the treatment of the different lines of the text to indicate the emotional program of the latter as set by the composer. It is one in which *color* is all-important.

At dawning, by Charles Wakefield Cadman, places before our readers, a duet arrangement of the well-known and widely popular song, made by the composer himself. It will be noted that it can be sung by soprano and alto or soprano and baritone.

Morning, by G. Waring Stebbins, breathes the spirit of outdoor life and joy, and very fitly closes with a passage in waltz rhythm. Here is a good teaching song. It is also published in F for medium voice.

For Jean, by Eugene Cowles, the composer of the popular *Forgotten*, is in the fine ballad style of which he is a master. It is full of feeling and will suit any singer who has the art of indicating the sentiment of a text. It is also published in C for low voice.

THE MUSICIAN Prize Contest for Piano Music closes October 1. If you have not yet sent your contribution, get it ready at once.

ECONOMY IN MEMORIZING KEY SIGNATURES

BY HAROLD S. CLICKNER

IN teaching the pupil to memorize the key-signatures for the major scales (of which there are fifteen), it is not at all necessary that he should be compelled to retain the above number. Instead, we should endeavor to show him how few of these key-signatures he should memorize, and yet know at any time the entire fifteen.

To cover the needed ground in music both thoroughly and rapidly is the urgent call of our day. We should, at all times devise means of making these tasks, which are difficult enough, less laborious. Is not time valuable?

Upon examination, we find that two scales commence with the same letter, excepting the letter C, of which we find three.

ILLUSTRATION

1	2	3	4	5	6	7
A	B	C	D	E	F	G
A♭	B♭	10 C♯ and	D♭	E♭	F♯	G♭
8	9	11 C♭	12	13	14	15

Have the pupil commit to memory the key-signatures for the first seven scales in the above illustration. When this is mastered, the other eight remaining key-signatures are easily found.

Example: Suppose the teacher asks the pupil for the key-signature to A flat. All that he must do is to subtract the number of sharps found in scale of A (which is three) from the number seven and he will at once have the answer for A flat. Seven less three equals four. A flat has four flats for its key-signature. The letter C being represented three times makes no difference. The rule above still holds good. Take particular notice that it hinges on the number seven.

ILLUSTRATION

A3	B5	C0	D2	E4	F1	G1
A♭4	B♭2	C♯ and C♭7	D♭5	E♭3	F♯6	G♭6
7	7	7	7	7	7	7

Of course it is to be understood that the teacher should show his pupil before he commences to memorize key-signatures, the order in which the sharps and flats make their appearance in key-signatures.

As this article has to do with key-signatures, it will do no harm to show how quickly the order of the sharps and flats can be learned. Take the following sentence which I found in Fischer's *Musical Psychology:*

Father Charles Goes Down And Ends Battle.

The initial letter of each word in the sentence is the order for the sharps as found in key-signatures.

1	2	3	4	5	6	7
F	C	G	D	A	E	B

By reading the sentence backward,

Battle Ends And Down Goes Charles' Father,

we find in the initial letter of each word, the order of flats. The only difference is in the word Charles' where we must use the apostrophe.

B	E	A	D	G	C	F
1	2	3	4	5	6	7

Composers in Love and Wedlock: Franz Liszt

BY J. CUTHBERT HADDEN

NIETZSCHE coined a synonym for Franz Liszt, and it was in this form: "Liszt, or The Art of Running after Women,"

Everybody remarked Liszt's weakness in that direction. When Borodin, the Russian composer, hunted up the Abbé at Weimar, he found him with fifteen pupils a day, mostly ladies. If a lady pupil did well, he kissed her on the forehead, and she kissed his hand. If she were young and pretty, he would kiss her—well, *not* on the forehead.

"This is the custom between Liszt and his lady pupils," says Borodin. "Evidently he has a weakness for the fair sex."

A FAVORITE WITH THE FAIR SEX

The late Emil Liebling, who had spent the winter of 1874–75 in Berlin trying to extract piano instruction from Theodore Kullak, thought it expedient to wind up his European experiences by letting Liszt know that he was around. He went to Weimar and observed the same thing about this Paganini of the piano. Liszt, he wrote afterwards, "shared with General Sherman and Bismarck a naïve fondness for kissing pretty girls, and there seemed no lack of suitable material. He exhibited rare judgment in knowing just where to draw the line, and if 'twas but a faded flower who presented herself, she had to be content with the privilege of kissing his hand."

He had a lady secretary, Janka Wohl, who has gushed about him in a book, and told that he gave her bonbons and kissed her hair! One night, after hearing him play, she was delirious, and "the archangel Liszt" beamed on her and "got mixed with algebraical problems in the dark," whatever that may mean.

The story goes that while he was preparing to enter Holy Orders at Rome, Liszt, after a service in the Sistine Chapel, was asked by the nuns to play. Many anecdotes are extant as to the extraordinary effect Liszt's playing in his younger days had upon impressionable ladies. In the present instance, the nuns rushed at him and covered him with caresses. Pope Pius IX therefore resolved that for the benefit of the clergy (or at any rate the female portion of the sect), Liszt's religious career should be cut short, and he refused to ordain him.

He was, in fact, idolized by the fair sex, and did not fail to take advantage of the homage they were eager to render him. A Polish Countess once received him in a boudoir ankle deep in rose leaves. Women flocked around him wherever he went, as in later years women flocked around Paderewski. Once he was discovered in his house at Budapest, seated on a platform surrounded by six or eight ladies all trying to portray his "ivory profile." He had fallen sound asleep, wearied with their homage.

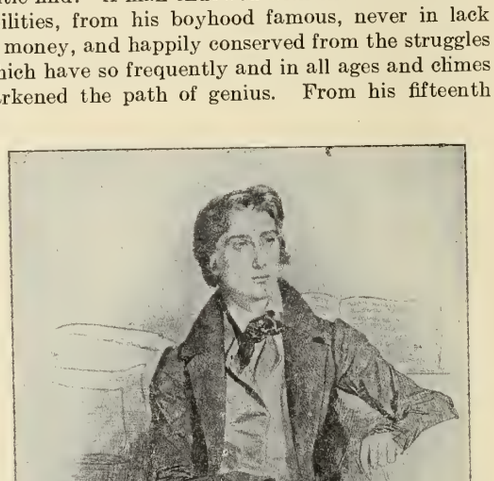
"You have found me," he said, when he awoke "in the attitude of St. Sebastian; but the arrows this time are paint brushes."

At St. Petersburg high-born ladies assailed him on the steps of his hotel and crowned him with flowers. Four noted beauties of the Prussian Court had their portraits painted representing themselves as Caryatides supporting his bust. Ladies even hugged and preserved as priceless treasures the stumps of his cigars.

The late Louis Engel recalled a characteristic incident of the time when Liszt used to give recitals in Vienna at midnight, after the opera. Let anyone else try such an experiment now! Yet not for love or money could one get a seat two hours after the subscription was opened. Well, Engel tells that one seat was found for the Countess R., a Polish beauty, after all the seats were occupied, and do you know where?—in the S of the piano; all available seats against the straight side being taken, a chair was placed in the small half circle. It was then that he left a glove on the desk, and the glove was torn into shreds, which were distributed like relics, in the "medaillon" of the Princess B., the sister of the beautiful Princess S., who quarreled with her for that bit of kid.

Liszt's most charming compliments were always paid to the sex which Rubinstein called "adorable." An American lady tried to tempt him across the Atlantic when he was old by saying he would surely make an immense fortune. "My dear lady," he replied, "if *you* stood in need of that large fortune, believe me, I would go."

Rightly does Frau Ramann, Liszt's biographer, say that in a truthful life Liszt's "frailties" must have an equal place with his virtues. And looking through her two volumes, what does the cold-blood critic find? A man endowed with enormous natural abilities, from his boyhood famous, never in lack of money, and happily conserved from the struggles which have so frequently and in all ages and climes darkened the path of genius. From his fifteenth



FRANZ LISZT

year, when he fell in love with Lydia Garella, the biography of this flaming meteor born in the year of the great comet, is plentifully speckled with fair names.

To tell about the whole of Liszt's love affairs in a short article is impossible. One can only, as somebody has phrased it, float along over the peaks, touching only the high points. Why, Liszt's letters to the last of his loves alone fill four volumes, each averaging about four hundred pages of small print! From the time that he first went to Paris as *le petit Liszt*, when he was kissed and embraced by rapturous women (as Mozart the *Wunderkind* had been before him) right on to the end, he was constantly enthralled by petticoats. His winsome face and insinuating manner never failed to cast their spell over womankind, who flew into the blaze of his attractions as the moth singes its wings in the flame.

THE FIRST LOVE

His real first love was Caroline, Countess de Saint-Cricq; tall and lovely, just seventeen, and "impressionable to beauty, to the world, to religion, and to God." Caroline was Liszt's pupil—a risky situation, as Mozart and Haydn found. Liszt was about done with his teens when he first saw her, "a maiden chaste and pure as the alabaster of holy vessels." This, remember, was during his passion for churchly affairs. Caroline's mother was dying. Impressed by Liszt's religious leanings, and with characteristic female penetration discerning how the thing was going between professor and pupil, she extracted a promise from her husband that he would not step in between the lovers and their happiness. He promised, but he was an austere person—Minister of the Interior, and thus well up in diplomacy. He became a widower only to put a full stop to the promising romance. It came about in this way:

Liszt stayed very late one night, flirting with his pupil. When he went to get out he found the court door locked and the porter asleep. The porter was angry at being disturbed, and as Liszt had not tipped him, reported to the parent next morning. Thereafter Franz Liszt was forbidden to visit the house. He knew what that meant. Nevertheless, he went to the Count and laid before him plainly his case. But he might as well have stayed away. The proud diplomat asked Liszt what his competence was, and the young pianist was compelled to answer that he had none beyond what his musical gifts might bring him.

Liszt was crushed. Too well he knew that Mademoiselle Caroline cared for him. Love, grief, and religion struggled within him for the mastery. Franz was unable to bear the strain; he fell dangerously ill. He was even announced as dead in the Paris newspapers, but, as Mark Twain said of himself, the reports of his death were "greatly exaggerated." This was the occasion of his renouncing the world and going in for the priesthood. Ten years later he wrote of that "maiden chaste and pure" as the sacrifice he tearfully offered to the God of Christians. Renunciation of all things earthly became the leaven, the only word of that day. A pretty romance! Liszt easily got over it; but it is said that Caroline, though she married another and had children, was in her heart always Liszt's.

A COUNTESS AND A DUCHESS

A man never really forgets his first love, and we may take it that Liszt was no exception. But he soon found a glorious train of followers. He was only twenty or so when the Polish Countess Plater meaningly said that she would choose Ferdinand Hiller for her friend, Chopin for her husband, and Liszt for her lover. And other grandee petticoats were smitten. There was, for example, the "sparkling witty, young, beautiful" girl who had married the Duc de Fleury. The Duc was old, but never apparently suspected the danger of inviting Liszt, the hot-blooded young Hungarian, to spend the winter in his country house. What happened is "better not guessing," as Clough said of the probable fate of the wicked in the next world. Liszt, at any rate, grew tired of being bound by these silken fetters, though when he returned to Paris he kept up a correspondence with the Countess which, as he said, brought him his first practice in the "lofty French style."

GEORGE SAND

Then, when fairly clear of this intrigue, he fell under the spell of George Sand, living now apart from her husband, another elderly specimen. Paris, at that date, was revolutionary with suffragette notions. As Ramann says: "Women were beginning to demand freedom and to experiment with the writing of perfervid romances, which questioned the very foundation principles of marriage and made a religion of Affinity."

George Sand was a chief crusader against the cause of monogamy. She had evolved a new gospel of love, and she tried it not only on Liszt, but on Chopin, Alfred de Musset, and a great many more. "Love," said she, "is Christian compassion concentrated on a single being. It belongs to the sinner and not to the saint. Only for the former is it moved restlessly, passionately, and vehemently." In other words, the love that sins from love is virtue! "Love exhausts itself; the union of a man with a woman should therefore be transitory."

Thus the cormorant George Sand, who sometimes wore men's clothes and smoked strong cigars in

awing rooms, and had a nose of a "Hebraic cast," id yet dominated the dreamy, dainty, tender, illu- re Chopin. Personal intercourse with her drew szt into the vortex created by these free love views hers; but Liszt was a stronger character than the nsumptive Chopin, and she did not shatter *him* is a too-spiritous wine shatters the fragile vase." o woman yet lived who could "shatter" Franz szt.

THE COUNTESS D'AGOULT

If any woman could have done it, that woman was e beautiful and "enchantingly graceful" Countess Agoult, who entered Liszt's life when he was in the oom of youth, a hero of the keyboard at twenty- ree. For five years and more this lady's life con- ued to be interwoven with his. She, too, like orge Sand, was literary, and wrote under the n name of "Daniel Stern." George Sand, George iot, Daniel Stern—why so often the male pseudo- m in those days?

The Countess was six years older than Liszt, and e also had a husband much in advance of her own ars. Coming under Liszt's fascination, the result s almost inevitable. She forsook her husband for szt, and yet the husband afterwards declared that szt had acted all through "like a man of honor." is was funny, considering that Liszt acknowledged ree specimens of pledges of the Countess d'Agoult's ection. A son died young. Two daughters sur- ved. One married the French statesman, Emile ivier, and became one of the reigning beauties of e Court of Napoleon III. She died in 1862. The ier is Frau Cosima, who married Hans von Bülow, d subsequently, after being divorced, Richard agner. It was a queer mix-up; and no wonder t Bülow, an ardent Wagnerian, said he wished e man had been another, that he might have shot n!

Janka Wohl, the Liszt lady secretary, tells the goult story from her own point of view. By as ch as her pen is apologetic of Liszt, it is femininely lous of the Countess. She pooh-poohs the idea t Liszt can have had any affection for the woman o gave up husband, child, and position for his sake, l quotes, with satisfaction, the biting remarks of mann concerning her. The Countess held the cup oison to his lips, and he drank of it—that was all. en he always spoke of her with irony, and made is boast that she "never had the slightest chance" ecoming his wife.

The Countess, it appears, had a personal income of r thousand dollars a year, but while she stayed h Liszt, she ran through about sixty thousand lars a year, mostly Liszt's earnings. Liszt ulti- tely deserted her entirely, the cause being, ac- ding to Ramann, that she "cherished an am- ion to be Liszt's Muse, and made strong demands the acceptance of her opinions upon his works." zt, as we all know, wanted to be regarded as a com- er rather than a pianist, and it must have galled n when the Countess said plainly that she did not e his works. A young French poet once tried to oncile the pair after a fireside combat of criticism. 'Think of Dante and Beatrice," he said to Liszt. hink how the divine poet listened to her words as revelations. Be thou Dante and she Beatrice."

'Bah, Dante bah, Beatrice!" cried Liszt; "the ntes create the Beatrices. The genuine die when y are eighteen years old." The Countess died thing but young for she lived until 1876, when was 71.

THE PRINCESS IVANOVSKA

o ended the affair with d'Agoult. The only er affair we have space to notice is that which nects Liszt with the rich Polish nobleman's ghter, Princess Carolyne von Ivanovska. She, was a sort of George Sand, for her father had ght her to ride wild horses and smoke strong rs. She had married, when she was seventeen, ussian cavalry captain, handsome, but intellec- ly unimpressive. She was unhappy, except for her child, a daughter, and when, in 1847, Liszt floated in across her horizon, she became so bewitched that she offered him her purse, and, practically, her person. The story bears a lot of telling. The Prin- cess fled from her husband, taking her daughter and all the available cash. The husband complained to the Czar, and the lady appealed to the Pope to allow her to wed Liszt. Liszt's valet met the runaway at the Austrian boundary, and she was conducted to Liszt himself.

This was in 1848, the year of the Revolution. For thirteen years she lived beside Liszt in Weimar, and the irritation he had felt at the meddling of the Countess d'Agoult was "changed to such a com- munion as the old Roman King Numa enjoyed with his inspiring nymph, Eger a," They beseeched the Princess to return to Russia for the arrangement of her affairs, but she would not move from Weimar, and at length her husband obtained a divorce. Then Liszt said he would marry her. The wedding was fixed for his fiftieth birthday, and the pair went to Rome for the ceremony. But, as Burns says, the best laid schemes of mice and men (and women, too) "gang aft agley." On the very eve of the wedding, Liszt was staggered to receive a message from the Pope, demanding a postponement, on the ground that the Princess' divorce had been irregularly ob- tained. This put an end to the marriage project.

The Princess "had resisted for thirteen years the efforts of the Russian Court to decoy her back to Russia. For the next fifteen years she resisted Liszt's ardent wooing to marriage." It is woman's way! Even when her husband died in 1864, this capricious Pole would not wed the man for whom she had sacrificed husband, home, position, and friends.

Here was the heroine of the four volumes of Liszt letters. To the last, she and Liszt were lovers, however remote. Even in the final year of his life he signed himself to her, "Umilissimo sclavissimo," and when he died in July, 1886, it was found that by his will he had made the Princess his sole heir and executor. She outlived him only one year.

At Rome, near St. Peter's, she is buried, and her grave bears the legend: "Yonder is my Hope." At her funeral the *Requiem* which Liszt had written for the death of the Emperor Maximilian was played. She had expressly wished that this music should "sing her soul to rest."

Such were among Liszt's experiences with the adorable sex. One writer says bluntly that for many years Liszt "lived a life of shocking immorality." If one is to say anything at all, perhaps it is advis- able not to mince matters. But all the virtues are not summed up in the negative of the seventh com- mandment. Let us remember the charm and the generosity of Liszt's character. He was the kindest and most constant of friends, the gentlest of masters, the most indulgent of critics, the most genial of com- panions, and the warmest-hearted of philanthropists.

"Like Christ on the Cross," said Wagner, "Liszt was ready to help everybody but himself." The record of his charities, of his beautiful, unselfish, often heroic acts, is alone a sufficient set-off to all the sins he committed against the moral code.

A TEACHER'S TALK TO A BEGINNER

BY CARL W. GRIMM

It is praiseworthy that you have set your heart upon joining the ranks of those who perform on the piano. This instrument is known today in nearly every home the world over. Your ability to play upon the piano will be the source of much enjoyment to yourself, your family, and your friends, and the better you learn to play, the greater will be your enjoyment of music.

I will not only show you how to manipulate the keys, but also teach you how to listen for, and bring out, the beauties in music, by reveal- ing to you the many wonderful things in music pieces that you could not discover by yourself now. All music should appeal to the ear, but not all good music pleases all people alike, nor is it understood equally well by all, because some music requires cultivation of the mind and heart to appreciate it.

Music is an art. You should make yourself familiar with the names of our glorious tone- masters, or, as they are usually called, compos- ers. Learn something about their lives and the great works they have given to the world. Then you will grow to love the best there is in mu- sic. Become familiar also with the names and lives of the great performers. Whenever you have the opportunity, go to hear them. It will be good for your improvement, and when you are further advanced and have learned to listen intelligently, you will be able to distinguish be- tween the worthy and the unworthy, and will lend your support only to that which is truly good.

To arrive at that point where you enjoy such good music, it will be necessary for you to practise faithfully, each day, what you are told to do. This will take time and patience on your part, but you will never regret the time and labor spent upon music, on account of the great enjoyment you will derive from it.

Some day you yourself may become a great composer, or a great performer, or if not that, you will certainly be an intelligent listener and encourage by your own playing the cultivation of good music. Or you may be so enthusiastic about the music of the masters as to become an admired teacher. One thing is sure: When you have enshrined in your heart the noble works in which the great tone-masters have commu- nicated their joys and sorrows to the world, music will give you many happy hours all the days of your life.

SUPERSTITIONS OF MUSICIANS

Why are musicians—certain classes, one should say—so superstitious? This question was raised in a gathering, the following statements being made to confirm the claim that they are superstitious.

A distinguished opera singer always crosses her- self before taking her cue.

A favorite prima donna is always escorted to the theatre by her mother, kisses the latter, and re- ceives her blessing before going out to sing.

A celebrated tenor carries a rabbit's foot whenever he is going to sing.

A well known prima donna never goes on the opera stage or the concert platform without tearing a button off her clothes for good luck.

A famous Italian prima donna refuses to leave the wings until she drops a dagger in the floor three times. If it sticks each time the omen is favorable.

A famous singer received a small bracelet from Gounod when she was a child. This same bracelet, with sufficient metal added to encircle a stout arm, is still considered a charm to bring success in her art.

Few musicians will sit thirteen at a table or oc- cupy a bedroom with the supposed fateful number. It is recorded that on one occasion Lablache, the great basso, discovered a blank piece of paper on the door of his room in a hotel. Curiosity disclosed that it covered the number thirteen. Rossini dreaded the number and Friday as well. It is a coincidence that he died on the 13th of the month, and on a Friday. Chopin's fear was of the numbers seven and thirteen. Rubinstein is said to have changed his quarters from one hotel to another because of the fact that in the first the only available room was numbered thirteen.

Community Musical Work as Demonstrated in Various Localities

BY THOMAS TAPPER

CONFERENCE ON COMMUNITY MUSIC

THE Community Music Conference at the University of Illinois, June 22, probably the first of its kind on record, brought out some interesting facts relative to what has already been accomplished in the direction both of the organization of Community Music and the formulation of the principles underlying it.

The opening paper, by Mr. W. D. Armstrong, on *Community Music: Religious, Patriotic and in the Home*, outlined the basis upon which the entire project should be developed to secure successful results.

TWO KINDS OF FESTIVALS

Mr. Armstrong and the other speakers of the day paid their compliments to the Music Festival as a force which too often *dissipates the energies of the community without adequate return.* It was the consensus of opinion that unless the Festival represents the community in some vital way, it is likely to take more out of the community than it gives in return; that the effect of too many of the small community Festivals is to leave the communities depleted, with no enthusiasm for the things which ought to be done by the community for itself, since all of the energy has been expended in floating a venture which demanded much more financially and, perhaps, artistically, than the community could rightfully assume.

As examples of the other kind, one held at Eureka was mentioned, in which a chorus of more than two hundred voices made up from three small towns, supplemented by the student orchestra of the State University, appeared in two high-grade concerts, with only two soloists from a large music center. This imposed no undue strain upon the community, and the return in musical growth and discipline much more than compensated for the very slight financial outlay.

Mr. Elias A. Bredin, in his paper on *Community Music and Festivals*, cited the case of a large city which advertises far and wide a Musical Festival, consisting of *half* of a well-known symphony orchestra, two foreign soloists (from another large city), and not one local performer. Two concerts at high prices are given and scarcely any of the large amount of money raised remains in the town; and, of course, not an iota of musical training and only so much musical culture as can be absorbed from the two concerts.

Another case was brought forward of a large town where a symphony orchestra with a widely known opera star and supporting company were engaged for two evenings at an expense of $10,000. In order to float so expensive a project it was necessary to organize the entire town into committees and to advertise strenuously; and, finally, to pay the bills. Here, again, only enough money stayed in town to pay the expenses of the company. As for the benefit of the concerts, it also was of most transitory nature. The obvious contrast again was that of the small town of 1500 people, cited before, whose total expense for two high-grade concerts was $600, paid for at the rate of 25 cents for the afternoon performances, and 50 cents for the evening performances, leaving behind a finer appreciation of music and a much greater ability to make it.

DEVELOP ALL THE MUSICAL RESOURCES

Mr. Kenneth Bradley, of Chicago, read a paper on *Music as a Civic Factor*, making a strong plea for the utilization of those forms of community expression which are now, to a large extent, tabooed, because, forsooth, they are not high-toned! Mr. Bradley urged that the community's own type of music be utilized at its face value, rather than to attempt to foist upon it something else which a self-appointed mentor thinks is better for it.

Mr. O. R. Skinner, of Bloomington; Mr. M. L. Swartout, of Decatur, and Mr. Henry V. Stearns, of Jacksonville, in turn discussed the subject, *Music Study for a Better Community.* Mr. Skinner pleaded for thoroughness in music study, and for a comprehensive curriculum, contending that the days when music study ended with the piano or singing solo songs are gone forever, and that theory and the cultivation of good taste are essential parts of any music study. He also urged a more universal musical appreciation of the type which makes it possible for the amateur to participate, citing the common experience in the more favored foreign countries where the family gives its own home concerts, even though they may not be always of concert-hall grade.

HOME MUSIC

The necessity for a revival of *home music* was dwelt upon by each speaker in turn, and seemed to be one of the most important suggestions which the speakers had to offer as a first step toward community music of the best sort. Mr. Skinner also made a plea for a more thorough acquaintance with *music*, apart from its technical phases, and for a more universal ability to read and enjoy the musical masterpieces.

THE BAND AND THE ORCHESTRA

Mr. Swartout paid a tribute to the village brass band, and suggested that its possibilities are much under-rated, not only for its own sake, but for what it can do in building up a community orchestra. He also suggested the improvement of the choir music and the formation of local choral societies by the combination of various choirs. The various mechanical reproducers of music were also given their place in the direction of popularizing music of the better sort.

Mr. Stearns dwelt particularly upon the community orchestra, citing various successful experiments, one of them in his own city of Jacksonville, where the chairs were filled from all walks of life, and where an orchestra of sufficient merit has sprung up to give two or three concerts a year, performing symphonies and overtures and the accompaniments to some of the less involved choral masterpieces. He also called attention to the very successful experiment which has been made at Winona, Minnesota, under the direction of Mr. George Coburn, where the choral and instrumental forces are now duly organized and performing concerts of the highest grade. In this case the director is engaged by the community, and does nothing else than to organize the community activities along musical lines.

The outstanding feature of the conference was the weight which speakers gave to the more humble phases of musical activities, though they involved rather the amateur than the professional musician, and to the possibilities of some of the least exploited phases of community life. This was the more noteworthy because each of the speakers is a professional musician engaged in musical projects of a high artistic order, with the artistic viewpoint. For this reason the findings of the conference are the more significant and seem to be worthy of careful consideration on the part of students of the subject.

There is not at the present time a more important problem before the musicians and music students of America, and it is a cause for congratulation that professional musicians are considering it worth their while to carry on careful investigations of what, at first sight, seems to be a matter rather involving the layman than the professional. But, after all, the musician is *first of all a citizen*, and as a citizen his duty is as definitely to the community as is that of the physician or the minister. It is high time that he shoulder his share of the burden.

HOW A COMMUNITY CHORUS WAS ORGANIZED

We have a community chorus organized in February of last year. As yet we have only thirty members whom we consider dependable. Next year we expect to double that number, for those who were faithful to the end—we stopped rehearsals the last of May for the summer months—were interested and enthusiastic.

In organizing our chorus we appealed to the choirs of the various churches and met with a hearty response. But the number decreased, raising our most difficult problem, namely, how to make the attendance regular. We do not wish our organization to be formidable by reason of fines and dues. I expect to publish a series of articles in the local papers on community music, using sections of articles in THE MUSICIAN and other writings that have appealed to me. We expect to keep "talking it up" all summer. We do not intend to allow folks to forget about it. I hope by this time next year to report something of real artistic results.

We have an orchestra in Aurora that does very good work. It has been organized a number of years and its membership averages near twenty. I am not a member of this orchestra and know nothing of its organization, but I believe it is self-supporting. The members are gracious to respond when we ask them to help us out in any affair of community interest, and I feel sure, when the chorus is ready, they will unite with us in giving a festival of which Aurora will be proud.—LAURA CLINE.

THE BROOKLYN (N. Y.) MUSIC SCHOOL SETTLEMENT

WHEN a boy of twelve sells newspapers and jumps to earn a dollar for a symphony concert ticket he proves in his choice of recreation initiative and self-reliance that are to be envied. If the hours spent in learning to play the violin have given that boy the capacity for musical appreciation, his life has been enriched even though he may never earn a penny as a public performer.

In developing in its pupils a love of music that will come only through learning how to make music, the Brooklyn Music School Settlement is educating audiences as well as making musicians. Not to foster genius in the one great player or singer in a million, but rather to develop the individuality of every child who shows a desire for music, is the aim of the Settlement. It believes that the world of music has no room for an aristocracy. It is working to bring music out of its seclusion into democracy so that it may act as a far-reaching, educative, awakening force among everyday people. It believes that the discipline of technical study and the inspiration of working with others in the liberal field of art develops strength and independence in the individual.

It was faith in these things that brought together a few women five years ago to talk over plans for a music school settlement in Brooklyn. The use of the rooms was given by Neighborhood Guild House, and forty pupils were enrolled the first day. For a while the Brooklyn school was a branch of the one in Manhattan, but after a short time it was organized independently. Almost three years ago it moved into the house at 525 Grand Avenue, which had been provided for it by friends.

The staff is made up of twenty-one teachers and a resident director, a secretary, and a visitor who keeps the teachers in touch with the homes of the pupils in order that the teaching may be sympathetic and intelligent. Children come to the Settlement from a wide radius for individual and ensemble lessons in the piano, the violin and the 'cello, for training of the voice and ear, and for orchestra practice. Here

one Sunday of the month, usually the last one, a free concert is given by the pupils themselves to their friends and the public generally. Here also meet the Students' Organization and the Parents' Auxiliary.

The school is not a charity and no pupil receives an unpaid-for lesson. There is no doubt that parents are making great sacrifice that their children may obtain an education in music. The students themselves are so eager for music lessons that last winter they raised a scholarship fund of a hundred and fifty dollars to be used in paying the tuition of those who otherwise would have to drop out. The fee is twenty-five cents for a half-hour lesson. The entire tuition covers about a quarter of the expense of the Settlement; the remaining necessary funds are raised by friends of children and of music.

The need that was shown five years ago in the response to the invitation for enrollment which the Settlement gave at its organization is the same need that is shown today in the actual enrollmen of a hundred and sixty, with a waiting list of more than two hundred.

MUSIC EXTENSION WORK IN ARKANSAS

A recent *Bulletin* of the University of Arkansas makes an announcement of the University Extension Department's Loan Collection of Music Records.

The purpose of the effort back of the Loan Collection is "More and Better Music for Arkansas."

For this purpose it will send to any club or school that has or can borrow a Victor Talking Machine, four sets of fifteen records each, to be used for instructive purposes, each set of records being accompanied by a typewritten "talk" explaining the music about to be heard, and giving a few interesting facts regarding its origin, the instruments, the singers, etc. Each set of fifteen records will provide a complete entertainment for one evening.

The talks are entirely informal and devoid of technical terms and, while educational, are primarily for the purpose of making the music understandable and therefore more enjoyable. When a song is sung in a foreign language a translation will be found in the "talk."

In short, every effort has been made to aid "intelligent listening to music," and to give a liberal amount of instruction along with a fine entertainment. These sets of records will contain some of the finest and most expensive from the Victor, Columbia and Fonitipia catalogs. The *Bulletin* makes the following requests:

We ask, 1, that you give these entertainments in the evening so that parents as well a children may attend; 2, that no admittance fee be charged; 3, that you use a Victor or Victrola; 4, that only half-tone needles be used; 5, that you use care in unpacking and packing the records to avoid breaking or scratching; 6, that you pay transportation expenses on the records which will be sent you collect; 7, that you find them, collect, to the address which will be furnished you by the Department of Fine Arts; 8, that you keep the turntable of the machine revolving at 78 times a minute. You can test the machine by putting a slip of paper under a record and counting the revolutions for 1-4 minute.

The arrangement for these four entertaining and instructive evenings will bring children and parents together to the school or club; will interest the parents in all phases of your work, and will make more effective and efficient your endeavor to take in the great movement of COMMUNITY MUSIC AND MUSIC APPRECIATION.

AN ORCHESTRA CLUB

The Jamaica Plain (Mass.) Orchestra Club is out to begin its second season of community music work. The Club was founded in the beginning of the present year for the purpose of bringing together amateur players of orchestral instruments, and to extend to them the opportunity for definite instruction and practice. The benefits resulting from this have, as the founders perceived, a deeper interest in the instruments, an increase of skill to the individual player, and broadening experience in ensemble performance.

The Club exemplified its work in two public concerts.

As a part of the Club's activity a series of informal talks on music in relation to home and community life are included in the program for the present season. The Club announces the following topics as subjects for discussion:

1. The cultural value of the mechanical music instruments in the home.
2. Folk songs of Europe and America.
3. Community music throughout the United States.
4. Music study as vocational training.

A PLAN FOR CHORAL ORGANIZATION

BY GEORGE B. NEVIN

It is to be regretted that so frequently we hear of the wrecks of glee clubs and choral societies. Many of them begin their careers with every indication of a long and successful life, but for one reason or another encounter severe storms and are finally cast on the rocks to be numbered among the things of the past.

From practical experience the present writer has found the following plan to work out successfully, enabling societies to become more a part of the community, and, therefore, more stable.

The most important feature of any activity is that there should be a worthy object for which to work. In all towns and cities are charities to be supported and they are generally in need of funds. The first thing, then, for those in whose charge the society is placed is to secure from a list of well-known and generous citizens contributions for the actual expenses of the society so that it may be advertised in the public press that every dollar derived from the sale of tickets may be given to the charity or charities. The public always likes to know where its money goes. This plan appeals to the masses as a good business proposition and never fails to enlist the sympathy of the members of the chorus.

Do not ask everyone to join in this work. Select those who are known to be reliable and who will feel it an honor to take part in the enterprise, and soon you will have requests for membership.

Thirty good vocalists are much more effective than sixty singers of moderate ability, and those who can sing well, generally, can also read well. This facilitates the preparation for the concerts by lessening the necessary number of rehearsals.

Chorus singers have use for their time as well as other persons. Try to secure a large church in which to give the concerts where the splendid support of a pipe organ may be had.

Do not have the program too long, and remember that "variety is the spice of life." One or two well-known songs will always be enjoyed by the average audience. People go to the theatre to be entertained. Do they not expect the same pleasure at a concert?

Long works are risky and dramatic compositions usually suffer from the absence of action. In fact, many people see how ridiculous it is for a man in a "spike" coat (evening clothes) trying to enact the character of *Elijah* calling on God to send down the fire.

More and more conductors are learning that the most talented composers frequently give of their very best in their shorter compositions. No greater task of a conductor's ability can be made than a successful rendition of a miscellaneous program with its ever changing moods and fancies.

Always have the words of the choruses printed on an attractive program, on which should also be found the names of the chorus and of those who have shown their financial generosity and good-will.

With a worthy object in view and earnest, faithful work of all concerned, fewer derelicts will be found on the choral sea.

A FACTORY BAND

The Dodge Mfg. Company, makers of power transmission machinery at Mishawaka, Indiana, has a band, membership lying entirely in the various departments of the business. For example: The piccolo player comes from the Engineering Department; one of the cornetists is a foundry man; a drummer comes from the iron pulley shop; one of the saxophone players is from the veneer shop; and so on, to a total membership of nearly fifty players.

The band was inaugurated in November, 1915. The idea originated among the employees, certain of whom petitioned the Company for permission to organize a band. Twenty members were readily obtained, and rehearsals began under the direction of a competent instructor who was also an employee. The Company supplied the instruments and a room for rehearsal. Later a beginners' class was established with a large and interested membership.

Three rehearsals were held weekly, and five months after organization a public concert was given with satisfactory results. During the summer which has just closed the band played a number of concerts for the recreation of the townspeople.

No man is employed by the Company so as to build up the band, but a musician, other things being equal, receives preference, and a member of the band must give satisfaction as a workman or forfeit his connection with the organization.

It is significant of the spirit of the times that an orchestra for women employees is being considered.

The musical director is Capt. L. Eugene Willes.

JAPANESE MUSICAL INSTRUMENTS

Lyon and Healy, the well-known musical house of Chicago, had on exhibition duplicates of the musical instruments used at the coronation of the Emperor of Japan. We reprint the following from a description of the instruments:

The instruments were secured with great difficulty, as they are exceedingly rare and most of them have an interesting history. For instance, there is a *samisen* or Japanese banjo, with its catskin head, which formerly belonged to several famous geisha, some of whom had it for periods of from fifteen to thirty years.

There is also displayed one of the world's few complete sets of *banzai* or drums. This set had just been completed for temple service when it was secured for the present owners. The different instruments are beautiful, especially the large drum with its gold and lacquer decorations. These drums are used to announce the beginning and ending of the state or temple ceremonies.

The *sho*, or pipes, were purchased from a priest. This instrument is used exclusively by priests in temple worship, announcing special figures in great functions or ceremonies. There are also reeds or flutes used by priests and acolytes, notably the *hichiriki*, a bamboo instrument which, it is claimed, produces a more dolorous sound than any other instrument.

There are several beautiful *koto* or Japanese pianos, as well as a *biwa*,—lute—and a *yueh-ch'-in* or *moon guitar*, named because of its full moon shape, used principally as an accompanying instrument for ballads and songs. Another instrument is the *kokyn*, or slender Japanese fiddle.

SCHOOL AND COMMUNITY MUSIC

School music should have a vital effect upon the community. Every church, every Sunday school, every chorus, and orchestra, every musical study club, every teacher of music and every concert audience should feel the vitalizing effect of the school music. Yet this is not the case in most cities. The school music, instead, seems to have little or no outgrowth in adult interest or activity. The chief reason for this is undoubtedly the elementary character of the school music, which usually stops with the eighth grade. Jean Adams.

THE GENIUS OF THE UNGIFTED

THE STORY OF THE MAKING OF A YOUNG ARTIST THROUGH EXTRAORDINARY DIFFICULTIES

BY A. PUPIN

"DELIA *is* a queer girl," said Mrs. Noyes to her second daughter, Harriet, "I wonder why she stopped taking music lessons."

"She said it was because her teacher told her she would *never* learn to read notes. Just see the little twins, Milly and Lily; only eight years of age, and they can read anything at sight."

"Yes, they are very bright children. I cannot think what makes Delia so stupid."

"And so slow," added Harriet. "Why is it she can never get dressed in time to go anywhere with us?"

"I do not understand it. But in one thing she excels even you, Harriet, in her sewing. All of her stitches are exactly alike."

"Anyone could make their stitches all alike, if they took as much time to set one stitch as Delia does. I think she must count the threads before she puts her needle in."

"She does not seem to have given up practising. I hear her at the piano every morning."

"Yes. But what does she practise? Scales of eight notes: R. H. ascending; L. H. descending; R. H. descending; L. H. ascending; then both ascending; and both hands descending and then contrariwise."

"Is that all she practises?"

"Yes. She has been at it several months now; exactly the same thing in exactly the same way. I should think she would be tired to death of just scales."

If Delia was an enigma to other people, she was as much an enigma to herself. She could not understand why everybody scolded her and found fault with her, no matter what she did. She almost hated herself.

At school she never seemed to be placed in a class until it had advanced a month or more; so how could she parse, if she had learned nothing about verbs and adverbs; or do a problem in decimals, when she did not know what a decimal was? To be sure, she studied back by herself, and got a good understanding of the elementary principles.

Another thing troubled her. She could go to the blackboard and work out a problem correctly. But if the teacher asked her if a problem worked out by another pupil was correct, she would reply that she did not know. She was too far from the blackboard to see the figures, but having been told, on occasions, by her teachers, that her voice sounded like the squeaking of a mouse, she preferred to say, "I do not know," rather than answer certain questions, if she could evade it.

As the years passed Delia retired more and more into herself. Being scolded so much for her stupidity, she secluded herself from visitors and had a reluctance to make visits, or to go on any pleasure trips. Huddled up in a low chair, she would spend hours in reading, in studying languages, and doing fine embroidery. As she did not try to make herself interesting, and appeared so morose, her family left her much to herself.

She had an extract book, in which she copied paragraphs that appealed to her. These were mostly maxims and aphorisms, extolling the power of aspiration, the results of patience, perseverance, and concentration, and giving examples of many who had risen to eminence, through overcoming apparently insurmountable obstacles.

She continued her daily practice, not any longer on the scales of eight notes, but on some difficult passages taken from a few pieces. She practised these the same way; that is, very slowly and with great precision.

Harriet used to groan and remark, "How tiresome!" and the twins would say, "Poor Delia!" as they rushed to the piano, to rattle off their marches and two-steps for four hands.

"Delia," said her mother to her one day, "there is to be a fine concert here the Friday after Easter, given by a large orchestra from the city. But a very strange thing is, there is somebody with a name like yours,who is going to play in that concert. It says—Miss Fidelia Noyes will perform the *Krakowiak*, for piano and orchestra by Chopin."

"It is not someone with a name like mine, mother. It is myself."

"Delia, you cannot play that piece. I hear it is very difficult, and you have not practised it."

"I have been practising it every day for a long time."

"I have heard you practising only some exercises very slowly."

"Don't you know that all parts, or passages, of a piece are exercises, until they are learned; and if one practises very correctly slowly, cannot one play correctly fast?"

"I do not see that that follows. Besides, one who plays with orchestra must play from memory——"

"I shall play from memory."

"But you cannot; you have not memorized it."

"Yes I have. I memorized it inside of me."

"I do not understand your odd expressions. Then you know nothing about the instruments of the orchestra. It seems to me you ought to know something about them, before you have the temerity to think you can play with an orchestra."

"But I *do* know about them. Mr. Field has a score of that piece, which he copied off himself. He lent it to me for a week, and I studied it an hour every day. I memorized it."

"Delia, I don't think I shall let you go to that concert. You will disgrace yourself and us."

"Mother! You have never believed I could do anything. When I know I can do a certain thing, you ought not to put anything in my way."

The family did not speak to Delia for a week, hoping her crazy ideas would leave her, or that the real Fidelia Noyes would appear on the scene.

Meanwhile Delia went every day to practise on Mr. Field's grand piano; and on Friday evening, she came down stairs attired in a simple evening dress, entered a cab, and was driven to the concert hall.

When it came time for Delia to go out on the platform, she walked up to the piano, with no sign of trepidation; and without a note before her, she not only played her part with perfect accuracy, but the *nuances* were so charming and the *accelerandos* and *ritardandos* so appropriate, that the conductor threw down his baton at the last note, and rushed to take Delia's hand and lead her to the front of the stage; and all could see that his appreciation was sincere. He afterward said to Mrs. Noyes: "Your daughter is a genius. I have never known so remarkable a performance for a first appearance."

Everybody was talking about the stupid Delia Noyes and saying: "Who would have thought all that was in her!"

It afterwards transpired that Delia had been translating delicious sonnets from the French and Italian, for certain magazines and for song writers.

A day or two after the concert, Mrs. Embury, a neighbor, called on Mrs. Noyes and seeing Delia exclaimed: "Delia, how could you play that piece so wonderfully; your mother says you had not practised it."

"But I *did*," replied Delia. "I used to practise it an hour in bed, every morning before I got up."

"How could you make such beautiful shadings and such wonderful ritards?"

"I thought it all out, and decided how it ought to sound, and then I practised it so."

"But did not those other instruments disturb you?"

"Oh, no! I practised those sounds with the rest."

"How could you, if you had never heard the piece?"

"I studied it from the piano part and from the score, until I knew how it should sound."

"That passes me! Who is that lady across th street, Delia?"

"I do not know."

"Oh, Delia, you do," said her mother; "it is Mr Fellows."

"Then she must have a new dress; I never sa that one before."

"I want you to go down town with me, Delia said Mrs. Embury. "Run upstairs and put your things."

Then Mrs. Embury turned to Mrs. Noyes a said: "Do you know what is the matter with yo daughter; she is near-sighted. Here you have be scolding her for not doing things like other peop when she could not see how other people did thin And you have been blaming her for being stu when—please excuse me—but how could you all so stupid as to live so many years with Del without discovering that she is near-sighted?"

"She never said she couldn't see."

"Near-sighted people never know that there people that can see better than they. Here s comes. I'll give her another test. Oh, Delia, y are ready. Well, please look out of the window a tell me what time it is by the town clock."

"I cannot see the town clock from here. C you?"

"It is quarter past four. Cannot you see the g hands on the three and the four?"

"No. I did not know that anybody could see town clock from here."

Mrs. Embury gave Mrs. Noyes a significant gla as she went out. She took Delia to an optician, wh she had her eyes examined, and the oculist sa "Yes, she is quite myopic; she should have l glasses long ago." Mrs. Embury told him to fit with a light pair of gold bowed spectacles.

As Delia came out of the store with the glasses she exclaimed: "Oh dear, dear Mrs. Embury; are my fairy godmother; you have introduced into a new world. How can I ever thank you? had no idea the world was so beautiful. And and women are beautiful. I never saw peop eyes before."

"Delia, if I have introduced you into a beaut world, it is not more beautiful than the world you covered within yourself. I am going to persu your father to let you have a little studio down t with a grand piano in it, where you can prac quietly by yourself; and perhaps you may be wil to take a few pupils, and teach them your wonde way of studying."

"Now I can see to read notes! I was not re stupid, was I, Mrs. Embury? Being near-sighted plains everything."

"Yes, being near-sighted explains the past, an may be that being shut off, in a measure, from outer world, forced you to push into that i world, where you shape things as you will, and cr things of beauty to send to the outer world, w they give joy to others. All thought you stu ungifted, but you have found your gift, and i yours for all time."

———o———

TEACHERS have a fine opportunity to help pu Make practical tests to determine the accuracy efficiency of the senses most concerned with mu execution, namely, sight and hearing. If t seems to be even a slight defect, urge the pa to consult a competent specialist to determine cause and how to remedy the trouble.

———o———

BEGIN the new teaching sea efficiently by studying the vari suggestions in this issue of T MUSICIAN, and urge every one of y pupils to become a subscriber a regular reader. The results j justify.

MODERN MUSIC DEFINED

BY BERT E. WILLIAMS

It has been the present writer's experience that w music students and practically all of the usic loving public have a very hazy idea as to e difference between the different schools of mposition, such as the Classic, Romantic, Im- essionistic, Futurist, etc. Even musicians have ffered greatly as to their definition of the char- teristics of each school. There is a close alogy between the schools of painting and the ools of composition, and a comparison often ps to clear a murky conception.

First of all, let us look at some of the older asterpieces of painting. Without mentioning y individual painting, we find a school in ich every detail is worked out and the lines awn with as much care as can be found in our odern-day photography. This fine line-drawing closely akin to our classic compositions, be- se the classic school is the one which made most of form. The subject matter was of slight interest to many composers, so long as was worked out with great care in a certain ld. Our painters did not hesitate to throw in alo or two, angels, formal backgrounds, etc., gardless of their intrinsic worth. Each had its ce in the idea or scheme of the picture, and s added to complete the form. Our themes in classic school are often of little interest in mselves, but they are necessary to the work- out of a composition in a certain form.

Next we find a school of painting in which e is little of the line-drawing, practically noth- worked out in the background, just the cen- figure painted often in an idealistic manner. r composer of the romantic school makes e of the subject than of the form. Unfor- ately this often leads to the impression of nlessness. The works of this school appeal nany as "choppy" and without that continuity necessary to the natural progression of me- c threads.

term in daily use but as yet almost undefined "impressionistic." In the world of color we a school of painters who believe that a vas should convey a definite impression to person who views it. This impression may gotten in a number of ways. The work may drawn with as much exactness as is possible. it may make no claims at definition, and be tically formless, with the impression con- d through the media of color. The main ntial of this school seems to be a striking of color, and a freedom of technic never before vn.

usically, we have a school of composers se works may be strict or formless accord- to individual idea, but their use of elaborate nonies is striking and their effects often ling.

o give a concrete illustration, the writer has ind a painting by an almost unknown artist, led *Behind the Scenes*. This picture repre- s two athletes in lavender fleshings on the e during the performance. One man is bal- d on the hand of the other and held high e his head. Beyond the men can be seen audience, every face looking towards the e in breathless enjoyment of the "stunt" h the men are putting on. The idea is com- place but its treatment is remarkable. Im- e yourself at the back of that stage, the bril- footlights in your eyes, and beyond them, mi-darkness, row upon row of faces. If you ever had this experience of looking from d the scenes out upon an audience you will again experience the sensation when your eye first meets this canvas. The artist has conveyed a certain impression to you, and you will not soon forget his work.

The themes of nature have always appealed to the composer. There are a number of compositions entitled *The Storm* or something similar for organ, piano, orchestra, chorus, etc. The older writers almost always endeavored to depict the wind, the rain, the thunder, and so on. A German composer has treated the same subject in an impressionistic manner, and the result is both an improvement and quite as startling. I refer to *In the Storm*, by Schulz, a modern descriptive cantata for male voices. In this work no attempt is made to imitate the phenomena of nature, but an attempt *is* made to reproduce the emotions which one experiences when caught in the midst of a terrific storm. It is what you feel within yourself not what happens in nature that he is trying to reproduce. His method is to use free harmonies, untrammeled counterpoint, and a striking graduation of the dynamics. His success is remarkable, and it is surprising to note to what an extent an audience can be moved if they are once made to understand what you are aiming at.

Then we come to one last school of painting which is almost entirely misunderstood—the Futurists. The first glimpse of a futurist canvas is a disappointment. One sees nothing but a riot of color, without form and without any subject apparent at all. What then is he aiming at? He has painted nothing. Yet the picture is named. Begin with the name and look closely. You will soon see a faint connection; keep looking, and every bit of color begins to assume a new meaning. Before long you are really excited. You see it! But it isn't there! The picture is in your own imagination, stimulated by the riot of color. You are the only artist! You have created a picture out of your own imagination! And the beauty of it is that tomorrow, when you study this canvas again, you can see an entirely different picture.

The futurist in music has as yet not been so successful. Attempts have been made by using continuous processions of dissonants, but the result, instead of stimulating the imagination, has been to clog the brain, and make us wonder if this really is music. A more promising attempt has been the use of two harmonies simultaneously. Why can we not play two compositions at the same time, one say in C major and the other in C♯ major. At present it seems impossible for a number of reasons, but at one period in the world's history it was thought impossible to combine two melodies. Yet our whole system of counterpoint is based on the simultaneous performance of two or more melodies. Perhaps the future generations of musicians will listen to two tonalities with the same ease and clearness with which we now hear two melodies.

The influence of the impressionistic school of composition is already being felt in the technic of our instruments. In writing it is necessary to set down definite pitches by the use of notes. Formerly we have been accustomed to play these notes with much exactness, striking them on time, holding them a definite time, and releasing them according to the indications of the score. Our impressionistic players are taking great freedom. They aim to convey a certain impression by the whole, and the individual notes may be very carelessly or even inaccurately performed, the player holding that the central idea is more important than the detail, and that it may be conveyed in any manner whatsoever. Thus it appears that some effects highly detrimental in character are being developed along with the proper and legitimate explorations in the art.

REFLECTIONS FROM A NOTEBOOK

BY T. CARL WHITMER

As teachers, we must have joy in the thing. Then, the power to transmit that joy. This is the magnetic element.

It was a knowing soul who said, "What's Art or anything else to a human being?" Let us remember that our student is to be kept a *person* throbbing with life, and not simply mechanically loaded with information.

Is it not interesting and wholesome, the passing of the Eccentric? It indicates we are becoming simpler; at least, more sophisticated. Eccentricity was a marketable pose two-thirds of the time.

Are you really individual or do you suffer from a localized, provincial, dialect-like kind of individuality?

Have you a message for your students, or are you giving them "records" marked with the sayings of others.

In the choir stalls of Lincoln Cathedral are depicted monkeys churning butter and the devil pulling teeth. Whether symbolism, pure decoration, or a sense of humor, it is certain that we should not be serious all the time.

I would like to write the biography of An Incorrigible Enthusiast. We occasionally meet such a one and the day is red-lettered for us. Are you one?

Have you noticed the number of great men who indicate their greatness at twenty-eight?

A great man's works, rather than his children, *live* after him. I am reminded that Mozart's son preferred the receipts to the concerts and good suppers to good music.

If composers would orchestrate their works like most organists register theirs—with the illogical tone color—the merry cabbage would appear on the stage.

One of the proofs of the emotional elasticity of music is in the result of the adaptation of secular compositions to church purposes without—unless it be ornate—any but the initiated and operatically omniscient feeling the jar.

There are occasional disadvantages resulting from broad-mindedness. One is the extraordinary and irritating optimism resulting from a calm, philosophic overlook of the situation and seeing that everyone's work has a value as well as your own. It makes one too modest in attitude! But, seriously, the question is whether too exalted a respect for the value of the ideas of others does not tend to destroy a certain initiative. That is, believing in nearly *everything* dissipates executive faculties. You see so much all around a thing that one's own side is but a facet. The real and important problem is to believe in your side absolutely. Conviction is apt to evaporate with too comprehensive a type of broad-mindedness.

Goethe said, "If a talent is to be speedily and happily developed, the point is that a great deal of intellect and sound culture should be current in a nation." In this connection, you will recall that Walt Whitman said that "to have great poets there must be great audiences, too." Certain movements in America are waiting until The People function on a higher plane.

A hobby is a good safety valve. Only be an amateur in the best sense within the limits of that hobby.

Must one be curiously cubistic to have a following? Let us have a permanent following by being simple and genuine.

"Fear the mellow-sweet, the sucking of honey-juice," says Whitman. Good words for the commercial composer.

PRE-SEASON EFFICIENCY

BY THOMAS TAPPER

No. 13 of the Efficient Music Teacher Series

The history of many institutions is the account of their departure from the original idea which gave them birth. Created for a definite, moral and spiritual purpose, supreme ideals have been lost sight of by the encroachment of merely secondary interests. As they have become extensive they have ceased to be intensive. They have developed a mechanical organization, but have ceased to be living organisms. And while their outer form and profession remain the same, their true spirit has been lost. No organized enterprise in the kingdom of God is immune from this danger. Few indeed entirely escape it.—The Christian.

I

SOME months ago THE MUSICIAN presented, in a symposium, the suggestions of several writers as to how a ten per cent increase in Efficiency of Teaching and Study could be secured. As the month of September, for the teacher, is the threshold of a new year, it may not be inappropriate to glean in this field again.

SOME PERSONAL QUESTIONS

Let us read the paragraph that introduces this article and then ask ourselves the questions that follow. They will not be entirely without embarrassment, but nevertheless, let us ask them.

1. Have I, as an institution, devoted to self-improvement and to altruistic service, departed from the ideals which gave birth to that dedication of myself and of my powers?

2. Is it true, in my case, that secondary interests have encroached upon the definite, moral, and spiritual purposes with which I set out?

3. Have I lost, and am I still losing intensiveness in my work due to extensiveness of secondary interests?

4. Am I a mechanical organization instead of a living organism?

5. Have I lost the spirit of life, love, and service in the process of becoming a professional teacher comfortably ensconced in life?

TOO MUCH EFFICIENCY

People become utterly weary from listening to the incessant ringing of the Efficiency bell. Popular magazines, in order to offer them solace, print funny stories about the struggles of the natural man as he strives to become the efficient man. They tell us that the struggle is not painless; that it is ever fraught with hilariously comic happenings. (See the five cent weeklies.)

We have had a good laugh at Efficiency, bid it good-bye, thank fate that we are a good, healthy type of citizen, and in no need of such training. We sleep peacefully and awaken still smiling at the memory of the antics of the man in the story who was striving to improve himself.

Then we get up to face (not the entertaining scenes of the five cent weekly) but the cold, cruel, monotonous, ordinary day's work, and then there happens to us not the comic but the tragic. Before night we catch ourselves doing all sorts of inefficient things that are funny only in a story:

Such as forgetting appointments, or being late, or never thinking again of promises, of needing forever to excuse ourselves,

and so on, to the weariness of the seven theosophic principles of man, if he has so many.

For simplicity's sake, let us put our hero in the singular. He stops reading funny stories because he is sick and tired of his ordinary self, and cries aloud like one of the lost tribes of the Wilderness:

Can I gain ten per cent in Efficiency, or is the Editor of THE MUSICIAN just making fun of me?

No, he is not. There are more than ten million ways of increasing Efficiency all the way from a half of one per cent up to any amazing amount. THE MUSICIAN for February, 1915, presented some suggestions. They were all good ones. Here is another. Try it out on any piece of work you have in hand, and limit yourself to the use of the following tools:

PREPARATION. APPLICATION. OBSERVATION.

As tools these are just as real as a plane, a hammer, and a file. But one has to learn to manipulate them with spiritual hands as skilfully as one uses the others with material hands.

Now for an illustrative case: The teacher is to give a piano lesson at ten o'clock (the teacher whom we are watching in his effort to use the three tools). His pupil is a Miss Avery. As she comes in let us test HIM in this wise:

I. PREPARATION

1. How long has Miss Avery studied piano with you?

2. Has she talent that justifies your time and effort and her own? If No, then why do you continue to work with her? If Yes, then——

3. Can you foresee her attainment? Can you judge of its ultimate worth to her and its service value to herself, family, friends, and public?

4. Have you, on the basis of this prevoyance, mapped out Miss Avery's work for some weeks or months (perhaps years) to come, as a good road builder would stake out his direction to guide his working gang?

5. Or, are you proceeding from lesson to lesson without going anywhere in particular?

6. Have you ever considered Miss Avery's musical attainment as a building of which you are the architect, and, in part, the builder? Have you planned that building so as to make the most of every factor concerned? Have you determined who are the best associate builders to work with you, to supply what your plans call for that you cannot yourself provide (theory, physical culture, cultural education, and so on)?

7. Is Miss Avery aware of the fact that you have worked all this out with infinite pains, skill, and desire for her best attainment? And is she vitally, dynamically, enthusiastically alive to it all, supplying the initiative and responsive power that will move your plans forward into reality?

8. Or, there being no plans, no prevoyance, no goal, is Miss Avery like countless others, uninterested, unresponsive, phlegmatic, careless, the worst possible testimony of you and your work?

9. Have you taken counsel with yourself and perceived that Miss Avery is going to have a music future, whether you plan it or not?

If you plan it, with wisdom, skill, industry, and prayer, it will be a definite kind of future for her. If you do not plan it at all, it will still be a definite kind of future. You cannot any more escape that result than you can the former.

II. APPLICATION

It is easier, in a sense, to use this tool.

If Mr. Teacher whom we are questioning is one who does no preparatory planning, who cares little about any result save that which helps his finances, we may send him for the present to the hospital, while we study the healthier type, the teacher who is a capable builder of futures. We shall not need to ask this one questions, but merely to observe these things:

1. He plans for each pupil, individually, knowing that the Creator conceives every one of his children as a distinct and independent type.

2. So he constructs a course of study for each individual pupil, never striving to secure the same results in any two cases.

3. He makes it inspiringly clear to every pupil that it must be her aim to secure the greatest results *from her own talent* without any inclination to be "puffed up" when in the presence of one more humble than herself, or to be cast down in the presence of the gifted. He will make it clear to every Miss Avery that her Duty-contract with the Creator is expressed in terms of her own talent, not in the terms of somebody's else talent.

III. OBSERVATION

A commander may have the finest plan in the world. It may have been worked out with the utmost of mathematical accuracy as the handmaid to vivid imagination; and yet, applied to the unknown conditions for which it was designed, it may go wrong in a thousand particulars. We read therefore that it is the inevitable custom of the commander to go forth with a plan as logically built up as he can make it; but not with a rigid, unyielding plan, rather with one that is pliable, adaptable, adjustable to every slight change in the conditions that meet it.

It is precisely so in the work of a teacher. No plan was ever made which is a solvent for every human case of teaching. With every human being in the process of learning there is necessity for constant close fitting of a plan to a ceaselessly changing individuality. It is necessary, therefore, to watch what is the precise result that eventuates from instruction and to plan the next step from the condition of the path as we find it.

It may therefore be said that with every student the skill and prevoyance of the teacher determine direction, while the unfolding intelligence more or less dictates the steps to be taken in the direction.

It is necessary therefore not only to be provided with all the wisdom that results from the use of Preparation and Application, but with the fruit of watching these in operation.

Hence Observation.

This may be likened to the work of the man on the bridge of the modern steamer. Before he left port with his vessel he not only knew his destination but even specifically the direction he must follow to make that destination. And yet daily he stands on the bridge, observing the progress of his boat, foot by foot, in order to gather in from Observation the actual conditions that meet him on the way.

It is these conditions which meet us on the way that finally dictate our actual momentary safety and justify our procedure. The teacher, precisely like the man on the bridge, observes daily what happens at the prow of his craft, and from what he observes he writes his log; the incidental happening, the momentary report of what takes place along the predetermined way.

It may be said briefly and, in conclusion, that we must learn, as members of the great family of Mankind,

1. To keep our ship in good condition.

2. To predetermine our course for every voyage.

3. To stand on the bridge for the sake of our passengers.

4. To write our log as a faithful record of the voyage.

A NOTE ON THE EFFICIENCY

In a state regarding its experiences with the students, the Emerson Institute of Efficiency

A WEEK'S WASTE

"In working with new students we seldom find a man who does not waste from five to twenty hours every seven days. That does not mean that he plays in those hours, or has fun, or rests. The hours of fun and rest are not necessarily wasted. It is that those hours slipped through his fingers with any fruit of work or money or knowledge or education. They just went.

A YEAR'S SAVINGS

"Think of what that means. Suppose you fourteen hours—two working days—a week.

(*Continued on page 573*)

CAN A MUSIC TEACHER SAVE MONEY?

BY FRANK ANDREWS FALL
(Bursar of New York University)

TO this question some reader who lives by the teaching of music doubtless hastens to reply: Possibly some music teachers can, but not his one, whose income is moderate and somewhat irregular, and whose fixed charges for rent, food, clothing, and sundries are such as to use it all up and leave not even a small margin for investment. With such an answer the writer begs most courteously to disagree. Ability to save money does not depend on large income. On the contrary, it sometimes happens that increase of income has the effect of making saving all the more difficult. Witness the case of the man who found that he saved less on five thousand a year than he had been able to on three thousand, because the promotion that was the occasion of his increase of salary threw him into expensive social relations with his superior officers. He had to join the Country Club. He had to buy a motor-car in which to go to and from the Country Club. He had to do much costly entertaining. The result was that instead of a three thousand dollar man spending two thousand, he became a five thousand dollar man spending five thousand. Financially the last state of that man was worse than the first.

Ability to save money depends on sticking through thick and thin to the principle of spending less than one earns. That is the essence of the technic of thrift in one short sentence. Annual income, said Mr. Wilkins Micawber, twenty pounds; annual expenditure nineteen six; result—happiness. Annual income twenty pounds; annual expenditure twenty pounds ought and six; result—misery. For once the gentleman who was always waiting for something to turn up was right.

Increased income may result, and often does, in increased saving. But the point for the music teacher of moderate income to get hold of is this:

Do not postpone the saving until the time when the increased income is attained. Begin now if you have not already begun.

If you are not getting the income you think you deserve, have a good heart-to-heart talk with yourself and try to find out the reason. There is one thing the world pays for gladly and generously: GENUINE SERVICE. If the rewards you receive are not satisfactory, you must either render more service or learn how to be a better salesman of the service you are already rendering.

The compensations of music as a means of livelihood are commonly understood to be not particularly generous. A few fortunes have been made by composers, teachers, and performers; but for every such instance it is easy to cite a score or more of the opposite kind. Mendelssohn was the son of a banker, and his entire life was free from financial cares. Haydn, the son of a wheelwright, either inherited or acquired a talent for thrift, and lived his seventy-seven years in fairly comfortable circumstances. Handel's operas were not successful, and he reached middle age a failure on the material plane, but oratorios proved more profitable and *The Messiah* took him out of bankruptcy. He died a comparatively rich man.

For the reverse of the picture one may go to Bach, who often walked from town to town for lack of means to ride, who failed to obtain an organist's position in Hamburg because a younger rival was able to pay something for the post, and who became blind from copying his own and other men's compositions; to Schubert, who could not afford to buy paper on which to copy his works, who applied without success for the directorship of a school of music at a paying salary of $100 a year, and finally starved to death; or to Mozart, who, after varying fortunes, died of typhus and was buried in the potter's field.

Teachers of music share the lot of teachers in general. That is to say, they are not paid what their services are worth. It is therefore evident that the average music teacher who wishes to save money must do it at some pains of self-denial. But it is undoubtedly worth while, not only on account of the peace of mind that comes with the possession of a cash or investment reserve, but also for the wholesome discipline that is involved in adopting a scheme of personal economy and living conscientiously in accord with its rules.

Such a scheme must, of course, be devised to suit the particular circumstances of each individual, but there is one principle that seems to apply in practically every case:

Income and expenditure should be put permanently and definitely on a budget basis.

Without this first fundamental step, saving is a difficult, not to say an impossible feat.

The making of a budget is really a very simple thing. How much may I reasonably expect to receive during the next month or year? Of this, how much should I save? How should the balance be expended for those who are dependent on me, and for my personal needs? These are the questions each teacher should ask, and the answer to them will constitute a fairly satisfactory working budget.

There is some significance in the order of these questions. Not all budget-makers are wise enough to put the saving before the spending. But that is the only way to succeed:

Make savings the first charge against your income, and then compel yourself to live on what is left.

A paper published in the Middle West recently printed some suggestions on family budget-making which are worth passing on to the readers of the present article. Ten per cent of the total income, the paper suggested, should be set aside for the savings account. Twenty-two per cent should go for shelter. This would cover rent, payments on property, taxes, and insurance. For food, including groceries, meats, ice, and meals away from home, thirty per cent.

For clothing, fifteen per cent. This would cover store purchases, repairs, and bills of the tailor and dressmaker. For incidentals (light, heat, laundry, telephone, carfare, house furnishings, and sundries), thirteen per cent. For advancement, including church, charity, lodge, books, periodicals, and amusements, six per cent. The balance of four per cent would be available for luxuries,—indulgences which are not absolutely essential.

On an income of $1200 a year this would allow the following amounts each month:

Savings	$10.00
Shelter	22.00
Food	30.00
Clothing	15.00
Incidentals	13.00
Advancement	6.00
Luxuries	4.00

The music teacher would naturally adopt a budget classification based on the particular requirements of the calling. Piano rent and sheet music, for example, would be items important enough to be treated under special headings. But the list given above is sufficient to suggest how a rough division of expenditures may be worked out.

Having decided upon the details of the budget, the rest of the job consists in living within its provisions. This is, in many cases, a task to try the patience of a saint, but it can be done if all of one's courage, perseverance, and will-power are concentrated on the problem. Thousands of small fortunes have been built, thousands of suburban plots and small farms have been developed, through just this kind of concentration.

The "don'ts" of this matter of saving are important. The first is:

Don't let it get on your nerves.

If you worry yourself sick over it, the doctor whose bill you pay will be the one to put your money in the bank, not you. Stick faithfully to your plan; but if income unexpectedly shrinks or some emergency arises which makes it obviously impossible to set aside the amount designated for monthly saving, make the best of a bad bargain and console yourself by looking forward to a more fortunate result in the following month.

In the next place, no matter how old you are today,

Don't think that it is too late to begin to build a fortune.

Remember Verdi, who was refused admission to the Milan Conservatory on the ground that he "lacked musical talent," but lived to produce, at fifty-nine, an opera for which he received $15,000; at seventy-four *Otello*, and at eighty, *Falstaff*. A hundred thousand people witnessed his funeral, and he left a fortune to the home for aged musicians.

Most important of all, **Don't give up.**

That is the point where many a savings campaign breaks down. One or two reversals come, the program is disturbed and the saver says, "What's the use? It can't be done. I may as well give up trying."

Carlyle called Perseverance the very hinge of all the virtues. "On looking over the world," he wrote, "the cause of nine parts in ten of the lamentable failures which occur in men's undertakings, and darken and degrade so much of their history, lies not in the want of talents, or the will to use them, but in the vacillating and desultory mode of using them. The smallest brook on earth, by continuing to run, has hollowed out for itself a considerable valley. The mildest tempest overturns a few cottages, uproots a few trees, and leaves, after a short space, no mark behind it. Commend me, therefore, to the Dutch virtue of perseverance. Without it, all the rest are little better than fairy gold, which glitters in your purse, but, when taken to the market, proves to be slate or cinders."

AN ILLUSTRATION

I know one music teacher who evidently reads Carlyle and accepts his point of view. She has been just moderately successful, having had only as many pupils as she could take care of comfortably, but she has followed every rule of her self-imposed thrift program and has invested her savings so well that she will soon be able to live on the income from them, if she so desires.

But she will not so desire. Being a wise woman, she knows that effort is life, and stagnation is death, and she will doubtless continue to teach as long as she has strength for it, even though she does not need the money particularly.

That is one of the richest rewards of building up a competence for our declining years. It allows us to work for the love of it. It does away with work under compulsion. And that segregation of work and compulsion, all music teachers will agree, is emphatically a consummation devoutly to be wished.

———o———

How to Build a Fortune, by Thomas Tapper, is the title of a thoughtful, stimulating book, addressed particularly to persons having moderate incomes who are seeking for advice on the all important point of providing a reasonable competence for the later years of one's life. It is published by Platt & Peck Co., New York. Price, $1.00 net.

———o———

HAVE you planned at least ONE thing which will make your work better this season? If you have not, why not?

THE PROFESSOR TALKS ON EFFICIENCY AND SUCCESS

"Welcome, Professor! You can see that many of your disciples have hastened to greet you, although you seem to be commencing the season much earlier than usual!"

"Glad, indeed, to greet you, my dear Editor, and all our faithful friends here, among whom I see many new faces—do I not?"

"Yes; your circle of ardent followers, all enthusiastic seekers after pedagogical principles, methods musical, and constructive criticism, becomes larger month by month. Instead of friendly meetings in the Editorial sanctum, we shall have to hire a hall for your inspiring conferences!"

"Impossible, my dear sir; entirely out of the question! With all due respect to our friends here, I would much prefer *not* to have this kind of thing. You know, that all we ever intended was to have a *tête-à-tête*, amicable talk about our art; just you and I, without any audience. I have not the slightest desire to 'hold forth' or to preach, but just to indulge occasionally with you in an exchange of views, upon the most vital points that influence the progress and propagation of our art. Nevertheless, I am sincerely glad if my advice and experience can assist these inquirers after musical truths, and thus help to disseminate a purer, better, higher standard both in study and in practice."

"Well, Professor, I presume you have been having a delightful vacation, for you look well tanned and healthy; as energetic as usual. But, perhaps, you have again passed the time in teaching—summer schools, and so forth, passing along the good word, eh?"

TEACHER BUT ALSO A LEARNER

"Wrong, again, dear boy. It is true that I have been passing my time in summer schools, but not as a teacher—*as a learner*. Aha! that surprises you, does it? But I wish you all to take it from me that the teacher who thinks he knows it all, who is satisfied with *what he thinks he knows*, and who carries on his profession in the same old, humdrum, routine way—evidently imagines that the art of music and the art of teaching have stood still since the day (at the age of twenty-two) that he graduated from the Imperial Conservatory of Starokonstantinov!

"Believe me, if we are to keep up with the march of music, if we are to keep abreast of its perpetual progress, if we are to teach music, not only as it was when we were twenty, but as it is today,—in short

"If we teachers are not to be 'back numbers!' we must not only teach, but we must learn always.

"Therefore, my dear Editor, I have been going the round of the summer schools for teachers; picking up new ideas here, investigating new methods there, getting in closer touch with the latest pedagogical developments, exchanging ideas and notions with my fellow workers—and a remarkably bright, competent, well-educated, progressive, and enthusiastic lot of teachers I have found them.

"So you may readily understand, from my experience, how *absolutely necessary* it is that, no matter how competent we may believe ourselves,

"We should not only teach, but study and learn constantly.

"Efficiency in teaching requires that we should be fairly primed, chock-full of all that concerns our art."

"Is that all, Professor, that efficiency in teaching consists of? Is there nothing else? Because, if so, how is it that some teachers are so successful while others, just as learned and 'up-to-date,' fail in their endeavors?"

"Yes, there is another factor that makes for success—not to say others—namely, *personality*. By personality, I mean all those qualities, which according to their degree, render their possessor so different to anyone else. Those qualities are: Nature, spirit, disposition, temperament, genius.

A TRUE TEACHER

"The true teacher's original endowments and propensities are such that he is impelled—nay, he is compelled—by his spirit and disposition to teach. Similar to the interpretative artist, whether singer or instrumentalist, he has a *personal* message to deliver. He is no imitator. His natural temperament irradiates a magnetism of sympathy that draws out of students all that is best in them, that makes them imbibe almost unconsciously deep draughts of learning from his fountain of musical knowledge.

"The *personal note* and the *personal appeal in his teaching* are so forceful and compelling that his instruction is planted deep in the minds of his pupils; they understand him and learn from him so readily because he is so earnest and enthusiastic, because he is so interested in his subject (the cause of music) that he does not spare himself, but gives all that is best in him to his scholars. Thus he succeeds in making musicians and in setting in motion a wave of musical progress which benefits an entire community.

THE "GO-AS-YOU-PLEASE" PROFESSOR

"Not so your self satisfied graduate! He will consent—for a consideration—to pass a certain period in amiable and perfunctory discourse on musical subjects, or in equally perfunctory listening to a pupil's performance; but as for any real endeavor at musical progress, how can he? He is still teaching(?) the limited repertory he learned when he was twenty-two; for the past twenty years or more he has learned nothing, so what does he know of the new trend of the new schools of musical art and thought? *Ergo*, what can he teach? Practically nothing.

"As for endeavoring to draw out any latent original talent from the pupil, that must not be thought of! You must imitate me; this is the way we used to play that at Starokonstantinov; all else is heresy —taboo!' He little knows poor man, that

"His one, chief duty is to discover and educate the PUPIL'S originality; to foster and direct it; to see that it never loses its strong, personal note.

ORIGINALITY VERSUS IMITATION

"In art, imitation is not wanted. We want the performer's own message, uttered in his own accents. We go to see 'Hamlet' a dozen times, performed by as many different actors, because each one appeals to us in a different way and by a different reading. The same with operas and operatic artists; the same with lieder singers. We listen to a Paderewski in a Chopin program, but we also listen greedily to the same program interpreted by a de Pachmann. I repeat:

"We want the personal message, the manifestation of genius of each individual artist and composer. Therefore we need, and must have, that kind of teaching which will ensure that message and that manifestation."

"But, Professor, is not that kind of teaching very arduous, very tiring? Is it not easier to be less energetic, less enthusiastic?"

"Well—it is true that it takes more out of you *at the end of the day*, when your enthusiasm has died down and no longer excites your energy, than the lazy, perfunctory, feeble exhibition of the other so-called teacher. BUT, it is that energy and that enthusiasm which give zest to the teacher's art and which buoy him up and inspire him with such warmth and zeal, that he derives a veritable pleasure from his teaching, constantly renewed; so that his tiredness can come only with the reaction, at the end of the day. Whereas your amiably perfunctory personage is tired all the time, because *his interest is in the price and not in the pupil.*

SAUCE FOR GOOSE IS SAUCE FOR GANDER

"To those of you who are pupils: It should not be forgotten that these remarks of mine '*cut both ways*.' What is true for the teacher is equally true for the student.

"The student cannot learn in a lazy, perfunctory, feeble manner. He must be energetic and enthusiastic both at the lesson and during his practice. If he has any originality of temperament or genius he must constantly encourage its practice and manifestation. *If he has none, he would better choose some other study.* Let him also remember that the public will wish to hear *his own interpretation and not an imitation* of his teacher or of some other. Therefore must he help his teacher's instruction by his endeavors to understand it and to improve upon it.

PROFESSIONAL PUPIL VERSUS AMATEUR

"I tell all my pupils that the real acid test, to distinguish among them those who are amateurs and those who are professionals, is: *Those pupils who take a lesson, go away, and return with all the faults they had at that lesson, they are amateurs*, and they will always remain so; but

"Those pupils who take a lesson, who go away and not only master its subject but will IMPROVE UPON IT, they are professionals in the making, destined to sure success.

"The student must do his utmost to learn what his teacher is teaching. Neither the teacher nor the student can be independent of each other; if the student makes no effort to learn, the teacher cannot teach, and *vice versa*.

"Teaching and learning are mutual and reciprocal: they cannot exist independently.

"Now, my friends, if I have spoken thus seriously and at length, it is not because I have wanted to dictate or to dogmatize, but because I was 'young and frivolous' once (eh? what? oh! not so very long ago, but that I remember it vividly) and began to lose both time and opportunity by trifling both away. Yes, and I had a teacher of the kind I have described, who helped me to do so! Fortunately I had the good luck to meet a great teacher who spoke to me, even as I have spoken to you today, with the result that you now see before you—not such a very bad result, eh? So that I am merely passing on a good word; if it did me good (and I was a terribly hard nut to crack!), there is no reason why it should not be just as effective for those of you who may need it—either student or teacher!

THREE QUALITIES COMMAND SUCCESS

"There are only three things necessary to make you succeed in your present season's work: Enthusiasm for your art, will, and concentration. ENTHUSIASM that will convince you of the beauty of music and fill you with the desire to propagate it far and wide; the WILL to brush aside all obstacles to success in your art; and power of CONCENTRATION, by which alone you can exercise the WILL, and so master the many and varied details of your profession, whether of artist or teacher.

"Therefore let us all begin our season's work with these objects for our goal, joined to a determination to banish rigorously all superficiality, all shams and all circumstances that may militate against our SURE SUCCESS IN MUSIC."

EFFICIENCY APPLIED TO PIANO TEACHING

BY JOHN M. WILLIAMS

If time is money, tho average music teacher is certainly a good spender! To instruct a class of perhaps forty pupils, who take half-hour lessons (twenty hours of actual work) generally keeps the music teacher busy six days of the week, leaving little or no time for recreation or self-improvement.

If a teacher's time is his commodity for sale, and he charges $1.00 per half-hour lesson, why should he extend the time to forty-five minutes, thus giving away 50 cents with every dollar's purchase. What would happen to the grocer who gave away ten pounds of sugar with every purchase of twenty pounds? He would go bankrupt and so will the music teacher. Perhaps not bankrupt in the first few years but bankrupt in the end. No one can afford to "give out" all the time. To keep our balance we should "take in" regularly and thus be able to give out more.

Music pupils are notoriously fickle and the teacher who gives out everything to pupils, thus keeping no time for his or her own improvement, is apt, some day, to wake up to the fact that he or she is behind the times, and that some new or younger teacher, with a later method, perhaps, has the class.

It is a sad commentary on human nature, but I think it has been proven, that an article is generally valued in proportion to the cost; and teachers will usually find that this holds as true in regard to teaching time as to anything else. If fifteen minutes of the teacher's time is not worth anything, twice fifteen for the half-hour lesson period must not be; and so on.

A pupil who has a good lesson can generally get through with it in a half-hour, and the one with a bad lesson doesn't deserve the extra time unless we are giving rewards for poor work instead of good.

In a thirty-minute lesson I find it possible to hear Schmitt five-finger exercise, a major and minor scale, one arpeggio, an étude, and a piece. (This does not apply to pupils who have been badly taught, who frequently require the entire lesson on how to put the thumb under or some equally neglected point.)

How do I do it? By following a system.

I seldom have to ask a pupil anything about the lesson assigned,—thus saving a great deal of time. I have slips printed and perforated at the top like the one here shown.

These cost me $10.00 for 100 pads of 100 sheets each. I use a carbon, thus making a duplicate to keep for myself and tear off the top one for the pupil, using two for each lesson. This makes each lesson cost me one-fifth of a cent, which is a very small percentage of the cost of the lesson to the pupil.

I find that keeping a duplicate does away with the pupils' losing their slips. Poor pupils have a habit of losing their slips when they don't know their lesson, a habit quickly overcome when they discover the teacher keeps a duplicate of each.

I also use these slips in selecting material for the next lesson. Should a pupil need a new piece for the next lesson I write "new piece" on the slip.

Once each week I look over the slips and select the material for the entire week, thereby saving the lesson period for teaching. I have a graded list of my best teaching pieces in each grade, and when a pupil needs a new piece I look at this list which is an excellent reminder.

When a pupil arrives for the lesson, he hands me his slip, which I put in front of me on the piano rack thereby saving time through having to ask no questions.

I grade each lesson and give report cards at the end of each month. These reports must be signed by the parents and returned. The report card, as will be noticed, is nearly a duplicate of the practice slip and is done on heavy cardboard. These cost me $2.00 for 250, but each one lasts a pupil a year.

RULES OF THE SCHOOL

1. Parents are requested to sign this report and return to the teacher the first week in each month.
2. All missed lessons must be paid for but will be made up if a time convenient to the teacher can be arranged.
3. Studio recitals are given at two o'clock on the first Saturday of each month. Parents are urged to see that their children attend these recitals regularly.
4. All fees are payable in advance
5. Failures are written in red ink, and parents should inquire the cause.

By following the above system I teach a class of ninety pupils and keep well and happy. I am anything but a nervous wreck, and I find plenty of time for recreation and study. What is the reason? SYSTEM.

TWO BOOKS OF INSPIRATION

Are you an average person? That is, are you about as smart, as energetic, as persevering, as the average man and woman you know? Perhaps you are willing to acknowledge that you are. And you may even go one step farther and feel that while you are as clever as the other fellow you doubt that he is as clever as you are.

Be that as it may, there are times in your experience when the energizing force, which carries you forward to better things, must come from outside. Few of us are sufficiently dynamic to keep ourselves going at all times.

Therefore it is a good thing to pick up a book which contains material to pick you out of your rut, to put energy into your muscles, spring in your nerves, and aspiration in your mind. The right kind of a book is the kind of a friend who stimulates you to better work.

The other day in looking through a collection of books which came to his table the writer of this note was much interested in two numbers of a series called *The Inspiration Books*,* edited by Dr. Thomas Tapper, entitled *The Stairway of Success*, written by Murray Johnson, and *Keep Up Your Courage Stories*, by Franklin P. Lucas, both working out a line of thought which bears noticeably upon a prominent theme of the present issue, namely, increasing one's personal efficiency.

In *The Stairway of Success*, which is based on that well-known book *Self-Help*, by Samuel Smiles, we learn of the principles which many famous men used in building their careers, with success as the pinnacle. The mental picture of a "stairway" leading to success is an inspiring one for it suggests the process, namely, that of building and rising one step at a time.

In *Keep Up Your Courage Stories* one learns that no matter what the difficulties of the way upon which one is traveling, there is no valid reason for losing courage. We read how one man, another man, some frail woman, by courageous effort, won out in the contest which life imposes. The incidents are striking and stimulating.

Here are two books—either one can be easily put into a coat pocket—which are worth reading, worth pondering over the ideas advanced, and an earnest, persistent effort to apply the lessons suggested. The musician who has lost a little in the hopes with which he entered the profession may read *Keep Up Your Courage* to his great personal gain and growth.

———o———

SOUND-PROOFING

Sound-proof floors, partitions, and ceilings, forced warm air ventilation and hermetically sealed doors and windows are features of the unique music practice building erected by the Northwestern University for the students of the School of Music. The rooms are six by nine, with ceilings nine feet high.

Four different methods of sound-proofing the partition walls have been adopted in different sections of the building to compare their respective values. No lath or plaster appears in the building except in the section where gypsum blocks have been used, in which case a thin coat of plaster was applied to give the blocks a smooth surface. One-inch yellow pine sheathing has been used, covered with burlap; the latter, in some instances, is glued to the wall, and in others merely hung taut in the manner of tapestried walls.

The doors simulate the so-called sanitary flush doors, two of that kind, seven-eighths of an inch thick, being fastened together with a seven-eighths-inch space between, this space, in part, occupied by sound-deadening quilt, and part by the hermetically sealing mechanism.

*Published by Platt & Peck Co., New York. Price each volume, 35 cents.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

YOU YOU

THIS writing is addressed to YOU—the individual.

It is worth while to talk about musical progress in the United States, about better conditions of teaching, and the raising of standards throughout the profession. By all means talk these things wherever and whenever the opportunity offers. But don't talk without *doing* something

Begin with the job nearest at hand.

The name of this job is: YOURSELF. The hardest job you will ever have.

In order fully to understand this job you must devise means to attract your own attention. As you succeed in doing this, you will begin to see the truth. This page is offered as a help in attracting and fixing your attention.

THE world is made up of ONES: of whole ones; less than whole ones; never more than whole ones.

Your job, then, consists in making your ONE the biggest entity possible. Don't try to dodge this responsibility. Accept it like a true sport.

An old Greek injunction said: KNOW THYSELF!

But the old Greeks made a brain injection of this injunction. Here is where we may fail to emulate the O.G.

Before you can make yourself a bigger factor in the world's work, you must KNOW YOURSELF thoroughly and honestly; your weaknesses and your strength; your fullest ambitions and your desires. For what you are to become will grow out of these aspirations. Your ideals of today are your realities of tomorrow.

On this knowledge, acquired by study of yourself, you can base your training and the standards which will determine what you may do.

This constitutes the ideal of PERSONAL EFFICIENCY. It is the art of raising yourself to a higher level.

While you are doing this your neighbor catches the spirit and does likewise. And you influence your pupils, as well, to develop *their* personal efficiency. Which is a good modern illustration of the olden time mystery of the multiplication of the loaves and fishes. Not a miracle, just plain common sense and persistent effort.

HERE is a Program for the teaching season of 1916-1917:

1. I will strive definitely and systematically to develop my individual efficiency by reaching up to higher standards.

2. I will regard my responsibilities as a privilege and not as a burden.

3. I will endeavor to find and to put into operation the best possible efficiency program for every one of my pupils.

4. I will look as deeply for the efficiency of LEISURE and RECREATION as of WORK. And I will find happiness in them all.

5. As I make another year's march along the highway of Life I am determined to increase myself by experiences on the way and to cheer my fellow-travelers as I may be able.

THE MUSICIAN proposes to emphasize this doctrine for all time to come! (Not as a Theory, but as a practical, workable process of attaining unto that whole ONE of which we spoke in the beginning.)

We want YOU, the Individual, to be a partner in the Enterprise. For you are your own best material to begin with.

Study Personal Efficiency by scientific methods. It will not only pay YOU, but it will pay the COMMUNITY of which you are ONE.

Search every page of The Musician as it comes to you, month after month, for INSPIRATION and IDEAS

ONE POTTER

NEARLY two hundred years ago a boy was born in a potter's family in England. His grandfather, his father's brother, and his own brother were potters, and he began his apprenticeship to the trade. An attack of smallpox left him crippled and ultimately he lost his right leg. As a workman his activity suffered, but he could think.

"I am a potter," he said, "but I'll be the best ONE that England ever saw." As he improved in skill and understanding of his trade and its business possibilities he called to his aid the chemist who studied the constituents of pottery to learn the best materials and processes, the antiquary who informed him of the treasures of past ages, and the artist who gave his best skill and inspiration.

Today the name WEDGWOOD is known over the whole world.

ONE WOMAN'S CONTRIBUTION TO HIGHER EDUCATION

MOUNT HOLYOKE COLLEGE, the pioneer in the field of higher education for women in America, owes its existence to the energy and courage of ONE woman, Mary Lyon. Here is a record of personal development: Taken from school at fourteen. At seventeen again in school as a teacher for one term, a student the next. Paid tuition fees by giving in exchange for the instruction two bedspreads which she wove and dyed. A deep student of educational material with an ardent desire to place education within the reach of students of moderate means. Raised $4000 by subscription to establish a school for girls, in 1837. Today more than 1000 students are on its register. Mary Lyon's college became a model for others organized since.

ONE COPPER RIVET

AT thirty a Glasgow workman had so spoiled his life by drink and loafing that he found himself with empty pockets and no means to get them. Loitering near the docks he spied a copper rivet on the ground. This he picked up, and another, and still others, until it occurred to him to sell them. After several failures he disposed of them for four cents.

Something had aroused him. The ONE first rivet had *riveted* his attention to a possibility for him. He went back to the docks—the grog shop had no attraction now—and picked up every scrap of copper he could find. Vessels had copper bottoms; rivets and nails of copper were used in abundance. He worked as soon as it was light, and until dark. His savings grew rapidly, and before long he was part owner of a vessel, and later one of the most prosperous citizens.

The SINGER and HIS ART

ON THE RELATIONS OF SCIENCE TO VOCAL TRAINING

Read at the Convention of the New York State Music Teachers' Association, Syracuse, June 20)

BY LUIGI PARISOTTI

It has often occurred to me that it would be of reat advantage to members of the vocal profession some efforts were initiated to reach a definite and nanimous understanding on the very fundamental ut still much debated question of the relations be-ween science and vocal training.

Great expectations were entertained, in this re-pect, at the advent of the laryngoscope. But al-hough it is now about sixty-five years since that genious discovery, not only has unanimity not ollowed it in any way, but two antagonistic schools ave sprung from it. The one proclaims that vocal aining must depend upon the results of anatomical r physiological researches, while the other goes so ur in opposing this view as to consider it fatal to ie object of vocal training.

Personally I believe that this subject is in itself of scientific nature and that its treatment should de-end upon scientific considerations.

But in coming to this conclusion I kept in view two ssential facts:

1st, that science is divided into two main orders, ie physical and the metaphysical.

2d, that in the pursuits of either order, it is abso-itely necessary, for the purpose of reaching sound hysical or metaphysical conclusions, to rely re-pectively on positive physical facts or upon gen-rally accepted metaphysical principles.

Physiology is a branch of physical science, and hysiological investigations have established facts hich lead to sound conclusions from the medical oint of view. Thus a medical man, knowing what ie appearance of a healthy throat should be, both respect to its constitution and in respect to its nctional activities when inspected by means of the ryngoscope, will safely conclude that the throat not in a healthy condition if it present a change of pearances under the same process of inspection.

On the other hand when, in investigating the nctions of the vocal organs, we introduce the ryngoscope into the throat, we establish con-tions which are not exactly normal in respect either to the production, to the development, or to the speech moulding of the voice.

Now if this process of inspection does not provide us with the exact knowledge of the functional activities under normal conditions, it cannot serve the purpose of coming to sound scientific conclusions. It is true we may derive from that process of investigation plausible or even approximate conclusions; but plausible or approximate conclusions are not scientific conclusions; they are, at the best, scientific *suppositions.*

On the other hand, a reliable method must be built upon unassailable foundations of positive facts.

Suppositions are of no use for this purpose. Consequently while acknowledging the very great assistance that the vocal profession has certainly derived from the researches of the medical profession, we must also recognize that an incontrovertible method of vocal training based upon anatomical researches does not exist; it cannot exist; it is a misunderstanding from beginning to end.

In order to pass from this critical argumentation to constructive reasoning we should trace the cause of this very misunderstanding, and this, I believe, is due to limitation of views.

Medical vocalogists approach the subject of vocal training with the assumption that the human body is a physical machinery, which, from the medical point of view and up to a certain point, is a legitimate assumption.

But, unfortunately, this assumption is allowed to screen from our sight the following no less true fact:

The functions of the vocal organs are intended for the manifestation of our mental activities, and must therefore be impelled and regulated by our mental faculties.

In the act of speaking, whether for mere conversational purposes or for declamatory and musical purposes, the prime motive factor is mental conception, the vocal organs are the instruments by which the mental conceptions are formulated, and the link between mental conception and vocal formulation is the faculty of the will.

Consequently the will is the immediate impelling and regulating power of the functions of the vocal apparatus, when exercised for the expression of mental conceptions.

It is therefore reasonable to conclude that in vocal training the will power must be considered in both its modes of operation, namely, the conscious and the subconscious. In other words, the vocal training should proceed on psycho-scientific lines. The first step in this direction should be to understand the relations between conception and will, and the relations between conscious and subconscious operations of the will. And we have no better guide for this purpose than the crying of a newly born infant.

The first cause of its crying is the realization or mental conception of either discomfort or pain; otherwise it would *not* cry.

Moreover, the infant, in expressing this conception, makes use of two successive notes, and we recognize in these two notes the interval of descending minor third which requires a change in the adjustment of the vocal cords in order to pass from the higher to the lower note of the interval. Furthermore, the infant often repeats that interval in various keys in succession, which also requires a change in the adjustment of the vocal cords.

As this process of producing the sound and of changing the adjustment of the vocal cords, is *not* dictated to the infant by any anatomical or physiological knowledge, we are bound to conclude:

That the functions of the vocal cords depend solely upon the subconscious operation of the will.

In this respect there can be no difference between the laryngeal functions of infancy and those of manhood.

But while the infant is incapable of any realization of will power, both teacher and student realize that in vocal functions the intercourse between the subconscious impulse and the vocal organs manifests itself by two different sensations. One is the sensation of freedom or ease; and when *this* is the case we say that the sound they produced is either a natural or a well-trained voice. The other is the sensation of effort in a more or less marked degree, and in this case we call the sound a hard or untrained voice. Either case depends upon the realization or ignorance of the relations between consciousness and subconsciousness.

These relations may be divided into two classes, one of co-operation, the other of supercession.

As the intercourse between the will and the vocal cords is and *must* remain of a subconscious nature, our intentional purpose can only be of a co-operative nature, and it must be directed to the avoidance of every muscular resistance to the natural subconscious process.

This muscular resistance is mainly prompted by an imperfect appreciation or conception on the part of the pupil at the beginning of the study, as to the character and requirements of the act of singing. He realizes by instinctive suggestion the fact that in singing we must be capable of imparting to our voices better resonance than in conversational speech, and he wrongly imagines that this must be attained by a forcible activity of the vocal organs.

Consequently, the first step in vocal training should be to lead the pupil to conscious self-possession and gradually to the realization of that condition of almost passivity which will allow the free and full exercise of natural or subconscious activity of the vocal organs. This process, if successful, would bring forth that ideal mode of voice production which might be expressed by two words, REPOSEFUL ACTIVITY.

With regard to the breathing functions the co-operation of consciousness with subconsciousness would be utterly inadequate.

It is the fact that the act of breathing is of an absolute subconscious nature in the ordinary way.

It is the very first exercise of vital activity in our life.

We start breathing the moment we enter its threshold; we breathe through the whole of its duration and to its last gasp, hardly ever noticing the fact, except when exercising that partial and incomplete form of breathing which we call smelling.

This is a partial or incomplete form of breathing because it does not allow the air to fill the whole mass of the lungs, and it is not intended by nature to do so.

But in singing the breathing system must be filled with air to a greater extent than in ordinary breathing, though certainly never to the point of creating discomfort.

This object can only be obtained through the supercession of subconsciousness by consciousness.

At this stage, however, the utmost skill is needed to avoid confusion between the conceptions of increased ordinary breathing and of the act of smelling.

If we tell the new and raw pupil to take a good deep breath, we will almost always see him carry out an exaggerated smelling action and thus accumulate a large volume of air in the upper regions of the breathing apparatus. This exaggerated high breathing is one of the causes of that labored and explosive laryngeal process called "stroke of the glottis."

In order to avoid this mistake the pupil should be led to the conscious practice of perfect complete breathing action, by means of suitable exercises of the respiratory muscles, without his being informed of their final object, until that object has been obtained. With regard to the use of the various sources of resonance, which in the course of ordinary speech is *also* a subconscious process, it must be rendered in all respects absolutely conscious.

The pupil must know all these sources, their functions and their various adaptabilities, right and wrong, and he must be fully informed concerning the purpose of the exercises by which he is trained to acquire full control of those sources of resonance.

He must know that they need contain a larger amount of air than for ordinary breathing purposes; that all causes of restriction of their space must be carefully avoided; that where it is possible the capacity of these spaces must be increased; and, above everything else,

He must know that resonance and tone constitute the very object of vocal training, and that all the functions of the organs of voice production, breathing, and speaking must be absolutely subordinated and co-ordinated to this object, namely, perfect resonance and tone.

As in the previous steps the accuracy and singleness of conception are strictly necessary conditions.

But it is a very strange fact that these essential conditions are often ignored; with the result that scarcely one in ten among professional vocalists fully understands the meaning of nasal, pharyngeal, oral, laryngeal, pectoral, and labiodental resonance.

It is owing to this want of understanding that we hear the shrieking soprano, the bellowing contralto, the white-voiced and tremulous tenor, and the boisterous baritone and bass. Yet we have the right conception of resonance and tone of musical instruments. We expect the high notes of a violin or a piano to have depth and the low notes to be clear.

The fact is that resonance must be regulated by tone, and unless the tone is both rich and clear, from the lowest to the highest note of each voice, and from the *fortissimo* to the *pianissimo*, the process of development of resonance must always be faulty.

It is therefore essential that the pupil should be led to distinguish the conception of high musical note from the conception of vocal resonance, in order to avoid the excessive use of the soft palate, and that he should distinguish the conception of deep musical note from the conception of vocal resonance, in order to avoid the excessive concentration of angles of incidence and reflection in the laryngeal region.

This discrimination between musical note and muscular activity of the sources of resonance must be of a fully conscious nature.

Finally we come to the training of the vocal apparatus for the purposes of sentimental expression.

This subject is also of a subconscious nature in the ordinary way, and indeed the process through which the vocal apparatus is prompted to give to the voice the respective intonations in the realization of contentment or sorrow, affection or hate, etc., is a mystery.

But we know that the outcome of this mysterious intercourse is a sensation of expansion of the sources of resonance and of certain variations in the progress of the expiration of the air from our lungs.

And we also know that these sensations are dependent upon mental conception or realization of impressions.

In all genuine emotional manifestations of ordinary life, we may always observe that feeling of expansion; while we may observe that the expiration of the breath is either rapid and abundant, or slow and of moderate quantity, or abundant and halting, and so on, according to the various emotions by which we are affected.

Therefore the artistic expressions of emotional situations can and should be carried out by a conscious process of displaying the sources of resonance and regulating the progress of the emission of breath, according to the intentional conception of situations.

From this limited survey of the relations between our mental powers and the organs of the vocal apparatus we can derive the following conclusions:

First, for the purpose of sound vocal training, the accuracy and singleness in the realization of conceptions and the judicious understanding of the use of consciousness and subconsciousness are essential factors.

Second, every sound mental process being of an unchangeable and universal character it must be possible to reach, through the study of these factors, a reliable and unanimous and, therefore, universal basis for a scientific method of vocal tuition.

Voice: Its Origin and Divine Nature

The Truth About Voice.
Mind: The Cause of Voice.

THE DECLINE OF SINGING

What has become of the old-fashioned singing teacher?

Most of us remember, with a lot of pleasure, the old-time singing-school, with an instructor who did not style himself an "exponent of vocal culture," who collected a few cents per pupil for each "school," whose "down, left, right, up" style of beating time seems grotesque today, yet lies back of all successful directing, and whose pupils really learned to read music a little, sang by "position" with good ear, and could render part songs in a fashion to make a modern glee club sit up and observe things.

The cheap music-hall song has driven decent singing from most stoops, piazzas, and front porches. The mechanical reproductions of the talking machine seem to satisfy youthful musical longings, and no gathering about the piano seems to inspire the singing of anything worth-while.

The tinkly, the syncopated, and the off-color finds its place on the music-rack, and the atrocious scores of "latest and most popular song successes" offer nothing to piano fingers or singing voices but rubbish. What wonder, then, that good singing has declined, and that it is the exception, rather than the rule, when a party of young people are able to sing together without actually inflicting nervous pain on the involuntary audience?

We are doing a little with music in our schools, but it is hardly being done in a fashion to make singers. To begin with, most boys just simply despise the music period and take a delight in killing natural harmonies rather than creating them. This is unnatural, because practically all boys can sing and like to sing when they are offered a piece with a "tune to it" and a little "pep," as they express it; but they soon emerge from the "Good morning, merry sunshine" stage and want something with more character than they find in the average school songster.

One thing is fairly certain, if boys and girls are given something to sing that they can sing and like to sing, they will learn to sing, because singing is just as much an expression of joyous youth as chattering, and everyone prefers a nightingale to a magpie.—Rutland (Vt.) *Herald.*

TWENTY "BEST" AMERICAN SONGS

In a recital at the New York University, in July, Reinald Werrenrath, the well-known baritone, devoted his program to American composers, presenting twenty songs which he selected from a very large number as the "best" American songs he knows. In addition he considers these songs as representative works of the composers who appear on the program. The program follows:

MacDowell: *Oben wo die Sternen glühen, Long ago, Midsummer lullaby, The sea.*
Chadwick: *Allah, O let night speak of me.*
Nevin: *At twilight.*
Foote: *I'm wearin' awa'.*
Whiting: *Fuzzy wuzzy.*
Loomis: *Two epitaphs.*
Deems Taylor: *Witch woman.*
Class: *The elfin knight, To you, dear heart.*
Loeffler: *To Helen.*
La Forge: *Schlupfwinkel, To a messenger.*
Carpenter: *The heart's country.*
Searle: *The days of long ago.*

VOICE AND NERVE CONTROL

Teachers of singing and singers, as well, are advised to look into the book recently issued with the title which appears as a caption to this note, written by Madame Jutta Bell-Ranske, and published by Frederick A. Stokes Co., New York (price, $1.50 net). Before particularizing as to the contents the reviewer would say that he considers the book as having special importance to all who are interested in voice training and the relation of the voice to general health and well-being. An idea which is rather new to voice users, teachers, preachers, lecturers, etc., as well as singers, is the part which the nervous system plays in breathing. The first section treats of the vocal organ from the physiological point of view, and especially with the subject of breathing, in which connection we call attention to the chapters, *Medulla or nerve breathing* and *The respiratory nerves.* Other chapters containing valuable suggestions are *The school of three registers, The larynx school, The pharynx school, The resonance school.*

Part II discusses the subject of the voice and tone, in what the artistic tone consists, and the various factors which enter into its making. Psychology and its relations to vocal tone are included in this consideration.

Part III consists of ten progressive lessons to apply the principles set forth by the author. The term "nerve breathing," so freely used in this book opens some very interesting and suggestive trains of thought.

Voice and Nerve Control is a good book for a teacher to read and study at the beginning of a new season.

WHY FEMALE VOICES MAY SAFELY TALK MORE THAN MALE ONES.

BY DR. LEONARD KEENE HIRSHBERG, A.B., M.A., M.D
(Johns Hopkins University)

Experiments conducted in scientific laboratories of applied psychology have just brought to light the explanation of why women may talk more than their "worso" halves.

In view of these results, the first of which were made by Dr. Pentier, of Lyons, France, it is evident that the vocal muscles of the feminine part of mankind expend one-third of the energy lost by man when he speaks the same words in the same length of time.

Woman, it is plain, by tests made with several precise instruments, loses less heat, does less work

THE HERMAN KLEIN PHONO-VOCAL METHOD
Based upon the Famous
School of Manuel Garcia
Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

nd uses less force by 66⅔ per cent when she talks han does her escort, husband, father, brother, or on.

Other experimental psychologists and experimenters in this matter discovered that the kind of oices of women and of men play a large rôle in this trange vocal supremacy of the female of the species.

Dr. Carl Molisch used a musical comedy troupe or his researches. He found that those women who ave the highest pitched soprano voices are the ones ho can speak longest and talk the most with the east loss of measurable energy. An instrument alled a calorimeter or heat-work clock shows that he soprano voice can rattle away at aeroplane speed ith the least possible fatigue of the owner.

Next comes the mezzo-soprano, who also wastes omparatively little flesh and labor when talking a reat deal.

As might then be expected, contraltos, counter-enors, and tenors come next and stand in between he normal, natural male voices, the baritone and asso.

Men, which the savant proved by almost all tests nade upon deep male voices, employ vast resources f reserve energy, when they speak. This is the first roof of the fact scientifically, although it is evident rom past experience that men as a rule are more aciturn and less given to useless words than their nothers and sisters. It seems they unconsciously ealize that it tires them more to talk than it does oman.

The actual measurements in these researches prove hat the range of voice differs greatly, so the percentge varies to the same extent, but as a general result t was proved that a tenor uses only from one-eventh to one-sixteenth of the lung power of the aritone or bass. The difference in the force used y the contralto and soprano is very marked, and he contralto who sings in very deep tones uses at east ten times the force of the soprano.

The explanation is so simple that it is surprising hat it was not thought of long ago. It has long een known that the tenor or soprano brings the ocal cords together and keeps the edges vibrating nly by the emission of air. The bass or contralto eaves the space between the cords wider open, and as to vibrate much more of the membranes.

In other words it is all a question of muscle. The ocal muscles of men must move further with a reater force applied to them and with more difficulty than the lighter textured, more easily disturbed eminine ones. Like the blacksmith's biceps, Ruffo's r Plançon's vocal chords are tougher, thicker, arder, and less likely to be disturbed than are the lighter cords of Mme. Schumann-Heink, Lena Cavalieri, or Geraldine Farrar.

Is there then any wonder that barbers with tenor voices can far out-talk the patience of their more vigorous, hardy, masculine customer?

Efficiency Hints for Singers

The training of the voice to sing without training the Singer's Mind and the Singer's Body is no training at all.

Vocal practice—good or bad—depends upon what mental demand you make upon your muscles! It is not working with the music or text; they were given to you fully completed. *Study yourself!*

If you have studied three months and have made no discoveries for yourself—about yourself—you have not yet awakened the Singer's Mind.

When training the Singer's Mind one should not overlook the fact that the singer has two sorts of memory to develop: Mind memory and Muscle memory.

You will miss a great deal of useful information if you do not have frequent conversations with yourself. Do not "try hard." Try intelligently! Use your brains before you use your muscles.

Do not depend upon your voice to carry you to SUCCESS. You must possess several other important gifts. Whip up your MIND.

"I have tried faithfully" is a soothing draught to oneself, but is rarely considered of much value by the teacher. It is not indicative of any particular wear and tear on the brain.

Do not work for *reward*. Work to grow!

From *Some Staccato Notes for Singers*, by Marie Withrow.

A NEW BOOK ON THE VOICE

Another work* on the voice has recently been published by a New York teacher, which deserves more than mere passing mention. The author adheres most strenuously to the spiritual theory of singing as opposed to the teachings of those who base their work on physiological principles. The statement of this position, as found on the first page of the book, is extremely interesting:

"The lips don't know they move; the tongue doesn't know it moves; the soft palate doesn't know it moves; the larynx doesn't know it moves; the lungs don't know they breathe—which is equivalent to saying that there is no intelligence in the body. The body is not the source of intelligence.

"Then where and what is the power that sings? We know that it is possible to sing and that certain people have this power. We have found that the power to sing is not in the body; therefore we must conclude that it is in Mind and is mental; being mental and a good power, it must be spiritual, and therefore originates in God. Man reflects this power and it must be the I or ego which sings."

The various chapter headings indicate the extension of the author's point of view, namely: The motive power of voice, The spirit of singing, False human theories of voice, The true source of voice, The mental principle, God's gift of voice.

Teachers who believe in the dominance of the mind over the voice and singers who may have given too much attention to developing the physical side of technic will find this little book full of ideas. It is an enthusiastic presentation of the subject.

AMOUNT OF "METHOD" IN TEACHING

An artist who has made a concert tour which included the English-speaking countries and colonies mentioned the fact that during this trip he had listened to the playing of hundreds of students who had been taught by musicians of various nationalities using every known method. Among all these students there was scarcely one who gave undoubted evidence of becoming a world-famous artist.

The repertoire of these students was much the same, and the various numbers were performed with technical proficiency, even perfection, in the moderate sense of that term. In reflecting upon the work of these various students the artist was impelled to attribute the lack of the essentials which mark the recognized artist as due to "too much" or "too little" method.

This does not attack the importance of method. On the contrary it emphasizes it. But it means that the trouble is not so much in the method as in the teaching which was claimed to be according to the method. Therefore the teacher who relies on the "method" he uses or follows and does not study, day by day, to improve his teaching will never turn out an artist pupil.

CONDUCTED BY HELENA MAGUIRE

BACK TO PRACTISING

When autumn comes, and the days grow rapidly short, and the sun goes to bed early, leaving a chill over the late afternoon, then little boys and girls turn to indoor pleasures and tasks just as eagerly as, at the beginning of Summer, they left their pianos and books, and raced for the "out-of-doors," and all the various kinds of outdoor work and play. And, gladly as they stopped lessons and practice a little while ago they now turn back to them, realizing again that there is a joy of a very particular kind in the early-lighted lamps, close-drawn curtains, and the hour at the piano.

Each season for its pleasures and its work. And now let us begin music study and practice with just as great a will as we had when we left them off, getting ready for good times at the music clubs and musicales to come.

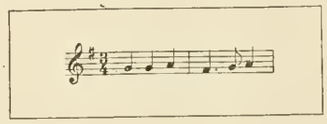
SOME MORE MUSICAL GAMES

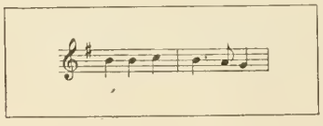
BY ELIZABETH A. GEST

MUSICAL OLD MAID

Make pairs of white cards (*a* and *b*) and write the first measure of a simple, but well-known melody on *a*, and the second measure of



the same melody on *b*.



The cards are dealt and the children draw from each other in turn, matching the melodies, and laying the pairs on the table. One blank card remains for the "old maid."

MUSICAL STAGE-COACH

The children sit in a row, and each one is named a degree of the scale.

The teacher plays some very simple melody, slowly, and as each child's degree is sounded, she stands up and sits down again, quickly. If she stands up at the wrong time, or fails to stand up, she is "out."

BLIND-CAT

Blind-fold each child in turn, and let her write a broken chord on the blackboard, having given her the "starting place."

The most successful attempt wins the prize.

———o———

A LITTLE LESSON ON THE SONATA

September is here once again, children, and the time for gathering new knowledge about music begins with the gathering in of the harvest. So, beginning with this month, you will find here in the Children's Work Department, in each number, a little lesson about music from which you may gather musical knowledge for all the years to come.

This first "Little Lesson" is about the sonata, and is reprinted from an English paper called *The Music Student*.

THE SONATA

Years ago, in Charles II's days, people had not learned how to write pieces that should be long without being tiresome.

So they used to string together several short pieces, and thus make quite a long piece, with plenty of variety in it. Our English Purcell used to do this, and so did Bach. The little pieces they put together were generally pieces in dance style. We call such a string of pieces a suite.

People still write suites today, but out of the suite there has grown up something a little less lively, called the sonata. It is generally rather long, and made up of either three or four shorter pieces. One of these is often a dance piece, a minuet. This reminds us that the sonata is a descendant of the suite, just as, if you see a boy with blue eyes, you may be reminded of his father, who has blue eyes, too. But the father and his son may be living at the same time, and so it is with the suite and the sonata—both are still written today, though one came from the other.

We call the short pieces of which a sonata is made up, "movements."

Generally the first movement is the longest and most serious. It is often made this way:

1. First tune and second tune.

2. A passage (often long) made out of bits of these tunes.

3. First tune again and second tune again.

I might tell you much more about it, but this is sufficient for one month.

A string quartet is generally a sonata, but for four stringed instruments. A symphony is a sonata for full orchestra.

HOW MUSIC CAME TO BE

BY LAURA M. WILLIAMS

A FABLE

Years ago when Mother Earth was young, there dwelt upon her two different races of men. One was tall and handsome. The other was short with long, long arms and great big staring eyes. This race hated the big people, and they used to throw stones at them from the trees and play all sorts of tricks upon them.

Of the tall race there was a beautiful girl, with very long hair. Her father kept her in a dark cave, never allowing her out but once a day, at a time when he could walk beside her. For he knew that all the men loved her and he didn't mean that anyone should steal her from him.

So every day, when the Sun was high, all the men would gather about the cave to watch the beautiful Longlock come out for her daily walk. Of course together they could have stolen her from her big father, but who would have her then? No man wanted to see another take her, so Longlock, the beautiful, lived in the dark cave and was sad and lonely.

One day, while she was sitting alone in the darkness, thinking how horrible life was, she heard a queer sound, high and clear, ending in a little trill.

She held her breath and crept slowly forward toward the cave's opening. At first she could see nothing. She listened and again came a sound like she had never heard before, high and clear, ending in a little trill.

Longlock peered about. She could see nothing but a tiny bird and she was turning back into the cave, for she was forbidden to peek out, when once more came the sound, high and clear, ending in a little trill.

"Is it the bird?" thought Longlock, watching the creature in amazement. "How beautiful. What is it doing?"

And forgetting everything she crept out of the cave to the bush where sat the little bird trilling. Longlock watched and listened and listened and watched.

"Perhaps I could do that," she said; and opening her mouth she began to croon. But it didn't sound much like the bird and Longlock was disappointed. She kept trying and trying, and before she knew it the Sun was high. Off flew the bird and Longlock ran into the depths of the cave in a fright.

Every day the little bird trilled outside the cave and Longlock crept out to meet him, trying to make a sound as beautiful as his, high and clear, ending in a little trill.

One morning the bird stayed overtime and Longlock, listening to her own voice, did not notice that the Sun was high. Over the rocks

came her father and over the rocks came all the men too.

The little bird saw them and flew away, but Longlock kept right on, her voice rising high and clear, ending in a little trill.

When she had finished she saw everyone about her, and was frightened and would have run, but the men begged her to make those beautiful sounds again. So Longlock opened her lovely mouth and poured forth her voice. It was very beautiful; and the men began to weep and fell on their knees at her feet. For Longlock was the first one on all the Earth who had learned to sing.

After this she was no longer kept prisoner in the dark cave but was allowed to wander where she would. No one dared or wanted to harm her.

Now when the little race of long-armed people heard of the wonderful singing girl they determined to possess her. For it was said that the big race was happier now. If anyone became sad or discouraged they sent for the singing maiden and were made happy once more.

Picco, the fiercest of the dwarfs, watched from the trees until he saw Longlock leave her cave and wander off alone, singing as she went. Picco had never heard anything like it before, so he followed the girl on and on until they came to a huge rock. Here she rested while Picco ran to call his comrades.

They came hurrying to the spot where sat the singing maiden. Her voice was so high, clear, and trilly that the dwarfs vowed she should never leave them and rushed forward, surrounding her.

Poor Longlock could not resist them. Though she was very big and they were very small, there were hundreds of them and but one of her. They carried her off and put her in a cave, guarding the entrance. Longlock sat alone in the darkness, weeping.

When Longlock did not return that evening everyone thought her dead, for no one imagined the dwarfs would dare touch her. All the young men wept and everyone became sad.

Of all the men Strongarm loved her the most. As the days went past and she did not return he wandered off by himself to weep.

He walked and walked until he became so tired he sank to the ground and lay as in a swoon. Suddenly he roused and sprang up. A sound had come to him. Was it Longlock singing? He ran and ran until he came to some marshy land, but there was no sight of Longlock anywhere.

The reeds were growing and the wind blew over them with plaintive sounds. It seemed to weary Strongarm that it was his love's voice calling him.

He broke off a reed and walked sadly on. As he went he made a little hole in the reed and blew into it. A wonderful thing happened. A voice answered him, low, sweet, and plaintive. He blew and blew, and the voice of the reed sang. He went on blowing and listening, quite lost in the sound.

He stopped abruptly before the rock where Longlock had rested weeks before. The dwarfs were swarming upon it. Strongarm didn't like the looks of them, but he thought that they might know something of Longlock. So he smiled and bowed and all the dwarfs bowed too.

"What have you there?" asked Picco. "Play it again."

Strongarm bowed once more and blew into his reed, and such wonderful sounds came forth that the dwarfs danced and laughed and wept all at once.

"Give it to us. Give it to us," they all cried when Strongarm ceased blowing.

Strongarm shook his head. "What will you give me for it?" asked he.

One said an arrow, another said an animal skin, a cave, a wonderful stone; but Strongarm would not part with the reed for anything they had.

Then Picco came forward the last and said: "I have in my cave, a wondrous singing maiden with long, long hair. I will give her for your reed."

Crafty Picco did not tell Strongarm that every day he had begged Longlock to sing for him but she would never open her mouth. Neither did he say how pleased he was to be rid of her.

"Let me see her," cried Strongarm, and followed Picco over the rocks to the cave where Longlock sat weeping alone. Strongarm called out in a loud voice and Longlock came out into the sunlight.

Then Strongarm snatched her up in his arms, threw the reed to Picco, and ran off shouting for joy.

When the big people saw them coming, there was wild rejoicing. Strongarm demanded Longlock for his bride and no one denied his right to her. Longlock went with him to his cave, and once more she sang her lovely song, high and clear, ending in a little trill.

And Strongarm pulled other reeds from the marsh lands and gave to the men and they blew and heard the voice of the reed. And ever after there was Music on the Earth.

WHEN FRANZ JOSEPH HAYDN WAS A LITTLE BOY.

BY HELEN DODGE, AGED NINE YEARS

In a tiny village in Austria, in 1732, Franz Joseph Haydn was born. He was one of a large family; though poor they were very happy. His father was a wheelwright, and the children used to like to play and watch him make wheels and carriages. On Sundays they always had music, for the father sang and the mother played the harp.

Joseph sat beside her and sometimes sang with his father. Before Joseph was six years old, he was able to lead the singing in the choir of the old village church. The father thought the boy ought to be taught music, and was glad when a cousin, who was a musician, visited them and offered to take Joseph home with him and teach him. He was six years old and was glad to go with his cousin.

He lived with him three years, and on week days worked hard at his music and Sundays sang in the choir.

When Joseph had been with his cousin a year, they had a visitor from Vienna. After dinner Joseph sang for him. When he had finished, the visitor taught him to trill, and was so pleased with his little pupil that he filled his pockets with bright red cherries.

This visitor was chapel master in a large church in Vienna, and wanted Joseph to go with him and sing in his choir in St. Stephen's Church in that city.

The boy wanted to learn all he could about music, and if he heard the great organ would leave his play and go into the church to listen. While he was a choir boy he earned very little money, but saved all he got.

When he was 13, he bought two books that he might study more about music. He was never taught to compose but this did not keep him from trying.

When Joseph was sixteen his voice changed and became so harsh that he was no longer wanted in the choir. One cold night he left St. Stephen's church, and wandered about the streets cold and hungry, but met a kind friend who was willing to share his home with him. It was an attic, but Haydn was not unhappy. He soon found work, sometimes playing the violin, and gave some lessons as well.

Haydn and some musicians used to play in the streets and Haydn often composed the music. One night they went to serenade the leader of the opera. He came to the window and asked who was playing, and who wrote the music? Haydn said, "I did." The old gentleman asked him in and engaged him to write the music for an opera. After this Haydn was never poor.

THE "MOTIVE" IDEA

A STUDY FOR TWO LITTLE GIRLS AGED NINE YEARS

BY C. NITZKY STINE AND ADELE SUTOR

Florence: Janet, do you know what a "motive" in music is?

Janet: Yes, it's what the music talks about. The same as though I were to tell you a story about my dog, Freckles. I would often speak of him, of course, because I would be talking about a dog.

Florence: Oh! yes, and if you'd want to make up a little piano piece about him, you'd do the same on the piano.

Janet (laughing): I made up one about my bird, "Caruso." Mother put his cage on top of the piano, while I was practising one day, and he began to talk to me. Then I asked him if he loved me, and he put his little head on one side and said, " 'deed I do." And I told all about it in my melody. I know another name for "motive," Florence.

Florence: So do I, "theme," and when the composer writes in this way it is called the "thematic style." He then takes an idea and often repeats it. He answers it too, in many different ways.

JANET: I have one of Gurlitt's little tone poems, *The Wanderer*. It is written in the thematic style. Oh, wait! I'll play you the first five notes in the right hand, and then the next five notes of the same part, and you'll notice that they are exactly alike. In *The Wanderer* these five notes are "the motive." (Illustrates.) See?

FLORENCE: Of course, that's very easy to understand. Well what's your story about. I guess we'd better not say *story* but "motive," when we're discussing music, Janet.

JANET: I think so too. *The Wanderer* tells us about a person who goes on journeys. You know in Germany the ambitious young man used to take a little bundle of clothes, perhaps a sandwich or two, for his next meal, and then with his violin in its case, he'd start out to see the world. Often his idea was to get a city where he might earn his music lessons. He'd leave home in the morning and walk, but not too fast, for he had to go a long way. Maybe by noon he'd come within sight of some real nice home, and when he was near the house, Mr. Violin would hop out of his hiding place. You see *The Wanderer* would play his violin and get the children to dancing. Then the older people would invite him to dinner and have him play for them. After that he would go on his journey again. At supper time he'd do the same thing. Maybe he'd have to sleep on some hay in a barn. But, finally, he would get to the city he had started out for.

FLORENCE: Many of the celebrated musicians did that, Janet. I heard Ben say Christine Nilsson, who was one of the great singers—people all over the world know about her—used to take short journeys like that when she wasn't any older than we are. Her brother played the violin and Christine sang.

JANET: That's interesting to know, Florence.

FLORENCE: Isn't it? Those journeys must have been nice when the weather was fine.

JANET: I guess the composer thought of all kinds of weather, in his pieces.

FLORENCE: And scenes too. And when *The Wanderer* had to travel a long way, parts of the road would be very much alike, wouldn't they?

JANET: Surely! And then other parts would have new scenes and different kinds of landscape. And oh! don't you just love to hunt for the repeats and the different parts of the story?

FLORENCE: Yes, *it is* fascinating! Won't you play *The Wanderer*, Janet? I want to listen and see if I can follow the theme.

JANET: All right. (She plays it, and goes on talking and pointing out the different places in the music, illustrating her meanings.) I guess you know, Florence, that a motive has a natural length of exactly one measure. You see, this little piece is in 6-8 measure, and the music begins on count 6. So it must stop on count 5 or before it.

FLORENCE: Yes, I see; but look, count 5 is a rest.

JANET: I know, the music really stops on count 4. My teacher says that is the lesser accent in this kind of a measure.

FLORENCE: Look, Janet, I've found four measures exactly like your first five when we learned the motive.

JANET: Let's go on and see what happens. Isn't this fun? You play the melody beginning with the last note of measure 4, and see if you don't hear the same tune, only now, it's one step higher. That's the chord of G minor. You can find that again too, farther on in the piece.

FLORENCE: Let me try this one. (Plays a chord.) Why! that's D minor chord, but it's the same melody.

JANET: Wait a minute, Florence. I want to find out something (she begins to count, pointing out measures as she goes on). Here's the opening motive in the chord of F, eight times, in the chord of G minor, eight times; in the chord of D minor, two times. Oh! doesn't that show us plainly that the story is all about the motive or little melody?

FLORENCE: That's as easy as A B C. Let's see what happens to the story. It wouldn't be a story, when the subject is repeated so many times unless something happens. Because we make a story out of a subject and what happens to that subject.

JANET: Yes, don't you remember what we learned in class: A motive is a musical idea, a short melody which is dependent because it needs to have something more said about it.

FLORENCE: There was more: A motive can be repeated entirely or it can be placed in another chord, and so repeated, one step, or many steps, higher or lower. Just like a design for embroidery, you can repeat the pattern and change it, or not, as you wish.

JANET: What piece did you have where you learned about the motive idea?

FLORENCE: The name is pretty nearly the same as yours, *The Traveler*. I'll play it for you. (She plays and at the end)

JANET: That's a darling. Isn't it the easiest thing to follow the story, after we've studied "the motive idea"?

FLORENCE: Yes, and thank you for helping me.

JANET (laughing once more): Why, I didn't know I was helping you, I learned a lot from you.

They lock arms and go off the stage.

—o—

THE SCHOOL SONGS

IF a child may leave school with a love for a few great songs he will carry into life a valuable inheritance. But they must be known well. The boy or girl must have sung them under loving guidance, must have found the way into them, must have learned that the poem and the song are the property of the other. In brief, the poetry and the music (which mean the beauty) must have been brought forth so deftly and so appreciatively by the teacher that the learner is at once admitted to all the meaning both of poet and composer. And such learning of a song will brighten life for the learner.

MUSIC BY MEANS OF LIGHT RAYS

A NEW YORK inventor, Dr. Lee De Forest, claims that he has been able to change light rays into sound rays. The apparatus used and the explanation given is too technical to be set forth here, but we will give the gist of his statements.

The essential part of the apparatus is the audion, an incandescent lamp used as a detector for wireless signals. It is by means of this that the extraordinarily long distances lately witnessed in the transmission of wireless telegraphy and telephony have been made possible. This little bulb can be made to generate alternating currents; in other words, it is a transformer of energy. The alternating current, if of low frequency, can actuate the telephone diaphragm and make musical notes. From one bulb by an arrangement of keys and switches, the inventor produces the various degrees within an octave, another bulb being used for the next octave. The further statement is made that it is possible to vary the tone quality, for example, and secure the characteristics of the flute, cornet, and stringed instruments. The tone is said to be sweet and clear, and considerable in volume.

—o—

HIGH GEARS ON THE HARP

THE harp soloist was in the middle of a brilliant solo, a pastoral which called for some very clever work with the pedals, which are used to secure chromatic changes in the scales. This manipulation of the pedals as usual attracted the attention of many in the audience, old and young.

Suddenly a youngster became so much interested in the changing of the pedals that he burst out, "Look, look, dad! She's shifted gears twice already and now she's on the high."

—o—

How many boys have you in your class of music pupils? Can you not increase the number?

THE BIRD CORNER

LIGHTHOUSES FOR BIRDS

"THE lighthouse reservation on Farallone Island, near San Francisco, has been a bird sanctuary for eighteen years. Recent reports show that bird life has increased there. Within the last two years bird reservations have been established by executive order, in the state of Washington, at Ediz Hook and Dungeness Spit on the southern shore of the Strait of Juan de Fuca, and on Smith and Minor Islands, near the northern end of Admiralty Inlet. The lighthouse inspector reports that results have been satisfactory. Though in some cases there has been no actual increase in the number of birds visiting these reservations, there is a relative gain, as the number of migratory birds on the coast is thought to be decreasing."—*Outing*.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

CHIN AND SHOULDER AIDS

BY RALPH WYLIE

It has been several months since a journal devoted exclusively to the violin gave considerable space to the arguments of certain violinists, for and against the use of chin rests and shoulder cushions.

One laid stress upon the injury to the varnish of the instrument due to perspiration if a chin rest is not used. Another argued that chin and shoulder rests interfere with the instrument's vibrations. This is a delusion. There is not an outfit on the market that does not leave greater vibrating areas in freedom than are left by the chin and shoulder in all-round work. The man who says the violin, without a chin rest, yields the softer, sweeter tone is undoubtedly right. When his shoulder and face press upon several square inches of top and back, muffling a large percentage of the resonance-box, his instrument is partially muted, and a great many individuals very naturally find their playing most agreeable under a mute.

Viewed from the point of physical welfare to the violin and from that of acoustic completeness, the arguments against the chin and shoulder rests are logically untenable. However, suppose we grant the argument of disadvantages to the violin itself. How about the welfare of the player?

It will be generally conceded that all good art has as a rock-bottom basis of good health. All thoughtful and observant people know that creative effort is a flirtation with insanity and ambition a coquetting with death. There is not another artistic vocation that can begin to drain the human organism of its vitality as does the violin. The first fact of vital importance in violin study is the simple truth that *this instrument is not fitted to the human body.* Normal width of hand, width of fingers, and length of arm are duly considered by the violin-maker, but there all consideration of human anatomy leaves off. The instrument cannot be made dependent upon the left hand for support unless the player is willing to be satisfied with a very limited area of the fingerboard and with very partial facility in that area.

For a comprehensive technic the violinist is dependant upon the chin and shoulder vise as a means of instrumental support. Under no other condition can he hope to fulfil the demands of any but the most childishly simple compositions.

The chin and shoulder are the supporting agents of the modern violinist. The distance between these two agents varies in different adults from four to ten inches. The minimum distance is found where the player enjoys the anatomical features of an ample jaw, short neck, full chest, and square shoulders. The maximum distance is seen where there is a short, slender jaw, long neck, flat chest, and drooping shoulders.

Most successful violinists have been blessed with the minimum distance between supporting agents.

Paganini is said to have used no chin or shoulder rest. Small wonder! He stood considerably over six feet and is reported to have had arms of such unusual length that his fingers could be laid over his knee-caps while he stood with legs straight and body erect. His neck was relatively short. That is about as near to orang-outang proportions as a human being ever gets; consequently he is absolutely no criterion by which to judge of the right or wrong in the present controversy.

Between the supporting jaw and shoulder of the classically-proportioned figure of medium height there is a space of approximately six inches. The violin fills little more than a fifth of this space. Thus the bare violin cannot be supported by these agents save by an elevation of the left shoulder, or a rotation and depression of the head, or by both.

We have all played, as children, at the game of holding the arm straight out from the body. The deltoid muscle, which caps the shoulder, does this little task very easily for a minute, but it is not much longer until that arm begins to feel strangely heavy. In another minute it is astonishingly heavy. In a little more it is—, well we needn't say just how heavy it is, but we are glad to let it hang where it belongs for a while.

Let us not forget that it is not our muscles which get tired. The nerves are the things that become fatigued. The nervous machinery is built to operate much after the manner of a gasoline engine,—that is, by explosions of fuel and consequent waves of energy. The explosion of a quick, hard handgrip being done, the following energy-wave proceeds at once towards exhaustion as surely as a piano-tone exhausts from the moment of striking.

Just as the effect of a crescendo can be obtained in a piano-tone by opening other related strings to the activity of sympathetic vibration, so the sustained action of a muscle is usually fortified by sympathetic contraction of nearby and even remotely distant muscles springing to its aid.

The conclusion is that we can work as hard as we wish, so long as we conform to the physiological law of our being; that is, we can work the nervous system by wave-like bursts or spurts of energy, but we cannot contract muscular tissue in any one place for more than seconds at a time with impunity. Where reaction does not soon follow action we get, at first, fatigue; next exhaustion; then pain; and at last paralysis. In short, a single muscle, kept contracted beyond the normal duration of the energy-wave, quickly becomes a point of leakage in the store of nervous energy. Nervous energy is vitality, vitality is life.

The youthful organism holds a very liberal grant from Mother Nature in the way of reserve energy. That is her way of preserving an ample margin of safety against the normal growing experiences of falls, fevers, bumps, green apples, disappointment in love, and all the other painful obstacles on the way to philosophy and old age. After we are mature, however, we do not have that tremendous store of surplus vitality. With every passing year we can afford less in the way of nervous leaks.

The violinist who plays without chin or shoulder rest and practises a virtuoso repertoire is simply committing slow suicide. The teacher who forbids chin and shoulder rests except in the most rare and exceptional cases is guilty of a blind cruelty and should not be pardoned for counseling slow suicide in others because he chooses to practise it himself.

The violin is not built to fit the human body. To be played after modern art standards it must be equipped to fit the body or the body must be distorted to fit the violin. To teach a human body to cultivate an abnormal elevation of the left shoulder, and a consequent lateral curvature of the upper spine is to be judged no less than criminal.

The equivocating policy of many teachers consists in the direction of gripping the violin when the left hand is in transit and lowering the shoulder during the time it is in repose. This involves the mastery of a dual or double mechanical foundation. The violin shifts upon its longitudinal axis with every vertical shift of the shoulder. The fundamental labors of the bowing function are increased as the complexity of changing relationship between the bow and the strings. If any violinist wishes to know all that this means let him undertake to master the Henselt-Hunyadi *Bird-study*, that little-known *moto perpetuo* in double sixths in which the bow must be impeccably precise spiccato on two strings, shifting from pair to pair synchronously with rapid, wide skips of the left hand from position to position.

It is trite to remark that no effect exists without a cause, yet there is too little inquiry into the causes that must be behind certain painful conditions existent in the violin world. First of these is the reputation the violin sustains, of being the most forbiddingly difficult undertaking in the whole world of art. Next is the fact that certain anatomical coincidences are observable among successful violinists, even in the eyes of those who are merely alert, without any technical experience of the violin. Next is the fact that while more than twice as many girls as boys *begin* the violin, and at best three times as many girls as boys *graduate* from the conservatories, there are probably fifty times as many men as there are women in the thin, small ranks of mature artists. In the ten to fifteen years of obscure individual development between commencement and commanding eminence of artistry, there is a terrible turning of the tables and a complete elimination of the physically unfit. The weak and overworked nervous organisms are threshed and diverted to other spheres of life.

The cause that underlies all these effects, or rather, the cause of all causes, lies in the physiological stress of adjustment; in the insanity of slowly, cruelly, and persistently weaving out the nervous system, sapping the vitality day by day, year after year, by blindly, foolishly, idiotically fitting the divine human body to the violin instead of fitting the violin to the human body.

———o———

Violin teachers should seriously consider the matter of introducing the study of the violin and other orchestral instruments into the school curriculum, as has been done in a number of cities. Dr. A. G. Mitchell, who has charge of this kind of work in the public schools of Boston, has put his material into text-book form, under the title *Public School Class Method for the Violin*, published in two books. This offers splendid material which any efficient teacher of the violin can apply in class instruction to the great good of a community.

———o———

Violins made in Japan are beginning to appear in American stores. Some one has called this race the "Germans of the Orient."

RUDOLPH F. GEMÜNDER

American violinists are familiar with the name Gemünder, which has been a prominent one in the musical field. The founder of the family in the United States was the late August Gemünder, the son of a violin maker, who came to this country in 1846, locating in New York. His three sons, August, Jr., Rudoph F., and Oscar A., took up the art of violin making and in the course of years the firm of August Gemünder & Sons became one of the most prominent in the country, with a reputation which spread to Europe.

The elder Gemünder was the first to be taken away by death, followed on July 8 ult, by the second son, Rudolph, who passed away at his home in Leonia, N. J.

The business will be continued by the two surviving brothers, August M. and Oscar A.

MAKING A BEAUTIFUL TONE

Some months ago *The Violinist* printed a symposium on "Tone" from which we take the following paragraphs:

"A tone may be killed by excessive or wrongly applied pressure. A forced tone is not unlike the throaty quality of a poorly-taught tenor. The pressure brought to bear on the bow must come from the hand alone and not from the arm or shoulder, otherwise the arm stiffens and the tone becomes forced. The pressure bears a direct relation to the speed with which the bow travels; that is, the greater the pressure, the greater must be the speed. And there is a limit to the resources of every violin. The moment that limit is exceeded the tone becomes coarse. There is exactly the same difference here as there is between a tone sung with full voice and the same tone carried beyond the singer's capacity to a raucous screech."—*Alexander Bloch.*

"Tone production depends upon the manner in which the bow is applied to the string, and the manner of applying the bow to the string must, in a great measure, depend upon the way the bow is grasped.

"The beginner's attention should be concentrated on tone and the fundamentals of bowing until the proper holding of the bow, a free, flexible wrist, and relaxation of the arm and fingers have been fairly well mastered."—*Percy Fullinwider.*

———o———

SOME FIRST PRINCIPLES

BY WALLACE RICHIE

One of the minor points which is by no means so insignificant as the majority of players seems to consider it, is the way in which the strings are stopped. The universal fault with beginners is to stop the strings with the fleshy front part of the top joints of the fingers, instead of with the very ends of the fingers.

Firm and clean-cut stopping can only be secured by bringing down the top joints of the fingers as nearly perpendicularly as possible, for if the front or ball of the fingers is placed on the string indistinct stopping is bound to result. The nails of the fingers of the left hand should be kept clipped as closely as they can be, or else when stopping with the extreme ends of the fingers the edges of the nails will meet the fingerboard.

Young players will bend the fingers only at the second joints, whereas the correct plan is to bend both the upper joints, so that the fingers, when in use, form, as nearly as is practicable, three sides of a square. It is, of course, somewhat difficult to do this and especially so with the fourth finger, which is shorter than the others and has also to reach farther over; but with persistent striving this difficulty will soon disappear.

A great help toward this end is to bring the elbow as far over toward the body as it will go. Most instruction books say that the elbow should be brought under the center of the back of the violin; but this is not far enough, as it should be brought level with the inner edge of the violin, or even a little beyond it, so that it can be seen by the player when the instrument is in playing position. This enables the hand to be brought farther round the neck of the violin, so that the fingers may be the more easily brought down perpendicularly on to the strings.

Another common fault with regard to stopping is that the fingers are not brought down firmly or forcibly enough. The general method is just merely to lay the fingers on the strings; but they should be well pressed down with distinct muscular effort; and, in fact, should descend so strongly that the sound of their knocking on the fingerboard is quite audible.

The habit of withdrawing the fingers (especially the fourth) away from the fingerboard must be stringently avoided. The fingers must overhang the strings when not in use, so as to be ready to drop instantly into their place on the strings when required to do so. If they have to travel a distance to their place there is bound to be more or less shuffling, and it is long odds against the note's being stopped perfectly in tune. Whereas by keeping them suspended over the strings all they have to do is fall down in the right place when called upon to do so.

Another bad habit frequently met with in inexperienced players is to bend the left hand backward at the wrist, thus bringing the palm of the hand into contact with the neck of the violin. There must never be the slightest approach to this backward bending of the hand; as a matter of fact, there is a slight bending in the opposite direction. The rule is that the back of the hand and the back of the arm should form one continuous straight line, and the pupil will do well to see that this rule is obeyed.

The neck of the violin never comes anywhere near the palm of the hand, being held only between the side of the hand immediately below the bottom joint of the forefinger and the upper joint of the thumb. The neck must never be allowed to sink right down into the hollow of the thumb; on the contrary there must always be a considerable space in this hollow—sufficiently large, in fact, to admit of the insertion of a finger. I am speaking now, of course, with respect to holding the violin when playing in the first and lower positions. When the hand is moved upward into the fifth and still higher positions the position of the hand becomes altered, for then the thumb is drawn gradually round the neck, and this hollow space ceases to exist.

I would repeat the real necessity of never raising a finger when once it has been put down until it becomes compulsory to raise it. It very often happens that before a finger need be raised it will be wanted again in the same place. Why, therefore, go to the easily avoidable trouble and labor of raising it and putting it down again when by simply leaving it where it is this double movement may be saved. Doubtless it will sometimes be the case that in keeping a finger or fingers down a very awkward position of the hand is incurred. In such cases it is quite allowable for the finger to be raised, for in violin playing as in everything else, the maxim holds good that when there is only a choice between two evils the lesser should be selected.—From *Chats with Violinists*

The Slow Sustained Bowing in "f" and "ff"

Mode of Practising: Begin at the tail end of the bow, about an inch above the nut, and draw in a perfectly even "f" or "ff" to the extreme point, and back again, without interruption, until the scale through three octaves is finished. Change occasionally the above scale for other ones, major and minor, but begin always on the G string and go up to the highest notes on E.

Do not draw fast and "waste bow" in the beginning of each stroke, and afterwards, as the other end of the bow is being approached, try to economize in order to get in all the beats; divide the whole length of the bow into eight equal parts and give one to each beat.

Do not start roughly or with an accent, or by throwing the bow on the strings; a perfect round and smooth tone must come forth as soon as the bow touches the string, and not an inch must be lost in getting a proper start.

Place the bow near the bridge from the beginning, and keep it there; on the higher notes it will come of itself yet closer to the bridge.

Don't overpower the strings—particularly the E in the high notes—by too strong pressure; discriminate and find out how much pressure your instrument can bear. Different instruments require different treatment. An old violin, as a rule, answers more quickly to the touch, but is also more sensitive with regard to pressure, than a new one.

Give attention that in the down bow the tone does not get weaker at the point, and *vice versa* in the up stroke.

The tone must be perfectly even through the whole length of the bow.

Change bow as noiselessly as possible at both nut and point, and press fingers firmly on the strings; the higher the note the firmer the pressure.

Play in perfect tune; thereby you avail yourself of the so-called upper tones which sound with every perfect tone, making it stronger and clearer. Do not avoid the open strings.

From *The Art of Bowing*, by Paul Stoeving.

HOW ALBERT SPALDING CAME T WRITE "ALABAMA"

The concert-going public has accorded pra to *Alabama*, a melody and dance in the plantat style, which was written by Albert Spalding, v linist, to perpetuate this style of American fo music, and used by him in his concerts. The f lowing is taken from a statement prepared by M Spalding. Several years ago he was in Copenhag visiting a musical friend who played for him so very eloquent Scandinavian melodies, singula expressive of the country which gave them bi When the friend asked Mr. Spalding what he h been writing lately the reply was, "Not much, I should like to play for you a melody which been running in my head for some time." This was enthusiastically received and afterwards wor up into a song and dance under the name *Alaba*

Writes Mr. Spalding: "'Folk songs,' are the ba bone of the country's music, because they are simplest and sincerest form of expression of people in melody and rhythm. Now simplicity music (as it is in all else) is of a twofold nat It serves as expression to people of primitive l by necessity, and to people of complex live the highest form of luxury; for clearly it is the

lt of a culture that has passed through the entire mut of technical studies which, once acquired, ust be forgotten so as to leave the mind unouded by the smoky machinery of education.

"Before we Americans can hope to express our eals and aspirations in art songs that will enre, we must have the courage to perceive beauty rough the windows of our own temperaments, jecting the traditional field glasses with which untries of an older established art culture try to npose their will on younger races. Not that we ust deny for a moment the value of their contribuons to the world of music, nor that we can give up r appreciation for the great master works with hich Europe has so enriched our literature. But here is a vast difference between appreciation and eation. And until the latter has attained freedom thought from the enslaving traditions of the rmer, our musical offerings will be but the watery id diluted expressions of an alien culture.

"In writing *Alabama* and programming it in retal together with classic works, I have tried to ow my faith in the power of the much despised g-time. It is high time that this singularly perasive and fascinating rhythm should take its place stimulating original expression. It is splendidly nerican in feeling. It is born of our own soil; id though its early life has been sadly debauched id coarsened by ignorant treatment, its awakeng to better things is now at hand.

MUSIC AS TAUGHT IN THE J. STERLING MORTON HIGH SCHOOL, BERWYN, ILL.

BY E. C. STARBUCK

CREDIT FOR MUSIC STUDY DONE OUTSIDE OF SCHOOL

In the belief that music study can be considered part of the preparation for life, and that many idents are pursuing it outside of school as seously as any school study, the J. Sterling Morn High School has determined on the following heme of recognition:

For ability in playing any instrument or in singg, credit will be given on the basis of a half or n-text book study; for example, the pupil's mu: study shall comprise, 1, an equivalent of five 60nute practice periods, and, 2, one lesson a week. Grade 90-100, 2 1-2 credits; Grade 85-90, 2 cred; Grade 80-85, 1 1-2 credits; Grade 70-80, 1 cred- Grade 60-70, 1-2 credit.

The grade will be determined by a committee three of the high school teachers, who will hear e student play or sing without being aware of s identity.

Violin Instruction **Victor Küzdö**

Sole authorized exponent (in America) of the system of

LEOPOLD AUER

(Teacher of Elman, Zimbalist, Parlow, etc.)

STUDIO: 560 West End Avenue, New York City

Those who desire to obtain credit should note the following regulations:

1. The student must register in the first week of the semester, indicating:
   a. The instrument.
   b. Previous study.
   c. Present teacher.
   d. Work required weekly by present teacher.

A preliminary examination will be given the first week in February and the first week in October. A week before the date specified, the student must hand in to the office a copy of the piece chosen for examination. This copy is for the use of the committee and should not bear the student's name.

At the examination he will play or sing the prepared piece, being graded upon technic and expression. He will also be tested in sight-reading of a selection slightly less difficult.

Final examinations will be given the first week in February and the last week in May.

A week before the date specified, the student must hand a copy of the first prepared piece and a copy of a more difficult piece chosen for comparison in the final examination. He will play or sing both pieces and his final grade will be based upon the degree of improvement in technic and expression. He will also be tested in sight-reading more difficult than that of the preliminary examination.

The music committee does not wish to know the identity of the students registered and is not to be consulted personally, either before or after the examination.

Harmony and counterpoint will be graded as a regular text-book study.

The student must spend at least 7 1-2 hours a week in study and recitation. A music teacher affiliated with a music school of good standing must give him a written examination in the subject to certify his grade to the committee.

INDIAN THEMES IN CHAMBER MUSIC

During the past season the Zoellner String Quartet has repeatedly played in its various concerts two *Indian Dances*, by Charles S. Skilton, of the University of Kansas, head of the departments of organ and theory in the school of music.

In his *Dances* Mr. Skilton has aimed at the utmost realism instead of taking Indian tunes and idealizing them. In spite of the apparent paucity of color possibilities offered by the four strings he has managed to convey the impression of the drum beat and the monotonous chant, the whole effect of barbaric atmosphere being extremely powerful.

Have you examined Mitchell's Public School Class Method for the Violin? It is used by progressive teachers.

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGALL

ORGANISTS IN CONVENTION *

MUNICIPAL AUDITORIUM, SPRINGFIELD, MASSACHUSETTS, AUGUST 1 TO 4, 1916

BY H. C. MACDOUGALL

"Springfield!" exclaims the reader of these lines, "Why should any convention meet in Springfield?" Well, there are many good reasons. Springfield is a railroad center; it is a fine, clean town of 103,000 people; it is in the center of the Connecticut River Valley, a district containing more schools, more colleges, more fine cities, greater wealth, and a more industrious and intelligent population than any district of equal size in the United States; it has excellent hotels at reasonable rates; it has a beautiful and acoustically perfect concert room seating 4000; its Board of Trade offers many inducements to prospective conventions; and, lastly, the four-manual organ in the Auditorium is one of the most satisfactory organs in public use in our broad land. The National Association of Organists had its eighth and ninth conventions here, and has voted to return to Springfield in 1917, despite cordial invitations from Buffalo, New York City, Philadelphia, San Francisco, and Tulsa, Okla.

The dominant notes of the Convention, as of the N. A. O. itself, were sincerity, informality, hospitality. I have never attended any meeting of musicians where I enjoyed myself more. Organists unquestionably have a greater interest in their instrument and greater love for it than pianists or even violinists have for theirs. And this accounts for the enthusiasm and cordiality shown on every hand.

This spirit found in the president of the convention, Arthur Scott Brook, a sympathetic exponent; his tact, winsomeness, good humor, wit, and charm were in constant evidence, and when a strong hand was needed he was not wanting. Although I had to leave Springfield before the election of officers I will risk my reputation as a prophet in the statement that he will be re-elected for another year.

While the N. A. O. is in purpose and method quite distinct from the A. G. O., the two bodies are complementary forces in the development of the art of organ playing and should both be loyally supported. If I were asked to define the scope of each body I should do it as follows:

The American Guild of Organists is a legislative and administrative body, expressing mainly the conservative and academic side of the organist's profession. The National Association of Organists is an outlet for the younger men, less formal and more social in its aims, offering cultural opportunities to both church and concert players.

Membership in the N. A. O. is open principally to all organists who are willing to uphold the objects of the Association and who become subscribers to the monthly journal of the Association, *The Console;* the annual dues are one dollar, which includes the subscription to the official journal. The N. A. O. does not conduct examinations.

Broadly speaking the convention busied itself with informal meetings at the Hotel Kimball and in the lobbies of the Auditorium; and with papers by G. A. Audsley, L.L.D. (*Important questions on the tonal appointment of the organ*), Henry S. Fay, Philadelphia (*The use of the organ in the church service*), W. D. Armstrong, Alton, Ill. (*Desirable changes in the musical settings of anthems and canticles*), John Hermann Loud, Boston (*Registration and the art of expression in organ playing*), and Homer N. Bartlett, New York (*The general education of the organist*).

Recitals, all on the Auditorium organ, were played by Edward F. Laubin, Hartford; Richard Keys Biggs, Brooklyn; Mrs. Kate Elizabeth Fox, Morristown, N. J.; Percy Chase Miller, Philadelphia, representative at the convention of the Organ Players' Club of that city; Dr. Francis Hemington, Chicago; Charles M. Courboin, Syracuse, N. Y.; and Clifford Demarest, New York. Mr. E. R. Kroeger, St. Louis, played the piano, in a program of his own compositions for voice, organ, violin, and piano, John A. O'Shea, of Boston, taking care of the organ works and Arthur H. Turner, of Springfield, of the songs for baritone. Ada Ellen Chadwick collaborated with Mr. Kroeger in a performance of his piano and violin sonata in F sharp minor. All these recitals, all sessions of the convention in fact, were open to the public without any expense beyond the slight charge of ten cents for the souvenir program.

Mr. Laubin introduced a piece (*Recitative, Air, and Chorale*) by W. D. Armstrong that is both solid and attractive; the *William Tell* overture was quite to the taste of the audience. In Mr. Biggs we have a clear, attractive player, one who will go far in concert playing. He was recalled several times and added a piece to his program. There was much to enjoy in Mrs. Fox's program ending with the very difficult Reubke's *XCIVth Psalm.* Every person in the audience seemed to take a personal satisfaction in her success. No player at the convention had more distinctly a style of his own than Mr. Miller. His playing of the Karg-Elert pieces and of Borowski's *Méditation-Elegic* was extremely effective. I regret to say that I did not hear Messrs. Demarest, Hemington, and O'Shea.

While I wish to avoid invidious comparison I want to say a special word about Mr. Courboin's playing. He was recalled time and again after his program and added several pieces to satisfy a clamorous audience. He is distinctly of the virtuoso type of player, facile and temperamental. It would be interesting to hear him in pieces whose value lies in the subtle balancing of musical content and form, and not so much in brilliancy of orchestral coloring or piquancy of rhythm. He was seen at his best and at his worst in the familiar *Marche militaire* of Schubert, played with incisive and biting rhythm and with an almost irritatingly varied registration. A characteristic effect was the addition of a pedal part to the first five measures, using a sixteen foot stop uncoupled, *à la timpani.* Mr. Courboin is already a great player.

Taking all eight recitals, I find that Bach was represented by five items, Mendelssohn by his first sonata, Handel by a concerto, Guilmant by three compositions. Three numbers from Widor and one each from César Franck, Mailly, de Boeck, stood for the Belgian school. Altogether there were sixty-one original compositions for the organ (including eleven sonatas or other works in large forms), and sixteen transcriptions, of which four were by Wagner, the *Liebestod* from *Die Walküre* being played twice.

The organ in use is very rich in soft stops, very pleasingly voiced; the swell boxes are of cement, and close down very tight. The variety and power of expression are both great. In pieces like Johnson's *Evensong*, Kinder's *Berceuse*, Karg-Elert's *Clair de lune* and *Harmonies du soir*, or Frank E. Ward's *Humoresque* the effects were simply enchanting, while the climaxes in the more massive pieces were indeed grand. I heard occasionally a criticism to the effect that the organ had suffered through being shut in back of the stage. I cannot sympathize with that criticism; the full organ, to my ears, is sufficiently sonorous,—it has "crash," but without the cacophony that distinguishes the full organ of some of the English cathedrals, Bristol and York for example. I could cite examples nearer home, but do not wish to wound the susceptibilities of anyone.

In hearing the recitals, while I wished that the programs had been more largely representative of the substantial side in the organ repertoire, and while I grieved at the inclusion of some transcriptions that it seemed to me were quite unsuited to the genius of the instrument, yet it was evident that in the main the recitalists rose to its capabilities.

An organ like the magnificent one used at the convention is a vastly different affair from the church organ of twenty-five years ago. Now tone colors are more vivid; there are many imitative stops; bells and the harp are pressed into service; a variety of ingenious mechanical movements not only suggest but even insist on a richness of registration hitherto undreamed of. Then, too, playing to a large concert audience demands a vigor of attack, a deftness of finger, a clever use of the staccato, an accentuation of the values,—and these the ordinary excellent church player does not know much about. I have intimated that the N. A. O. gives the younger men their chance. They fully improved it.

If I were to venture on any criticism of program or performance it would be in reference to the restless ness of the playing and registration. The wonderful crescendo and diminuendo possible with the concert swell boxes, though ravishing through two or three recitals, began to lose its charm by the fourth and one longed for sixteen measures on an open diapason with no nuance whatever. The crescendo pedal was, so it seemed to me, used at times in too prodigal manner; it was formerly thought that, to be effective, one should be sparing in its use. After all, these effects border on the sensational. Excessive excitation of the nervous system results in correspondingly great fatigue. A wise man doesn't spend money simply because he has it in his pocket.

I can glance only briefly at the papers. Mr. Audsley pleaded for the enclosure of a certain proportion of the pedal stops in a swell box. Mr. Loud asked for more intensive instruction in registration, suggesting that, when practicable, musical examinations should give credit for facility and taste in the department of organ playing. The point was made by Mr. Armstrong that, in the case of non-English

* This was the ninth annual convention of the N. A. O. (National Association of Organists). The society has more than doubled in membership during the past year, having now nearly 800 names on its books.

eaking peoples who have settled in the United ates and who continue their worship in the lan- iage of their native land, the ritual language should changed to English in order that the younger ople may intelligently worship. He also advocated e adoption of shorter canticles in the case of the *Deum* and *Benedicite*. Mr. Fry's paper, well ustrated at the organ, took up various practical ints in the treatment of the instrument.

In considering the convention as a whole one could sh that more attention had been given to church aying and accompanying, through the employment organ and a choir in ritual music, hymns, anthems, nglican and Gregorian chants, etc. It would ap- ar that the organ's concert side has been well udied. Sometimes valuable papers fell somewhat t for the lack of discussion. One must also plead shorter programs. It is said that a minister eaching before the students at Yale asked President dley how long he should preach. President Had- replied, "It is a tradition at Yale that after the st ten minutes no souls are saved." It is safe to y that, after forty-five minutes of such fine playing we had from everyone at Springfield, and on an strument so stimulating in its tonal variety and wer, no ear remains unwearied.

The convention reflected the greatest credit on eryone concerned in it.

THE PHRASING OF A BACH ORGAN THEME

BY S. HARRISON LOVEWELL

[We print an illuminating phrasing of a well-known ch theme, and suggest that some of our readers y care to send their own. Mr. Lovewell is an ad- rer of Riemann and has translated one of the rman teacher's important theoretical works into glish. There are several interesting queries grow- out of the rather complicated markings quoted Mr. Lovewell; we can imagine anti-Riemannites nd there are many of them—chortling with angry and saying "Tush."—Editor.]

SEVERAL years ago, the theme of Bach's A minor gan fugue was submitted to the musical editor of e of our most popular monthlies in the hope that would be pleased to settle a discussion by declar- the proper rhythmical construction of this fugue ject. Nothing came of it!

Dr. Hugo Riemann, of Leipzig University, was n appealed to. His reply was prompt and char- eristic. Not only was the theme carefully phrased, harmonies indicated, the shadings (agogic) rked, and a brief analysis given, but also other tters of a private nature. And all within the nds of an ordinary postal card!

As this particular fugue is among the most fa- iar of the Bach organ works, other organists, m sure, will welcome a viewpoint differing widely m the usual conception of its rhythm. The solv- of many new problems adds nothing to the tech- al difficulty and the performer will find compen- ion for his effort by the fact that as a whole the ue gains immeasurably in intelligibility.

The following is the manner in which Dr. Riemann es the phrasing:

few words will suffice in the way of explanation: phrase marks show rhythmical divisions and do imply matters of touch, although a rational use *portato* and *leggiero* touches are not precluded. shade marks from necessity must refer to the gics of the subject, the shading of tempo rather n the shading of volume of tone. This shading etermined largely by the harmonic functions— slight pressing forward toward the Dominant, a return to normal at the Tonic. (D—Dominant; °T—Tonic Minor; °S—Sub-dominant Minor; °Tp—Tonic Minor Parallel, or C Major chord in this case; S^6—Sub-dominant Sixth, the II^7 of the Thorough-bass system; the functions in parenthesis belong to he next following °Tp.) The figures (2), (4), (6) and (8) refer to the accented measures of the period; (3) shows an unaccented beginning. There are two elisions, one at (4) and the other at (8).

In performance, a rather soft registration and very moderate tempo would seem the most in accord with the theme's expressiveness.

ORGAN RECITALS AND THEIR VARIOUS ASPECTS

BY BERNARD JOHNSON

I

ON PROGRAMS

No concert program can be considered completely good unless what is known as pure organ music be fully represented. This point should be insisted on because, if the polyphonic style be totally miss- ing, a player loses an opportunity of securing what is the great desideratum in program-building, namely, variety; and this quite apart from artistic considerations.

But here is precisely where a concert program has the advantage over a church recital program—that a far wider field is open to the player from the very nature of the circumstances under which the music is heard. There is much excellent light music for the organ which can and should be played in concert halls, and it seems to me to be every bit as inartistic to confine oneself to any one style in a concert hall as it is for a church player to introduce light, secular music into a church program. My quarrel would be just as sharp with a man who gave a program con- sisting entirely of orchestral arrangements and "pretties" as with one who fed his audience on a diet of Bach and Rheinberger undiluted.

Not long ago I was present at a church organ open- ing, and listened to four Bach fugues in succession: a fifth was set down to follow, but I joined the stream of disappointed parishioners flowing westward.

Turning to questions of key contrast, here is an- other example of how *not* to do things. A recent pro- gram given by a recitalist of some considerable ex- perience began as follows: *Sonata* in E♭ minor, Rheinberger; *Allegretto* in E♭, Wolstenholme; *St. Anne Fugue*, Bach. Here the items killed each other by reason of want of contrast as regards key. By the time the Bach fugue was begun the ear was sick of the very sound of E♭, with the result that the fugue, though ably played, not only missed its effect, but became a veritable torture of monotony.

The aim all along must be for variety: variety of tonal color (how seldom does a player let us hear the diapasons on the Great Organ uncoupled!), variety in the treatment of the pedal (there are players who never spare us the boom of the 16-foot all through a

MUSIC FOR Harvest and Thanksgiving Services

ANTHEMS, MIXED VOICES

BRACKETT, FRANK H.
No. 12,392. **Raise the song of harvest time**.....$0.12
An easy anthem, with solo for soprano.

FEDERLEIN, GOTTFRIED H.
No. 12,072. **Let them give thanks** .12
A broad choral style, supported by a fine organ accompaniment, distinguishes this anthem.

HUHN, BRUNO
No. 12,903. **Sing unto the Lord**.. .12
A strong choral number, without solos.

FOLKSONG OF THE NETHERLANDS
No. 12,606. **Prayer of Thanksgiving.** Arr. by E. Kremser ..... .10
Largely in unison with fine organ support.

MAKER, F. C.
No. 12,066. **O give thanks**..... .12
An inspiring work, with solos for soprano and tenor; works to a fine climax.

ROGERS, JAMES H.
No. 12,549. **For as the earth bringeth forth her bud**..... .12
Begins with a soprano solo, and includes a section for a quartet, which offers fine contrast to the passages for full choir.

ROGERS, JAMES H.
No. 12,187. **Praise ye the Lord**...$0.12
In the big choral style, with short solos for soprano and bass.

STEANE, BRUCE
No. 12,256. **And God said: Let the earth bring forth**..... .12
A short, easy anthem, with a striking passage for all the basses.
No. 12,687. **He hath been always mindful**..... .12
Lively and spirited in style, with solos for soprano and bass.
No. 12,702. **O sing unto the Lord with thanksgiving**..... .16
Interesting sections for the basses and a soprano solo contrast effectively with the easy choral passages.

STEVENSON, FREDERICK
No. 12,019. **Praise the Lord, O Jerusalem**..... .20
A big anthem, with tenor solo. The organ accompaniment is orchestral in style and very brilliant.

STEWART, H. J.
No. 12,492. **It is a good thing to give thanks unto the Lord**... .16
A work of broad melodic character, with short solo for the bass.

CANTATAS

GIVE THANKS UNTO GOD, Op. 29, No. 1 (mixed voices). H. Clough-Leighter.....$0.50
Soprano, alto, and tenor solos; moderate in difficulty for chorus; will require about twelve minutes for performance.

OMNIPOTENCE, Op. 70 (men's voices). Frederick Stevenson.....$0.50
Soprano or tenor solo; with organ and piano accompaniment (string quintet, $2.00); ten minutes for performance.

THE HARVEST IS RIPE. P. A. Schnecker.
Soprano, alto, tenor, and bass solos; easy chorus parts; twenty minutes for performance.

program), variety of style, key, speed, strength of tone, etc. It is only by taking most careful thought of all these considerations that a program "comes out" well.

Although it does not exactly come within the scope of this article, it may perhaps be permissible to protest here against the growing practice on the part of our church organist brethren of trespassing upon our preserves by introducing much light music into their churches.

ON ARRANGEMENTS

Here one is treading on highly controversial ground. But before coming to grips with the subject let me make good one broad argument if I can. An old and valued friend, a church organist and a purist in every sense, condemned arrangements, root and branch, in the course of a recent conversation. I asked him what music he used on the frequent occasions of marriages and deaths among his congregation: he was bound to admit that *O Rest in the Lord*, the two funeral and wedding marches, and the usual music trotted out on these occasions were every one of them arrangements. So that the principle has long been admitted, and has indeed been carried into practice even among church organists.

Upon what logical grounds, therefore, can the objection to arrangements rest—as such? The art of the modern builder has made possible a fairly adequate presentation of many great masterpieces which could not even have been attempted on the organ twenty years ago. Upon what grounds should the player refuse to follow where the builder leads? Let it not be thought that the contention is that an arrangement can be anything but, in fact, an arrangement; the very word implies compromise. But I do most emphatically contend that in the many towns and cities where the opportunity of hearing an orchestra occurs very seldom the city organ can become a great educational medium if used intelligently in this direction. It should be remembered too that, after all, the literature for the organ is extremely limited, and when a man has to play frequently in the same town, if all arrangements were to be eschewed he would be hard pressed for a repertoire. On the other hand, if an organist finds himself placed where frequent and regular orchestral performances are available, there is less reason to include arrangements in his programs.

ON TRICKS

No instrument lends itself more readily than does the organ, unfortunately, to cheap and vulgar effects. The perpetual use of the tremolo stop, startling dynamic changes, vulgar registration designed to catch momentary attention and applause—this is all stock-in-trade only too easy to acquire. With such things this article has nothing to do, inasmuch as one is pre-supposing all along that the "man-at-the-wheel" is an artist and a serious musician. But certain little aids to good results are still looked at askance by many players.

Such an one is the device known as "thumbing." In cases where this is designed to suggest, say, a passage on the horns, and if it can be done smoothly, what possible objection can there be to the use of the device? Like many other good things, it can easily be overdone, and a man's sense of the fitness of things and his good taste must be the final arbiter. My point is that if a legitimate effect is secured it is no trick; it only becomes so when it is employed for the sake of "showing off"—an altogether contemptible thing. Broadly it may be stated that no device which secures the composer's intention can rightly be regarded as a trick.

An instance of what I mean was rather strikingly illustrated the other day by the remark of a brother organist who plays upon a two-manual instrument, and who told me that he could not play the well-known *Andantino* of Lemare because the Dulciana on his Great organ is too loud for an accompaniment to the Oboe on the Swell. We were at the organ, and I was able to show him that the 4-ft. Flute on the Great, which happened to be a very quiet one, played an octave lower, gave the composer's exact intentions even more truthfully than the 8-ft. Dulciana would have done, inasmuch as the little countermelody could then be thumbed exactly as written for a three-manual organ. His remark was, "Oh, but that is a bit of a trick, isn't it?" I contend that the means were fully justified by the effect obtained.

A WORD TO OURSELVES

One of the greatest dangers which beset a concert-player who has to keep a large audience interested for an entire evening, is to sacrifice the composer's intentions in favor of mere brilliance of technic. He is apt to forget that he is out to interpret greater intellects than his own, and he is tempted to think that the audience wishes to hear what Mr. Blank can do, rather than what John Sebastian Bach has to say. I have heard some players rattle off a Bach fugue at breakneck speed, and the irreverence of the proceeding has more than sufficed to discount any pleasure derived from the technic displayed.

It is to be feared, too, that this is the reason why even the great players give us only some six or seven of the larger fugues—namely, those which can be treated in a manner which serves to display the player's finger and pedal dexterity. How seldom one hears, for example, the noble B minor fugue with its magnificent prelude! Is it because there is here no chance of display? If only we could endow ourselves with an imagination sufficiently vivid to visualize the figure of the great Cantor seated among the audience, and could persuade ourselves, further, that we must face him after the performance, surely our playing would often gain in point of dignity and reverence!

It is like ploughing the sands to attempt to lay down a line of demarcation beyond which one should not go in the direction of the lighter literature now at our disposal for concert purposes. A man's own good taste (I had almost written good breeding) must decide that question. But I trust that enough has been said to indicate the lines upon which those of us who are in charge of large concert organs are working, and I suggest that the time has come when the art of the concert-player should definitely be accorded a "place in the sun," and should be regarded as separate and distinct from that of his church brother. Then, and then only, we shall be spared the spectacle of the church musician playing light and trivial voluntaries, and the equally distressing sight of the concert-player conscientiously grinding out, unrelieved, Bach and Rheinberger to empty benches.—*The Musical Times.*

II

[Mr. Harvey Grace, a prominent writer on organ topics, comments on Mr. Johnson's article as follows:—Editor.]

It is good to find Mr. Johnson contending for the inclusion of pure organ music in concert programs. We might add to his reasons the fact that no single instrument is so well able to render complex polyphonic music as the organ, on account of the help afforded by the pedals, and also because it is the only instrument that can sustain any number of parts for an unlimited time.

As to transcriptions, the conscientious objectors known to Mr. Johnson must surely be among the last survivors of what will soon be a species of musical dodo. The R. C. O. has long since changed its ban into a blessing, and the artistic transcription of good music no longer needs any apology.

C. W. WILCOX, Director

Dept. "A." 225 Fifth Avenue, New York City

THE SUPPLY OF REAL ORGAN MUSIC

But I fancy many of my church colleagues will inclined to join issue with Mr. Johnson when defends the use of transcriptions by bringing forw the well-worn allegation that "the literature of organ is extremely limited." I have heard this s many times, but can never get anything in the way evidence beyond the fact that Beethoven, Moz Wagner, and a few other classical composers wrote organ music. This is true, but quite immater The fact remains that there is a very large or literature of the highest class. If we examine published lists of recital programs we see little dence of this, I admit. But, for the matter of th if we study a hundred pianoforte or vocal rec programs, we shall come to the conclusion t there is not, and never has been, much good pia forte music, or more than a few score of good so Organists, like too many of their brothers and sist of the concert platform (and even of the conduct desk), prefer the safe and easy game of follow-l leader to the troublesome and ungrateful rôle pioneer.

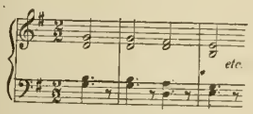
als nowadays go. One excellent feature of this mphlet is that each composition is listed along th the name of its publisher. Mr. Davis's list, erefore, is valuable for reference and should be in e hands of every organist,—in fact, many music rks will find it highly useful. I was glad to learn m it the publisher of one piece that I have for ne time been trying to get.

* * *

In looking over the sonatas that Mr. Davis has yed, I asked myself why organists do not play tdley Buck's fine one in G minor. It is brilliant, y practical, and interesting. I hold no brief for ck, but we should not forget the honorable posin he holds in the history of the years 1860–1880, en music in the United States was in a much less rishing condition than it is at present.

* * *

This present summer my travels have led me into eral country churches and I have been struck esh with the lack in all cases of one of the fundantal qualities of organ playing, namely, the legato. ne-keeping is not so bad in the majority of cases. is very curious that notwithstanding the injuncns of all instruction books and—presumably—of teachers, almost none of the young women who y cabinet and small pipe organs seem to have the ntest notion of what it means to hold one key down il the next one is played. Another and equally ressing habit of these country church players is ding the right hand down, but taking the left thus:—



his seems to promise a legato in one hand and a aching of everything in the other; what really pens is a lack of legato in right hand and a gasp- sound in the left. I have never felt much ensiasm for any schemes of instructing in practical sic by mail; but it seems as if something might be e by ingeniously contrived tests administered by country player herself, that would, at any rate, en, even if not cure, the bad habits to which I r.

* * *

n regard to the singing in the country churches: often hears sweet voices unspoiled either by what lled "training" or by hard use. There is somees found the village Melba, a lady no longer ng and usually of ample frame, with a hard, calliope voice. When one notes the crowds of young people in the movies, the young men loafing around the steamer docks, the candy and drug stores, one wonders whether community music is not a solution of the social disintegration found everywhere at the seashore.

* * *

September ought to find us with our plans made for the musical services of the winter and with new anthems selected or arranged. But we seldom do what we ought; summer finds us entirely willing to give up all planning and devote ourselves to recreation. This is no doubt wise, for man cannot live by work alone. Twenty-five years ago a musician had no other resource than to amuse himself in the summer. I have been looking over the advertising columns of The Musician and another widely circulated paper, and I am surprised to see how many summer schools of music are held this year. Competition is so keen—and it is becoming keener every month on account of the great war—that musicians need to prepare themselves with the greatest and most unwearying care for their season's work; they also need to extend the financially productive period if possible. Those considerations lead me to believe that the choirmaster who appears with his choir in September with some old, worn music, is hardly wise. Vacations with us are too long; the teaching season is too short; the sessions of the public schools are suspended too early in the summer; and, to crown this Jeremiad, musicians practise too little during the same season.

* * *

It is probable that the vogue of the "movie" organs will tend to establish "legitimate" organ music on a somewhat firmer basis. That is to say, the recitalist, if he is playing on a church organ, will naturally take out of his repertoire the pieces that are entirely effective as illustrative music; and restrict himself more and more to those pieces that are valuable for their own sake, and not of value simply because they stimulate or reinforce a mood. Let the "movie" organ have traps and timpani and any number of etceteras useful in their place and interesting to their special audience. Let the church organ—I do not now refer to the concert organs like those in Portland, Atlanta, or San Diego—be differentiated from other types, and let the music played on it fit the type for which it is written. The "movie" organ has catered to the demand for the sensational, the realistic, and the ultra-orchestral; let the concert hall organ do the more practicable orchestral arrangements as well as it can; let the church organ, in its turn, do those things that embody the fundamentals of the instrument; namely, sustaining power, placidity, color.

* * *

I have not seen any statement in any of the organists' journals, American or English, as to the effect of the "movie" organ on standardization in organ building. I have never felt the interest in schemes for standardization that many—in fact, nearly all—of my organist friends feel. As conducted, the campaign for uniformity in console, place of register, type of registers, etc., concerns itself purely with externals; it doesn't get below the surface. We are, few of us, recitalists; we play seldom on any instrument but our own; the bewildering, baffling, and heartbreaking differences in console and all the externals of stop-knobs, stop-keys, and bench, are, after all, things affecting, directly or indirectly, very few of us.

What *is* important is that the tone-colors of an organ lack so greatly in uniformity; one can never tell how "open diapason, swell" will sound, either absolutely or relatively, to any other stop or group of stops, in any organ but his own. When men of science are able to apply standards of measurement to *quality* and *intensity* of musical tones we shall see enormous changes in organ voicing and planning.

———o———

PRE-SEASON EFFICIENCY

(*Continued from page 532*)

us cut them in half. Suppose you lose only seven hours—one working day—each week. That is fifty-two working days a year—almost two months. If you can secure a fourteen-month year to everybody's twelve-month year, you will be that much ahead of everybody else. Efficiency adds hours to your day—days to your week—months to your year—years to your life. This saving of time does not mean hurrying—or scurrying—it means extra time given you so that you can use your imagination—form new ideas—so that your latent ability can come to the top—so that you can plan your way out of the ranks of the commonplace.

CONSIDER THE MINUTES

"Consider the minutes that go empty every day—minutes waiting for other people because your day was not rightly planned; minutes of trying to remember because your records were not efficient; minutes spent in trying to decide what to do next because you went ahead without a schedule or plan; minutes wasted in searching for what should be at hand because you have not standardized conditions; minutes wasted on things that do not count. Think of what you want most—money or education or culture or leisure or fun.

"Through this course of Efficiency you will add these extra hours, extra days, and extra months to use for that thing you want most."

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley-Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY-MATHEWS

THE central theme of the present issue is PERSONAL EFFICIENCY. As stated on the Editorial Page THE MUSICIAN is in this campaign to stay. We want to help every teacher, every pupil to carry on their duties with greater ease, better results, and permanent development. The TEACHERS' FORUM is one of our most valuable departments, and is conducted for the benefit of teachers who meet with problems which tax their pedagogic skill. If you need advice and do not ask for it the loss is yours. At the same time we feel that we lose when you do not give us an opportunity to help you.

This Department is yours "for greater efficiency."

I HAVE so many requests from parents for daily lessons. Is it a wise plan to have pupils every day; and, if so, what should I charge for lessons? My regular price is $1.00 for one hour lesson a week, and $1.50 for two forty-minute lessons. F. W.

It all comes back to what we are teaching for. If we want a lot of helpless children spending their days with a maid at their heels by all means give them a lesson every day. The surest way to keep them dependent is never to let them think for themselves. But if we want children who have some initiative, some self-reliance, some intellectual independence then we must not take it upon ourselves to do all their thinking. Personally I cannot think of a greater handicap for a child than a daily music lesson.

Music education is not like learning the multiplication table—a matter of drills and memory; but a question of forming a cultivated sense of hearing and of starting the creative faculties. One must plant seed and then wait for a day or two for the seed to germinate. It takes a little patience to wait; sometimes one feels like stirring up the soil before the seed has taken root. But experience teaches very soon that Nature does that work best if left undisturbed.

Many parents argue that the child makes "so many mistakes" which might have been avoided if the teacher had been at his elbow. Undoubtedly true. But isn't it through our mistakes that we grow?

Every teacher occasionally meets a mother who asks for daily lessons. For my part I try to have the mother understand that modern music teaching enables the child to study intelligently by himself after the first two weeks of lessons. There is no excuse for the Little One having wrong notes or wrong rhythm if the work is prepared in the modern spirit. When the pupil leaves the class-room he knows just how to prepare the new lesson. He knows he must tap the rhythm, work out the fingering where it is not marked, and study the family before he attempts to play the lesson on the piano. When he goes to the piano it is more than half prepared. He knows whether the melody is built on a chord pattern or a scale pattern—whether it is a pattern "by the yard" or just one design standing alone. He doesn't need a teacher to tell him. My experience with children has taught me that they prefer to find their patterns alone.

If you have watched a child working with a Meccano or building blocks you cannot fail to appreciate his delight in seeing the work grow under his hands. Try giving him some suggestions, as he is building, and you will soon find that while he enjoys your companionship, he prefers to work out his own salvation. It seems a pity to me to deprive children of the satisfaction that comes from doing work well. We must however make sure that the work is made attractive and worth doing.

Much of the general school work is merely routine, a grind. Let's make sure that our music education sharpens.

Therefore if I were asked to name a price for daily lessons I should try to convert the mother to my belief. Failing in this I should advise her to look elsewhere for a teacher who hadn't so many "troublesome convictions."

* * *

Will you give me a list of teaching pieces for first, second, third, and fourth grades?

FIRST GRADE: *The sandman*, Laver.
Thumbelina's cradle, Crosby.
Ballet dancer, Hannah Smith.
Plantation melody, Hannah Smith.
The Jack Tar, Maxim.

SECOND GRADE: *Intermezzo*, Virgil.
Dreaming by the brook, Kern.
Through the woods, Gronow.
In grandmother's time, Lemont.
March of the scouts, Sharpe.
The firefly, Paldi.
Uncle Remus, Grant-Schaefer.

THIRD GRADE: *Evening Song*, Gronow.
Improvisation, Virgil.
Papillons, Goodrich.
Valse mignon, Rogers.
Witches' revel, Schytté.
Sleeping Beauty, Schytté.

FOURTH GRADE: *To the rising sun*, Torguesen.
March grotesque, Friml.
The fountain, Oehme.
Sylvan dance, Orth.
Arachne spinning, Wilson Smith.
Elves' Dance, Orth.
Allemande, Wolff.
Scherzo, Schelle.

* * *

(1), I am fairly well advanced on the piano, but it has always been my great desire to be a 'cellist. Hitherto I have been unable to study the 'cello on account of financial difficulties, but in a couple of years I hope to be able to. I will then be 20 years old. Do you think it will be too late to start then. I know nothing, so far, about it, but I am very musical, and can learn quickly.

What is the shape of the ideal 'cello hand? My hand is large, with very long fingers. I can strike three keys beyond an octave on the piano, that is, from C to F. Do you not think my hand is more suited to the violin or 'cello than piano?

(2), Could a 'cello department not be conducted in THE MUSICIAN?

(3), What is the pronunciation of *Il Trovatore?* Where is the accent?

(1). Fortunately for all of us there is no age limit in instrumental music. I would advise you to begin just as soon as you can, however, as each year you postpone the beginning will add to your difficulties technically. Your hand should be very good for the instrument, and with a good working knowledge of piano any instrument is more easily picked up than without it. You will know the elementary theory and will only have to buckle down hard on conquering the technic of the 'cello; and if your ear is good I see no reason why you shouldn't succeed.

All stringed instruments demand an ear for tone and for pitch, and we who work with piano are turning our attention more and more toward developing the same qualities in piano students. We realize that tonal imagination is the keynote to successful performance.

(2). The 'cello can be well taken care of in the violin department.

(3). The accent should be on the first syllable.

I am writing to you for some information re garding the study of harmony. I have studied t some extent, have also had lessons on the pianc but at present I haven't a piano to practise on an wanted to take up harmony. I only have m evenings for study, and as I am a Canadian an haven't been here very long, I thought I woul write to you. I have often read your column i THE MUSICIAN.

Do you consider personal work better than co respondence? Also I would like to know wha text books are used, as the one I have is Stainer'

Would it be presuming on good nature for m to ask what requirements are necessary for a teache in theory. What piano work, etc.? E. G. F.

You have asked a question which I am loath t answer, for my idea of what constitutes good ha mony work seems to be very different from tl generally accepted opinion.

I am not interested in any harmony book whic deals with the writing out of figured basses. want a harmony that will develop the musical sen and help me to know and understand the art music. I want to know and understand the natu of a musical idea and to know it melodically, ha monically, and rhythmically. I want to unde stand and have a working knowledge of rhythm, to appreciate the value of pulsation and accent ar the larger symmetries that go into the making an art work. I want a more cultivated sense hearing, and unless ear cognition goes along wi eye it doesn't interest me in the least.

While I think the best teachers of harmony a our great master works, still some text book seer a necessity for the student, especially the stude who works without the aid of a teacher.

I like the *Applied Harmony*, by Carolyn A. A chin very much indeed. Everything is related the ear. Then too it is clear and the principles a few but involve musical effects always. All t illustrations are from the best sources, classical a modern, and it seems as if one must acquire the pow to *do* from such a book.

I have just received three books by Anna Heu mann-Hamilton that seem very interesting and he ful. They are, however, primarily for piano st dents as everything is related to the keyboa These books should prove very valuable for t student who wishes keyboard harmony.

There is nothing that takes the place of cont with a good teacher; but if it is impossible for y to have the personal lessons you will find M Alchin's book very interesting. You should ha access to a piano however if only for half hour a d There are many fine teachers of harmony in city in which you live, and also many places wh you could, for little money, rent a piano for a half h a day for such work. It would be easier to r one for harmony than for piano practice, an question very much whether you would grow mu cally unless you had some opportunity for actu hearing what you have written. If you are su ciently advanced to hear it as you write then y gain more from the study of the master wo themselves than through any book.

The requirements for a teacher of theory are h to define. It all depends on who is making engagement. In most places I am sorry to say requirements are very low. The teacher should able to read a score, transpose at sight, arrange orchestra, write accompaniments, as well as moc for students; should be able to read well at si and know, that is have a playing and work knowledge of the literature of the orchestra as as of piano. He should be able to show a stud many ways of doing the same thing, and above should be able to inspire a real love of the work in students.

Very few teachers of theory are so equipp But there are a few in all the cities. I hope may come in contact with such a one and know joy of becoming a real musician.

THE MUSIC OF THE SPHERES

[Some time ago a reader of the Chicago *American* ddressed to the Editor the query: "What is the usic of the spheres? Is it the vibrations culminat- g in sounds, colors, and conditions of matter?" is query was referred to Mr. Garrett P. Serviss, e eminent scientist, who prepared a very interesting ply, from which we reprint the following para- aphs:—Editor of THE MUSICIAN.]

THE "music of the spheres" is a sublime mental nception which may or may not have a material sis. Pythagoras, Plato, and other ancient think- were charmed by this idea, and sought to express beauty and the principle on which it rests by agery and suggestion.

The central thought was that the heavenly bodies re carried round and round the earth embedded in ncentric crystalline spheres, or shells, of absolute nsparency, and that these revolving shells, mov- over one another, produced an all-pervading rmony of sounds, of superhuman delicacy and uty.

Science has nothing to say about the music of the heres, and recognizes no such thing. There are no stal shells surrounding us, and the earth is not center of motion for any of the heavenly bodies, even the moon, since the only effect of the earth's raction on the moon is to bend its path in and as it travels with the earth round the sun. As been often said, the discovery that comets rush very direction through space around us "demol- ed the crystalline spheres."

But notwithstanding all this, the underlying prin- e of the music of the spheres runs through all ntific discovery. The universe is found to be an anic whole; its laws are everywhere applicable harmoniously active. But harmony is the soul nusic, and if we widen the idea of music so as to ude every kind of harmonic action, and not sim- the accordant vibrations of air which affect the n through the ear, we perceive that the "music he spheres" may be an expression for the har- nious working of the entire machinery of the verse.

nd very likely this was the real thought in Plato's d when he averred that each of the revolving res carried with it a siren, sounding its own par- lar note, and that these various notes being in nonious accord, produced a perfect concert, h so delighted the attendant sirens that they ng divine songs and accompanied them with a ed dance." This method of expression was ely a poetic dress for an idea that even Plato unable to define without the use of figurative uage.

hus Plato had at least the germ of thought on h modern science is based, viz., that everything ne universe is at the same time relative and ac- cordant, and that, though possibly undiscoverable to us, there is a principle of harmony which forms the clew to all phenomena.

It is natural for us to seek this principle in vibration, or motion, because we find that that prevails everywhere. Light, heat, sound, electricity, atomic action, nay, the very existence of atoms and of matter and life itself, depend upon vibratory motion. The universe quivers, and therefore, and thereby, it lives.

Let the universal vibrations cease or fall into disaccord, and stars, suns, and world would disappear as completely as if they had never been. In a moment, in the twinkling of an eye, there would be nothing that we call anything. The resulting chaos itself would be a chasm, an abyss of nothingness.

It was a happy choice of words that designated the principle of universal harmony as the "music of the spheres," for there is no other impression reaching our minds through our senses which so stirs our inmost nature as music does.

It is not the ear that understands music—the ear only transmits the vibrations that it receives.

I will not even admit that it is the brain that understands, for it is not the brain, which is also a machine, but the mind.

Yet the mind, the real master, is indefinable.

Music as we comprehend it is only a partial thing. It is the music of sound, but there must be as many forms of music as there are energies in the universe, and one combined harmony includes them all.

———o———

THE earnest student must not measure his work by the amount of time he gives to it, whether little or much. Two hours one day may be worth as much, no more and no less, as four hours on another day. Everything depends on the degree to which he can concentrate his mind on his work. This means not only the exercise of considerable will power, but also keeping the mind in a healthy state, and to this end it is necessary also that he should keep his body in an equally healthy state.

By Divine decree, man is condemned to work, but his lot is not, therefore, a miserable one. Work can be a pleasure as well as a profit, if we remember that life's enjoyments in rational measure conduce to that end. All work and no play does, indeed, make Jack a dull boy, no matter what his original gifts may be.—*Musical News.*

To send light into the depths of the human heart is the calling of the artist.—ROBERT SCHUMANN.

To Music Lovers

Composers and Music Publishers are forever striving to furnish material for your requirements.

It matters not whether it is for purposes of education, church use, or entertainment, there is an earnest purpose to satisfy the Teacher, the Organist or Choirmaster, the Professional Singer or Pianist, and the Amateur.

A composition cannot please everyone. But in the course of a season publications are issued by the various publishers for the benefit of all classes.

Success, a complete swing around the circle, demands four essentials:

1. *Royalty or Compensation to the Composer*
2. *Profit to the Publisher*
3. *Profit to the Music Dealer*
4. *Satisfaction to the Buyer*

The Composer must furnish compositions in anticipation of various requirements.

The Publisher must select compositions suited to present demands, which means a large investment in time and money.

The Music Dealer must cooperate with the Publisher and carry in stock the novelties suited to his customers' needs; and by his service and attention convince them that he is worthy of their patronage and quite up to date, and that their interests are best served by giving him all of their orders for music supplies.

The Buyer, whether Teacher, Choirmaster, Organist, Professional or Amateur, should loyally support the Music Dealer in the home town, which will insure his having constantly in stock the class of music used or desired.

And thus the circle will be completed.

For the Composer will be stimulated to greater efforts because of substantial recognition; the Music Publisher and Dealer will be repaid for their enterprise and business activity; and the Buyer—the Music Lover—will be satisfied.

But success can only be assured by cooperation of all. The Composer, the Music Publisher, and the Music Dealer can be depended upon to do their part; it remains for the Music Lover to do his.

The easiest way to do this is to make friends with and *order of your local Music Dealer.*

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment—a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

MUSIC ON SALE

Attention is called to our Special Offer to send Music On Sale to Schools and Teachers. Full particulars will be sent on request. **At no time have we been so well prepared to make strong and satisfactory selections of music and books for our "On Sale" business.** OUR SUCCESS in obtaining and holding the school and teacher trade is based upon the fact that in making selections we use only such music as will prove useful. WE DO NOT FOLLOW THE PLAN, adopted by so many dealers, of taking the first assortment that comes to hand, regardless of the special needs of the customer. WHEN YOU PATRONIZE US you can depend upon receiving music selected by experts, and selected with the special object of supplying JUST WHAT IS WANTED. Only the latest and best publications are used in making these selections, insuring a nicely balanced and well contrasted supply. If you have never tested our ability in this line, *give us a trial.* So that we may have full particulars regarding the kind of music which will prove most useful, a blank application will be sent on request, which carefully fill out and return. At the same time give us an idea regarding the quantity desired—the value measured by retail prices. Attention to these details will enable us not only to supply the proper material, but also the approximate amount of music desired.

Those who have never investigated our "On Sale" plan should do so **at once,** and become acquainted with a method which has done more than anything else to lessen the labors of the music teacher.

Full details will be gladly sent on request.

IN BEHALF OF THE HEARERS

BY B. MAXTON ELLERRY

Is there anything from which the average teacher falters with greater misgiving than the "annual pupils' recital" which seems to be so necessary a part of the year's work? It is looked upon for months ahead as an evening of insecurity, of icy formality, and as having a general atmosphere of aloofness from which no amount of worthy playing can draw a due quota of applause.

To the student it is a sort of purgatory through which one must pass ere entering upon the Elysium of a summer's vacation. The hearers go, not to be entertained or to enjoy the music, but solely because Willie or Mary is to play.

It contains the greatest aggregate of emotions ever grouped into one affair.

At a recital given by the pupils of a friend of mine I resolved to eliminate or, at least, cover up the discomfort of the pupils and audience. I told the teacher that if he would give me full charge of the evening and himself (literally) take a "back seat," I would give everyone an hour of genuine enjoyment. I received the commission.

As a program I selected the most contrasting pieces that I could find within the technical scope of the students. Some of the selections were learned solely for the occasion. For the final number I chose a rather more fiery than artistic work which I would play myself. "Always play to the pleasure of your hearers, although it may be at the expense of your own."

Precisely upon the hour set for the curtain I stepped to the front and spoke to the audience, telling how the numbers had been chosen for their diversity, and that before the performance of each number I would give the musical criticism fitting it and relate anything of interest that I could remember regarding it. Nothing did I say of those who were to play. I really think that after the first fifteen minutes they had ceased to exist in the minds of the hearers.

The little descriptions were largely personal reminiscences and were not spoken after any cut and dried rule. I merely "told" them. I removed every atom of formality that could be spared without jeopardizing the dignity of the situation.

One of the most noticeable improvements was the deathlike silence that reigned during the performance of the selections—the straining to find the points of interest that I had called to mind. There was a constant expression of expectancy on every face and the time between numbers rang with deafening applause. At the end of the program there was no shamed filing out with whispered comments. All that was said was in a normal tone, concerning the MUSIC, and not the performers and their clothes.

Behind the screen the pupils nearly fell over one another to hear the little anecdotes. One of the girls afterwards said, "It used to seem a mile from the edge of the stage to the piano but tonight I didn't notice it at all. I just wanted to get over there to that piano and show the people what you were talking about." How is that spirit?

Remember that when you try this you must find a manager who will not create a bedlam. Not everyone can handle people in masses. And, do NOT try to do it yourself. It is an impossible task for the teacher of the performers.

PADRE MARTINI

BY HARVEY B. GAUL

THERE were two shining lights in the dawnir days of Italian organ music. One was Frescobalc and the other was Giambattista Martini, known posterity as Padre Martini.

Giambattista Martini lived in the latter part the sixteenth century. History is not exact as the date of his birth. Padre Martini had some the versatility of another famous Italian, Leo ardo da Vinci, that is, he achieved fame in sever walks of life. He was priest, composer, organi violinist, historian, and well-known as a book c lector. Burney mentions him in his famous histo

Padre Martini published, in 1738, an antholo of organ pieces entitled *Sonate d'intavolatura p l'organo ed il cimbalo.* It is a miscellany pieces in which are contained some of the c dances. In the year 1747 a second collection peared entitled *Sonate per l'organo ed i cimba* In this collection the word *intavolatura* is omitt

Farrant's claim to fame rests chiefly on the c anthem *Lord, for Thy tender mercies' sake.* L Farrant, Padre Martini is best known to us by inimitable *Gavotte* in F.

This gavotte, with its Handelian imitations a canonic effects, stands forth as one of the fin contrapuntal compositions of its *genre.*

This gavotte is found in the *Sonate d'intavo tura* and was intended to be played with a Caril stop. Today organists, looking for a nove would do well if they would hark back to t delightful old gavotte. With the modern organ can be used with telling results with a Caril and Celesta stop.

Weckerlin has arranged some of the Mar songs. They have the charm of ancient *Bergeret*

Fritz Kreisler, while traveling in Italy, tells staying at an old monastery and finding some Martini's music in script. He tried to obtain pa from the monks to transcribe the music, but t jealously refused to relinquish their herit Kreisler says that he went back, took down cuffs, and "copied to his cuffs' content." Th Martini-Kreisler transcriptions have been publis and further establish Martini as a composer melodies are charming and, considering the pe in which Martini lived, they place early Italian sic on more solid ground.

BOOK NOTES

Cumulative Harmony. By William J. McCoy, Ginn & Co. Price, $1.50.

The introduction of the theory of music into the curriculum of the high school with the resulting organization of classes in harmony has created a demand for a text-book suited to the special conditions of school work and the musical training of the pupils. It is a matter of common opinion that few of the existing books are adapted for use of public school classes being either too comprehensive and advanced or so elementary as to have no permanent value.

The author of *Cumulative Harmony*, a San Francisco musician and composer, has been in charge of the harmony work in the public schools of Oakland, Cal., for a number of years, working out his observations and deductions as to the kind and extent of harmony study which will best suit the needs of high school students. His success is a matter of record and the fine quality of the work of his students has been attested by a number of competent musicians and educators.

From the preface we gather the following points which show the aim of the author. The reviewer, in his study of the material presented in the book, is willing to express his belief that this material would produce the results desired. These are the innovations peculiar to the system:

1. The evolving of melodies from harmonic structures.

2. A tabulated system of modulation to directly related keys, considered harmonically and melodically.

3. A recognition of this principle: The fact that the positive identification of a key is dependent upon an assured dominant chord is sufficient justification for assuming that the appearance of such chord in any circumstance, serves fully to identify the key.

4. The harmonization of melodies by the three-part mode involving the grouping of all chords into three general harmonic families.

5. The use made of the secondary chords of the subdominant, tonic, and dominant.

The treatment of the family of augmented chords also deserves mention.

We agree unhesitatingly with the following sentiment: "The study of harmony should be pursued simultaneously with the study of instrumental and vocal music. It should be thoroughly mastered and absorbed during the receptive periods of childhood and youth, not deferred until the musical character has been already formed and new lines of thought become unwelcome."

The Symphony Play. By Jennette Lee. Charles Scribner's Sons. Price, $1.00 net.

The book is the expression of an idea thus stated by the author: "Why should there not be such a thing as a Symphony Play, a play made up of one-act plays—three or four of them, or even five—plays not merely 'linked together by intervals of silence' and a dropped curtain, but one-act plays so related in color and tone and progressive meaning that together they would form a perfect whole—as the movements of a sonata form a whole, or a symphony?"

At home with the world's greatest artists

Enjoying the exquisite interpretations of the most famous singers and musicians is a pleasure which only the Victrola can afford you. For the world's greatest artists make records only for the Victrola.

Any Victor dealer will gladly show you the complete line of Victors and Victrolas—$10 to $400—and play the music you know and like best.

Victor Talking Machine Co., Camden, N. J., U. S. A.
Berliner Gramophone Co., Montreal, Canadian Distributors

Important warning. Victor Records can be safely and satisfactorily played only with *Victor Needles* or *Tungs-tone Stylus* on Victors or Victrolas. Victor Records cannot be safely played on machines with jeweled or other reproducing points.

New Victor Records demonstrated at all dealers on the 28th of each month

To insure Victor quality, always look for the famous trademark, "His Master's Voice." It is on every Victrola and every Victor Record. It is the only way to identify genuine Victrolas and Victor Records.

Victrola

The idea of organic unity as worked out in a sonata, a symphony, or any other of the cyclical forms offers a good model for the dramatic writer and the methods for achieving and maintaining unity and coherence are not difficult to follow. The student of form in music will be interested to discover how the author has used and adapted the various devices familiar to the technically trained composer. It is really a delightful study in comparative esthetics.

The different "movements" are: I, *Prelude*, Billy Boy; II, *Allegro*, The Mother; III, *Andante*, The Brother; IV, *Allegro*, The Lady with Wings.

THE WORCESTER (MASS.) MUSIC FESTIVAL

The 59th Worcester Music Festival will be held September 25–29. The choral work selected for repetition this year is *The Children's Crusade*, Pierné, given last year, and which introduced a splendid chorus of school children. Other choral works will be Rossini's *Stabat Mater* and Florent Schmitt's *47th Psalm*. The latter will be one of the most superb works ever given by the festival chorus.

The festival will be conducted by Dr. Arthur Mees, with Gustav Strube as associate conductor. The orchestra will be composed of 60 players from the Boston Symphony Orchestra.

The following artists have been engaged: Alma Gluck, soprano, Mme. Marie Sundelius, soprano, Miss Florence Hinkle, soprano, Miss Marcella Craft, soprano, Miss Henriette Wakefield, contralto, Percy Grainger, pianist, Theo Karl, tenor, Lambert Murphy, tenor, Wilfred Glenn, bass, and Marion Green, bass.

There will be five concerts in all. The first will be given Wednesday evening, September 27, when *The Children's Crusade* will be presented. The second concert will be on Thursday afternoon, and will be given by the orchestra and Mr. Grainger. Thursday evening, September 28, the *Stabat Mater* and *47th Psalm* will be given. The fourth concert on Friday afternoon will be by the orchestra and Miss Craft. The fifth and last concert will be given Friday evening, September 29, when the artists' night program will be given by Mme. Gluck, Mr. Karl, Miss Wakefield, the orchestra and chorus. September 25 and 26 will be devoted to rehearsals.

Ball Bearing; Long Wearing

Do You Know How?

It is often necessary to write a word or phrase exactly in the center of the paper. It is simple on the *L. C. Smith & Bros. typewriter*. Do you know how?

Do you know the best way to insert a large number of sheets of paper and carbons at the same time, so that the edges will all come even?

Do you know how to "half-space" so that you can write in an extra letter and still have the work look well?

Do you know why the use of the Variable Line Spacer increases the life of the platen?

Do you know what can be done with our Variable Line Spacer that cannot be done with any other?

Do you know the best way to insert a sheet of paper?

Do you know how to "front feed" envelopes?

If you cannot answer "yes" to all these questions, it will pay you to send for the booklet—"*The Silent Smith.*" It's yours for the asking. Drop a card to

THEODORE SPIERING, AN AMERICAN VIOLINIST

THEODORE SPIERING has been identified so long with successful achievement in the international musical world that his nationality has often been a source of conjecture. In the recent biography of Coleridge-Taylor, the American artist is referred to as the Berlin violinist, and on other occasions he has been announced as German and Dutch.

Of German, Austrian, Dutch, and Italian descent, Theodore Spiering offers a striking example of the American who owes much in his artistic career to the strong characteristic influences of the races to which his ancestry belonged. St. Louis, Cincinnati, Chicago, and New York are the four American cities to which special ties bind the artist. In the order named they represent the birthplace, where the youthful Spiering lived until his 15th year, his first study period away from home, the first active professional experience and years of pioneering, and finally artistic maturity as exemplified in the responsible post under Gustav Mahler and substituting for this greatest conductor, and again the present abode of the master violinist and pedagogue.

Offsetting these periods of American domicile, are the four years spent in study with Joachim at Berlin, the return to the German capital after residence in Chicago, and again the return after three years in New York. In spite of the keen interest the artist has always manifested in the musical progress of his country, a progress that in certain territory is directly due to his faithful pioneering, Spiering has by natural evolution developed into an international artist, having cosmopolitan standards and tastes. His American tour, the first in twelve years, will bring him to the notice of a new musical generation in his own country. Combining the traditions of Joachim with certain characteristics of the Belgian School, Spiering is today a figure of eminence in the violin world, and an interpreter whose readings are recognized as authoritative the world over.

SPECIAL!

Free Offer to Teachers and Musicians

An ounce of **proof** is worth a pound of **promise.** Making **claims** is easy—"making **good**" is the **real** test of merit. Hundreds of Music Teachers and Successful Musicians claim that they have been greatly benefitted by the **Siegel-Myers** Correspondence Courses. They write us to that effect and we cheerfully accept their enthusiastic statements as sincere and truthful. You're welcome to these letters. We will send you as many as you care to read. But, after all, we realize that this is merely "hearsay" evidence to many readers of **The Musician** who have as yet no **direct personal knowledge** of what it really means—for example—to

Study Piano With Sherwood and Harmony Under Rosenbecker and Protheroe

If it were possible for Sherwood, pupil of Liszt, endorsed by Paderewski, Leschetizky, Moszkowski, and other world famous artists, to come right into your home and offer you his personal instruction at nominal expense, you would eagerly and gratefully thank your lucky stars for the opportunity. **Yet that opportunity is yours today, in every vital essential.** We bring Sherwood to you—Sherwood, the Great Master at his best—the very cream of his completed life's work as Teacher, Concert Pianist and Lecturer—in the

Sherwood Normal Piano Lessons and University Extension Lectures

This course of weekly Normal Piano Lessons, with **personal** examination papers and University-Extension Lectures on the Art of Teaching contains the fundamentals of a broad and solid musical education, and the principles of successful teaching. It contains the vital principles—the big things—in touch, technique, harmony, melody, phrasing, rhythm, tone production, interpretation and expression. It gives a complete set of physical exercises for developing, strengthening and training the muscles of the fingers, hands, wrists, arms and body, fully explained, illustrated and made clear by photographs, diagrams and drawings. These physical exercises show how to train over 50 muscles of the arms and hands alone used in piano playing.

WARNING

Many teachers have written us that they have been approached by agents representing (by inference at least) that they had the Sherwood lessons to offer. William H. Sherwood positively prepared no lessons except the course he personally prepared as Director of the Piano Department for the Siegel-Myers School of Music, sole owners of the copyright. The lessons, embodying all of the invaluable principles and methods that for over 30 years made Sherwood America's most famous Piano Teacher, can be secured only from this School

HARMONY

A knowledge of Harmony is absolutely essential to round out your musical education. It adds wonderfully to your equipment both as Teacher and Performer. Without it you limp along on the the crutch of "unpreparedness." We offer you a complete course of weekly Harmony Lessons at small cost in the privacy of your own home. These lessons, prepared by Mr. Adolph Rosenbecker, famous Soloist and Conductor and pupil of Richter; and Dr Daniel Protheroe, Eminent Composer, Choral Director and Teacher, can be secured **only** from us.

Each lesson is an orderly step in advance, clear, thorough and correct; not the mere mechanical application of dry-as-dust rules, but an interesting, intelligent, thoroughly practical method that grips your attention and stimulates your ambition to succeed from the very beginning. A written examination on each lesson, in connection with ample original work, develops your knowledge and firmly fixes the important principles in your mind.

Harmony Teaches You To

1. **Analyze Music,** thus enabling you to determine the key of any composition and its various harmonic progressions.
2. **Transpose At Sight** more easily accompaniments which you may be called upon to play.
3. **Harmonize Melodies** correctly and arrange music for bands and orchestras.
4. **Detect Wrong Notes** and faulty progressions whether in printed music or during the performance of a composition.
5. **Memorize Rapidly,** one of the very greatest benefits derived from the study of Harmony.
6. **Substitute Other Notes** when for any reason the ones written are inconvenient to play.

Lessons Highly Endorsed

Gentlemen:—In my recent investigation of your work, I was very much interested in the courses you offer, and saw that the work was being well done. Students who complete your Harmony Course, and pass the examinations with satisfactory grades, will be given credit for two years' work in the Northwestern University School of Music in that study.
P. C LUTKIN, Evanston, Ill.
Dean Northwestern University School of Music.

Gentlemen:—I had the pleasure of examining some of your correspondence courses in music, the Normal Piano, Voice. Pipe Organ, History of Music and Harmony. I was very much surprised to see that all these courses are not only good but also practical. They will be a help in the work of standardization.
Sincerely yours,
LIBORIUS SEMMANN, Pres.,
Assn. of Presidents of State Music Teachers' Assns

The endorsement of such eminent artists as Paderewski, Leschetizky Emil Sauer, Moszkowski, Alex Guilmant, Damrosch and Sousa, speaks conclusively as to the value of our instruction. These supreme authorities fix our status once and for all as an institution of the highest musical ideals and practical meri

FREE! Ten Regular Lessons Sent Free Without a Penny of Cost To You

During the seven years that our announcements have appeared in The Musician, we have had splendi results. Hundreds of readers have enrolled and successfully mastered one or more of our courses. Y there are many friends of this sterling publication who have never responded even to the extent inquiring for full information about our School.

We feel that these readers of The Musician are doing themselves—as well as us—an injustice by remain ing "mute." And it is to this class who little realize the wonderful worth of these lessons that we hav decided to make the following

Unprecedented Special Offer!

William H. Sherwood

Just sit right down now and write us a friendly letter telling us in your own w about your musical ambitions, your strong and weak points—how long you have studi music (if at all)—what courses you are particularly interested in, whether y have studied Harmony. We would like to know your ag whether you teach, play, sing—in short, write us in confiden just what you would feel perfectly free to tell us if you call in person at our school.

Then just as soon as we get your letter, we will select a send you—absolutely free of cost—10 regular lessons (6 fro any two courses), each treating of some important princi of personal interest to you. These will not be mere samp extracts but the genuine, original lessons exactly such as send to our regularly enrolled students in the Normal Pian Harmony, Advanced Composition, Public School Mus Choral Conducting and Pipe Organ Courses.

Kindly let us hear from you at once and, remember, 10 lessons are positively free—yours to do with precisely as you like, without the slightest obligation to us.

California music teachers met in their sixth annual convention, at San Diego, July 5–8. The subjects of standardization and school credits for music study outside the schools were discussed. The next convention will be held in Sacramento.

Amato, the baritone, considers that an opera with Dante as the chief character, has fine dramatic possibilities. He hopes that a composer and librettist of eminence may some day produce such a work.

Boris Godunoff, Moussorgsky's opera, was produced in London, during the summer, under the direction of Thomas Beecham. The production was in French.

Yale is to have a great pageant, Oct. 21, in commemoration of the 200th anniversary of the removal of Yale College from Saybrook to its present site. It will be given in the Yale Bowl, which has a seating capacity of 68,000. The participants will consist of nearly 8000 in the various scenes, supported by 700–800 voices, a band of 150, and a chorus of 2000 school children.

Announcement has been made of a projected tour by the recently organized Chicago English Opera Co.

Chicago's Civic Music Association asked for popular subscriptions to the amount of $10,000 for a series of "out-of-door songs," three of the programs to be given on the new Municipal Pier. The leading choral organizations of the city, the Apollo Club, the Mendelssohn Club, Marshall Field & Co. Choral Society, and glee clubs from large business houses, participated during the summer.

In the course of comment on the American music season the New York *World* estimates the total annual business of all sorts of musical enterprises at $250,000,000.

Steinway Hall, for many years a musical landmark on Fourteenth St., New York, will be moved to a new location on 57th St., west of Fifth Ave. The new building will include studios, with a concert hall still in doubt.

The Edith Rubel Trio gave a recital of folk-melodies with narrative at Newport, R. I., under the auspices of the Newport Historical Society, presenting numbers from the folk-song literature of the Orient, Europe, including examples of the music of the American negro and the people of the Kentucky mountains.

Owing to the fire which destroyed College Hall, Wellesley College, more than a year ago, and the small seating capacity of the only available hall at present, the usual series of Artist Recitals will not be given this year.

The Pittsburgh Festival Orchestra, Carl Bernthaler, conductor, in its series of summer concerts, played Adolph M. Foerster's *Lyric Suite* for strings, Aug. 10.

Robert Grau, brother of the late Maurice Grau of the Metropolitan Opera Co., and himself a manager of theatrical and operatic enterprises, died at Mount Vernon, N. Y., Aug. 10. He was manager of Patti's farewell tour of the United States.

Max Heinrich, who, before his retirement from public singing, was considered one of the greatest *lieder* singers of his time, died in New York, Aug. 8. He was born in 1853, at Chemnitz, Germany.

Eben D. Jordan, of Boston, former president of the Boston Opera Co., and principal guarantor as well, and a liberal patron of opera, music, and art, died at his summer home, West Manchester, Mass., Aug. 1. He was the head of the Jordan Marsh Company of Boston, a department store with agents in all the great trading centers of the world. Mr. Jordan was a liberal benefactor of the New England Conservatory to which was bequeathed $100,000 to apply on the mortgage on the building.

Henri Kowalski, a composer of piano music once greatly in vogue, died at Bordeaux, France, July

50c EACH POSTPAID

More than Half a Million Sold

50c EACH POSTPAID

Famous "Half Dollar" Series

SONGS

50 cents each, postpaid

Encore Songs. For high voice; for low voice. The numbers contained in this collection are the cream of "encore songs," of moderate difficulty. Singers need never be at a loss for a suitable encore, if this book be handy.

Favorite Sacred Songs. For high voice; for low voice. The old favorites never lose their hold upon the average congregation. This volume should be in every choir library.

Favorite Songs. For high voice; for low voice. Sixteen songs by American and European composers, available for teaching and recitals. A choice addition to the répertoire for use with young pupils.

Songs with Violin. In this well-balanced collection of thirteen numbers, songs in a quiet mood form a contrast to others that are spirited outbursts of feeling.

Thirty Songs for Children. Thirty songs written expressly for children to sing and selected for this volume because children really can sing them with delight.

Twenty Modern Songs. This volume includes with a few well-known songs others of equal beauty that are expressive of many moods and sentiments.

Twenty Songs. By Stephen C. Foster. The best of the 164 songs by the founder of American folk music.

Young Singers' Songs. Contains eighteen songs suited to the age and technical advancement of young people of both sexes. Adapted to students who have just begun vocal training.

PIANO—TWO HANDS

50 cents each, postpaid

Dance Waltzes for the Piano. Ten very popular waltzes for dancing.

Easy Opera Melodies. In addition to their value as pieces for recreation, these selections have good teaching quality. None of them go beyond the early third grade.

Easy Pieces in Easy Keys. Vol. I. Forty-three easy piano pieces in easier keys, arranged according to the keys.

Easy Pieces in Easy Keys. Vol. II. Forty easy piano pieces, arranged according to the keys.

Easy Salon Music for the Piano. First Series. Sixteen bright and attractive piano pieces in salon style.

Easy Salon Music for the Piano. Second Series. Fifteen melodious pieces of parlor music, none of them beyond the third grade in difficulty.

Familiar Melodies Transcribed for the Piano. By Charles Grobe. This volume contains the cream of popular transcriptions of familiar melodies, mostly in the third and fourth grades of difficulty. Contains ninety-one pages.

Famous Piano Solos. Grades III and IV. Fifteen pieces in all, every one included in the standard teaching répertoire.

PIANO—TWO HANDS

50 cents each, postpaid

Forty Favorite Airs. Though the arrangements of these sterling old melodies are kept very simple, they show much variety and pleasing quality.

Forty First-Year Piano Pieces. It is always difficult to find attractive pieces in the easiest grades, but here is a whole volume of excellent numbers.

Forty Very Easy Piano Pieces. First Series. Forty very easy piano numbers in the first and second grades, progressively arranged.

Forty Very Easy Piano Pieces. Second Series. This volume contains an unusually attractive collection of pieces of Grades I and II suitable for teaching and recreation. Every number is of practical value.

Carl Heins' Popular Piano Compositions. Vol. I. Contains sixteen pieces in the second and third grades of difficulty. Without any exception, these pieces are available for the teaching répertoire, as they contain passages of a technical character in pleasant musical form. Sixty-four pages, folio size.

Little Recreations for the Piano. Grades I and II. This volume contains thirty true teaching pieces with exceptional musical interest, such as will interest young players and also advance their technic.

Marches and Two-steps. Fifteen attractive marches and two-steps.

Modern Piano Compositions. Seventeen compositions, Grades IV and V. An excellent répertoire book for a busy teacher to have at hand.

Opera Transcriptions. All are good numbers for home, social, or public use.

Popular Salon Music for the Piano. Thirteen melodious pieces of proven acceptability for the drawing-room.

School and Gymnasium Marches. Sixteen attractive marches suitable for school and gymnasium work.

Thirty Easy Piano Pieces. Second Grade. This volume contains thirty carefully chosen teaching pieces, all of the second grade.

Thirty Second-Year Piano Pieces. All from the works of contemporary composers, these pieces are fresh and varied, and technically of value.

Twenty-Five Easy Piano Pieces. Grade II. Teaching pieces of genuine musical value, carefully fingered and phrased, the pick of the easy works of such composers as Aletter, Beaumont, Dorn, Engelmann, Fink, Horvath, Sartorio, Schmoll, and others.

Twenty Third-Year Piano Pieces. All graceful and pleasing compositions by present-day writers, containing no number that is dry or perfunctory.

GENERAL NEWS ITEMS

(*Continued from page 579*)

8. His *Salut à Pesth*, a march in the Hungarian style, is still played.

Jules Combarieu, professor of history of music at the College de France, and writer on musical topics, died at Paris, July 10. His *Music, its laws and evolution*, one of the volumes in the *International Scientific Series* should be read by all musicians. It is a work of unusual value on critical and esthetic phases of music.

Albert J. Holden, a well-known New York organist and choirmaster, died July 16, at Longmeadow, Mass. He was born at Dorchester, now a part of Boston, Aug. 7, 1841. He went into musical work before he was twenty, and turned his attention to composition, winning wide recognition for his church and Masonic music, the latter becoming a standard in that line. He was identified with various firms in the piano trade and was with the Aeolian Company at the time he retired from business activity. He served in the Civil War as adjutant of the 96th regiment New York Volunteers.

WITH THE SCHOOLS AND TEACHERS

Prof. J. Lawrence Erb, of the University of Illinois, continued his series of organ recitals through the summer, giving his 54th program, August 1.

Mr. Alvah Glover Salmon, of Boston, well-known as pianist, teacher, and lecture-recitalist, will continue his Steinert Hall studio, beginning his season Sept. 1, with two special courses of study, one for teachers and students preparing to teach, and one for pianists who wish unusual and effective program material by modern composers.

Loyal Phillips Shawe pupils gave a recital of songs at Providence, R. I., to close the teaching season. They were assisted by the Madrigal Club.

Ellmer Zoller, the well-known New York accompanist, will play for Mme. Fremstad in her coast-to-coast tour.

The New York School of Music and Arts, Central Park West, Ralfe Leech Sterner, director, conducted a successful summer session. A feature of the concerts closing the regular season was the excerpts from grand opera, sung by Mr. Sterner's pupils.

The Faelten Pianoforte School, of Boston, had occasion to be proud at the closing concert of the last teaching season when a large audience thoroughly enjoyed the playing of four of the graduates who had the support of forty-four members of the Boston Symphony Orchestra in their concerts. During the year 50 recitals, 35 method lectures, 35 pedagogic lectures, 35 interpretation lessons, and 690 playing tests were given.

The Bedford (Pa.) Piano Club is an active force in the musical work of the city. A program recently given showed a wide diversity of talent on the part of the members for it consisted of solo and concerted piano music with several fine vocal numbers. Miss L. D. Shuck is in charge of the programs.

Mr. William A. Wolf, director of the Wolf Institute of Pianoforte and Organ Playing, Lancaster, Pa., presented three recitals in one day to close the past teaching season, at 10.30 A.M., 3 P.M., and 8 P.M., representing the elementary, junior, and senior divisions of the Institute.

One of the English readers of The Musician sends us the following: Miss Louise Gros, of Surbiton (Surrey), assisted by her little pupil, Betty Hewitt, gave two demonstrations of her method of teaching music to little children by means of colors, June 27th and July 5. Aural tests in pitch, rhythm,

E. Robinson, American onservatory, Kimball Hall, Chicago.

HOW TO MAKE LISZT PLAY

In a book of reminiscences recently published by Mme. Waddington, wife of a famous diplomat of some forty or fifty years ago, is an account of how Liszt was inveigled into breaking his custom of not playing when invited to do so by a hostess who chanced to be entertaining him. She tells how, on one occasion in London, she arrived early at a luncheon at which Liszt was to be a guest. She found the hostess and Count Hatzfeldt, the German ambassador to England, entirely changing the appearance of the drawing room. The piano, in particular, was pushed into a corner, covered with photographs, vases, books, etc., while all the music was put out of sight. The hostess explained that this was done to get Liszt to play, saying:

"Begin by putting the piano in the farthest, darkest corner of the room, and put all sorts of heavy things on it. Then he won't think you have asked him in the hope of hearing him play, and perhaps we can persuade him." The author continues: "The arrangements were just finished as the rest of the company arrived. We were not a large party, and the talk was pleasant enough. Liszt looked much older, so colorless, his skin like ivory, but he seemed just as animated and interested in everything.

"After luncheon, when they were smoking (all of us together, no one went into the smoking-room), he and Hatzfeldt began talking about the Empire and the beautiful fêtes at Compiègne, where anybody of any distinction in any branch of art or literature was invited.

"Hatzfeldt led the conversation to some evenings where Strauss played his waltzes with an *entrain*, a sentiment that no one else has ever attained, and to Offenbach and his melodies—one evening particularly when he had improvised a song for the Empress—he couldn't quite remember it. If there were a piano—he looked about. There was none, apparently.

"'Oh, yes, in a corner, but so many things upon it, it was evidently never meant to be opened!' He moved toward it, Liszt following, asking Comtesse A. if it could be opened. The things were quickly removed. Hatzfeldt sat down and played a few bars in rather a halting fashion.

"After a moment Liszt said: 'No, no, it is not quite that.' Hatzfeldt got up. Liszt seated himself at the piano, played two or three bits of songs, or waltzes, then, always talking to Hatzfeldt, let his fingers wander over the keys and by degrees broke into a nocturne and a wild Hungarian march. It was very curious; his fingers looked as if they were made of yellow ivory, so thin and long, and of course there wasn't any strength or execution in his playing—it was the touch of an old man, but a master—quite unlike anything I have ever heard.

SECULAR SONGS

MEDIUM VOICE

RENAUD, EMILIANO

I would no more give thee a thought (*Je ne veux plus penser a toi*) [E♭] [e-g]. $0.60
A song with broad, lyric quality, and emotional expression, making it especially suitable for concert use; a brilliant piano accompaniment adds to its effectiveness.

LOW VOICE

HARRIS, VICTOR

Ghosts. [B♭] [b♭-E♭] ..... .40
The snowflakes of the first winter storm are the "ghosts" of the flowers of early spring. It is a nature song in which the composer has cleverly and effectively followed the pictures of the poet.

PIANO SOLO

HAYDN, FRANZ JOSEPH

Andante con variazioni in F Minor. IV-V. $0.50
A fine work from the classical repertoire, each successive variation calling into use different technical figures and skill, especially finger facility in scale passages and broken chords.

Fantasia in C major. IV. ..... .50
The teacher who wishes to give his pupils a few of Haydn's compositions should by all means include this in the list. It has the true classical spirit and is stimulating toward the acquirement of a facile finger technic.

ROLFE, WALTER

Autumn sunset. III-IV. ..... .60
A fine lyric number with poetic quality. The principal technical feature is the use of a melody to be played mainly with the thumb and adjoining finger, while the other fingers of the right hand furnish a chord accompaniment. It works to a fine climax.

MISCELLANEOUS

Songs with Violin. Medium Voice (Half Dollar Music Series) $0.50
Fourteen songs of moderate difficulty, with violin obbligatos, the latter published in a separate book, but included in the price quoted. Here is a collection of special value to teachers and singers.

MOSCHELES, IGNAZ

Twenty-four studies (24 *Charakterische Tonstucke*), Op. 70. Book I, Ditson Edition, No. 256; Book II, Ditson Edition, No. 257. Each. ..... .60
These studies are well-known and are considered as essential to the student's technical development, being the work of one of the masters of the classical style both in composition and in playing.

SIEBER, FERDINAND

36 eight-measure elementary vocalises, Op. 97. For bass. With English text by Laura Underwood. Ditson Edition, No. 293. ..... .50
Sieber is rated as one of the best writers for the development of a good singing style. He was an exponent of the best traditions of the old Italian ideas and his technical compositions promote the acquirement of good style and finish.

Composition to order for any character of text. Commissions for editorial work and "ad" writing from publishers desired. Why not write him at once for terms, care of THE MUSICIAN, Boston, Mass.

"When he got up, he said: 'Oh, well, I didn't think the old fingers had any music left in them!'"

—o—

EMBELLISHMENTS

BY W. C. FULLWOOD

I HAVE a studio novelty. Recently I found one of the old-fashioned hour glasses in a store in New York City. These old-time relics are rarely seen now. At the lesson hour I invert the glass; and as the sand silently and slowly runs to the lower part of the glass young pupils are interested, and want to know all about it; for they have never before seen one. It accurately measures the lesson hour, and they are enthusiastic over this new studio accessory.

I ALWAYS have musical magazines, studies, and pieces with attractive, colored, illustrated covers on the piano rack to catch the eye on entrance to the studio. This educates and nourishes the sense of beautiful things and ideals in the minds of pupils.

THE first duty of a teacher is to gain the confidence and liking of the pupils. For instance, a bright, nine-year-old girl disliked to practise, but she did so and kept at her lessons because she "liked teacher." Her mother, meeting me on the street, said, in a bantering way, "Mr. F., I am getting jealous of you; Bessie is always talking about and quoting 'my teacher.'"

IN the case of a nervous spell, I divert the mind of the pupil by telling a joke, anecdote, or by asking her about some incident of her school days. This gives time for the relaxation of muscles; and, after these few moments of pleasant chat, she forgets her nervousness, and resumes her lessons, calmed and interested.

I AM pleased to see that publishers are getting out first and second grade pieces and studies with attractive covers. For many years I have urged this very thing, by pen and voice. I would suggest further that a short, interesting story about the piece be printed on the inside of the cover page.

VICTOR TALKING MACHINE RECORDS FOR SEPTEMBER

MONTH in, month out, the issuing of new records goes on, the only difference being that certain months show larger numbers. September, which is the last month of the usual vacation season, is not much below months in the midst of the music season. We have much pleasure in calling to the attention of readers of THE MUSICIAN the following records which appear among the issues for September; they are worth hearing:

Calve, Emma, mezzo-soprano: *La Marseillaise.* Supported by a chorus from the Metropolitan Opera House this favorite prima donna sings the national air of her country with magnificent effect and patriotic fervor.

Caruso, Enrico, tenor: *La procession,* the finest of the songs written by the eminent Belgian composer, César Franck, who was one of the great master teachers at the Paris Conservatoire, where he influenced many of the younger French composers.

Farrar, Geraldine, soprano: *Lead, kindly light,* the magnificent hymn by Cardinal Newman, set to music by Dykes, the inspiration of the living and the comfort of the dying.

Gadski, Johanna, soprano: *Hedge rose* (*Haidenröslein*) by Schubert, one of the gems in the German folksong style, sung with the accompaniment of a string quartet.

Garrison, Mabel, soprano: *Je suis Titania* (*I'm fair Titania*), from Thomas' opera *Mignon,* sung in French, one of the most charming of the lighter operatic airs.

Gogorza, Emilio de, baritone: The popular *Prologue* from Leoncavallo's opera *I Pagliacci*; also *Je sais que vous êtes jolie* (*I feel I'm in love*), a popular French song in the one-step rhythm, by Christiné.

Gluck, Alma, soprano: *The bird of the wilderness,* by Horsman, an enormously popular song by an American composer.

Homer, Louise, contralto: *Last night,* by Kjerulf, a gem from the Scandinavian literature; and *Oh, promise me,* by DeKoven, a song widely known and a special favorite for wedding occasions.

Kreisler, Fritz, violinist: *Rondino* on a theme by Beethoven, arranged by Kreisler, and used by great violinist in his concerts with much success. is a fine string number.

McCormack, John, tenor: *Barcarolle* from Offi bach's *Tales of Hoffmann,* with violin obbligo played by Fritz Kreisler, one of the finest numb and combinations in the entire list.

Powell, Maud, violinist: *Molly on the shore,* old Irish reel as transcribed by Percy Grainger, a piece for the violin with all the spirit and captiv ing rhythm of Irish dance tunes.

Whitehill, Clarence, baritone: *Marching thro Georgia,* by Work, a song of the Civil War perio

Equipment Unrivaled Service Unexcelled

Conservatories, Schools, Colleges, and Convents Music Teachers, Music Pupils, and Music Lovers

will find in our catalog everything needful for study and recreation

From such an abundance it is impossible to enumerate more than the most noteworthy, but an idea may be gained from the following, of the variety, scope, and value of our publications

The Musicians Library

(75 Volumes)

This notable series has been planned to embrace all the masterpieces of song and piano literature; to gather into superbly made volumes of uniform size and binding the best work of the best composers, edited by men of authority. Each volume is independent, complete in itself, and sold by itself.

The Musical Courier says: "THE MUSICIANS LIBRARY is a boon to the musician; it is not only the Musicians Library, but it is a library for all people who believe in music, who are fond of the art and who cherish musical ideals."

Ditson Edition

(306 Volumes)

An ideal edition of standard educational works, chiefly technical, for the piano, organ, violin, and other instruments and for the voice. Progressive Music Teachers who use DITSON EDITION will use no other.

Favorite Songs of Famous Singers

(12 Volumes)

These volumes contain the Favorite Songs sung by Julia Culp, Geraldine Farrar, Emma Calvé, Elena Gerhardt.

"In these beautifully printed books the art of the printer and the bookbinder is rivaled only by the art of the composers and of the famous singers themselves."
—**The Musician**

Other volumes of the Favorite Songs sung by world famous artists in preparation

Ditson Dollar Series

(75 Volumes)

Includes the famous Piano Classics, Young People's Classics, etc.

Melodia

By COLE and LEWIS. The most complete, the most practical course in sight-singing ever published. Used in leading schools and colleges. Adopted as a text-book by the Summer School at Cornell.

The Music Students Library

(29 Volumes)

A series of Educational Text-books suited to the requirements of the average student and covering every essential branch of musical instruction.

From **The Music Trades:** "This library is one of the most noteworthy educational series of text-books ever offered to the public."

Half Dollar Music Series

(67 Volumes)

More than half a million sold. Invaluable for Music Teachers and for recreation.

Tapper's Graded Piano Course

(20 Volumes)

Edited by THOMAS TAPPER, author of *The First Piano Book* and *The Music Supervisor.*

"I have never approved of a Graded Course because I could never find one worthy of serious thought, but I am delighted with TAPPER'S GRADED COURSE and I shall be glad to recommend it upon every opportunity."—**Sarah I. McConnell,** Muncie National Institute.

Marzo's Art of Vocalization

and Preparatory Course to the Same

(24 Volumes)

Compiled and edited by EDUARDO MARZO.

"The best thing of the sort that I know."—**J. Frank Botume.**

Complete catalogs will be sent free on request

Our Songs and Piano Numbers are in active demand by leading teachers and professionals. In fact, our catalog in all departments was never stronger than at the present time. We aim for quality rather than for over production and results warrant a continuance of this course.

Absolute Satisfaction has always been guaranteed by us and we shall continue the same high standard in the future.

Our Large Retail Departments in Boston and New York are constantly growing in importance and service. The experience gained this way we are able to pass on to teachers and dealers in distant cities, for we carry in stock always the standard music of the world and are prepared at all times to fill orders promptly and correctly.

Our Musical Instrument Department is the most important of its kind in America.

Although we are Headquarters for Everything in Music we urge you to **patronize your local dealer** for it will encourage him to carry stock all the material needed by you in your work. He will order for you on request anything not in his stock published by us, including selections of special works for individual needs. These orders will have painstaking attention by our selection clerks, the same as if ordered of us direct. It is our wish to foster the **community spirit** in music and your co-operation by sending your orders through your local dealer will be much appreciated, but if you are unable to secure what you desire, notify us at once.

Oliver Ditson Company, 150 Tremont Street, Boston

Fraud Agent

A man giving the name Kenneth King has been taking subscriptions for Magazines, particularly in the West and Northwest sections of the United States, and giving receipts purporting to come from the Oliver Ditson Company and THE MUSICIAN, offering extraordinary inducements. Needless to say that he is a FRAUD, not authorized by

THE MUSICIAN

Progressive Violin Studies

BY FAMOUS MASTERS

Selected and Edited by Eugene Gruenberg

Vol. II. Studies in the first five positions

$1.00 postpaid

In compiling this volume the editor has had recourse, as in Volume I, to the great number of excellent studies and exercises which the famous masters of the violin have bequeathed to the world of music. Most of these studies are practically unknown, and in bringing these treasures to light Mr. Gruenberg performs a valuable service to students of the violin. Selected with knowledge of the pupil's needs and of the practical merit in each exercise, they offer abundant material, concise and progressive for the grades indicated in the title.

From the Musical Courier

"No student of the violin needs or can find a more useful and interesting collection of the best studies by the best masters."

TAPPER'S GRADED COURSE

FOR THE PIANO

Edited and Arranged by THOMAS TAPPER, Litt. D.
Author of Tapper's First Piano Book

The only course that provides all the necessary lessons in Theory, Music Writing, Melody, and Form, **when** and **where** they should be given

What a Progressive Teacher Says:

"I have never approved of a Graded Course, because I could never find one worthy of serious thought, but I am delighted with Tapper's Graded Course, and I shall recommend it upon every opportunity."

SARAH I. McCONNELL,
Conservatory of Music of Muncie National Institute.

Among the Distinguished Editors of the Work are: M. Esposito, E. R. Kroeger, M. Moszkowski, John Orth, Albert Ross Parsons, I. Philipp, Xaver Scharwenka, W. H. Sherwood, August Spanuth, Bertha Feiring Tapper

The Course Consists of

1. Graded Studies (Grades 1 to 7) . . . . — The Graded Studies constitute a course in technics, and in all problems that develop therefrom.
2. Graded Pieces (Grades 1 to 7) . . . . — The Graded Pieces offer the most pleasing recreations and repertoire selections, grade for grade with the studies.
3. Manuals for Grades 1, 2 and 3 . . . . — The Manuals contain graded lessons in Music Writing, Melody, Analysis, Form, and Music Theory, *applied to real musical composition.*
4. Four-hand Collection, Nos. 1 and 2 . . — The Four-hand Collections are for the double purpose of sight-reading and for ensemble work. They may be used from the third grade.

Price of each grade, $1.00, postpaid. Liberal Discount to Teachers

MELODIA

A Comprehensive Course in Sight Singing

By SAMUEL W. COLE and PROF. LEO R. LEWIS

In four books, each, 50c.

Complete in one volume, paper, $1.50. Complete in one volume, cloth, $2.00.

TESTIMONIALS

I am delighted with the work on Sight Singing as outlined in "MELODIA." This system is by far the most comprehensive, the most practical work published thus far. The course in the Bass Clef excels anything issued in the usual sight-reading manual.

CAROLINE V. SMITH,
Dept. of Music, State Normal School.

I have examined "MELODIA," and the material is good and well graded. The work will certainly fill, better than any other I have seen, the place intended.

J. L. JENNISON,
Choirmaster St. George's Church.

"MELODIA" was duly received and is the best work of its kind I have ever seen. I am delighted with it.

GERTRUDE BROWN.

I have examined the new course in Sight Singing, "MELODIA," and in my opinion it is one of the best works of its kind that I have ever examined. I hope to introduce it into my choral class in the near future.

SISTER M. EUCHERIA,
St. Xavier's Academy.

I have examined your book on Sight Singing, entitled "MELODIA," and think it a most admirable arrangement of exercises for the purpose; it should be brought into our public schools.

ADOLF DAHM-PATERSON.

I have examined "MELODIA" and feel confident that it will fill a long-felt want. It is clear, concise, and so well graded. It ought to be of great value, either to an advanced singer who does not read well at sight, or a beginner; it is excellent as a textbook for teachers, private or in school.

ELIZABETH HANSON BRADFORD.

I have examined "MELODIA" very thoroughly and can congratulate you and the authors upon the very good and logical product. It is certainly to the point in every respect, and ought to be in the hands of every vocal teacher, supervisor of music and college teacher. A careful use of this work will soon revolutionize our entire system of voice teaching. I certainly will adopt it for my class work, and you may expect an order as soon as the fall term begins.

AUGUST GIEGER, Ph.D., D.M.

MADE SUCCESSFUL BY THE TEACHERS THEREFORE EVERLASTINGLY FOR THE TEACHERS.

Concerning a Great Book

PETERS' MODERN PIANOFORTE METHOD, Price $1.00

DESCRIPTION: A practical, melodious, and progressive introduction to the art of pianoforte playing. **Both the Treble and Bass Clefs are used simultaneously from the very beginning.** Especially excellent in possessing many new and practical teaching hints and ideas of sound educational value. Exhaustively annotated and thoroughly fingered and phrased. The explanatory text is couched in the plainest and most simple language, and can be readily understood by the youngest pupils. However, no "baby" or "dollie" titles are used. It may be recommended highly for the older or adult-beginners. Suggests a helpful supplemental course of technical work. Closes with a dictionary of musical terms and signs. Forceful and effective in that it is concise and contains no dull parts. Every page has an object and accomplishes something tangible. The mechanical production is pronouncedly good—the binding will stand hard usage.

USE: As the sole instruction book for pupils from the beginning to easy medium grade. As the central or foundational work in a beginner course involving additional study works on special branches. As a guide to teachers in acquiring a standard system of teaching. As a supplemental work to any graded course, etc., for the particular study of the rudiments, the various elements, and such special branches as correct usage of the pedal, etc. As the beginning book for pupils of any age.

WILLIS SERVICE has no limit. It is for teachers everywhere. A letter asking about it is time and two cents well spent.

National Graded Course

THE ONLY METHOD OF PIANO INSTRUCTION

Illustrated by America's Most Distinguished Teachers and Pianists

A Practical, Comprehensive and Thoroughly Graded Course

The New Gradus ad Parnassum, Embodying the Latest and Best Ideas in Pedagogy

It Will Help You in Your Teaching

BECAUSE

It embodies the work of the most eminent pianists and teachers in America.
It can be readily adapted to your "method," no matter what that may be.
It is the LATEST work of the kind.
ALL of the studies are carefully annotated, fingered and edited.
It is the most carefully graded of any course before the public.
It begins at the beginning of study.
It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.
It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.
Hundreds of your fellow teachers from all parts of the country have sent us, unsolicited, enthusiastic commendations of these very features.

The "National Graded Course," which is complete in eight books (Primary Grade and Grades 1-7 inclusive), will be sent to any School or Teacher for examination and comparison with other methods, **without any obligation to purchase.** A critical examination and a practical trial with your pupils will convince you that it is the **Only Perfect Method** of Piano Instruction.

NOTE—Facsimile editions (small size) of the Primary Grade and Grade One, complete, together with a pamphlet describing the advantages of Graded Courses and the "National" in particular, which is well worth reading, will be sent **Free** and **Postpaid** to any address on request.

SCHIRMER 100% SERVICE

INSIST
on getting Schirmer Editions of the Classics

GOOD SERVICE in the music world means:

Orders filled promptly and accurately.
Prices and discounts that are right.
A complete and well-classified stock.
Correct editing and perfect printing.
No unnecessary transportation charges.
And, of course, courtesy.

100% SERVICE is "good service" plus:

The ability and willingness to furnish authentic information on every phase of musical research.
The material with which to fill any order, however rare and complex its requirements may be.

FOR NEARLY SEVENTY YEARS we have studied the musical development of this country and abroad. We have unswervingly maintained a standard of the best—first, last and always. We carry the largest and most comprehensive stock of musical literature in the world, both American and foreign publications. **Our editions are unsurpassed as to correct text and perfect typography.** Our orders are handled by specialists in the various branches. Our mechanical facilities are unequaled, as we now have the largest and most up-to-date music-printing plant in the country.

We are equipped in every respect to render **100 PER CENT SERVICE** to musicians everywhere. Dealers all over the country have for years recognized the value of this service and availed themselves of it. Their patrons, in turn, receive the benefit of it. This announcement, therefore, is intended specifically for those **Schools, Colleges, Teachers, Students and Music Lovers** who do not enjoy the advantage of local service. To such we wish to say that we are at all times desirous of rendering prompt and practical assistance, whether it be in the filling of a mail order or giving helpful information as to the arranging of a program, data in regard to a composer, etc., etc.

BULLETINS *containing announcements and reviews of our new publications sent free to any address. If you are not receiving them, send us your name and state the class of music you are interested in.*

G. SCHIRMER - - 3 East 43d St., New York

E. GRANADOS
SPANISH DANCES
(Villanesca—Playera Jota) From Op. 5 . . PRICE, $1.00

The characteristic color and bracing rhythmic spirit of these dances is very unusual.

While built upon the fundamental principles of Spanish folk-dances, their harmonic setting, originality, and striking melodic development, make them particularly interesting to solo pianists, who will find them exceedingly suitable for a concert repertoire of medium difficulty.

MOTION PICTURE PIANISTS

Just Published: "WHAT TO PLAY FOR THE MOVIES"

A carefully selected list of compositions for the use of motion-picture theatres. Classified and compiled for the guidance of the motion-picture pianist, it will enable you to fit almost any picture with the proper music.
Music sold at specially reduced prices. Send for this booklet, it's free.

Edition Wood

850 VOLUMES

THE Best Series of Standard Musical Works, including Studies, Recreations and Classics. Carefully edited, perfectly engraved, printed and bound. Teachers, Students and Music Lovers admit the superiority of this edition.

EDITION WOOD is pre-eminently the Teachers' Edition,---planned for teachers, built up to meet the requirements of teachers. The best evidence that the efforts of its publishers have been in the right direction is the large number of teachers now using it,—a number constantly and rapidly increasing.

The high position it now occupies has been attained only by virtue of consistently giving the Teaching Profession the maximum of *practical value.*

New Pianoforte Works

ESSENTIAL RUDIMENTS

A CONCISE AND MELODIOUS INTRODUCTION TO
THE ART of PIANOFORTE PLAYING
BY
EDITH HATCH

Book I **Price 60 Cents**
(*Schmidt's Educational Series, No. 163*)

Some of the Special features of this book are:

1. The treble and bass clefs are taught together.
2. Double notes and triads are taught from the very first.
3. Ear training is provided for.
4. Pieces of strong rhythmical character are included in the book to establish a good sense of rhythm.
5. A general review and test is given at the end of the book and a grade assigned to the pupil.

FIRST YEAR CLASSICS

JUST ISSUED

FIRST YEAR MOZART

15 SELECTED COMPOSITIONS
BY
W. A. MOZART
Adapted and Edited by
R. KRENTZLIN

Price 75 Cents
(*Schmidt's Educational Series, No. 151*)

A unique collection of the simplest Mozart material selected from a large variety of sources.

FIRST YEAR BACH

20 EASIEST COMPOSITIONS
BY
J. S. BACH
(*Schmidt's Educational Series, No. 85*)

FIRST YEAR HANDEL

12 EASY COMPOSITIONS
BY

(*Schmidt's Educational Series, No. 145*)
Selected and Edited by
ARTHUR FOOTE

Price 75 Cents Each

ENDORSEMENT

"A boon to piano teachers, for it supplies the simplest of polyphonic material, arranged and edited in a masterly manner. I shall use it in my teaching, and am strongly recommending it to my students for use with their pupils."

(Signed) MARY VENABLE.

New Violin Music

FRANZ DRDLA

3 COMPOSITIONS FOR
VIOLIN AND PIANOFORTE

Op. 137. BIANCA
Op. 138. GRISELDA
Op. 139. ROMOLA. (Mazurka)
Price 75 Cents
(*Schmidt's Educational Series, No. 156*)

The latest compositions by this foremost writer.

Suitable for teaching and performance.

Special Introductory Offer

One **sample copy** of the above work will be sent for **25 cents** if ordered before November 1st, 1916. *Mention "The Musician."*

AUGUST NÖLCK

GREETINGS FROM AFAR

4 COMPOSITIONS FOR
VIOLIN AND PIANOFORTE

Op. 196 Book I Price 60 Cents
(*Schmidt's Educational Series, No. 158*)

Contents

IN A SYLVAN VALE, Waltz.
AT A POLISH FESTIVAL, Mazurka.
TO AN ALPINE FLOWER, Melody.
EVENING ON THE HILLS, Reverie.

Graceful, melodious numbers in the First and Third Positions

Suitable for solo playing or class work

Special Introductory Offer

One **sample copy** of the above work will be sent for **25 cents** if ordered before November 1st, 1916. *Mention "The Musician."*

New Church Cantatas

HARVEST OR GENERAL USE

SOWING AND REAPING

COMPOSED BY
FRED. W. PEACE

Price 50 Cents

Written in a fluent and melodious style, with solos for Soprano, Alto, Tenor, and Bass. The Chorus writing is effective and without difficulty for the average Church choir.

Time of performance about one hour and a quarter.

CHRISTMAS

THE NEW BORN KING

COMPOSED BY
HUGH BLAIR

Price 50 Cents

A new and augmented edition of an unusually interesting Church Cantata for Christmas-tide. Occupies about fifty minutes in performance. Solos for Soprano, Alto, Tenor, and Bass.

Special Introductory Offer

One **sample copy** of the above Cantatas will be sent for **25 cents** each if ordered before November 1st, 1916. *Mention "The Musician."*

The Pianist and His Damper Pedal

BY EDWIN HUGHES

I

[Mr. Hughes has recently returned to the United States after several years of professional work in Munich.—Editor]

SINCE the time when the resonance of strings stretched over a sounding-board became so far developed as to make itself a factor of musical importance, the question of using the after-vibrations to produce new and original effects and of damping the superfluous flood of tone has occupied the attention of instrument makers and players.

In all stringed instruments in which the tone is produced by striking the strings, the after-resonance and its artistic application have become matters of prime importance, without which it would be quite impossible for such instruments to hold their own, from a modern musical point of view, with the instruments of the viol class.

From the inception of the pianoforte, therefore, we hear of various devices to place this valuable musical acquisition of after-resonance under the complete control of the performer, something which had been entirely lacking in the older keyboard instruments.

An Autographed Portrait of Leschetizky to His Pupil, Edwin Hughes

THE CLAVICHORD

In the clavichord of Bach's day the damping was effected by strips of felt twisted in and out among the wires at one end of their length.

The mere raising of the finger damped the tone completely.

From the very construction of the clavichord any other form of damping was an impossibility. Pedal effects were, of course, unknown, undreamed of, to the clavichordist, a matter that all well-intentioned players of Bach must hold constantly in mind, for although Bach was familiar with the first efforts at making pianofortes, which were just beginning to put in their appearance during the first decade or two of the eighteenth century, he evinced a decided preference for the older instrument, as the title of his immortal forty-eight *Preludes and Fugues* well indicates.

THE HARPSICHORD

Also the harpsichord possessed no damper pedal or other arrangement for sustaining the tone after the fingers had been lifted from the keys. The row of pedals seen on modern examples of the instrument correspond somewhat, in effect, to the stops on the harmonium, bringing four-foot, eight-foot and sixteen-foot strings into play, and altering the character of the tone. On the old instruments stops took the place of these pedals. The damper pedal which is found on modern imitations of the harpsichord is of course an anachronism.

EARLY GERMAN PIANOFORTES

German pianofortes of the eighteenth century had, some of them, stops near the left hand of the player, by means of which the dampers could be raised in two sections, this scheme of dividing the dampers being retained even in some pianos where the dampers were operated by two foot-levers, up until about 1830.

A KNEE LEVER

Other German pianos had a knee-lever to raise the dampers, somewhat similar to the knee-swell of the harmonium of today, with the exception that the lever was pressed upward with the top of the knee, instead of sidewise.

Mozart, in a letter from Augsburg in 1777, mentions with enthusiasm a piano with such a knee-lever. As he was but twenty-one at the time, it is evident that he was aware of the possibilities of pedal effects from then on, a fact of importance to the reproductive artist in the interpretation of the master's later compositions for the instrument.

INVENTION OF THE DAMPER PEDAL

The earliest appearance of the damper pedal, as we know it today, was in a piano made by John Broadwood, of London, in 1783, and the device has remained practically unaltered in form until the present time.

ADVANTAGES OF THE DAMPER PEDAL

The fact that the dampers could be operated by the foot practically gave to the pianist a third hand and had an enormous influence on the manner of composition for the instrument. Long notes or chords could now be held, at will, to the limit of the sonority of the instrument, while the hands could be released from the keys. The extension of harmonic figuration, begun by Beethoven and Hummel and carried to such wonderful heights by Chopin and Liszt, became possible, as did in later days the practical realization of the atmospheric effects of Debussy.

From a purely tonal point of view an even greater gain was achieved, for the simultaneous raising of the dampers allowed all harmonically related strings to vibrate sympathetically with the chords or notes played by the fingers. Modern ears, so used to pedal effects on the instruments of today, are hardly able to appreciate this advance in tonal beauty, until perhaps there comes an opportunity for comparing the dry, brittle tone of the old clavichord and harpsichord with the round, full quality of the modern piano tone, colored and reinforced by the sympathetic vibrations set free by the release of all the dampers from the strings.

So manifold were the possibilities opened up by Broadwood's invention, that the study of pedal effects gradually attained an importance quite on a

par from a musical point of view with that of sensitiveness of touch and nimbleness of finger, so that no pianist can now hope to reach the fullest development of his art until he has become a past master in the use of the damper pedal.

PRINTED PEDAL MARKINGS

In studying the functions of the pedal, the effort should be toward attaining independence in pedaling just as speedily as possible, through the development of accuracy, taste, and good judgment, and a knowledge of the most frequently used pedal effects.

Little reliance can be placed in the pedal markings generally found on the printed page, which, either from the fault of the composor or the printer, are always insufficient and usually far from anything like accuracy. In no point have composers been so careless as in the indication of pedal markings, and not a few, such as Brahms and MacDowell, have given up the whole matter as a bad job and left the pedaling of their compositions almost entirely to the individual taste of the performer.

There is, however, just as much play for the player's knowledge of pedal effects in the works of composers such as Chopin and Schumann, who attempted a more or less accurate indication of the use of the pedal in many of their works, but whose efforts, of course, did not reach anything like a satisfactory result in the matter.

In the Clara Schumann edition of her husband's works, that which comes nearest perhaps to indicating the exact intentions of the composer, there is a quasi-accurate attempt at pedal marking, quite accurate in fact in most places where there can be no doubt at all as to the use of the pedal, but failing almost completely to shed any light on the pedaling of the more complicated passages.

And what pianist would think even of pedaling the Chopin C sharp minor *Valse* after the indications in the Mikuli edition, which is again the most accurate as to text?

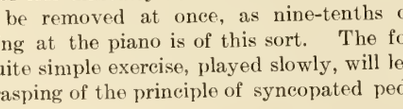
The salvation of the player lies then in the development of his own individual taste and of the fineness of perception of that final judge of pedal and all other effects at the instrument, the Ear.

NO SIMPLE RULE

The simple rule for pedaling in general is, of course, that a new pedal must be taken with each new harmony, although we shall find that many very beautiful pedal effects, particularly in the works of more modern composers, owe their charm to a direct disregard of this principle. The mere mechanical act of pedaling is so simple, particularly when the pedal is taken at the same time with a note or chord, that it need not detain us long.

THE SYNCOPATED PEDAL

The Syncopated Pedal, however, usually offers more or less difficulty at first to the student, which must be removed at once, as nine-tenths of all pedaling at the piano is of this sort. The following quite simple exercise, played slowly, will lead to the grasping of the principle of syncopated pedaling in a few moments:



Begin with the pedal pressed down. At the first quarter play the notes and raise the foot simultaneously. At the following rest the motion is reversed; foot down, finger up. The effect is that of a scale of legato half-notes. Besides making clear the principle of the syncopated pedal, this exercise illustrates another very important point in this sort of pedaling, namely:

The return of the foot to the pedal not immediately after striking the new note or chord, but somewhat later.

This is of the utmost importance for clean pedaling in the more sonorous parts of the instrument; for if the pedal is pressed immediately *after* it has been released, the vibrations of the strings, especially in grand pianos of full tone quality, will not have completely disappeared, and will blur in with the new harmony. Much of the bad pedaling that one hears in piano playing comes from this abuse of the syncopated pedal, this *re*-pressure of the foot too quickly after the pedal has been released. In legato playing the foot can *almost never* be pressed down immediately after the new harmony is taken, except when the tones lie in the upper portion of the keyboard.

Also if the dampers are allowed to drop suddenly on the strings and then raised again instantly, all the strings of the instrument will be set slightly in vibration by the sharp impact of the dampers. The resulting blur is as disagreeable as a directly false use of the pedal.

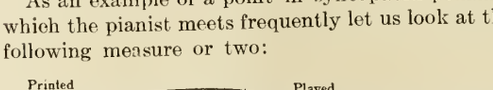
In order to form the habit of perfectly clean syncopated pedaling, it is even good to practise raising the foot quite off the lever before taking the new pedal.

This habit of accurate syncopated pedaling, once acquired, the first important milestone in the art of using the damper pedal has been passed. The perfect *legato*, so far as a real legato on the piano is possible, is assured, even when the hands are required to play in extended positions or when wide skips come into consideration.

STUDIES IN SYNCOPATED PEDALING

As a first study in syncopated pedaling, a piece of simple lyric character, such as the *Song without Words* in C minor, No. 14, of Mendelssohn, is excellent, where the use of the pedal, syncopated throughout, remains the same (changed on the first and second quarters of each measure), practically during the whole composition. Do not *re*-press the pedal immediately after its release at the quarter notes of the melody, but rather a *sixteenth note later*, in order to insure absolute clearness.

As an example of a point in syncopated pedaling which the pianist meets frequently let us look at the following measure or two:



It is impossible to make an absolutely *legato* progression from the second to the third chords, on account of the skip and the stretch in the left hand. There must be a break somewhere and the most propitious place to make it is, strange to say, in the upper voices.

The important consideration is that there shall be the effect of absolute tonal continuity, which the above method of execution gives.

Fortunately our aural sense is such that it easily bridges over the instant hiatus in the melody line in a case such as this, when the pause is cleverly filled in by taking the bass tone with syncopated pedal as indicated. The possibility of playing the low E flat and the right hand chord together with the beat and with the pedal change, then allowing the A flat in the left hand to follow immediately afterward would hardly conform with the composer's intention, still less the playing of the A flat with the thumb of the right hand.

The following is an example of extremely fine syncopated pedaling, where fingers and foot cooperate in the most intimate manner to secure absolute smoothness and continuity in the voice progressions:

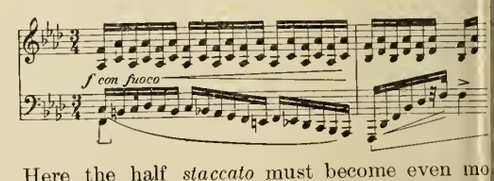
Many passages of similar nature are to be met with in the compositions of Schumann and Brahms. They require the utmost *finesse* in execution.

FAILURE TO CATCH THE BASS TONE

It may be mentioned here that one of the most frequent mistakes in syncopated pedaling is the failure to catch the bass tone at the proper moment with the pedal in the case of skips in the left hand, as a result of which the upper voices sound out without the underlying support of the bass which the composer had intended.

IN THE LOWER PART OF THE KEYBOARD

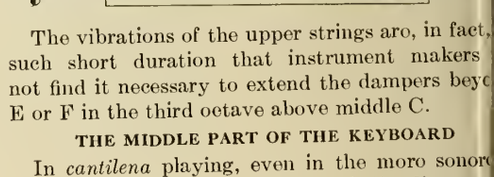
In pedaling progressions of melodic significance in the lower part of the keyboard, great care must be taken to keep the playing clear, especially in the case of step-wise progressions and of progression upward, for the thick bass strings do not damp so readily as the higher strings. The ear must be constantly on the *qui vive*. When melodic passages descend far into the bass of the instrument, it is even necessary to play them half *staccato* in order to obtain the necessary distinctness, abstaining from the use of the pedal.



Here the half *staccato* must become even more short and sharp towards the end of the first measure. The short pedal taken at the beginning of the measure reinforces the tone quality of the first chord.

THE UPPER PART OF THE KEYBOARD

Passages in the upper part of the instrument with on the other hand, bear a good deal more pedal. Even chromatic runs may be taken here with pedal, to the great benefit of the tone quality and without the slightest detriment to the clearness of the passage.

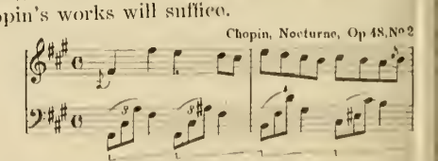


The vibrations of the upper strings are, in fact, such short duration that instrument makers do not find it necessary to extend the dampers beyond E or F in the third octave above middle C.

THE MIDDLE PART OF THE KEYBOARD

In *cantilena* playing, even in the more sonorous middle portion of the piano, melodic dissonances are often allowed to follow each other while the pedal is held. By a careful distinction in finger pressure between important melody notes and their less important neighbors, the unpleasant effect of such dissonances during the course of a melodic passage disappears entirely, and in the hands of a pianist with finely sensitive finger-tips, the passage receives in fact, an added charm from the complete melting of the melody tones one into the other.

This exquisite treatment of the melodic line, requiring a combination of infinite fineness of feeling for *nuance* in the fingers with a delicate perception of pedal possibilities, first makes its appearance among the great composers in the works of Chopin, although he himself was but a disciple of Hummel and Field in this particular matter. One example among hundreds which could be quoted from Chopin's works will suffice.



If this passage and similar ones were pedaled with the object of avoiding, with pedantic pre-

ss, all dissonances in the melody, an unbearable ryness would result, not to mention the constant ss of the ground tones of the harmony. The xtent to which we can avail ourselves of the rein-rcement in tone quality given by the pedal in ep-wise melodic progressions depends of course ntirely on the position of the passage in a higher lower part of the keyboard. When, as often in e case of skips in the left hand, it is a matter of hoosing between the lesser of two evils, that of sing the bass tone or of blurring slightly the elodic progression, the well-trained ear must pass fine and final judgment.

VARIETY OF TREATMENT OF SIMILAR PHRASES

For variety in the coloring of similar phrases hich follow each other the damper pedal is often a luable assistant to the fingers. The pedal may taken with the first phrase, then omitted with e second, or *vice versa*, or a completely different daling of the second phrase may be used to bring out the necessary variety. Of even more im-rtance in such cases is, however, the Soft Pedal.

Such phrase repetitions are of frequent occurrence in Schubert and Liszt, and call for colorful treatment if monotony is to be avoided.

THE NON-SYNCOPATED PEDAL

The first phrase of the above example indicates one of the rather rare cases in which the pedal is not syncopated, but taken with the stroke upon the keys, as does the following quotation of a *martellato* chord passage from the *Finale* of the Schumann *Symphonic Etudes*.

Even in *piano* passages of *non-legato* or half *staccato* notes or chords a short pedal may be used to advantage with the stroke upon the keys to do away with the dryness which would otherwise result and which is often undesirable.

The second phrase may of course also be played without the use of the damper pedal.

(*Part II in the November issue*)

MUSIC AMONG THE FRENCH SOLDIERS

Even amid war's alarms and tragedies music s not lost its hold on the men. Wonderfully pular are the songs of the people, rightly called k-songs which represent the most precious musical asures of a race.

On both sides of the battle lines musicians of gh distinction are to be found, in trench, in hos-al service, in the air, and their art is at the service their fellows.

Among those known to the American musical public are Charles Dalmores, the opera tenor, and Carlos Salzédo, harpist of the Metropolitan Opera House Orchestra. Mr. Salzédo, while stationed at the celebrated French fortress, Toul, arranged three folk-songs which were immediately taken up by the men in the trenches and convalescing in the hospitals and popularized all over the country as songs of the soldiers in the field. These will shortly be issued by the publisher of The Musician.

In the picture above Mr. Salzédo is in the front at the right (looking at the group), and back of him is Mr. Dalmores smoking.

THE LIMITS OF DISSONANCE

BY J. S. VAN CLEVE

Why should music ever be dissonant? And to at extent may a composer employ those har-nics which symbolize unrest?

These questions perpetually arise. We constantly hear it claimed for every new work that it is consummately beautiful, and needs only familiarity to disclose its charm. This idea was wittily expressed by an American humorist, who found Wagner's music both tedious and unattractive. Having listened to it at the side of a German enthusiast, he expressed surprise that such music could give pleasure, but said his mind was relieved as soon as he learned that the music was far better than it sounded.

This *bon mot* would have been applicable in the days of Rameau, who said that music must necessarily decline, as all possible combinations of sound had been used. That was in 1722. Since that period, a number of interesting men have arisen—Bach, Mozart, Beethoven, Handel, Haydn, Schubert, Mendelssohn, Schumann, Chopin, Liszt, Wagner, Brahms, and a cohort of others, who found some interesting combinations which the foolish world enjoys hearing.

All sounds heard together are of two general classes: Those which express a state of repose, and those which express a state of unrest. Some chords give the sense of rest; others tell of craving desire. Some are like the placid lake—some, the tossing billows. But they are both the same element—water.

Time and again in the course of musical history men have arisen who ventured out into the primeval forest and cut new paths while exploring to find novel works of nature. Each of these met with strenuous opposition from the established representatives of the art in his epoch. People were accustomed to shake their heads dubiously at the intricacies of Bach, and even Beethoven was criticised for that "appalling" dissonance of the 5th and 4th, C, F, and D, resulting from the mixture of the F major and C major triads, at the beginning of the last movement of the most euphonious of the symphonies, the *Pastoral*. Could any nonsense exceed this?

Beethoven felt that music must express something deeper and more elemental than the rippling waves on the surface of life, and must reach down to the ocean current.

How far a composer may go in selecting the chords of unrest can never be accurately adjudicated. Years ago Mr. Theodore Thomas brought out a *Minuet* by Boccherini, of surpassing loveliness so far as extreme sweetness goes. But one could not endure a whole concert of such confections. Hans von Bülow, a champion of the new school, and a promoter of both Wagner and Brahms, was once asked if he had heard a performance of a certain Haydn symphony. He answered: "Oh, no; to hear Haydn is too painful."

Thousands of musicians have had a similar feeling on first hearing Wagner, for exactly the opposite reason. How we all used to gasp and shudder at the unprepared and strangely resolved chords of the seventh and ninth and even eleventh and thirteenth, so densely woven in the Wagnerian web. It does not follow, however, that all composers should on all occasions sprinkle dissonances like a hail-storm upon their pages.

It may be laid down as an abiding principle that a composer having a heart full of emotion, if he has imagination, and can send his assemblages of tones through the conduit-pipe of technical skill into a reservoir of definite composition may become a refreshing source of inspiration to his fellow-men. They may draw off those tones in varied rills of refreshment of their own spirits, and obtain the imparted state of mind, in some measure at least, which first existed in the composer. There must always be, however, some strong human emotion, and the expression, however bizarre, must be expert.

For instance, one of the finest examples of long-continued—not linked sweetness long drawn out, but linked bitter-sweet—may be found in the accompaniment to *Ich grolle nicht*, by Schumann. That passage, coming as the climax of the song, is a stroke of genius, for the experience of all mankind confirms the fact that a baffled love has its real bitterness qualified and enriched by sweetness even more poignant. Else why should poets and musicians have uttered this sentiment so many tens of thousands of times?

This question of the limits of the use of dissonance not only recurs periodically but is the burning question of the day in the realm of creative music. Horace, the Latin poet, said there is a certain license to the painter and poet to invent the unreal, but of a truth this license should never degenerate into mere

musical licentiousness. Every time a dissonance shows its head it should be commanded to halt and give the countersign.

There are a few examples of noble effect produced by pure concords, such as the famous instance of the three major chords on F, G, and A united by the device of contrary motion used by Palestrina in an *Ave Maria*. But the warm, serene effect of these chords depended largely on the fact that they were to be sung in a huge basilica, so as to produce echoes which caused them to overlap, like waves of the sea, and this afforded an admixture of temporary relieving dissonance.

Our business in this world, however, is that of mixed creatures—animals with a soul entangled in them. Musical art should utter and communicate the psychological states of one human being to another. The great theorist, Marx, defined music as the art of motion, proceeding from soul to soul. So long as human souls have varied states, so long must the composer mix concords and discords. But the mixture must always conform to the laws of spiritual health; and while it is true that our medicinal drugs are poisons, they must never be given in quantities too large.

ON PHRASING

BY LEO OEHMLER

Phrasing, undoubtedly, is the most important item to observe in the rendition of a composition, because it controls the fingering and not *vice versa*, as some pianists who edit music seem to think.

The architectural outlines of a composition can only be discerned through or by the phrasing. Consequently, each phrase should be clearly revealed to the eye. And by this we mean that not only fragments of phrases but each *entire* phrase should be plastically revealed by the proper use of the slur.

The slur, as the modern musician understands it, is not merely placed over a group of notes to signify that such notes are to be played legato; its chief significance is that it is to reveal the beginning and end of each phrase.

But when this all-comprehensive use of the slur is made it may happen that some notes within the phrase demand a finger, wrist, or arm-touch staccato; in which case the dashes or dots are added over those notes.

But for the purpose of clear interpretation, the slur should always signify,—that where *it* begins the *phrase* begins, and where *it* ends the *phrase* also ends.

Seldom do composers or editors play compositions as they slur them! On the contrary they usually render pieces much better than they have marked them! Their musical feeling usually eclipses their intellectual appreciation of the interpretative signs; where they err in analytical powers and editorship, they make up by artistic, poetic, or innate musical power.

But if they were keener as to the exact meaning of every sign employed in music they would undoubtedly mark the compositions just as they play them. In other words, the printed page would exactly match the delivery of the musical message.

The chief editorial crimes seem to be committed against the slur. True, sometimes the slur as a phrase-sign must be discarded; but only where entire phrases are to be executed with finger, wrist, or arm staccato.

In such instances, the teacher and student need also not be obliged to grope in the dark as to where such phrases begin and end; for the great dynamic sign should then follow such staccato phrases from beginning to end, just as the great dynamic sign should underlie most of the slurred phrases. For it is chiefly this sign which reveals just where the climax of the phrase occurs, namely:—exactly at the beginning of the closing-up section of the sign.

Consequently, the great dynamic sign should accompany most phrases whether they be revealed by the slur or not.

If composers and editors would more often think of the slur and great dynamic sign, as traveling together, as close friends from the exact beginning to the extreme end of each phrase, revealing carefully just where the climax of the phrase is to occur, unmusical phrasing would become a thing of the past.

In endeavoring to throw more light on the subject of phrasing by revealing the conjunctive use of the slur and great dynamic sign, the reader must of course understand, that the great dynamic sign only reveals the chief accent or climax of a phrase; never a secondary accent.

For secondary accents the expert composer or experienced editor always employs the secondary signs such as, pressure touch sign (—); *sforzato* or *sforzando* signs (>); *demi-marcato* sign (called *portamento* in singing) which is a combination of dot and slur combined (◠) (but which, if it is to be distinguished from ordinary staccato in a phrase should be marked *demi-marcato* or *portamento*); then there is the sign *tenuto*, and a few more.

But these secondary signs, if properly employed, are but accessories to the main ones, which, in all good editing consist of the slur and great dynamic sign, which two primary signs are the only ones which can reveal the phrases clearly.

The general conception seems to be, that the first half of the dynamic sign is merely a crescendo proposition and the second half a decrescendo affair. This inexact conception is responsible for the unmusical and destructive use made of it by many otherwise superior musicians. True, a crescendo does follow the gradual opening of the first half of the sign and a gradual decrescendo the closing-up half.

But *how* loud or soft these gradations of tone should be is altogether dependent upon the amount of tone volume the nature of the phrase calls for and for this purpose the well-known signs *ff*, *f*, *mf*, *p*, *mp*, *pp*, etc., are used.

There is no logic in using the great dynamic sign unless it accompanies the phrase throughout its length and unless the second or closing-up section, with its open end, falls on the climax of the phrase.

For general crescendos or decrescendos over the large masses or massed phrases, *cresc.* or *decresc.* suffices, with the sforzato accent sign to indicate a climax in such massing of phrases.

If every composition were correctly and beautifully phrased by the composer himself or by a conscientious editor, every composition, whether short or long, classic, semi-classic, or popular, would be intelligible according to its phrase construction, and each phrase, whether long or short, would be accompanied by its underlying dynamic sign as well as by its secondary signs placed above the notes.

It becomes obvious from all this that logical fingering can only accrue if the phrase is first clearly defined by the slur (if it is to be played legato) or by the great dynamic sign (if it is to be rendered by one of the staccato touches), or by both slur and dynamic signs combined. For the fingering can only be logically estimated from lowest to highest note in the phrase, by the hand being first spread out and quietly laid on the phrase.

By this procedure the fingering of each individual phrase suggests itself, for each phrase is viewed from the vocalist's viewpoint, namely, that it is as complete a musical proposition as though words were there to amplify its meaning, and that the hand must be lifted from the keyboard at the beginning of each phrase, the point where the singer would take breath.

This estimation of piano playing from the singer's viewpoint is the only rational one to secure musical and artistic effects, as each phrase is liberated or individualized thereby into a plastic, living thing, and fingering becomes logical, free, elastic, and modern because the idea to unfetter the phrases and hand them like a superior vocalist is a modern idea.

To focus thus on phrasing and dynamics creates intelligent musical thinking and requires attention without relaxation; and much of the nervousness or all of it, which afflicts some pianists, vanishes like magic and the student is on the high-road to success.

By constantly thinking of entire phrases and not in fragments of them, errors in fingering or awkward hand positions cannot accrue.

A piece of literature, no matter how valuable as a literary product or by what author, would at once lose in merit and become obscure in meaning if its entire punctuation were wrong.

Likewise, a musical composition, no matter how exalted its esthetic merit or by what composer, if it is phrased and edited poorly or wrongly altogether becomes quite useless as a teaching piece; and the virtuoso will also prefer to shun it, because it involves extra labor to memorize and interpret it properly.

But if grammar and syntax are vital factors in literature, so likewise are they in the world's language, Music.

The composer or editor, realizing the affinity between the psychological and physiological aspects of music, is also alive to the fact that dissonant chords and chords of unrest are far more frequent and accented than independent chords of rest.

Hence he gauges the placing of his dynamic signs by the laws governing harmony and is not merely guided by his melodic or lyric taste.

By observing laws in his editorial scheme, he does not, as some may superficially conclude, degenerate into a pedant, but has thereby stepped out into the open and linked his own artistic discernment with Nature's dynamic processes.

The lover of Nature discovers that in her realm the great dynamic sign plays a most important rôle.

All the action of weird storms in their onslaughts and departures; the incoming and outgoing waves of the sea; the ponderous roll of thunder; the murmur of forest streams in their winding courses through emerald-hued woods, and other sounds in Nature accompanying her varying moods, are all exemplified by the great dynamic sign in music, name-

For all nature sounds, from sighing wind to crashing thunder storm, begin with but little sound, swell to a climax, and expire again into the invisible.

Let us all henceforth be more keenly alert about correct phrasing and learn to build climaxes properly too. By aiming to inspire composers and editors with more respect for Nature's dynamic teaching and awakening in them a keener perception of the natural use of all dynamic signs, particularly the slur and great dynamic sign as applied to phrasing, we will all advance the general cause of music and additionally prove to the world that its intellectual and scientific aspects are quite as much in evidence as its emotional power to depict human and nature moods.

Ten Reasons for Studying Harmony

BY ARTHUR TRAVES GRANFIELD

It teaches how to build the pillars of music: chords.

It teaches the progressions and resolutions of chords.

It is a potent aid in assisting sight-reading.

It is a valuable brain developer.

It gives poise and certainty to one's playing.

It impresses groups of notes upon the mind, thereby assisting in memorization.

It develops an appreciation for the best in music through its cultivation of a taste for correct harmonic progression.

It teaches modulation, that is, the ability to pass smoothly from one key into another.

It teaches us the classification of chords—harmonic analysis.

It teaches us to think music in a logical manner.

TOMORROW

BY THEODORE STEARNS

If you will scrutinize this picture carefully you ill see the dust on the door. It is a snapshot of a cked-up, abandoned nickel show and the last, tat- red sign left over the entrance reads: Tomorrow.

Investigation showed me that a propensity for utting things off—delaying decision in little things -made this modest movie a failure.

"Tomorrow" is the tired man's tocsin.

After Boabdil, the last king of Granada, "To- orrow" (*manaña*) became the slogan of southern, unny Spain; caused its ancient power to crawl where nce it climbed, and covered the Moor with the ivy be of romance.

"Tomorrow" crept over to Mexico and Today is e result. Almost everything down there is shifted a to "tomorrow," until that word has become the ational phrase that has wrecked the last of a once ighty race.

Vigorous todays take time to handle successfully. lore than that. They demand decision. They are ll of busy minutes; "all-fired" busy, because they e spinning along right in front of your nose.

Take the 20th Century Limited, for instance. It verages fifty miles an hour of smooth speed— etty close to eighty feet a second. That means a mp onward of over forty times your customary ride in the flash of an eye! That's what decision n do with time as applied to progressive science.

You can't practise piano at this rate of speed, t you have a servant with you, swifter than an press train, and he is working all the time. There no dust on his door.

His name is Thought.

Have you got him harnessed?

What are *you* doing with the silent, leaping min- es of today? They could not be more animate were ey to flash this intelligent query to you as they ee past.

"Have you determined what to do with us—will u decide today—or tomorrow?"

It is, perhaps, human nature to dream. Most of work. Some of us do not. We think we do and nder why we are not successful. I tell you it is cause we dream at the wrong time and spend too uch time analyzing our dreams.

"I'll do it tomorrow" has wrecked thousands of es because, half the time, the tomorrow could be day.

Naturally accomplishment takes time and pa- nce. You cannot plant a radish seed after break- st and eat it for dinner. It takes twenty days to oduce a good radish. But if you plant it "To- rrow," you'll have to wait twenty-one days, and u might die on the twenty-first day and not get a lish at all.

Perhaps you wouldn't miss it, for some radishes e rather hot eating anyway.

Any future has the expectancy of romance, even the most matter-of-fact business man or woman, ause it contains a certain amount of hope.

To the rich or successful it promises further alth or fame; to the struggling it is a goal of prom- d attainment; for the hopelessly weary or dis- raged at least it pledges peace.

No matter who or what we are "Tomorrow" has some magic, only magic will not make technic or pay the cruel landlady. The days of Anderson and Grimm are loitering back in the shadow lanes of history and can help us only in our dreams.

Society is different now and we are living amid banks and obligations. Time is still unchanged, only there is not so much space. Farms have become cities and too many of us are just in time to be too late.

Dream if you must; yes, but dream with a wide-awake smile.

All tomorrows are made today—there's no question about that, is there?

It's the house our decision puts the future in that counts.

Shall it be well-dusted, fair and true—
Or just a relic and a ruin?

———o———

THE BEGINNINGS OF MUSICAL FORM

Dr. Percy Buck, Professor of Music in Trinity College, London, delivered two lectures on Form in Music to a general audience in Dublin. From a report of the lecture, printed in *The Musical Herald*, of London, we have taken the following paragraphs, somewhat modified in condensation:

The word "form," spelled with a capital "F," is wielded about in argument as if it means something deep and subtle, which ordinary people cannot understand. Artistic things do not grow ready-made, and it is necessary to go back to the beginning and show why form is necessary. Music for centuries consisted of melody unaccompanied. The singing of infants, until, say, about a year old, is a kind of "curve" of melody, then they begin to find that one definite note can be followed by another.

Music written on the curve of the voice is that known as Plain-song. At a comma it falls a semitone, at a colon or semi-colon a minor third, and at the end of a sentence a fifth. All Plain-song grew up more or less in that way. Plain-song has another characteristic in that it is no tune unless sung to words, the reason being that till words are put to the tones one cannot say where the accent lies. One cannot whistle or hum a tune without accent, which is an essential quality of all melody.

Melody has four ingredients. First of all comes the curve. The principal thing one can say about the curve of a tune is that the more agreeable a tune is to the average person the smoother is the curve of its melody. So true is that that a great many people with more knowledge than intelligence have lifted it into the realm of a law. A particular tune in Beethoven's *Choral* symphony is quoted in a great many books as the most beautiful in the world.

[At the risk of being thought a Philistine, Dr. Buck admitted that the tune does not appeal to him in the least, and said that he believed many others are in the same position.]

Uneducated people are often caught by a bit of rhythm for a time, because they are superficial. There is no need to put on airs and ask for "high-brow" music; but a little rhythm, rammed home again and again, is obviously cheap, and it is one of the signs of poverty of imagination in creation to use the same thing over and over again.

The third ingredient is harmony. People sometimes say they like tunes when the appeal depends entirely on harmony, a stress made on the emotions at the right point.

Binding all three ingredients together is the fourth—structure, a miniature example of form in melody. Inspiration comes to a composer only in the form of material, and the whole of a composition is the result when the composer has applied his workmanship, his knowledge of the craft, his sense of balance, and his skill to that material. This has to be done consciously, for a definite purpose.

In his second lecture Dr. Buck said that a grasp of form is the first essential to the understanding of any piece of music whatever. It is necessary to see upon what plan a composer wrote, how long he intended his work to last, whether it has the right balance, whether he goes on mechanically; and if there is a proper sense of finish at the end. It is a simple fact that in making up a tune it is not necessary to go on writing something fresh, and, indeed, that one would better not do so.

Dr. Buck proceeded to trace the growth of form, from the simple and elementary expedient of repeating a melody which is a shoddy way of making a composition last. After a while the conclusion was reached that one repetition of a melody is sufficient, and then came the introduction of a second subject. Once that was realized there was little else to know about form. The rest was all illustrations, examples, calculated exceptions, and so on. When it was seen that the first subject, complete in its melody and structure, composes one unit and can be followed by another, composers were well on the way to the solution of their problems. Several different avenues could then be taken, and all were explored in turn. The term *lied* was simply applied to one type of form, in which the first movement is repeated after the second one, in the manner of a sandwich, and this type, the song type, has been extensively developed by the Germans. It has been handed down historically as a sort of orthodox plan, and composers use the form without question, as one signs "Yours faithfully."

After a while composers sought to lengthen their compositions, and the more serious-minded saw that it is a cheap way to do so by repeating two melodies alternately. They saw that a sandwich can be made indefinitely, with something different between the bread each time, and compositions of that character—the rondo—began to appear. Then it occurred to them that with that plan there was nothing to signify that they had come to an end. Inventors saw that by a very simple device they would make a rondo satisfactory in that respect, and that the important thing was to see that the last constituent was always the second repeated. There must be three, and perhaps four, intermediate subjects, but the feeling of being thrown back to the beginning by the concluding movement gave a sense of completeness.

In the ordinary form of a classical symphony the important movement, the first, is nearly always written on the same plan—in sonata form. Form in music is the same thing as structure in melody, and each section of a symphony can be analyzed, and will be found to comprise its first and second sections. Credit for this form is always given to Beethoven, though it is not due to him solely. However, he took the *lied* form, gave the first movement a first and second subject, which consequently both appear in the last movement, while the middle movement, instead of being anything in the way of a subject at all is devoted to playing about with tunes already given. This is generally called the development section. Sometimes the tunes are turned upside down; sometimes played with the left hand or in other keys; in fact, composers with fertile minds can find innumerable devices.

After the concluding recapitulation something is needed to give a finishing touch. It is called a "coda," and may consist only of half a dozen chords. Listening is solely a matter of understanding the plan of a composition and seeing that a piece of music is not merely a haphazard collection of notes, but, like ordinary speech, a coherent, consecutive series of remarks.

———o———

THE MUSICIAN is a big help in a teacher's work if it is used to proper advantage. There is a wealth of suitable study material in every issue.

THE MUSIC DEALER AND HIS PARTNERS

How He Can Contribute to Community Music Progress

BY THOMAS TAPPER

I

IN the preceding articles of this series, the writers would seem to have treated most of the factors that can logically be regarded as assets. And yet, one of the most significant has not as yet been even mentioned.

We refer to the Music Dealer, who, either as publisher, or as representative of publishers, or both, is a receiving and distributing center of prime essentiality in a community.

Wherever his place of business may be there flow to his shelves and counters from all parts of the world its standard texts and its novelties. The teacher and music lover may find there ready at hand the latest popular dance and the most recent publication of the Russian school. He may ask for and receive the *Suites* of Bach or the *Impressions* of the Futurists. Music for all instruments, for all occasions and purposes, merchandise, magazines, instruments and strings, and the amazingly diversified paraphernalia of a modern music supply house is ready at the call of the voice or of the post card.

Studies in individual efficiency reveal that the average worker, let us say the music teacher, is invariably under-equipped. That is,

It is a tendency of human nature to put up with what one happens to have in the hope that one can get along with it.

And yet it has been repeatedly pointed out that a worker's efficiency is determiued by the uature and completeness of his equipment. This fact leads us to inquire whether the great mass of music teachers, of students, and lovers of music, may not find the Music Dealer *an indispensable community asset* and a professional implement, *which one must learn to use for the greatest self-advantage.*

In other words, just as the scholar and writer must not only have the most authoritative dictionary and other works of reference at hand but must master the technic of using them, so,

The musician, of whatever status, must master the technic of the Music Dealers' supplies, must learn by the most efficient study and co-operative inquiry how to make the most of so great and valuable an implement.

II

The modern Music Dealer, inventive as he often is, is still dependeut on the lead and hints of his clients that he may render the most complete round of service that is possible to his plant. He is an active and responsive source that depends upon the user for intimate personal service as reaction.

And yet the Music Dealer is not merely a purveyor of goods and chattels.

He creates.

At a cost which is never even guessed at by the public, he becomes the representative of the composers of the day. It is he, as publisher, who, by the magic of his resources, captures tho dominant idea, materializes it, and brings it to the attention of the musicians of his times.

This—the creative side of tho music publisher's work—we seldom think of in terms of adequate appreciation. But, nevertholess, ho is the great Go-between; the master of ceremonies who presents at the Court of Ideas the gifted ones to the music lover, to the teacher, and to the performing artist.

But another ossential value of the Music Dealer as a community factor is worthy of our attention.

We refer to his ability to purvey to individual needs; to his willingness and capacity to mako individual needs the subject of efficient action and consideration. His sholves and counters are (or should be) repleto with goods, called STOCK, which has been assembled from far and near, in the expectation that it may be of service to the public; to tho individual, in fact.

Stock is generally selected as carefully as the Dealer's knowledge of his patrons permits; it is kept complete and is augmented by such additions as it seems reasonable to secure. But if the Dealer had more intimate knowledge of his patrons' needs that knowledge would be reflected in his stock selection.

It is this willingness of the Dealer to procure and carry stock that makes his place of business an indispensable partnership-factor to everyone who even remotely comes into touch with music. He can be made, with co-operation, to serve them all:

The Teacher, the Player, the Singer, the Conductor, of the town chorus, the Supervisor, the Music Lover, the Mother who directs music in the home. The Dealer is the bridge leading from the needs of his patrons to the publishing centers of the world, near and remote.

Do you require a new publication that has just appeared in Boston, New York, or Chicago? He has it at hand or can supply it in a day or two. Or does what you want originate in London, Paris, or Berlin? It is ready for you at once, or at most in a few days.

Now it would seem to be the primary efficient object of anyone who uses a music store, continuously or infrequently, *to learn how to make the most of a service that is at once extensive and intimate.*

The skill of the Music Dealer is proverbial. He is occasionally and justly praised for his anticipation of demands. But, after all, he is human, which means that he is not clairvoyant, not an unfailing reader of the future, not always capable of guessing to a hundred per cent of accuracy what it is we want when we are not quito sure of it ourselves.

Perceiviug in himself the lack of these super-man qualities,

He depends upon co-operative work with the public in order to be forehanded in supply.

But general-supply is always buckshot shooting into the air; the needs of an individual purchaser demand the briuging down of game by a skilfully shot rifle bullet.

III

It is at this point that the Music Dealer will remain for the purchaser either a buckshot shooter or an expert in briuging down specialties. If we use him only in the former capacity, he will, as a good business man, do the best he can to secure our game for us. If we approach him as one who can purvey to our most exacting individual needs, he readily and willingly becomes a co-operator on that basis.

Thus he is a partner in our business of securing our needed supplies.

It is a fact, thon, that the Music Dealer is not a storekeeper. He is a working partner with the teacher, the player, the customer of whatever kind. It is logical then to make him thoroughly acquainted with what you are doing, with the detail of your demands, with the particular line of supplies you require. He will make all these phases of your affairs his own. Even when you are unreasonable, he will be patient, and still not claim to possess sprouting wings.

Are you a music lover owning a phonograph and possessed by an interest in oriental music? He will take it upon himself to purvey to your interest, finding and procuring all the available disc records that exist of the music of Japan, China, Java, India, and Sumatra. He will find for you music of the flute, the tom-tom, the kin, and the vina.

Now the Dealer takes this amazing amount of trouble for the music lover and (for example) his phonograph for two reasons:

First, he knows that the world's supply of music for this modern form of home entertainer and educator is enormous.

Secondly, he knows that your resources for getting what you want are inferior to his own.

And, naturally, there rests in the back of his communistic commercial head a third reason, which is this:

If he can deepen your interest in your specialty, he knows that the phonograph (or fiddle, or piano, or whatever it is you possess), will keep on going, will continue to be an active thing in life, instead of an unused self-destroying thing, a loser of invested capital for the owner, and a discontinued source of revenue for the Music Dealer himself.

IV

The music teacher, forever broadening her outlook through reading, study, and experience, cannot afford to trust to accidental means of discovering the best material. A teacher can do no less than avail of every means of building a teaching repertoire scientifically. To entrust its upbuilding to the occasional turning over of the pieces in the folios on the music store counter is truly living by treasure trove.

The teaching repertoire must not be selected haphazard.

It must be built from the entire bibliography of the subject. Hence, it must be added to, freshened revived every year. It then becomes of importance which extends its solidity to the lesson hour.

No one whose quest in life is limited even to collecting postage stamps would confine his hunt for issues exclusively to his own correspondence. He would learn to consult with, work with, and depend upon a reputable dealer whose affiliations cover the world. In other words, he would use for the purposes of his attainment, the means (dealer) possessing the longest and most comprehensive reach.

It is even so with the purchasing musician. The Dealer becomes for him Reach and Search, gathering from the entire world of publishors its output for the scrutiny of one who chooses to live as remotely as he will. It is because of these activities willingly undertaken by tho Dealer, that we have referred to him as the music teachor's partner.

The question may now properly ariso:

Is there any such Dealer in existence as the one we have assumed to describe?

There aro plenty of thom. The present writer once informed a Dealer of the fact that he had seen in Moscow a new issue of teaching pieces, four hundred in number.

"Did you purchase them?" askod the Dealer. On replying in tho negative, he said, without a moment's hesitation, "Shall I order the entire set for you?"

If there be hero and there a Dealer who does not rise to tho business level of this preachment, take him in hand, and make an up-to-date Dealer of him. There aro few men, however, in tho music business who aro in it literally to be of little or no use. The desire of them all is to be of service. Even if they have to guess as to what that service must consist of, they will still make effort. They know that a little stock with a list of names and addresses is not the entire equipment of a real merchant. There must be something more than that.

1. An increasingly intimate knowledge of what the purchaser has used, is using, and could use if it were provided.

2. An intelligent purvey to the demands of the community at large that may be assumed to be improving in its music activity.

(No Dealer can create alone the sentiment of a community. He can help to do it. Nor can a community become as a mass specifically self-expressive in music. Some one or a few must lead. And in their plans the Dealer should be a live participant. He has far-seeing eyes, and a long-reaching arm.)

3. An intelligent purveying of good things to the music lover, to owners of mechanical instruments who may not be provided with the ways and means for securing material they desire.

But—

Why, for example, will not some enterprising person find a way to make a disc record fully intelligible to the amateur listener. To listen to a beautiful voice singing in Italian, for example, is impressive and inspiring. But why hasn't somebody thought of supplying a slip of paper that will convey to the listener what it is all about?

Few music teachers, and we say this with no hesitation, secure the best co-operation of their Music Dealer for the simple reason that they acquaint him only imperfectly as to their demands and requirements. He can reach out to the world at large and supply, for examination, all the world has to offer, for example, in second grade pieces. They come in carload lots. Thousands of them are not worth anything.

But it is said that the South African miners handle tons of blue clay willingly in the chance of finding a diamond that will cut to one-half carat. From this illustration we may make the general deduction that to get the best there is of anything we must do a lot of shoveling.

And the Music Dealer will shovel all day for us, if we give him intelligent directions.

A PLAN FOR HIGH SCHOOL CREDIT FOR OUTSIDE MUSIC STUDY

Abilene, Tex., has an Association of Music Teachers which has shown a highly progressive spirit in matters affecting music education, with a constructive effort that should produce excellent results for the community.

The Association has secured the adoption of a system of credits in the High School for music study under the direction of private teachers. For the benefit of readers who are trying to secure the adoption of a similar system in their communities we give a synopsis of the Abilene plan.

1. The work must be done under a teacher regularly elected by the School Board, who must be a member of the Abilene Music Teachers' Association and attend its regular monthly meetings.

2. The work must begin within two weeks of the opening of school and application for enrolment must be made at the High School office.

3. No student will be enrolled for credit work until he has done satisfactorily the equivalent of the first and second grades.

4. The work for one-half a credit consists of two lessons and six hours of practice, excluding lessons, each week for one year. The teacher must report at the end of each month the number of lessons taken and the amount and quality of the work. The student is required to keep an accurate record of the amount of home practice, and is expected to do regular daily practice.

5. Examinations will be held at the end of each half-year term. These will cover the history of music, biography, character of composition, elements of harmony, knowledge of the technic of music, ability to execute from memory compositions offered for examination, and ability to execute at sight compositions submitted by the examiner. All students must answer questions concerning pieces played and the composers represented. Eighteen pages of memory work are required each year not less than nine of which must be offered for the examination at the end of the term.

Space does not permit the printing of the full prescribed course of study. For the first year, first term, a sonatina by Kuhlau; a study for the left hand from Czerny-Liebling; Grieg's *Birdling*, are called for. For the second term, Studies 59 and 61, Book I of Czerny-Liebling, Schubert's *Impromptu*, Op. 142, No. 2, and *Gertrude's dream waltz*, Beethoven. Other material to make up eighteen pages is selected from a prescribed list. The pupil must be able to play four scales, major and minor, parallel motion, in eighths, M.M. 88 to the quarter note, and their tonic triads. The student will be asked about the great pianists of his day.

Second year, first term: *Sonata* in C major, Mozart, first movement; two short preludes in C minor and major, by Chopin. Second term: *Sonata* in C major, Mozart, third movement; Minuet No. 2 from B♭ *Partita* by Bach; *Study* No. 76, Book I, Czerny-Liebling; Schubert, *Moment musical*, No. 3 Other material to make up eighteen pages to be selected as before. At the end of the grade the student must be able to play eight scales. Major and minor, parallel and contrary motion, in eighths, M.M. 100 to the quarter note, and the arpeggios at the same tempo. Sight reading will be a piece in Grade 1½. A review of the great pianists of history and a study of eminent living performers.

Third year, first term: *Military polonaise*, Chopin; Invention, No. 4, Bach. Second term: Minuet, No. 1, from B♭ *Partita*, Bach; *Adagio* from Beethoven's C minor *Sonata*. At the end of the grade play all scales, major and minor, parallel and contrary motion, in eighths, M.M. 120 to the quarter note, arpeggios at same tempo. A study of the greatest composers, including a few contemporaries.

Fourth year, first term: *Study in thirds*, Op. 740, No. 10, Czerny; *Prelude*, No. 3, G major, Chopin's *Minuet* from *Fantaisie-Sonata*, Schubert. Second term: *Rigaudon* from *Holberg Suite*, Grieg; *Romance* in F♯ major, Schumann. Material to make up a total of eighteen pages to be selected. Sight reading a piece in Grade 2½. Play all major and minor scales in parallel and contrary motion in triplet eighths, M.M. 120 to the quarter note, arpeggios at same tempo. Review of history of music.

SUMMER MUSIC PUPILS IN COMMUNITY SERVICE

A big feature of summer life is the summer camp and the summer school, among the latter a large number devoted to music and allied arts, especially esthetic dancing. The Editor of The Musician has visited several summer music schools in years past, and in every instance has learned that the directors and pupils have given of their talent and studies to benefit the communities in which the sessions were held.

In some cases this help represented musical contributions to the church service; in other cases one or more concerts open to the public without fee or, at most, a small one; a music festival in the style of a pageant; a chorus open to the people of the town and vicinity.

This summer Mr. Frederick W. Wodell, of Boston, and the Misses Florence Leonard and Louisa Hopkins, of Philadelphia, found that they would be at the charming summer seashore resort in the southwestern part of Maine, near the New Hampshire line, Ogunquit, each with a few pupils who wished to continue study during the summer.

From this came the organization of the Ogunquit Summer School of Music, which was situated most delightfully for profitable summer work in music, vocal and instrumental.

There is an old saying that if a person can do some one thing well the public finds it out. And the people of Ogunquit, both villagers and summer guests, took advantage of Mr. Wodell's skill and magnetism as a choral director to plan for music by the people. And this was the result:

On August 18, Flotow's opera *Martha*, was given in concert form, by soloists selected from Mr. Wodell's pupils, supported by a chorus of forty-two from the village and summer guests, with Miss Leonard at the piano, and with the assistance of the Sparhawk Hall Quartet.

Twenty-one numbers from the opera were sung, the program giving the story of the opera in an abridged form with the music at the proper place in the development of the action.

The receipts were turned over to the Village Improvement Fund.

Here is a new phase of community musical work and summer study.

$10,000 FOR THE MUSIC DEPARTMENT OF THE SPRINGFIELD, MASS., PUBLIC LIBRARY

The income of a $10,000 endowment fund for music, left in 1909 by Col. James A. Rumrill, a former president of the City Library Association, in memory of his sister Grace Rumrill, makes it possible for the library at Springfield, Mass., to meet the demands of its patrons with some degree of satisfaction.

Besides the collection of musical literature the library has more than 2500 volumes of scores, covering oratorios, operas, songs, music for the piano, the organ, violin, 'cello, mandolin, guitar, the various band instruments, and also chamber and orchestral instruments.

As the library must serve a variety of tastes the collection is accordingly varied. There is easy music for the beginner, and there are grand opera scores for people who go to New York or Boston for the season's music; there are popular selections for the amateur band and there are full scores for the full professional orchestra; there is material for an old folks' concert and the conductor's and vocal score of *The Messiah*. The kindergarten teacher comes here for suggestions and the leader of a Fourth of July celebration as well.

The entire music library is made unusually accessible through a very full card catalog, a printed catalog, and a title index to song and piano collections. Much freedom is allowed in the circulation. There is no limit as to the number of volumes which may be taken on a card, and they may be kept four weeks and renewed for two more. A summer privilege from June to October is permitted.

Last winter the income from the fund made it possible to secure Thomas Whitney Surette for a lecture on *The Appreciation of Music*. The fixed endowment makes it possible to plan expenditure, and the community interests are carefully studied in building up the collection.

A RAILROAD MEN'S BAND

Employees of the Western Pennsylvania Division of the Pennsylvania Railroad, with headquarters at Pitcairn, Pa., have a fine concert band under the direction of Mr. W. H. H. Long. This band has given a series of popular concerts on Thursday evenings throughout the summer, presenting programs which are well-planned, giving the public a fair number of songs and airs of the day, with other pieces of a higher grade, and airs of the folk song character such as *Carry me back to old Virginny*. We also notice that a favorite piano piece of a previous generation, arranged for band, Wilson's *Chapel in the mountains*, was received with much appreciation.

Directors of concerts for the people cannot make mistakes in selecting their programs if they include such old favorites as the two mentioned.

QUEEN AUTUMN

BY ANNIE STEVENS PERKINS

The following program is intended for use in October or November, when, after a few weeks of work, a social afternoon for the parents is planned. The exhibit screen should be made attractive with specimens of drawing, writing, etc., furnished by pupils. Light refreshments may be served by girls wearing white gowns and dainty aprons. Invitations sent may be decorated with autumn leaves.

This rhyme may be used:

To an hour of mild festivity
And cordial sociability,
We hope to welcome you.
The day and hour are named below.
We'll do our best, you surely know,
To win approval true.

THE PROGRAM

1. The Pageant. Queen Autumn takes her place at center, rear, and all the participants in the entertainment pass before her, in costume. The piano, or school orchestra, should play numbers like *The Hunter's Call*, by Carl Bohm; *Voice of the Heart*, by Sidney Smith; *Reaper's Song*, by Carl Reinecke. The participants bow before Queen Autumn as they pass.

SUGGESTIONS CONCERNING PARTICIPANTS AND COSTUMES

Queen Autumn wears loose, flowing gown of rock-gray with festoons of autumn leaves; or, dress made of Dennison crepe paper, autumn-leaf design; crown of goldenrod; sceptre wound with the same. September, a girl dressed in yellow, with wild aster sprays for decoration. (September, October, and November should be three girls who can sing well together, as three beautiful trios are to be rendered by them.) September is followed by boys and girls,—number optional,—dressed as school-boys and school-girls, of different periods,—colonial, war-time, etc., some up-to-date.

October should be a girl, dressed in red (crepe paper, or cheese cloth) with decorations of white queen's lace, or other white fall flowers. She is followed by boys and girls in play clothes, with baskets of nuts; boys and girls in Hallow E'en costumes.

November, a girl dressed in green, with decorations of red and gray berries, alder and bayberry; or eye-berries and juniper berries. Boys and girls in Puritan and Indian costumes follow.

Other participants in the program, indeed, all members of the school, may follow in the pageant, if desired. Shower-bouquets of goldenrod and asters should be carried; and festoons of bright leaves or berries worn.

2. Trio for female voices, *When the leaves are turning gold*, by Donizetti.

3. Reading. *The Corn Song*, by Whittier.

4. Living Pictures. These are to be posed by boys and based on the poem, *Hiawatha*. The book to be used is the paper-covered edition published by the Houghton, Mifflin Company (New York, Boston, Chicago), in two parts. There are ten pictures from which a selection may be made. An account of the visit of Alice M. Longfellow to the Ojibways, on invitation, to see their performance of the play *Hiawatha*, is included in the edition. Material to be used as a guide is incidentally furnished. Short selections from the poem should accompany the pictures.

5. Trio for female voices, *The Lonely Rose*, by Hermes.

6. Ethical Number, *Fruition.*

A girl dressed in white enters, bearing between her outstretched hands a satin banner on which, in gold letters is read, "AUTUMN THOUGHTS."

Pupils of the school follow, bearing cardboard oblongs with the following legends: FRUITION; FULFILMENT OF PROMISE AND PROPHECY; PREPARATION; SEED-SOWING; CULTURE; ABSORPTION; GIVING AND SHARING; GARNERING; STORING; WISE DISTRIBUTION; GRATITUDE; THE UPLOOK AND THE OUTLOOK.

After arranged positions are taken, pupils bearing the several legends recite as follows:

Fruition: All fruition implies labor, culture. My companions will speak to you of different processes and suggestions we may glean as we consider these. I will give quotations concerning "Fruition":—

From Epictetus:—"Nothing great is produced suddenly, since not even the grape or the fig is. If you say to me now that you want a fig, I will answer that it requires time; let it flower first, then put forth fruit, and then ripen."

From Clinton Scollard:

For the fruit of the time of our toil;
For what'er we have fought for;
Whether born of the brain or the soil
Be the meed we have sought for;
For the gifts we have had from His hand
Who is Lord of the living,
Let there ring through the length of the land
A Thanksgiving! Thanksgiving!

Fulfilment of promise and prophecy:

Out of the strain of the Doing,
Into the peace of the Done;
Out of the thirst of Pursuing
Into the rapture of Won;
Out of gray mist into brightness,
Out of pale dusk into dawn—
Out of all wrong into rightness,
Hearts that are weary shall come;
Into all joy of fulfillment,
Into the glad, "Harvest Home!"
W. Jay (adapted).

Preparation: Through preparation, carefulness, patience are all good results attained. The soil must be ploughed and harrowed, before the seed can be successfully planted. "The labor of the righteous tendeth to life," we read in the book of *Proverbs.*

Strive; yet I do not promise
The prize you dream of today
Will not fade when you think to grasp it,
And melt in your hands away;
But another and holier treasure
You would now perchance disdain,
Will come when your toil is over
And pay you for all your pain.
Adelaide A. Proctor.

Seed-sowing:

"Thy deeds now are the seed-corn of eternity." Dr. Pusey.

"Sow truth if thou the truth wouldst reap;
Who sows the false, shall reap the vain.
Erect and sound thy conscience keep;
From hollow words and deeds refrain."
Bonar.

Culture: Through cultivation and pruning is the fruit brought to perfection.

"The great law of culture is, Let each become all that he was created capable of being; expand, if possible, to his full growth . . . show himself at length in his own stature." Carlyle.

Absorption: The growing plant absorbs all it may, from earth and air, to make it strong. The soul seeks to absorb from its environment that which will aid it in its upward growth.

Through love of friends we gain and grow;
From books we gather strength;
Through true communion power is won
To guide us home, at length.

Giving and Sharing:

"The gift without the giver is bare." James Russell Lowell.

"The only gift is a portion of thyself." Emerson.

"Giving requires good sense." Ovid.

Giving: "If we could cast into the heart of a friend the gift of a lovely thought that would be giving as the angels must give."

Garnering: Ungarnered fruit simply wastes. Garner the ripened fruit that nothing shall be lost. Cherish the fruits of friendship, too; for love and friendship cost.

Storing: Garnered harvests must be safely stored in strong bins and on well-built mows.

Store wisely away thy garnered wealth,
For use on "the rainy day,"
With friends who are dear and kin who are near,
Who'll rejoice in the holiday.

Wise Distribution: Responsibilities come with possessions of all kinds. Distribution of wealth is becoming, more and more, a study. Talents, too, should be used and their benefits distributed. Hoarding of riches or talents is baneful. And giving for the sake of getting the task out of the way is unwise. In such matters, as in all others, the soul must seek God as guide, in order to do the wise and sane thing.

Gratitude:

"Thankfulness is the tune of angels." Spenser

"Gratitude is the fairest blossom that springs from the soul; and the heart of man knoweth none more fragrant." Hosea Ballou.

The up-look and outlook:

"To look up and not down;
To look forward and not back;
To look out and not in;
And
Lend a hand." E. E. Hale.

7. Trio, *In Autumn*, or *The Reapers*, by Clapisson, a four-part song.

8. Song by six little children, *Come, Little Leaves*, from the Harriet A. Jenks collection of child songs.

9. Acrostic Exercise. This is to be given by the same group, if desired. An older child, standing behind the group, gives to each, a large pasteboard letter, as the verse is recited.

AUTUMN

A ARTIST Autumn, with your brushes
Dipped in liquid gold,
Painting scenes of rarest beauty
For us to behold.

U URGENT Autumn, pleading with us,
Now to gather, gather,
That thy treasure be not wasted
But made a blessing rather.

T TRIUMPHANT Autumn, glorying
In harvest-time's sweet savor.
Thankful Autumn, gratefully
Owning heaven's favor.

U UPLIFTING Autumn, teaching us
To think of God's protection,
And know that we are resting now
'Neath heaven's benediction.

M MATCHLESS Autumn, gowned in glory,
For thy day of rest;
With myriad blessings crowned and honored
With abundance blessed.

N NYMPH-LIKE Autumn, hiding treasures,
In the trees and lanes,
To reward, with sweet surprises,
The eager seeker's pains.

10. Piano, *Rustling Leaves*, by Lange. (If desired, an autumn-leaf dance may be given, under the direction of the folk-dance teacher).

(The musical numbers named in the program are publications of the Oliver Ditson Company.)

THE PROFESSOR TALKS ABOUT THE MUSICALLY GIFTED

"You arrive at a most opportune moment, Professor. Some of our friends here"—the Editor, with a sweeping gesture of both arms, indicated the presence of the ladies and gentlemen in the *sanctum sanctorum*—"have just been requesting me to be their representative in order to ask you a few questions touching the branches of music known as Singing and Composition. What do you say, Professor?" Then, somewhat hesitatingly, "Shall I formulate them?"

"Well, my dear Editor, under ordinary circumstances I would be only too glad to answer anything you may wish to say; but on the present occasion, I'm afraid I must forego that pleasure. You see, first of all, it seems to me that it would place you in a wrong position; because you are no doubt perfectly able to answer all they have to ask, without referring to me; then again, if you become their mouthpiece you identify yourself more or less with the questions they formulate and thus might be held (erroneously, no doubt) to agree with the ideas expressed. Besides, these seekers after musical truths meet me here so often that all they have to do is to ply me with their queries. I shall be equally delighted to answer them and to help them to the best of my ability.

THE PROFESSOR PROMISES PRACTICAL HELP

"Indeed, I have long felt a desire to tell you all that not only will I endeavor to enlighten you upon any topic you may propose at these meetings, but I will also very willingly give due consideration to any point or question you may wish to have determined, *between our meetings.* All you will have to do will be to write to me, in care of the Editor, and, if your questions are of general interest, they shall have my best attention.

"As a matter of fact, such questions—both written and spoken—are absolutely necessary to renew your untiring interest and your persistent determination to succeed in the art of music, whether as pupil or teacher, amateur or professional.

"Please do not misunderstand me when I make use of the term 'amateur' as opposed to 'professional.' The only distinction I draw between them is that the professional is paid and the amateur is not. In every other respect, the amateur is equal if not superior to the professional. You may remember that in France the qualification 'distinguished amateur' is about the highest praise that can be accorded a musician, in the sense that his musical attainments are remarkably complete. He is superior to many professionals, but he pursues music entirely for the love of the art and not for any money consideration.

"The amateur's love for the art is, therefore, without alloy.

MUSIC PROGRESSES PERPETUALLY

"You will notice that I have said: 'He pursues music.' I did so advisedly. Music is an elusive art, always just beyond our grasp. When we think we have her, some new development occurs which makes it necessary for us to pursue her yet more, or be hopelessly left in the rear. That is why so many professional 'teachers' remain in a state of stagnation—no progress possible, unless the pursuit be watchfully constant. Make that your motto:

"To be an efficient musician, the pursuit of the Art must be watchfully constant.

THERE IS NO AUTODIDACTIC MUSICIAN

"This distinguished amateur, this accomplished musician, is the very antithesis of that so-called 'musician' that one so frequently hears about: the one who, being 'heaven-born,' is self-taught, self-inspired, and, it must be said, self-satisfied. Such a one, no matter how gifted, no matter how 'heaven-born,' *must educate efficiently and systematically his gift and his heavenly birthright, otherwise he will lose or squander his inheritance.*

"By the incredulous expression of some of your faces, I gather that there are those among you who, having acquired their musical knowledge by patient study, doubt the existence of the 'heaven-born'—or, let us say, *in-born, innate!* Nevertheless it exists, it *must* exist. The music that is inborn is the music that, afterwards, is educated: that inborn music is the essential foundation for the musical education. In the good, old cookery books the recipe for preparing jugged hare begins: 'First catch your hare'—a most wise preliminary!

"The musician's 'hare' is his innate musical germ, without which there can be no musician.

"In order to have a diamond, lustrous and polished, the rough stone has to be cut, faceted, and polished; but the stone, the rough stone, has to be primarily *a diamond: without the rough diamond, there can be no highly finished brilliant.*

"So, also, without the innate music, there can be no accomplished, highly finished musician. *Ex nihilo nihil fit: out of nothing is made nothing* (free translation: you can't get music out of insensibility).

APPRECIATION OF SOUND IS INBORN

"So far, so good; but what does the inborn musician *know?* Nothing whatever; he merely has sensations which are aroused in a vague, incoherent way by the *sounds he hears*—sounds which depend upon his environment. If his daily pabulum be classical music, he will long for melody and harmony combined in strict form; if his surroundings are less fortunate and consist chiefly of the 'music' furnished by the street hand-organ or player-piano, he will go into ecstasies over the latest popular-song tune, or the raggedest of rag-time, or the most satanic tango! In short, his ear desires to be tickled by the kind of 'music' to which he is accustomed.

"Can he ever learn anything else? Most assuredly.

"Because his chief faculty is an appreciation of sound.

"That is the true name of his inborn gift, and not 'music.' 'But,' you ask, '*how* can he learn to build upon that inborn gift?' To which I reply with the simplest of answers: 'He must learn.' There is nothing easier, because there is nothing more logical. He possesses the great inborn gift of *appreciation of sound* (commonly called 'music') which is capable of being trained—trained in the traditions, growth, and practice of music, from the earliest times to the present day.

THERE IS NO "BORN MUSICIAN" ALL COMPLETE

"There is no such thing as the 'born *musician*'; because it is impossible for anyono, no matter how greatly gifted, to be born with a knowledge of all or any of the different changes and developments through which music has passed. It is absolutely impossible for him to know, or to learn unassisted during his short span of life, all that our great musical progenitors have achieved for and bequeathed to us from generation to generation during the past eighteen hundred years.

"He has to learn it; he has to train his ear gradually to all the difficult intricacies of sound beginning with the unison and ending with his life—for music progresses ceaselessly, advancing ever.

A WRONG SYSTEM

"Whence it is plainly seen that, no matter how great our natural endowments, study is indispensable. In my young days I used to think that the best way to form musical taste was to read and hear masterpieces, without order, system, or choice, just as they happened to come; that all that was needed was to let anyone, with that kind of casual 'learning,' write down his ideas, show him how to correct them by himself, and amend his style by putting before him, as models, examples of the masters' writings.

"Such a system is completely wrong. I agree, however, that a student should practise writing all his ideals and, having so done, put them away for future reference and comparison with the progress of his education; but it is worse than useless for the teacher to correct them according to *his* taste, for that may result in killing or, at least, in stunting the student's individuality—the one quality to be preserved and communicated, when found worthy.

FUNDAMENTALS ARE ALL ESSENTIAL

"Fortunately, I was not very long in discovering that such a system was entirely erroneous and that a totally different, more logical system could be adopted successfully with pupils. That system might be termed a *natural education.* As a matter of fact, is it not the most logical way to teach, first of all, the natural laws, beginning with the most simple—those which are understood and accepted without question by all who possess any musical sense? Those laws hold together and follow each other in regular succession, even as the laws of natural science or chemistry. But what would be thought of the teacher who began by teaching his pupils the most difficult problems? He would be found incompetent or crazy for omitting the primary definitions and fundamentals. The teaching of music is precisely similar.

"It must not be forgotten that there is another way in which the inborn musician may find his gift destroyed by that mistaken study, wherein he trusts to himself alone; it may slip away from him, 'peter out,' become practically lost, *by neglecting to study regularly and conscientiously.* He may avoid such a calamity by diligent practice, and make his art more perfect by a logical observance of the natural laws of music *under proper professional guidance.*"

THOSE WHO ARE NOT GIFTED

Timidly a bright young woman asked the Professor: "After your valuable advice I think we all understand now how to treat those who have the *inborn gift of appreciation of sound;* but what are we to do, Professor, with all those pupils who are brought to us who are so much wanting in this necessary musical sense as to be non-musical, and who come merely because it is considered 'the correct thing in society' to have some knowledge of music as an ornament or an accomplishment?"

"My dear Madam, tho only advice to give you is the same as that given by Mr. Punch to those about to marry: 'Don't!' Your question however, is much too serious to be treated in a jocular manner. It is no joking matter to counsel you to renounce a considerable source of income; yet I have to do so. It is your duty not only to refuse those non-musical persons who are proposed to you as pupils, but also to refuse all those who go to you to learn how to teach, merely as a means of earning a living, but who have neither gift for music nor inclination for teaching.

"Turn them down relentlessly. Do not permit them to leave your studio with the bare appearance of a knowledge which they can only use to the detriment of musical art and to the prejudice of its true teachers.

"Now, my dear Editor, I am sorry to say that I must request you to postpone the consideration of those unstated questions about singing and composition, until our next meeting; on which occasion I shall ask our friends here to formulate their own wishes—or by mail, whenever they may so desire."

THE NEW SCHOOL OF PIANOFORTE PRACTICE

BY LOUIS ARTHUR RUSSELL

II

FACILITY AND QUALITY

This process awakens at once the student's musical sense, and the power of appreciation of tonal effect grows with technical development; the relationship of pure technics to quality of tone becoming fixed in the young player's mind. Every young player, and many of the older ones of the old school of culture, had a dread of exercises and compositions written in keys removed from the white key scales (C and its close relatives). Skill in technic was generally developed exclusively through exercises in the key of C, with white keys only (flat surface position).

In the new teaching skilful finger action is gained at the table in a comparatively short time. When a degree of facility in movement is gained at the table, the student, placed at the keyboard, is almost at once, and certainly in his very early keyboard lessons with melodic figures, taught to play with equal freedom in all positions on black and white keys. And this system is carried on to the end, so that the "new school" student has a perfect familiarity with the keyboard and has equal facility in all keys.

The charm in the new teaching comes from two conditions: 1, the simplicity of its progression from page to page, which commands the attention of the youngest student, because interesting results follow his efforts; and 2, the great variety in the work, all of which is readily memorized by the pupil, who, therefore, practises with pleasure, the study period having somewhat of the delight which falls to the lot of the player who extemporizes.

The playing of scales or arpeggios is not drudgery to the student whose fingers readily answer the physical requirements, having been trained in accuracy of action, and then, with a variety of rhythmic figure (changes of accentuation, etc.), the two hands playing contrasting figures, etc., the mind is as active as in the performance of a composition.

This delight in practice is the result of the superior mental culture of the student of the new school. He is taught that even the simplest five-finger practice-passage may be the germ of a great work of art, and his practice processes of the exercise prove the statement. For in the new teaching, the student learns the rhythmic and dynamic possibilities of a figure—and plays it, not in a perfunctory way with one touch and one speed, but with every possible touch, and through groups with various accents—the figure runs on with increasing speed until the limit of celerity and musical character is reached.

RHYTHM AND FIGURATION

With the metronome as a guide, the student becomes that most interesting of pianoforte players, a good timist.

To attempt to learn all the possible melodic figures or even all of the figures thus far ever written for the pianoforte, is not required of the student of today; this task is not only impossible but useless. The principles of pianoforte figuration, with reference to the action of the playing apparatus at the keyboard have been quite definitely itemized during the last few years, and now the student's requirement is to master the principles of pianoforte technic, and to learn the regular and constantly used forms of melodic outline only, and these latter more particularly for the development of a subconscious habit of correct finger rotation, than for the acquirement of digital power or speed, which are gained by simpler processes and then applied to melodic figures.

Therefore, the old system, of playing hundreds of five-finger exercises has been practically discarded, and in its stead, we have a broad musical and mechanical consideration of the major and minor scales, the arpeggiated triads, diminished fifths, sevenths, etc., with a close classification of technical items, as octaves, wrist exercises, doubles, hand crossings, interlockings, chromatics, etc.

Five-finger exercises are gradually being reduced to a very small number of essentials, and those which are still retained by the leaders in the new school of teaching, are such as are thought to be of especial value in developing some much used principle in pianoforte playing, especially including the development of the weaker fingers.

By this process of selection, exercises are written for specific purposes, that is, for close position, white key position, black key position; positions with various finger expansions; exercises for finger independence; for thumb crossings; for the hand crossings; for the weaker fingers; for the extreme stretches and skips, the fourth and fifth fingers, accompaniment figures, interlockings, etc.

Much surprise is expressed by older teachers and players of today over the remarkable progress in technic and interpretation made by the young pianoforte student of the modern school. It is no uncommon thing to find in well conducted schools of music, students in considerable numbers of from twelve to eighteen years of age playing Bach, Beethoven, Chopin, Schumann, and the modern composers in some of their most difficult phases, with a firm and musical touch, splendid accuracy, and all necessary speed, in many cases lacking, only, the element of power for a full realization of the content of a composition.

POWER A LAST CONSIDERATION

This item of power is, of course, a matter of development, requiring the maturer, muscular strength of the grown woman or man. These young players of today prove by their work what the modern school of teaching is doing. The platitudes in easy, though brilliant, pianoforte figures to which our grandparents were trained, are gradually (and happily) disappearing, and the earnest student of today is growing more and more to be a real musician and pianist, a result to be attributed, beyond question, to the methods of instruction which have been adopted by the thoughtful teachers of the last generation.

What teacher of ideals can remain content with the old school methods? He who does not go with the van of progress is surely left behind, and his pupils are inevitably the failures of the music world.

The scintillating trifles which pleased the former generation of music listeners, who applauded the brilliant Thalberg, or Gottschalk, are no longer tolerated by the cultured amateur of today. The musical ear of America is attuned to deeper things, and we now require of even our children more than mere surface music. The truth of music has "come out" with the awakening to somewhat of the true beneficence of the art in its ministrations, and if we are to speak this language through the medium of the pianoforte, we must be trained to a keen and full appreciation of the true genius of the instrument; and all of this is the peculiar characteristic of the "new pianoforte teaching." "Clock practice" and the development of technic by numberless repetitions of dry exercises are now discounted by brains, and much of the finest products of the masters, once a sealed message to the masses, is now an open book to all who are willing to work and to wait patiently for results of significant importance.

The new school of music pedagogy is not a laborless process, it offers no encouragement to the indolent, but it is a true "Royal Road," for it presents rational common sense methods of progress; teaching the "truths" of a great art, eliminating waste of time and energy and giving assurance of the "great reward," a *sure reaching of the goal*, to all who follow the law with devotion and constancy.

Here is an answer to the teacher who says: "I know of no reason why I should advertise, my class is full now."

Why You Should Advertise

1. To attract pupils you must be known to some persons.
2. Your opportunities will be small if you allow yourself to continue unknown.
3. It is up to you to make yourself known to more persons.
4. You must keep your name continually before the public to strengthen first or general impressions.
5. The local newspaper is a good medium to make you known to your townspeople.
6. You need not restrict your appeal to the public of your own town or immediate vicinity.
7. If you are big enough and make the public appreciate the fact, you can draw business from other towns, and your studio or school becomes a definite educational center.
8. The musical paper will make you known to a wider public interested in music, and in time you will be considered by those who become familiar with your name as a representative musician of your community.
9. If you create a demand for your services, your price can be advanced.
10. And by doing bigger work to meet the demand your advertising helps to create, YOU GROW PERSONALLY AND PROFESSIONALLY.

BALANCE IN MUSIC

BY C. P. LAISTER

A certain authority has made the statement that modern pianoforte music consists of a melody with an accompaniment. And so, no doubt, it does to a great extent. Students are usually introduced to modern music before entering upon the study of the older works, and that is why so many of them come to regard the treble and bass clefs as invariably containing melody and accompaniment respectively. They acquire the habit of making the music in the treble always preponderate over that in the bass.

Such a habit is extremely harmful to those who would become players of good compositions. He is a poor composer whose works always require the bass to be subordinate to the treble. All of the masters composed music wherein prominence is given to both portions of the stave, so that each is absolutely essential. Look, for instance, at Mendelssohn's well known *Spring Song*. Let the student play only the treble and he will at once realize how necessary is the bass, not only to the whole composition, but to the treble itself. Let him play the piece again, this time so that the treble shall be given decided prominence. Even this will not do. And so the student is brought face to face with the too often neglected study of "balance" in music, a study, moreover, which must be mastered by all who aspire to fame as players.

Teachers are apt to lay too little emphasis on "balance" and their pupils, as a result, fail to grasp the necessity of studying it.

The student should practise compositions ranging from *Ben marcato il basso* to *Ben marcato la melodia*, having always in mind the idea of balance and the correct blending of melody and accompaniment, bass and treble, intended by the composer. He will thus be taking a large step upwards in the ladder of progress.

THE EFFICIENCY OF COLLATERALS

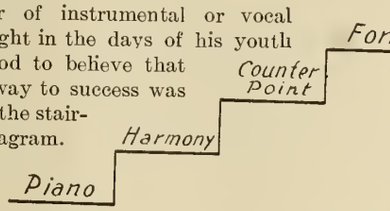
BY THOMAS TAPPER

Every man who thinks down to basic facts knows that he is working for *himself* and not for anybody else. Nothing has deluded more people than the thought that they were working for other people. Carnegie was working for himself when he was with the Pennsylvania Railroad. Frank A. Vanderlip, president of the National City Bank of New York, was working for himself when he was in the United States Treasury. If you have an establishment of your own, of course, you understand you are working for yourself; but if you are drawing a weekly salary—or a monthly salary—you are still working for yourself. *Emerson School of Efficiency.*

I

WE refer in the caption, to the factors of which this article treats as Collaterals; but that is not their full and proper designation. They should always be referred to as Collateral Essentials.

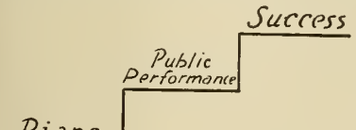
The teacher of instrumental or vocal music was taught in the days of his youth and studenthood to believe that the only true way to success was to be found up the stairway of this diagram.



He believed this and threw his ambition into the fight to win his toilsome way to the top step. But one day he made an interesting discovery, namely:

That singing or playing for others proved on experiment to be a present tangible and effective accomplishment by which one could win applause; while knowledge of the theoretical side of music was a deeply concealed virtue, which would never be exhibited with applausive results.

Therefore, he perceived how very easy it would be to pat the mountain on the head, and so to speak to shut the stairway up accordion-wise. Seeing this, he exclaimed, "Here goes," and so the bourne of all his earthly existence flattened out into this:

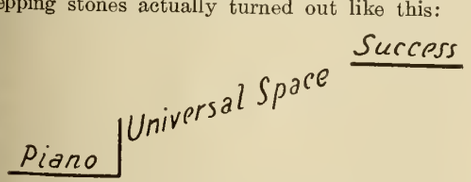


II

At some time in life everyone raises the pathetic inquiry:

Is it ever too late to learn?

And we give lectures, write books and articles, and urge, by all the means we can command, that it is never too late to learn. But it is always hard and embarrassing to build into a structure a portion of missing masonry. Its very newness seems to cry out the original omission on our part. What leads one (impels one rather) to voice this pathetic query is not the reawakened ambition of later years, but the rude awakening that the stairway of our ambition which we planned of few and near-lying stepping stones actually turned out like this:



The Editor prints a graphic statement in this issue of THE MUSICIAN concerning the value of ONE HOUR, pointing out what its potentiality is the moment it is strung, bead-like, with other hours; its force in association with many of its kind, not too far separated one from another.

In the editorial referred to it is pointed out that a young man may obtain a practical working knowledge of the science of electricity in seventy-two hours. This statement is vouched for by a distinguished efficiency expert.

Any one of the subjects in the stairway of the first diagram can be mastered to a degree in even this short space of time.

Let us select, for example, the subject of music literature, to be mastered not as critica writer needs to master it, but to be grasped as the student of history, esthetics, and interpretation should know it. What can one do in this domain of music with a brief time allowance?

Music literature is a department broad as to extent and numerous as to titles. One could spend a considerable part of all one's time at it and even then scarcely be abreast of its development. But fortunately all departments of literature are divisible into two sections:

a The portion we need;

b The portion we do not particularly need.

For example, a piano teacher must read Philipp Emanuel Bach's treatise on the *True Art of Clavier Playing*, but while he might find somebody's *Chats with 'Cello Students* interesting, it would scarcely be regarded as indispensable to him.

One can imagine the pianist setting the problem of music literature before him in this wise:—

What are, for example, ten indispensable titles in general music literature?

It is easy to ascertain ten such titles and inexpensive to come into ownership of them. Then with the books before him he says to himself:—

1. Do I know my reading speed? That is, have I ever ascertained (by an efficient method) how many words I can read in deliberate, thoughtful manner, say in fifteen minutes? (Every student and teacher should have this measure of himself just as he should know his age, weight, and height.)

2. As to book No. 1: How many lines per page? How many words per line? How many words per page? Hence, approximately, how many words in the entire book? And, finally, how long will it take me to read the book at my determined reading speed?

He now knows approximately the time investment of any book that may come to his hand. It is peculiar that once we know a fact like that it seems more easy to find the time, either as direct assignment or as made up of odds and ends.

The present writer has just made a test of reading speed with a deliberate reader, using Grove's *Dictionary of Music and Musicians* as a basis. The volume is not easy to hold and is of small type —two factors which may be said to favor the test in a way. The reader read two columns, approximately 1000 words, in six minutes. Thus, a 60,000-word book could be completed in 360 minutes, or six hours. This suggests that the teacher of the preceding paragraphs might commune with himself in this wise:—

1. Have I wasted six hours in the past two weeks?

2. Am I perhaps wasting time regularly at the rate of six hours every two weeks?

3. If so, I am losing the opportunity to know a 60,000-word book every two weeks.

4. Or twenty-six such books every year.

Let me (the Victim is speaking) close the eyes and imagine these twenty-six volumes all standing in a lovely row, in a lovely bookcase, flashing their attractive colors upon me as next year's possibilities.

I wonder how I should feel, here within me, if I had in the past year actually mastered these books by the simple process of just doing it!

I give this up. It is impossible for me to imagine so wonderful a feeling, and yet I know by the elementary mathematics of Efficiency (he is still meditating with the eyes closed) that I have lost every year, for years past, the food and flavor of just such a row of books. In ten years this means 260 volumes. I really feel great respect for the authority I might have been.

III

Efficiency has worked hard and always will to show that all things are possible to him who establishes a goal and persistently works his way toward it.

No worker can fail to be impressed with our low average of time use.

Most of us simply putter our way through the day. We dawdle, loaf, laze, shuffle, stumble, and do everything but proceed at a steady on-going rate of speed. What we have failed to discover in the gift of the gods is that every hour is a golden cup filled to the brim with sixty minutes. But as we appropriate it, reaching out the hand to receive it from Father Time, we spill twenty or thirty minutes in getting hold of the cup.

Our trouble then is that we miss a vast amount of what would make us significant in our profession, simply because we are trying to build a Temple of Life with twenty-minute hours, with thirty-minute hours. That kind of brick will never make a substantial wall. It will persist in falling about us and compel us to apologize for the dust in our rooms.

IV

It is stated that ninety-seven per cent of boys in the United States receive no college education. It has also been stated that 325 men in the senior class of an Eastern university spend, *each of them*, over four thousand dollars for his university training.

Yet the significant work of the world is being done only in small part by the three per cent of college men.

This means that it is being done for the most part by the non-college trained man.

But—

No work of enduring value is being done by anyone who is untrained.

The best positions in all the arts, sciences, and industries are opened to trained men, whether college trained or not

But all significant positions are forever closed to the untrained.

This is true in the Art of Music, more so today than ever before. And it will be more rigidly true ten years hence than it is today.

Any man who arrived at the station called Ten-Years-From-Now with exactly the same equipment with which he starts will, as the wit expresses it, "Never arrive." All the unsatisfactory work that is being done today (omitting that of the bluffers, slackers, pretenders, and the like), is that of men and women whose training is ten, fifteen, and twenty years old.

A conservatory graduate of ten years ago who has not since then added ten rings of growth around his heart wood is a decaying tree. Some day a careless breeze will blow him over to the destruction of every nest which he has encouraged the birds to build in his branches.

The one single danger lies in the compressed stairway of Success. There are no short cuts. And there is no expanding view for the one who has stopped climbing.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley-Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY-MATHEWS

I HAVE been very much impressed through my contact with teachers during the summer months by the deep earnestness of most of our teachers of music. The hundreds of teachers who combine a vacation with normal training thus testify to their desire for the very latest innovations in methods as well as to their need of new material and a freer and finer interpretation of the old.

This reaching out for new ideas is not confined to any small section but is very general as pupils come from the extreme South, West, and East to the Middle West for special helps.

As I have been giving normal courses for many years, it is a source of great pleasure to me to note the great gain teachers are making and how much more ground we can cover in a two weeks' course now than we could fifteen years ago. Teachers come to the large cities now with a very definite conception of their needs and they seek direct methods, practical helps, and inspirational suggestions rather than big names and certificates as they used formerly to do.

There is still, however, much work to be done in systematizing music teaching. Teachers must be urged to form some standards of their own (if they are not willing to accept the standards of others), that they may secure more co-operation from the parents of children as well as give children the satisfaction of obtaining credits for work well done.

I have been amazed to find how many teachers still think that if work is "graded," Art takes wing. Naturally these teachers have never seen a graded work, or the results obtained through requiring certain ground to be covered annually by the pupil, but get their idea of "grading" from certain graded courses on the market.

When a graded course of instruction is mentioned we have no reference to any graded books (though many of them are very helpful), but rather to a carefully thought out and tested scheme by which we place and teach in a certain year, technical exercises, studies, pieces, ear-training, and theory work.

Just as in a day school pupils have certain studies for which they obtain credit if the work is properly assimilated, so do we grade our music work that we may secure certain definite technical results, certain musical results, and certain pianistic development within each school year.

What is the result?

A far deeper interest on the part of all concerned, a growing chentéle because of that interest, and, finally, we become a power for good in the community, placing music on a sane educational platform along with other formative factors.

Children work in school not because they enjoy it, but because they want to keep up with their classes and make the grade. In music work where, previously, it has been next to impossible to secure practice of technic, that careless attitude towards technical practice changes as if by magic as soon as the graded schedule is adopted. The pupil can see a goal to be reached and, like the good American he is, joins the "Prepared Brigade."

So many of our old-time troubles vanish in thin air when the credit scheme is introduced, that I wish every teacher might be awake to what she is missing by sticking to her hit-or-miss methods of assigning material.

Will you be good enough to tell me through THE MUSICIAN how many elastic touches you use in the first two grades? I have been in the habit of playing all chords with a drawing in of the finger. Am I right in this? C. W. B.

I am using fewer and fewer elastic exercises in the first grades as they destroy the "steel" finger for which we are working.

We seek in the first two grades to secure the "steel" finger and responsive condition of hand and arm as well as arm weight in exercises. I find the elastic exercises of great use in vitalizing the finger point upon which all fine technic turns later on, but for elementary work I should not have such exercises practised other than occasionally.

The chord hand is a hand that is in a block. We do not consider the finger element at all except as we voice. Therefore the drawing in of the finger point is to be avoided. The more solid the hand, the firmer it is from the knuckle joint down to finger tip, the finer the chord.

* * *

In one of the large convent schools where I have been teaching this summer, I gave a technical examination at the close of the course. Among other questions was this:

Give explanation of pedals as to a child.

I give below the answer received from one of the Sisters which should prove helpful to piano teachers in elementary work.

The pedals are, like good fairies, always ready to help the hands out in their work of making beautiful music.

The one on the right, which is called the Damper Pedal, like a charm fairy, has a magic effect upon a tone. If we press a key and, while holding it, take this pedal, we shall hear, if we listen attentively—*very* soft tones ringing out with the one we are pressing, in a kind of echo chorus. Now, if we wish to hear what these sympathetic tones are saying let us sound a tone and, after taking the pedal with it, release the key depressed. We will then hear the fairy-like echo chorus of the tone just left. Thus we see that the Damper Pedal not only makes tones more beautiful, but can also prolong them after the fingers are released.

The pedal on the left, which we call the Soft Pedal, by making tones sound far away, acts like a little dream fairy. It muffles the voice of the tone but has no prolonging power.

The pedal is the middle, which is the tone Pedal, is like a most wonderful little fairy, for it sustains tones long after the fingers have left the keys. We will learn more about this pedal later.

* * *

Will you kindly advise me, through THE MUSICIAN, just what technic and theory a boy, thirteen years old—a beginner—should have in the first lessons to advance rapidly; also the names of pieces which will be of use theoretically, and at the same time keep him interested. F. F.

I would use my *Conversation Lessons* and work as hard as I could toward the chord and pedal. As soon as families are presented, work toward a chord formula that he can transpose readily in all keys, for boys like the chord work and pedals especially, and I think they show good taste.

I would use very little, if any, of the *Child's First Grade*, with so old a boy, for *The Doll's Tea Party* and such titles prejudice him against the message.

Try the *Student's Classics*. Such pieces as the *Air and Variation*, by Gurlitt, *The Jolly Hunstman*, by Merkel, etc., should interest him; and if you will push the chord work you will be surprised to see how soon he can take them safely.

Use Hannah Smith's *Plantation Melody* or her *Ballet Dancer*. Besides the chord work give plenty of arpeggios, changing the accent and chord each lesson. Some scale work and insist on its being properly done. Keep "General Efficiency" before him constantly, as in the Boy Scout movement. If the lessons are few and far between talk with him over the telephone every other morning and ask him what he has practised that day, how much memorizing he has done, and if he has struck a "snag" anywhere. Don't let him think that you are not on the job but keep your personality and your work before him, by using the telephone, if you can't have him for two lessons a week. Do plenty of transposition work with him and have him appreciate that he has certain definite responsibilities toward you and toward music.

* * *

Who is the greatest living piano teacher? M. L. M.

I would say that this is largely a matter of opinion and temperament. However, it is often the case that the most celebrated teachers are not the best.

There is a certain type of pupil, who enjoys taking lessons from an artist, as he delights in the playing and feels that the interpretations are more authoritative.

Then there is another type of pupil who feels that the artist takes little or no interest in teaching and therefore puts no time on the solving of the difficulties which confront the student.

I would not like to take the responsibility of saying who the best teachers are or where they are because this great country is full of earnest workers. The personality of both pupil and teacher must always be considered, in the choice of a musical guardian. I always have the feeling that a teacher should be not only a teacher, but a guide, philosopher and friend.

I am sorry to say that I have never heard of the Trio you mention in your letter.

A NEW SEASON ANNOUNCEMENT

THE card to the right is a copy (except the change of name) of an announcement sent out by two teachers in one of the large American cities. It is a good model.

MR. AND MRS. BLANK

Teachers of Piano

FIRST TERM—SEPTEMBER 11TH TO JANUARY 27TH. Vacation Christmas week.

SECOND TERM—JANUARY 29TH TO JUNE 15TH. Vacation Easter week.

Pupils of Mr. Blank who begin study the first week of the term will be presented with a year's subscription to THE MUSICIAN.

Pupils of Mrs. Blank who begin study the first week of the term may have THE MUSICIAN for half price (seventy-five cents).

All indications are that this is to be my busiest season. To get desirable lesson periods, as well as THE MUSICIAN, register at once.

I am reserving ——— on ——— for you. Kindly advise me on the enclosed card if it is satisfactory.

Sincerely yours,

MR. AND MRS. BLANK.

CHILDREN AND MUSIC STUDY

A Berlin magazine, *Die Dame*, collected from a number of eminent musicians their views on the subject of music study by children. The published replies were translated for *Musical America* and printed in the issue for August 5th, from which the following extracts have been taken:

Lilli Lehmann says: "Of course children should be taught an instrument. . . . For children not particularly musical the piano is better than the violin. . . . It is the most important, nay, more, it is the first and most vital demand that children at school should be taught not to *sing* but to *speak*. Children, without exception, copy the mistakes of their parents and their surroundings. . . . Singing in school is of importance but it does not greatly benefit the hearing of the children.

"Instruction in the art of speaking, and that alone, refines the ear. The children learn just as violinists produce the tone. Such lessons should be given for a year. During the second year the children will not only sing better, but their instrumental lessons at home will benefit. To attain any skill in music one must begin by being industrious. It is still true that genius is industry."

Mme. Carreno speaks strongly: "I know of no subject so interesting to me as that of the training of children. Most virtuosi are too proud to instruct children. But I have said to myself, 'Can there be anything finer than to train a child from its earliest years as one cultivates a flower and brings it to perfection?' I am the mother of many children and was grateful to my father because he brought me up with such care.

"Parents are stupid enough to believe that whatever is cheap and inferior is good enough for the children. To such parents I say: 'Why do you take such a poor teacher? Because he is cheap? Do not take any, and that is cheaper still!'

"The strength of children must not be overtaxed. Their ambition must be aroused. If you tell a little boy that he will know a certain line in an hour he is much more likely to have acquired it than if you had punished him. Do not permit children to practise too much. When at the age of thirteen I played before Liszt he said: 'Do not practise more than five hours a day. Five hours and fifteen minutes will spoil everything that you have learned in five hours.'

"Children playing alone should practise for twenty-five minutes at two intervals. The child sits down and before he is tired ceases to play."

Willy Hess, former concert-master of the Boston Symphony Orchestra, has an interesting reply: "As a violinist I naturally recommend the violin and advise that instruction on that beautiful instrument be assiduously pursued. But as a much better ear is required for playing the violin than the piano the selection of the violin should only be made when the pupil possesses an excellent ear, a healthy body, and a suitable hand. Generally speaking, one can begin at the age of eight. But another consideration far more important. I advise my pupils, particularly when they are a little too young, not to begin with the violin, but to devote themselves to the piano for a year or two. For the violinist the beginning is particularly difficult. Much strength is needed to held the violin correctly, to stand straight without getting tired, to learn the fingering while at the same time reading the notes.

"But if the child possesses a little preparatory gymnastic and musical training many difficulties will disappear. In that case tone, notes, and rhythm will be familiar to the pupil. He can then concentrate his attention entirely upon acquiring finger and bow technic, without having to fasten his eyes continually upon the notes, or worrying about their character and meaning. Before all a well-ed foundation is necessary."

NOTES ON THE MUSIC IN THIS ISSUE

October again brings us to the threshold of a new teaching season. It is true, that many teachers are not really started in their studio work until the end of the month at the earliest, yet the present time marks the period when one should begin to think about the work of the new season and to plan to carry it on efficiently.

This means being on the lookout for new material not only such as can be used with pupils but such as will be worth the teacher's while to study on his own account. It is a great mistake to allow one's technic to deteriorate, to allow the sharpness of perception to become dulled, to remain out of touch with the significant movements in music. Alertness and progressiveness are of the highest importance.

Following out this idea we try to select music for the young player as well as for the advanced pupil and the teacher, especially aiming to present, in the music section, compositions of musical as well as technical value. It is not an unusual thing for writers on the subject of music education through the piano and its music to caution against too great devotion to the work of developing a high degree of technical skill. And yet it is not well to decry thorough technical drill. Technic is the basis of interpretative skill. All the great players of the day have abundant technic, which they use for artistic ends. Therefore students are wise to work on technical exercises, part but not all of the time.

Movement de valse, Op. 10, No. 2, by Samuel Maykapar (pronounced Mai-ka-*par*), is from the pen of a Russian composer, born December 18, 1867, studied in St. Petersburg at the Conservatory, later with Leschetizky in Vienna, locating in Moscow for his professional career. It is light and graceful in style with a modern trend in harmonic quality, just the kind of a piece for a teacher to use for his own pleasure or to give to an advanced pupil as a study in a polished, refined style of playing.

Miniature, Op. 7, No. 1, by B. Kalafati (Ka-la-*fah*-tee), is also from the Russian repertoire and is distinctly a study of a technical character, but one which has very definite musical character as well. The figure in sixteenth notes is to be light and graceful, a sort of decorative background with a melodic character, very much as if it were being played by another instrument. The movement of the hands calls for free, unrestrained action, neither interfering with the other, and not showing, to the ear, any sign of break. It will be best to memorize this piece, learning a few measures at a time. Both this and the preceding number are from the volumes of Russian piano music, edited by Constantin von Sternberg, and recently published by the Oliver Ditson Company in their Musicians Library.

At eventide, Op. 6, No. 3, by Cedric W. Lemont, is from a set of charming pieces entitled *Dream Pictures*. It is contemplative in character and demands a full, round singing tone, one which makes a melody stand out prominently. The first sixteen measures are rather quiet, but at the *poco agitato* slightly increase the tempo as well as the degree of loudness. At the section marked *Allegro agitato* a more rapid movement is called for, with a certain bold vigor as indicated by the doubling of the melody in both hands, as if a violin and 'cello are playing, an octave apart. When the return to the first theme is reached keep the accompaniment in broken chords rather subdued and quite legato, but making the melody sing.

Valse aérienne (*Sounds from the South*), Op. 148, No. 1, by Fritz Spindler, is included as a study in velocity playing, and in octaves which give out a melody. Notice the tempo, a dotted half note equals 112, which means that a dotted half note gets one beat, and that there are 112 beats to the minute. Since six eighth notes equal one dotted half, the first part of this waltz requires that the player execute at the rate of six times 112, or 672 notes to the minute. Commence at one-half this tempo and gradually increase. It will furnish excellent drill in rapid scale playing.

In the cotton, Op. 1, No. 4, by L. E. Orth, is a delightful little character sketch suitable for players just entering Grade III. The melodic figures are highly suggestive of the negro's musical ideas, and the player should have in mind the banjo and its characteristics. This may have a place on a program of music in the folk song style.

Scrubbing song, Op. 35, No. 2, by Charles Wakefield Cadman, is one of a set of ten pieces, descriptive of the incidents of one day in the life of two children. The verse at the beginning clearly indicates the thought of the composer. Commence practice rather slowly and gradually increase the tempo. Learn a few measures at a time.

Dance of the flowers (Waltz), Op. 135, No. 3, by J. Frank Frysinger, is by an American composer who always writes interestingly. This is one of a set of three pieces in dance rhythms, for young players. It is graceful in style, charming in melody, and has exceptionally stimulating technical value, demanding considerable variety in touch effects.

Fall in line (March), Op. 318, No. 5, by Carl Wilhelm Kern, is one of a set of six "miniature dances." This is an easy march especially useful for school and gymnasium classes which work to music.

Little Folk Song, Op. 135, No. 1, and *A Fairy Tale*, Op. 135, No. 2, by Karl Komzàk, will be found effective for use in the ensemble class, and just about the difficulty for the average player. We call attention to the fact that in the left hand part of the *Primo* in *Little Folk Song*, the lower notes forming thirds in several measures can be omitted, making the passage somewhat easier. In the *Fairy Tale* follow the directions so as to get the appropriate tone color to the two sections. As usual we advise that the two players learn both parts so as to change about. It is not well for a player to confine himself exclusively to the upper part.

Andantino-reverie, by Théodore Dubois, transcribed for the organ by James H. Rogers, has pronounced melodic charm and should prove an attractive number for the church service or a recital. It is by a distinguished French composer.

Song of the Volga boatmen, a Russian folk song, transcribed for violin by Franz C. Bornschein, is a number which will repay careful study; the difficulties are not much from the point of technic. Tone, full, round, and sonorous, is what is demanded, and good intonation in playing in the higher positions. The transcriber has carefully marked essential fingers, phrasing, and bowings.

Devotion (*Zueignung*), Op. 16, No. 1, by Richard Strauss, is one of this great composer's most available songs for the young singer. It is broadly melodic, with here and there a break in the rhythmic continuity which suggests an undercurrent of intense and passionate sentiment. Don't sing the rests! In A for medium voice.

Expectancy, by William Stickles, is a short song which works up to a strong climax, the whole effect being very definite and highly artistic. This song has appeared on the programs of some well-known concert artists. In C for medium voice.

Jesus, word of God incarnate (*Ave verum*), by George B. Nevin, is a sacred song of fine quality and unusual value to the church singer. We have used the low voice edition, which enables a contralto, especially, to display the rich, deep quality of the lower notes of the voice. In A♭ for medium voice.

THE MUSICIAN Subscription Agency will save you money on your magazine combinations.

The Musician

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

One Hundred Million is A Hundred Million ONES

TIME is a flowing stream: Unhurried and undivided. But to use Time with profit we mus learn to divide it. So Nature provides us with the great factors:

ONE MINUTE-ONE HOUR-ONE DAY-ONE YEAR-ONE LIFE

How shall we learn to command these factors? For we must realize the law that unless we command them they will subjugate us.

WE MUST GET DOWN TO "ONES."

We must learn the value of the minute as it comes—a seedling—out of the garden of the Infinite. How it increases into more minutes, into hours and days and years, so growing into the Tree of Life!

What sort of a Tree of Life?

The sort we make of it as we manage the Minute and its growth

It has been said by an efficiency expert that a young man ca acquire a practical working knowledge of the Science of Electricit in seventy-two hours. That is, one hour a day for seventy-two days or one-half hour for one hundred and forty-four days; or a quarter o an hour for two hundred and eighty-eight days. [Even then there ar left seventy-seven days for vacation.]

Have you ever translated this seventy-two hour statement into terms of your own needs?

Would you consider yourself a better asset as one partner in the firm of 100,000,000 workers of the United States afte you have devoted seventy-two hours, split up as you can best manage it, to—

1. Knowledge of current musical events.
2. Knowledge of acoustics (a practical reading knowledge of the subject can be had in much less time than seventy-two hours).
3. Theory of music (including harmony).
4. The art of musical analysis.
5. Such modern biography as the life of Coleridge-Taylor, Bruneau, Debussy, Vincent d'Indy, César Franck, etc.
6. Left hand technic.
7. Score reading. (If you haven't learned Harmony you won't be able to do this. But seventy-two hours of Harmony should enable you to do it.)
8. Solfeggio and piano sight reading.
9. Piano and vocal ensemble.
10. Systematic reading of works on music, including at least o musical magazine.
11. Musical pedagogy.
12. Polishing your repertoire (and perhaps your speech!).
13. A foreign language.
14. Writing on music education.
15. Efficiency in business affairs.

It is amazingly easy to devote one hour to anything. Almo as easy to devote two. Seventy-two hours for one year to one su ject. In three years you can have three subjects well in hand.

But soon we begin to perceive that we are not touching the milestones of the hours on a level road but that we are traveli uphill, with constant changes in level, and curves which close off the view in both directions. But there is a way out! KEEP O

It is not the pull of the Steep that puts us out of the running as we start to climb this highway. It is the trench work of our enemies—The Snipers, the '75's, the Gas Bombs, Liquid Flame, Aviators, etc., or translated into terms of our profession:

Apathy, Self-indulgence, the Desire to be Entertained, Uncurbed Tendency for Self-excuse, Dodging Responsibility, and others that every one knows for himself. But let any one go forth with will to conquer these hidden foes to his progress and he will fi himself not only able to climb this incline, to the higher lev of the desirable things of life, but, like the Juncan Miner who said was willing to pursue Fortune not only up a vertical cliff but th that lean back.

FROM OBOE-PLAYER TO ROYAL ASTRONOMER OF ENGLAND

IN 1751 a nineteen-year-old German musician, William Herschel, came to England and for a time supported himself by playing the oboe in an orchestra at Bath, and the organ on Sundays. Not being satisfied to be merely a player, he studied Smith's *Harmonics*, a text-book on musical science. In this way he learned of the same author's book on optics, which he began to study. From this book he went to the study of astronomy. His work culminating in the manufacture of great reflecting telescopes. The discovery of the Georgian Sidus, commonly known as the planet Uranus, secured for him the appointment of Astronomer Royal.

FROM CARPENTER TO SURGEON-GENERAL

IN Scotland, in 1750, there lived a young carpenter, just twenty-one years old, who could barely read and write, and was handicapped by a poor memory. To train his memory he made it a habit to put on paper everything he thought or learned. Then he entered the dissecting room of his brother, as demonstrator in anatomy. No fact was too trivial for him to record, and in time he trained his memory and acquired an education, closing his life as a surgeon of high distinction. John Hunter's rule was: If a thing be practicable I can accomplish it if I give pains to it; and having begun, I never stop till the thing is done.

FROM COBBLER TO METAPHYSICIAN

TOWARD the close of the eighteenth centur young cobbler in Cornwall felt the need learning to read and to write. His study w his wife's kitchen. After he had learned read he felt his ignorance the more, but det mined to go on with his study. As he pegg soles on shoes he read Locke's *Essay on Understanding*. From reading he turned writing and then to further reading. variety of subjects, Astronomy, History, Me physics, took his attention. The publicat of several works brought him the degree Master of Arts. And in time Samuel Dr became editor of an important publicat and known as the "Cornish Metaphysicia

The SINGER and HIS ART

RECITATIVE AND ITS RENDERING*

BY R. J. PITCHER

Probably no branch of the singing teacher's vocation offers greater scope for study and investigation than the work of teaching how to render a recitative in an intelligent and artistic manner. More individuality and greater artistic skill are requisite for singing recitative than for the interpretation of airs and ballads.

A recitative may be compared to an outline picture which is given to a student to fill in with details and coloring; or, again, it is a mass of dry bones which may be conjured in life by skilful interpretation.

It is almost impossible to assign a definite inventor; but Cavaliere (1550–1600) has been named, and there is much evidence in support of his claim. Be that as it may, its discovery has exercised almost as important a bearing on the art of music as the discovery of harmony itself. It is worthy of note that Cavaliere was among the very first to use *basso continuo*, and he has the distinction of being one of the earliest to use vocal ornaments.

Recitative may be said to be declamation in music, and for this reason it has been extensively used in opera and oratorio. When the sentiment of the poem constantly alters, or the action of the drama leads rapidly from one crisis to another, formal rhythm and aria become impossible. Then it is that recitative comes to the aid of the composer, and thus variety and additional interest are added to the work.

Some of the earliest examples of recitative in its true meaning are to be found in Cavaliere's oratorio, *La rappresentazione dell' anima e del corpo* (about 1600). No other form of music has undergone so little change in three hundred years. *Recitativo secco* (or dry, simple, unaccompanied recitative) is now to-day what it was in Cavaliere's time; as now, so then, it was built on a simple *basso continuo* (thorough bass), with figures for the harmony which was filled in by an organ or harpsichord. This plain announcement of the word made it necessary to avoid melody (as it is generally known) and the rhythmic division of music, as being opposed to the effect needed. Blank verse is much more suited to be set in recitative, the symmetry and design of the usual lyrical form, almost demanding rhythm and phrasing, is not so suited to this form of music; this explains why composers of absolutely opposite tendencies employ the same cadences, chordal progressions, etc., over and over again.

It will be noticed that, as a general rule, key signatures are not used, sometimes also the usual time signature is omitted. A recitative often begins in one key and, after many modulations, finishes in a key far remote from that in which it began. These numerous modulations enable every kind of diction to be expressed, and the monotony which, from the character of the music, must result if one key were dwelt in is avoided. As an example of numerous changes of key we cite the beautiful recitative, *Deeper and deeper still*, from *Jephthah*.

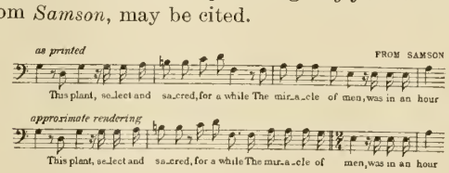
Handel is probably the greatest composer of recitative the world has ever known. The most consummate orator could exhibit no greater perfection than that obtained by this immortal composer, and with the simplest harmony he has so clothed the prosody as to bring out most forcibly every minute detail. Bach, Haydn, Mozart, Beethoven, Weber, Rossini, and many other great composers have left priceless examples of this class of music, and countless examples might be given of recitatives by all these masters.

Diction, musicianship, and fine intelligence are all requisite for one who seeks to become an interpreter of these wonderful conceptions, and they will repay the utmost study and labor.

We shall name some details connected with recitatives and formulate some rules which are generally to be observed.

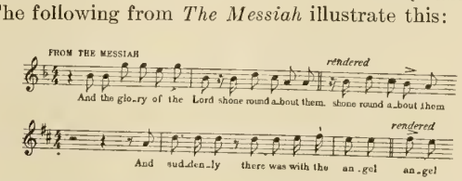
Recitatives in the writing are largely disconnected, rests are inserted, completely severing the ideas of the prosody; in performance the actual notation is largely set aside, and phrases separated by rests are sometimes united, while rests are often inserted where they do not exist in the music. It is difficult to assign a reason why composers do not write exactly what they want, but it may be said that it would almost be an impossibility to denote absolutely accurately the proper rendering of a recitative, and it was often customary with Handel to leave much to the genius of the performer.

As an instance of complete opposition to performance the recitative preceding *Thy glorious deeds*, from *Samson*, may be cited.



as printed
FROM SAMSON
This plant, se-lect and sa-cred, for a while The mir-a-cle of men, was in an hour
approximate rendering
This plant, se-lect and sa-cred, for a while The mir-a-cle of men, was in an hour

Appoggiaturas are generally introduced at the ends of phrases, or in an accented prominent position in a phrase, when two notes or their equivalent occur at the same pitch. This is done to give prominence or to raise the voice on accented words or syllables. The following from *The Messiah* illustrate this:

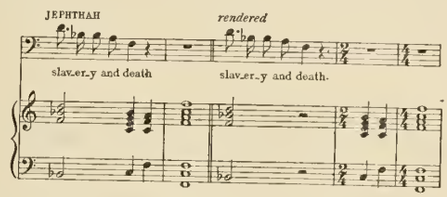


FROM THE MESSIAH
rendered
And the glo-ry of the Lord shone round a-bout them. shone round a-bout them
rendered
And sud-den-ly there was with the an-gel an-gel

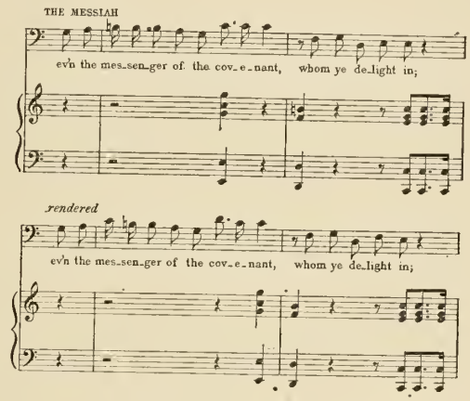
This idea of an appoggiatura is frequently carried into the domain of aria as in *I know that my Redeemer liveth:*

Examples might easily be multiplied, and the student can readily find others. Another variation in the text generally occurs when, at the end of a phrase, two notes are repeated after a leap down. The appoggiatura then takes the form of repetition of the upper note, or note from which the leap has been made, serving the same purpose as the ordinary appoggiatura. For example, the following from *The Messiah*:

In accompanying a recitative a pause or wait in the accompaniment is nearly always made for a cadence, whether at the end or in the middle of the recitative. The time in these places, therefore, is elastic, and full allowances for these points must be made. The following from *Jephthah* shows the practice:



In certain cases chords disconnected by a rest are joined and the rest omitted, as in the following from *The Messiah:*



THE MESSIAH
ev'n the mes-sen-ger of the cov-e-nant, whom ye de-light in;
rendered
ev'n the mes-sen-ger of the cov-e-nant, whom ye de-light in;

A TALK WITH GARCIA

In looking over an old copy of *The Messenger*, issued by the Music Teachers' National Association, we noticed an account by Frederick W. Root, the well-known teacher of singing, of Chicago, of a conversation with Manuel Garcia, who was then ninety-five years old.

Mr. Root says that Garcia had come to treat the whole subject of teaching singing with the greatest simplicity. In the course of a discussion on the subject of "voice placing," he said: "The voice is made in the larynx and issues from the mouth; that is all there is to it."

Nor would he give sanction to the custom of localizing sensations of tone in the cranium, forehead, nose, etc., stating his view that it was all superfluous.

The question of energizing the diaphragm for voice control came up. "Let me see you breathe once, and describe to me the process," he said to Mr. Root. The latter did as requested.

"Is there anything rigid about it?" asked Garcia.

"No," replied Mr. Root.

"You can't improve on that," was the master's comment.

"I tried one thing after another of the devices voice teachers use," writes Mr. Root, "to get his opinion of them, but he only shook his head."

*From a book on the subject published by Novello & Co.

HOW TO SING

BY ARTHUR DE GUICHARD

V

Before continuing our inquiry into the Art of Singing, an appropriate digression may be permitted in order to reply to a question from a correspondent who, evidently, belongs to that category of singers who believe that all they have to do to sing well is to study the *technic* of the Science of Singing, and by this means become excellent artists.

The correspondent says as much in his letter and goes on to declare: "We have only to consider the case of Caffarelli, who studied with the celebrated Porpora—the most wonderful teacher of the old Italian school" (*poor O. I. S.! your cloak covers many excruciatingly curious fables!*). "It is related of Caffarelli that his master gave him a page of exercises"—*one page only!*—"and told him to go away and practise them for five years—nothing but the one page. At the end of that period, he returned and sang his page to Porpora who, after listening enthusiastically to the execution of the technical exercises, sent him away, saying: 'Go my son; you are now the greatest singer in the world!' Does not this prove that, provided the voice be good, all we have to do is to practise a few technical exercises to get flexibility?"

THE FABLE OF 4 Ps

This story of the Pupil, the Professor, the one Page of exercises, and the Practice-period of five years is quite well-known as a story. It belongs to the *ben trovato* species (*se non è vero è ben trovato*! "if it is not true it is well invented"). If it were true, instead of esteeming Porpora among the greatest of singing teachers, we would have, like Dogberry, to "write him down an"—idiot!

For my part, I refuse to believe the story as it stands. It may, however, contain a certain amount of truth, just enough to give currency to the spurious version. The truth underlying the fable was the need, in Caffarelli and Porpora's time, of great agility in execution of rapid trills, scales, and arpeggios. The singer in question was a sopranist (or male soprano, *castrat*) whose performance of what is known today as coloratura music was exceptionally brilliant; he seems also to have been the first to have cultivated the singing of chromatic passages.

But the ability to sing trills, runs, chromatic scales, and arpeggios, while generally necessary to a singer's technical acquirements, *does not* in any way or manner, as my correspondent implies, *constitute the whole Art of Singing.* Indeed, we are told that even Caffarelli excelled in the pathetic style.

SOME SINGING ESSENTIALS

Let the former ask himself: "How much could have been written on that celebrated page?" And again: "Were the coloratura exercises of that period sung to only one vowel, or to all the vowels? Were consonants also included? Were there any words?"

Then there was the matter of word values and color; the study of phrasing, of declamation, of style, of expression appropriate to the various emotions—more kaleidoscopic and more fleeting than the evanescent iridescence of the rainbow.

All these attributes must form an integral part of the equipment of an artist of today. (And they could not possibly have found a place on that one short page.)

The real artists of today are not those who can astonish by their rapidity of execution, or by the lustiness of their lungs, or by the emission of phenomenally high notes, but those who, like a Clément or a Bonci, can sing emotionally with comparatively little voice and yet with such exquisite style and perfect diction that their auditors are put in complete sympathy with the intentions of author and composer, as well as with the artists' *personal interpretation.*

Despite all these *absolutely necessary acquirements,* my correspondent and the others like him believe that as soon as they have taken a few, a very few, lessons in "voice placement" they are ready for any vocal eventuality, either on the operatic stage or on the concert platform! Or, if they consent to study seriously they devote all their endeavors to the production of "perfect tone," to such an extent that words and interpretation are completely neglected. These mistaken and misguided persons are eventually seen and heard striving vainly to rival, for beauty of tone, with the orchestral instruments which have *no words* to render and to impart to an audience!

THE OBJECT OF SONG

If the ultimate goal of song were the rendering of musical sound, a page of exercises *might* suffice; but the object of song is the intelligent interpretation of a story or of a poetical idea, by means of words. Therefore,

Whenever a choice has to be made, music must be sacrificed for the words and not the words for the music.

Consequently, the answer to my correspondent is very emphatically: NO. The singer's art cannot be summed up in a knowledge, no matter how deep, of his vocal mechanism or in the emission of perfect tone (can we imagine ourselves worrying about the production of a perfect tone for the culminating cry of the boy in Schubert's *Erlkönig?* We would kill the climax!) That "one page" was very apocryphal in Porpora's time. It has become an absolute impossibility today.

REAL GOAL IS MUSICAL EXPRESSION

Paradoxical as it may seem, the art of a great singer of the present day consists of knowing *how to do without voice.* This does not mean that technical exercises (slow tones, intervals, scales, arpeggios, shake, agility, and so forth) can be omitted; on the contrary. Not "one page" alone, but many are necessary. But they are not the goal; they are only a means to the end, and

That end is musical expression imparted to word interpretation.

The art of expression does not consist in actually feeling the sensation or sentiment to be expressed; for the actual feeling would probably deprive the artist of his voice, when most needed. It is the *art* of expression; a simulated expression. The artist must understand and be able to feel the expression, in order to simulate its various phases; but *he must not feel it when interpreting.* He must employ all the resources of his art to convey to his auditors the emotion he wishes them to feel, and thus play upon their feelings without abandoning himself to his own; which latter would result in the loss of all control of expression, for himself and for his audience.

THE TRUE ART OF EXPRESSION

Thus, the singer who is a true artist studies the words, fathoms their meaning, endeavors to feel them and to note down their effect so that he may be able to reproduce the exact state of mind desired and,

By his art (that is, his artificial means) convince the audience and make them feel the wave of real emotion, which he is only simulating.

Divested of all technical details, this is the true art of expression: the highest point to which the conscientious artist is ever striving.

A GREAT TEACHER'S WORDS

As to those details, read what one of the finest interpretative artists of the present time has said: "*First of all, study the musical part profoundly and precisely, even to the most minute detail,* with the constant determination to fathom and respect the composer's writing, down to its smallest particulars. After which, there will come the vocal practice, or sound-realization of the preceding by means of singing. The part having been already memorized accurately all the resources of the art of singing, all the nuances and every variety or contrast of quality and vocal color must co-operate in as sincere a realization as possible of the musician's intentions.

"Must I speak of declamation and of the study of the poem, with the object of giving due value and importance to sentences and words? If so, it would only be in order to point out the faults of prosody, and then the contradictions and even the antagonism that too often exist between the musical and the literary phrases, particularly in translations.

"There is not merely one difference between a speaking and a singing part; there are numerous differences. In addition to the actor's difficulties the singer has to think of the music, of the time of his voice, of that voice which he certainly abuses and uses abnormally, and which is affected by the slightest occurrence or the least indisposition. The preoccupation of shortness of breath, and of emotion—that emotion that even the most hardened may succumb to. Emotion, which is *really felt* and which adds deeper intensity to the actor's art *contracts the singer's throat and deprives him of his voice.*

"In conclusion: I do not think that work has ever produced genius; it is much too ambitious a word. But I do firmly believe that constant work, in a well-balanced temperament, can produce talent and talent only; and that is a result which is much less common than is supposed."

AN ARTIST'S EQUIPMENT

The author of the foregoing admirable counsel is M. Maurice Renaud, one of the world's chief exponents of lyric declamation. In order to learn lyric declamation (recitative) we must learn phraseology, articulation, breathing, style, music, languages, literature, esthetics, facial play, and deportment. The absence of any one of these acquirements from an artist's equipment may nullify his best endeavors and render his interpretation ridiculous; because artistic poise, or balance, will be destroyed.

As a practical aid to the study of facial expression I would strongly recommend the student to obtain from a seller of drawing materials, a set of outline sketches of the face which serve as models for the drawing student to copy, in the delineation of the various emotions: love, hate, fear, courage, melancholy, joy, etc. Standing before a mirror, with the model by its side, the student will endeavor to depict different sensations by striving to imitate in his own face the lines and expression of the model. It is surprising the rapid mastery over the features that may be acquired by a daily twenty-minute practice of this nature. Facial play for the expression of emotion is just as necessary to the concert singer as to the operatic artist. There is probably, nothing more aggravatingly disappointing than to see a singer, on the concert stage, give utterance to the most emotional music and words while maintaining a rigid attitude of body and countenance as stolid as that of a deaf-mute.

GREATEST ATTRIBUTE OF MUSIC EXPRESSION

I have insisted upon this subject of expression such length, because, as a matter of fact,

Adequate expression includes everything that constitutes the singer's art.

Every little tributary stream, whether it be termed voice, legato, sostenuto, agility, coloration, diction, color, intensity, phrasing, what not, flows into the great ocean of *expression:* the greater the number and the perfection of these tributaries, the deeper and more wonderful will be their aggregate of EXPRESSION.

Music is emotion; the musical art is an emotional art; therefore the greatest attribute of music is expression. If the expression, or the music, is to be perfect no little tributary may be omitted or incomplete, but must be practised until the co-ordination of the perfect parts results in a perfect unity.

THE HERMAN KLEIN PHONO-VOCAL METHOD

Based upon the Famous

School of Manuel Garcia

Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

CARUSO ON TECHNIC AND EXPRESSION

me months ago Caruso, in the course of a talk a representative of the *Christian Science itor*, of Boston, spoke very freely on certain s connected with the art of singing. We re- here some quotations from the published t.]

ORDS are the first consideration in singing. text of an aria rather than the music should be rtist's principal guide in performance. The cto, coming into existence before the notes, and in fact the reason for the composer's writing ly, ought to be the foundation on which an preter builds."

the query "Where do you locate the source of ssion in singing?" came the answer:

find it in the words always. For unless I give earers what is in the text, what can I give them? ust produce tone my singing has no meaning." izing a series of scale passages such as are used dio practice, Caruso commented:

ow, when I do that I don't say anything. I make musical sounds, but I express nothing. even execute the notes with a good staccato ato and still, having no words to go by, I make ect on my listeners.

ok at the question in another way. Suppose e to sing a line of text with a meaning in my that contradicted the idea of the words. Would not that be nonsense? People have observed that I sing as though I were talking. Well, that is just what I mean to do."

Singing, then, as Caruso began to define it, is a sort of exalted speech, its purpose being to illuminate the imagery and sentiment of language. The mere music of singing he seemed for the moment to put in a subordinate place.

By way of further emphasizing his point, he referred to a theme in Donizetti's *L'Elisir d'Amore*, which is used in two opposing situations—by the soprano in a mood of joy, and by the tenor in a mood of sorrow. He sang the measures of the soprano as though laughing. Then he sang those of the tenor as though weeping.

"But those two passages of melody cannot be identical," objected the interviewer.

"Oh, yes, they are," the tenor declared; and he quickly proved it by singing them over again with a less marked indication of the moods. "Here you plainly see where expression must start. It has to be from the words, of course. The performer puts in the feeling of gladness, or sadness, without regard to the notes, paying attention only to the text."

The next question was as follows: "But surely you must present some part of your thought in terms of music alone, for everybody knows that you believe in thorough technic and in finished phrasing."

"Yes; and I like to sing a tenor rôle like the one in the *Muta di Portici*, which is hardly anything but technic. I also like the bravura music of the *Barber of Seville*. A singer cannot do much without training in the old school works. Too many nowadays are in a hurry to sing the modern repertory. They do not like to study. A man with a voice gives a year to learn a rôle in a popular opera and gets on the stage as quickly as he can. When such a man is asked to take a part in one of the old operas, he cannot do it. I believe in a thorough technic certainly.

"When I sing I think of an instrument. In a *legato* phrase I think particularly of a violoncello, which, when played well, is almost the same as a human voice. I am much inspired by that in my central range, and often I lead my tones up the way the player does it on his A string. Quite regularly, too, in taking certain long intervals down from my middle to my lower voice, I do it in the manner of the violoncellist."

A NEW BOOKLET BY MR. STOCK

Helpful Suggestions to Young Singers

"There is more information for Students compressed into the few pages of this brochure than any one vocal lesson could possibly contain." A quarter in your letter will bring it to you. Address:

TWO MORE "INSPIRATION BOOKS"

IN the issue of THE MUSICIAN for September we called attention to a series of small handy volumes edited by Dr. Thomas Tapper, and published under the general name "Inspiration Books." In the present issue we mention two more which offer extremely useful material to readers of THE MUSICIAN, not as persons interested in music, but as interested in life and in making the best of one's opportunities.

For several years past we have heard much about the great benefits of organization, and clubs and societies of many kinds have been formed with a great variety of aims. But in all this busy turmoil it would seem that many of those who accept the tale of the advantages of organization do so without considering the attendant obligation to organize themselves into a Club of One.

We offer this as a suggestion to every reader of THE MUSICIAN. Join organizations if you have time to do something for them and are in sympathy with the purposes. But be charitable to yourself, and begin at home. Organize yourself.

And you must think about the motive power, that something which starts you to self-improvement and keeps you at it. Inspiration is a good name for it. Therefore seek inspiration from all possible sources.

We mention these two:

Making Life Worth While, by Edmund T. Ker, and *Women Who Have Made Good*, by Cecil Ker, both books published by Platt & Peck Co., New York, price 35 cents each.

Here is a thought from *Making Life Worth While:* "Viewed as a period of time, Life may be regarded as capital. . . . Considered as a state of being, Life may be regarded as equipment. . . . Life as the potential of animating principles is vital force or power. . . . Hence we have a simple proposition the terms of which are Capital, Equipment, and Power. 'Making life worth while' involves conserving our capital, improving our equipment, and controlling and directing our power."

These three points are worth reading about.

In *Women Who Have Made Good*, the author presents in a concise way the life stories of ten women, Jane Austen, Mary Lyon, Elizabeth Browning, Charlotte Brontë, Clara Schumann, George Eliot, Jenny Lind, Clara Barton, Rosa Bonheur, and Louisa Alcott. Each story has a message for the reader.

BERLIOZ ON MELODY

IT is quite easy for others to convince themselves that, without even limiting me to take a very short melody as the theme of a composition—as the greatest musicians have often done—I have always endeavored to put a wealth of melody into my compositions. One may, of course, dispute the worth of these melodies, their distinction, originality or charm—it is not for me to judge them—but to deny their existence is either unfair or foolish. They are often on a large scale; and an immature or short-sighted musical vision may not clearly distinguish their form; or, again, they may be accompanied by secondary melodies which, to a limited vision, may veil the form of the principal ones. Or, lastly, shallow musicians may find these melodies so unlike the funny little things which they call melodies that they cannot bring themselves to give the same name to both.—*Berlioz.*

RUTH ALICE MILLER

A YOUNG PIANIST WHO BELIEVED IN WORKING HARD.

Last June, Ruth Alice Miller, a ten year old Cincinnati girl played Mozart's D minor concerto from memory, her teacher, Mrs. Alice Hardeman Dulaney, playing the orchestral parts on a second piano.

After the concert a musician talked with her about her music and her playing. The following remarks have the right ring and show a spirit which should carry the little girl musician very far.

"I expect to be a concert pianist. To attain to this will require 'elbow grease' and 'sticking plaster.' This summer we will camp in a cottage in the Rocky Mountains. I shall climb trees, swing, play tennis and golf. But every day I shall practise one-half hour on my dumb keyboard so that I shall not lose my technic."

The June program included a number of other pieces by classical composers, with Debussy's *Arabesque* as a modern number.

———o———

GUIOMAR NOVAES A YOUNG BRAZILIAN PIANIST

One of the interesting personalities of the past season was Guiomar Novaes, a Brazilian girl who won high recognition for her playing of the piano. To an interviewer she gave the following items:

"I began to play the piano when I was four, by listening and picking out everything on the piano by ear. When I was six my studies really began. I was placed under a most excellent artist and fine teacher, Chiafarello, an Italian musician, who had achieved success in Brazil. Under his direction I started to give concerts in Sao Paulo when I was ten years old. Prof. Chiafarello was my teacher seven years, and then our Government sent me to Paris, where I studied with Philipp for nearly four years. Then came my début, some concerts, a return to South America, and then the United States—and here I am."

MUSICAL MAGIC

FOR HALLOW E'EN

To carry "Musical Magic" through successfully at your "Hallow E'en" club meeting, select the cleverest member and dress him in a long black robe with wide flowing sleeves and an imposing high hat. Very solemn!

As he enters the room in which all are seated, he carries a metal tray, which he places on a table in the center of the room; on this he places a white envelope. Beside this a basket covered with a black cloth on which are pasted crescents and stars. He then lifts the basket and hangs it on the chandelier.

Next he commands, in a terrible voice: "Let everyone in this room think *hard* of a great musician!"

While they are thinking he tears up paper into as many strips as there are people in the room. This done he commands each in turn to come up to the table and pronounce distinctly the name of the musician of whom he (or she) has been thinking.

As each one pronounces the name he writes rapidly on a slip of paper, and, reaching up, places the slip in the basket, with profound thanks.

When everyone has given a name he asks the company to select one of their number to reach up and take a name out of the basket. The person being selected, he warns her to remove the slip carefully, so that there is no possibility of his seeing, even turning his back. This done he takes down the basket saying, "I now leave the room. In my absence pass that slip around so that all may see the name. Then place the slip in this envelope, seal the envelope, and replace it on the tray. Let me know when this is accomplished." *Exit.*

When this is done (we will suppose the name taken out to have been Beethoven), word is given for the magician to return to t room. He comes in this time blindfolde produces matches, and commands that f be set to the envelope, and to tell him when is entirely reduced to ashes. He then pr ceeds to make strange passes over the tra and to chant a weird incantation. (Some sa peter or Japanese incense sprinkled in t tray helps along the illusion.)

When nothing remains of the paper t magician removes the bandage from his ey and still chanting, raises his sleeve and ru the ashes onto his arm, when, behold! name *Beethoven* appears in black letters on flesh!

This is a trick which will mystify and ent tain a roomful of guests for an hour at a ti as it can be done over and over without guests discovering how it is done. It really only a "trick" as, of course, is "magic" or "black art" so called, and thi how it is done:

In the first place, although the magic insists that each guest shall give him a *ferent* name, he only writes *one* name do the same name thus going down on ev slip, and this is why he is careful to write that no one can see that he is not wri down every name that is given him, but *same one every time.* This means that *one* name can be drawn from the baske they are all one and the same. He t takes the basket out and destroys the o slips that no one may discover the fraud, while he is out he writes this name on his using a tooth-pick dipped in milk. dries at once, and is invisible, but when rubs the ashes over his arm he does so in a way that it adheres to the flesh over w these letters have been traced, and so name appears on his arm in a most wond manner! Helena Maguir

LITTLE LESSON FOR THE MO

THE DANCE

If you read the musical magazines, or l to your elders discuss music, you are bou come across many and different opinions a Form. And most likely you will wonder it is all about; for, to young people, "gr ups" always seem to start in the midd things, and it is *so* difficult to get at the "w of it.

So here it is. As everyone knows, *thing* has form. Animals have form, have form, the stars have form, so hav clouds; and they are not all alike, c But there is always a definite form there makes you quite sure of what it is you ha deal with. Well, then, so has and so music have form too. Never mind how people argue over it—*you* stand out for *f* And it is enough to know just now that kinds of musical form come from these the Dance and the March, two whic know very well indeed, don't you?

I'd like awfully well to quote here from a splendid essay on form by Ap

y there are too many long words in it for department, but these bits are pretty ar. First he says: "With the March l the Dance—that is, with the familiar acts marching and dancing,—Music has one ential element in common; namely, *rhyth- motion.* And this element contains in lf a form-giving principle for all three." en too—"without some underlying form- ing principle, Music would be unintelligible, the confused muttering of a crowd."

Now, then, what is the dance?

Here are two definitions: 1. A graceful vement of the feet or body, intended as an ression of various emotions, with or with- the accompaniment of music to regulate rhythm.

. A *tune* by which the movements in dance- are regulated.

You may read about ancient dance forms l modern dance forms. It is an excellent to make a list of all the different kinds of ce forms that you know, and hand them to your teacher; also the names of the -dance forms of the different countries. en notice how "pat" it is that the different ts of the sonata which once upon a time e only different *dances* came to be called ovements"—"a graceful movement"—"in- ded as an expression of various emotions,"

———o———

DISCIPLINE

AM sure that some people went from *your* n, during the past Summer to one or more the "preparedness camps" for training. tors and lawyers and students, men, nen, girls, and boys—each had their camps their months of discipline—and what did ll mean?

Was it not, largely, that these earnest people t away from home to learn how to do kly and well things which they did not icularly *like* to do? Things like getting at unearthly hours in the morning, taking ibly long "hikes" in the hot sun with a heavy roll of equipment weighing their lders down—or, if it were girls—washing out of dreadful wounds, remaining for our perhaps at a time in a most horribly mfortable position, while holding a limb had to be placed in a cast, "set" or laged, and hundreds of other unpleasant gs which no one really *likes* to do, but which makes necessary.

nyone who went to a preparedness camp cting a pleasant vacation returned might- disillusioned, for they found there just one g—Discipline. And it goes without saying, n't it, that those who came back best pre- d for the work of a soldier or a nurse were e who took such an interest in what they commanded to do that they learned to ne most unpleasant things well?

ell, there you are in your music practice. too is a discipline—for the more musical are the less you *like* the drudgery part of ice.

But if you will think of this as a "discipline" and keep doing what your teacher tells you to do until you can do it as quickly and as well as those who have been trained at the preparedness camps can do their "stunts"—why then you will not only become a good musician, but you will also be a good "subject" if the time comes that your country needs *you.*

It is the "discipline" that counts. And discipline means learning to do quickly and well something that you do not particularly *like* to do.

MOTHER GOOSE GIRLS

A MOTHER GOOSE RECITAL FOR HALLOW E'EN

BY LAURA ROUNTREE SMITH

(Book rights reserved)

THE Mother Goose Musical may be given as a whole or in part as desired, and many familiar *Mother Goose* rhymes may be added at pleasure.

Suitable costuming will add to the success of the entertainment. Invitations are written on a booklet cut double, shaped like a pumpkin. Inside it contains the following verse:

Mother Goose (how we all love her)
Bids you meet us in October,
On Hallow E'en we will sing and play,
And help you while the hours away.

PART I. ON PRIMROSE HILL

(The Goose Girls enter and go through any short drill. The Old Woman and children stand in groups about the Shoe.)

1. Goose Girl's Drill and Dialogue.

(They enter half from the right, and half from the left, pass each other several times, marching right and left, meet, hook their crooks, and recite. After their first selection Mother Goose enters from the back and marches between them.)

GOOSE GIRLS:

We are the Goose Girls of Mother Goose Town.
High upon Primrose Hill,
Each with a crook and wonderful gown,
We go walking wherever we will.
'Tis this way and that way we dance o'er the green,
Late in October upon Hallow E'en!

Mother Goose has come to town,
Heigh, ho, heigh;
In her quaint, old fashioned gown,
Heigh, ho, heigh,
Soon we will away, away,
Singing at the break of day,
And we'll have a holiday,
Heigh, ho, heigh.

Mother Goose of olden time,
Heigh, ho, heigh;
Famous still in song and rhyme,
Heigh, ho, heigh.
Welcome then we sing anew,
To this poor old crowded shoe,
Mother Goose, we all love you,
Heigh, ho, heigh!

2. Song. *Goosey, Goosey Gander.* (*Sixty Songs from Mother Goose.*)

3. Dialogue.

MOTHER GOOSE:

Old Woman, Old Woman, living in a shoe,
Old Woman, Old Woman, pray what can you do?
A musical we'll give 'tis true,
And buy for you a fine new shoe!

CHILDREN:

Three cheers for Mother Goose,
Famous in song and rhyme,
Three cheers for Mother Goose,
In merry autumn time!

OLD WOMAN:

Tom, the Piper's Son can play,
Over the hills and far away.
And I think you'll all agree
We will need the Fiddlers Three,
And Boy Blue, piping at early morn,
From his little silver horn.
Of course we'll welcome Tommy Tucker,
Singing sweetly for his supper.

4. Song. *Little Boy Blue.* (*Thirty Songs for Children.*)

5. Piano. *Little Boy Blue,* Lemont; *Bye Baby Bunting, My Son John, Jack and Jill, Peter, Pumpkin Eater, Little Tommy Tucker* (*Mother Goose Songs without Words*).

(While these selections are played the children whom they represent are seen back of a picture frame, one at a time.)

6. Dialogue:

MOTHER GOOSE:

On Hallow E'en
Who comes a tripping o'er the green,
On Hallow E'en, on Hallow E'en?
Elves and fairy folk are seen,
Dressed in gold and silver sheen.

Skip again and foot it lightly,
When the stars are shining brightly,
Pause and bow to all politely,
This night of Hallow E'en.

OLD WOMAN:

Gipsy Autumn

(She passes in front of the stage with basket of fruit.)

Autumn is a gipsy maiden,
With her fruits and flowers laden,
And we cannot help but love her,
She's our bonnie bright October.
Hi, ho, for the gipsy maid,
Prettiest ever seen,
Hi, ho, for the gipsy maid,
October's a gipsy queen.

Autumn is laughing as she passes,
O'er the tender curling grasses,
And she paints the trees all over,
She's our bonnie bright October:
Hi, ho, for the gipsy maid,
Prettiest ever seen,
Hi, ho, for the gipsy maid,
October's a gipsy queen!

7. Piano. *Little Bo-Peep* (*Mother Goose Songs without Words*). *Dream of the Shepherdess.* Labitzky.

(Little Bo-Peep dances to and fro, shading her face with the right hand and left, looking for her sheep.)

8. Song. *Old Mother Goose.* (*Sixty Songs from Mother Goose.*)

9. Any pretty drill by Goose Girls.

10. Dialogue.

Simple Simon

Oh, Tom, Tom, I heard you play
Over the hills and far away.
I think it is the strangest thing
That I can neither play nor sing,
Morning, night or afternoon,
I cannot keep a single tune!
So salute poor Simple Simon,
Always sighing for a Pie Man,
Of sharps and flats of course I've heard,
But I still think them quite ABSURD!
My music is quite experimental,
And if pleasing 'tis ACCIDENTAL!

ALL:

Over the hills and far away,
Hear the Piper's merry lay,
Over the hills, over the hills
Over the hills and far away!
(Tom, the Piper's Son, leads them all off.)

PART II. IN MISTRESS MARY'S GARDEN

(Pretty Maids stand in rows at right and left of stage. They wear white dresses, red sashes, and red sunbonnets. In front of each maid is a red geranium in a pot. They skip about and Mistress Mary enters at the back and marches between the rows, about each one, etc.)

1. Song. *Mistress Mary.* (*Sixty Songs from Mother Goose.*)

2. Piano. *In the Garden.* Gurlitt. (*Rhythm and Action,* Norton.)

3. Song. *Merry Are the Bells, There was a Little Girl.* (*Sixty Songs from Mother Goose.*)

4. Flower Recitations.

Lady Hollyhock

Little Lady Hollyhock,
Very shy and tall,
Wears a pretty autumn frock,
Hears October call,
Says, "I'm stately, as you know,
And grow with others in a row.

Little Lady Hollyhock,
Dainty as can be,
In her pretty rosy cap,
Nods her head at me,
Says, "When autumn breezes blow,
Mistress Mary's flowers grow."

Asters

Asters purple, asters white,
Nodding in the pale moonlight,
Sing "All hail to glad October,
In the autumn time we love her,"
Asters purple, asters red,
Each one nods its sleepy head.

Daisies

Daisies, heigho! We love you so,
In autumn when the breezes blow,
Then blow it east or blow it west,
Daisy is the flower we love the best.

Daisies, heigho! You soon must go,
Under a coverlet of snow,
Then blow it north or south today—
Daisy bud dances the hours away.

(The stage is darkened, and very little children in white dresses and caps, with hair hanging, nod and dance as a field of daisies.)

5. Piano. *Daisies.* Kern.

6. Recitation. Miss Muffet.

Little Miss Muffet is so very shy,
Heigho, heigho, heigho;
To sit quite still she never will try,
Oh no, oh no, oh no!
When in comes a spider to sit down beside her,
What will Miss Muffet do, pray?
On Hallow E'en night, when the moon is so bright,
He will frighten Miss Muffet away.
(Miss Muffet runs across stage.)

7. Piano. *Spider Dance.* Cramm.

8. Recitation. Goldenrod.

Dream, little goldenrod, dream,
Of flowers that nod by the stream,
Of leaves falling down, o'er all Squirrel Town;
Dream, little goldenrod, dream.

Dream, little goldenrod, dream,
Of the autumn with sunshiny gleam,
October, October, all the world over,
Dream, little goldenrod, dream.

9. Piano. *Goldenrod.* Kern. *March of the Flower Girls.* Wachs.

(All march off. Enter Goose Girls singing.)

10. Song. *Owl Song.* (*Sixty Songs from Mother Goose.*)

PART III. AT THE COURT OF KING COLE

(The King is seated on a throne, at th right, the Queen of Hearts, at the left, th Knave. The Fiddlers enter.)

1. Song. *Old King Cole.* (*Folk Songs f Children.*)

2. Violin and Piano. (By Fiddlers.) *H Cross Buns, See-Saw, Nobby Grey.* Hamilton.

3. Recitation. (By King Cole.)

Jack o' Lantern now is seen,
On Hallow E'en, on Hallow E'en,
Elves and fairy folk and fay,
Dance about at break of day,
Moon elves come with song and rhyme,
In the happy autumn time.

4. Piano. *Jack o' Lantern.* Krogman (Boys pass with lighted Jack o' Lanterns *Sounds in the Night.* Cadman. *By Moo light.* Rollinson.

5. Recitation. Moon Elves.

(The stage is darkened and little girls wi pale blue dresses and wreaths of autun leaves, go through a dance.)

Little Moon Elves, elves in October,
Hence jolly rover, hence jolly rover,
Dance in the evening dew, who are so g as you?

Little Moon Elves, elves in October,
Summer is over, summer is over;
Join your hands two-and-two, dance skies are blue!

6. Piano. *Frolic of the Pixies.* Valenti

7. Song. *Fairy Song.* (*Sixty Songs fr Mother Goose.*)

8. Song. (By sailor boys.) *Where go Boats?* (*Posies from a Child's Garden.*)

(Three ships are sketched on a screen a three pretty girls seen behind them. "A one could whistle, and one could sing, and could play on the violin."

MOTHER GOOSE:

Once I saw three dream ships sailing,
O'er the deep blue sea,
Every ship was heavy laden,
With rich gifts for me,
And three pretty maids, and three pre maids,
Sailing away, away,
And three pretty maids, and three pre maids,
Sailing 'til break of day.

In the dream ship I'll go sailing,
Now you understand,
With dear Mother Goose this evening,
On to fairyland! etc.

In the dream ship pretty maidens,
Riding low and high,
Hear their airy, fairy voices,
Softly sing "good-bye!" etc.

ALL:

Hail, hail to Mother Goose,
How we love her name,
Hail, hail to Mother Goose,
Lasting is her fame.

10. Song. (Led by Goose Girls.) *M Are the Bells.* (*Sixty Songs from Mother Go*

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

KNOW YOUR VIOLIN

BY RAY G. EDWARDS

How many advanced violin players, or even chers of the instrument, are there who, if asked play a series of modulations on the related dom- nt seventh chords, would be able to do so? ould they not be more apt to look at you rather nkly and ask you what you said? Yet any sec- d year student of the piano should be able to through the dominant seventh chords, B, E, A, G, C, ending on the tonic F chord.

Why should not the violin pupil know enough ut his instrument to be able to do the same? y is he so unfamiliar with the fingerboard that, rived of the printed page, he is at absolute loss arding scale fingering and has no knowledge atever of broken chords, arpeggios, and simple dulations?

o far as the scales are concerned he cannot have excuse that might apply to the broken chords, ely, that he has not studied harmony.

However, I should immediately say to the teacher t he has no business to lower the profession by mpting to teach in his benighted state of un- elopment.

o the advanced player I should offer condolences, mpanied with the advice to secure harmony in- ction immediately, or at least purchase and study ook on harmony. Those by Goodrich, Goet- us, Norris, York, Boise, and Clarke are excel- . If you must work alone, study the chords on a piano and violin; find out how the chords, in ltaneous harmony on the piano, are broken into essive harmony for the violin, or dispersed so as ring one note on each string.

ne language of music being founded on chords scales, how can the violinist pretend to know nstrument if he cannot grasp the relationship of chords and scales, and think of their position he fingerboard? He ought to know all the en chords and how to finger them in several ent ways, in various positions and shifts, in two, and three octaves.

resented thirty-one ways of fingering the three e D minor broken common chord in the series *ft Hand Technic* which appeared in this de- ent several years ago. I merely mention this ow what may be done in the way of becoming familiar with your instrument. If one can do so much with a common triad, what of the more complicated chords, their combinations, and modulations?

I advise the advanced students (and it will also help the teachers) to buy a quire of large sheet music paper and write their own violin studies. Not that these studies will take the place of études, but that the student may begin to gain an acquaintance with the instrument of his choice. This home-made book of exercises is to contain only the germ or motive of each series; to serve as a reminder, when it comes to practice, for the purpose of familiarizing oneself with the fingerboard and really knowing the violin. The sheets should be bound, using the outside pages for a cover and title page. Then on the third page begin your exercises. I shall present a few, to start off. To these you can add others from your present knowledge of harmony or as you learn of them in your study.

First, there are six common triads, three major and three minor, starting from the open G string. (See the first line of accompanying plate.) After the first two measures I have abbreviated, showing only the start of each ascending broken chord. It will be best to abbreviate thus as much as possible in your book, to avoid the danger of following out each exercise with the eye and thus missing the mental training, as well as the whole point of this study. You are trying to "know your violin," and for present purposes we are assuming that you can read notes so perfectly that we need not bother with that phase.

Understanding, then, that each group between the double bars represents only the start of a broken chord, ascending and descending, and that you may then go through the same series of six chords beginning on A♭, then on A, and so through all the keys, starting always on the G string, and that beginning with B♭ any of the series can have two distinct sets of fingering (as they begin with first or second finger); the next series may be written in abbreviated form as in No. 2. In this exercise we start from the upper G and play the same six chords. To descend first is much harder than always to do the ascending scales and chords first, as given in most exercise books.

No. 3 is a very familiar vocal exercise; the tonic chord ascending and the dominant seventh chord descending. Repeat each two measures and work up speed, still holding to absolutely true intonation and full tone. Long, slurring bows. Then go on to A♭, then A. When you reach the B♭ series, begin with the second finger. The next series begin with the first finger, 3d position, and so on. Or, to vary the fingering still further, you can begin with the third finger all keys above C, and with the fourth finger all keys above D. Start always on the G string.

No. 4 reverses the last exercise and may start with almost any finger, as we change to the higher positions on the E string, going through the entire series of keys.

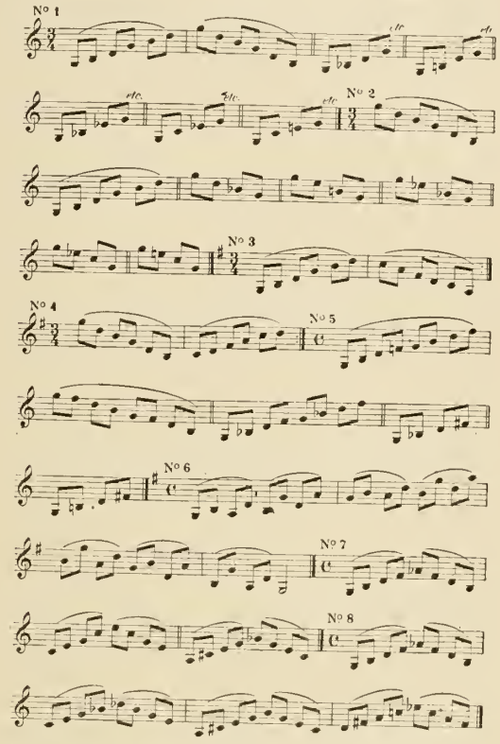
With No. 5 we leave the common triads entirely, taking dominant harmonies made up of four notes. All start from the same note. Carry these through the different keys as before.

Next we have two notes from the tonic chord and two from the dominant chord, alternately through two octaves ascending and descending. In this key it is two notes from the G major tonic, followed by two from the dominant seventh on D. Carry this through all the keys. The keys of B, D, and F start with second finger, in the 1st, 3d, and 5th positions respectively and require the extension of the fourth finger for the highest note on the E string. The keys of C, E, and G start with the first finger in the 3d, 5th, and 7th positions. Play in all the keys.

No. 7 brings in a chord with five letters, the minor ninth being included. The second measure contains the resolution of this chord to a common chord, the tonic triad. Following this, take the dominant beginning on A, then B, C♯, etc., each time a whole tone above the last dominant harmony.

No. 8 is almost like the last one, only the tonic chord is changed each time into a minor ninth chord, so all the chords have minor ninth.

As to fingering the last two exercises, you can stay in the first position as long as possible, only shifting when it becomes convenient to do so, on either the A or E string, or you can start each time from the G string by shifting immediately to the position desired. In these various fingerings the minor ninth chords are made to start with any finger, a very good thing to know and requiring considerable practice.



Play each exercise in all keys and with different shifts and fingering as suggested in paper entitled *"Know Your Violin."*

It is not my intention, however, to tell you all that is to go into your book of studies. They will not be your studies if someone else writes them all out for you. But if you would know your violin, know it as a pianist should know his instrument; know it so that you think of chord formations on the fingerboard; know where to find any modulation; know it so that you recognize chords by their names as you play them; then will your knowledge aid you in reading new music, in improvisation, in mastering difficult passages and in memorizing solos.

The fear that you may be getting hold of a special bit of technic out of the regular order, before you are prepared for it, need cause no alarm; the thing to fear is that you will never get on familiar terms with your violin, which, indeed, you never will unless you learn its language, and can speak in terms of chords so that you become intimate chums, you and your violin. When you understand each other, when you know chords and scales for what they are, and where they may be found on the violin, you will have a wonderful new interest in the instrument and in music in general.

A NEGLECTED OPPORTUNITY

BY EDWIN H. PIERCE

A few weeks ago there appeared in the columns of a prominent musical journal the suggestion that it would be a fine thing if an orchestra could be organized with the express purpose of giving young composers a chance to hear their compositions rendered, and thus to perfect themselves in the practice of orchestration, by means of laboratory work, so to speak. Admitting without argument the excellence of such a plan, it is to be feared that there are too many practical obstacles in the way for it ever to be realized in fact, and meanwhile young composers with orchestral aspirations must worry along as best they can with the means at hand.

There is one great opportunity close at hand which composers of more serious artistic aspiration fail to grasp in its proper significance, the numerous small orchestras in existence in the larger theatres, summer resorts, etc. Although obliged by the character of their employment to play a great deal of trivial and vulgar music, these organizations are often composed of excellent players, and occasions arise when they are at liberty to play something of a higher order, and indeed, when it is expected.

On these occasions it often happens that they attempt some of the standard classical overtures or even a movement or two from a symphony, but the thinness and meagerness of effect which results from attempting to render with ten or a dozen players music scored for an orchestra of at least fifty or sixty (even though by clever "cueing in" of parts there is no *hiatus* of any important melody or counter-melody), is so depressing as to give but little satisfaction either to the players or the audience, and still further to increase the prejudice of the ignorant against classical music.

On the other hand, the better class of popular music of today has been scored for orchestra by men who have made a special study of the powers and limitations of the small groups of instruments which pass under the name of "orchestras" in our American theatres, and they often produce really rich and interesting tonal effects with very limited means. In spite of the banal subject matter of much of this music, I maintain that this is a real artistic achievement, and that if the best composers here in America would make themselves masters of the same art (which they could do by earnest and repeated efforts therein), they might add enormously to the advancement of music, and find a grateful field for the expression of their musical genius. Incidentally, instead of eating their hearts out over huge orchestral scores lying stillborn on their library shelves, they would have opportunity to hear their works performed, and to be in touch with the public.

Let none be so snobbish as to despise the possibilities of a very small orchestra. Mozart's first few symphonies were scored for two oboes, two horns, and the usual strings. Now oboes and horns are at present rare with us, outside of symphony orchestras in the larger cities, but cornets, trombones, and clarinets are common. The cornet is a far more flexible and varied instrument than either the horn or trumpet of Mozart's day, and the clarinet (suppose we cannot have both), is an instrument of greater range and variety than the oboe. Trombone players of today are virtuosos compared to those of former times, and more than reconcile us to the frequent absence of the bassoon. The bass and snare drums form perhaps a rather gnoble substitute for tympani, yet even they are capable of legitimate artistic effect, and the orchestral "bells," which most drummers play, have charming uses.

If I were a young composer with symphonic aspirations, and found the road closed before me in the direction of performance by large orchestras, I would sketch out a sinfonietta, a suite, an overture, or a symphonic poem, for a combination of instruments such as the following:

Flute, Clarinet, Cornets I and II, Trombone, Drums and the usual Strings, leaving space on my score for a possible future addition of second clarinet, oboe, two horns, bassoon. I would prepare also an *ad libitum* piano part, representing an arrangement of the second violin, viola, and bass parts.

Then I would make up my mind to forget, so to speak, all I had learned in Jadassohn, Prout, Berlioz, and other standard works on orchestration, and begin humbly at the bottom again, by taking one of the best-sounding modern arrangements for small orchestra—for instance a "selection" from one of Victor Herbert's operas—and preparing a score for study, by copying out the orchestral parts in proper form on to score-paper. (There are practically no printed scores available in the lighter class of modern music for small orchestra, and the proceeding just recommended, though laborious, will be exceedingly instructive.)

With this preparation, I would go ahead and score my own composition, copy out the parts, and then seek every opportunity for rehearsal or public performance, making changes freely as the effect in performance might suggest.

Often hints from the instrumental players themselves prove exceedingly valuable, and should always be received in a courteous and friendly manner.

It may perhaps increase the confidence of those who feel an inclination to follow the suggestion in this article, if I add that the writer himself experimented in just this line, in former years, with a fair measure of success, writing two overtures and a portion of a symphony for a small orchestra like that described. Circumstances later turned his attention toward other branches of music, and prevented his time and thoughts from further efforts in this direction, but he is still of the opinion that it offers an excellent and strangely unappreciated opportunity for the young composer who wishes to develop his latent talents for orchestration.

Possibly a few words may be in place in regard to two of the most serious difficulties which strike the beginner in this line of composition.

The first is the terrible uncertainty as to the exact number of instruments which will be available in actual performance. To a composer of chamber music this would be an insurmountable obstacle; but in a true orchestral style, the ideas are not so fine-wrought and delicate, and though they suffer somewhat when one instrument is substituted for another, the effect is not altogether spoiled. One will learn by observation, how to cue a 'cello melody into the lower register of the clarinet, or in case a more robust tone is needed, into the trombone, how to give what might be properly an oboe melody to muted cornet, or to clarinet, etc. This cueing in of parts calls for ingenuity and taste, and implies considerable added labor in the copying out of parts but the former is part of one's art, the latter a necessary evil.

The other obstacle which one encounters is the absence of well-balanced complete bodies of tone, —the familiar "strings, wood-wind and brass" o the symphony orchestra. Of these, the strin section alone is usually complete, though too scant in numbers for the best effect. One clarinet, tw cornets, and trombone make a fairly good quarte to respond to the strings, with other wind-instru ments added if desired. If one has a realizing gras of the materials at hand, it is perfectly possible t produce an artistic effect with them. It is onl when one thinks in terms of the symphony orche tra and then tries to translate his ideas into theat orchestra idiom that the pinch is felt.

THE VIOLIN IN THE PUBLIC SCHOOL

No longer does the term public school mus means the practice of vocal note reading and chor ensemble. Instrumental music is coming in view, both the piano and the violin, and the latt instrument seems to be getting the greater atte tion, in the school at least. It has the merit portability and cheapness, for it is a poor chi indeed, who cannot provide himself with an strument at the very low prices at which violins a offered.

And there is another point which deserves me tion, namely, that boys who do not feel attracti to singing—perhaps even have no voice for singi —will begin the study of the violin which th accept as an instrument for the masculine s and not so definitely feminine as the piano. Bu is not to be thought that the violin is for bo alone. On the contrary, in a class of 200 sch pupils at least one-third were girls.

It must be remembered that the growth of cl singing and instruction in singing was a matte development. Experience had to show the m practical and helpful material and the best meth of imparting the desired instruction. As pedago methods improved so did methods of m teaching. As a result children in schools wh have the advantage of thoroughly competent enthusiastic teaching accomplish much in t music. In quite a number of cities they t part in choral concerts on festival occasions.

Violin teaching in the public schools means c teaching and not individual lesson giving, as is case in private work. Therefore the demand is a system which can be used for class work an textbook to use with these classes. We h profited by the systematization which has c about in all teaching in late years, and it is not necessary to make long, slow, laborious ex ments to determine just how to get young interested in the violin and its music, and just lesson material is to be placed before them.

More than a year ago The Musician publi an article describing the violin class work do certain schools in Boston under the direction o Albert G. Mitchell, and more recently we ga report of the demonstration of a year's work by 200 pupils. To this we add that in other violin classes have been organized, and s orchestras formed. Therefore we may con that it has been demonstrated that it is possi teach violin playing to classes of children.

But we have progressed one step in advance the present year, and have reached the point normal instruction is offered to teachers who wish to take up the work, thus going to the beginning of the problem by training teachers system.

mmer, Dr. Mitchell conducted a class for teachers the violin in the public schools with the purpose explaining the peculiar problems of the work and w to carry on the classes. So radical a proposion did not fail to attract the attention of the press d several reporters came to watch the unwonted ght of a class of men and women playing the olin in concert and learning the rudiments of the t as well as the best, easiest, and quickest methls of getting children to play acceptably. Says a riter in the *World:*

"For the last three weeks a class of music supersors and teachers at the summer school of the ew York University has been busy with the violin. he school director, Dr. Mitchell, believes that hool children should be taught to play the violin hile they are learning arithmetic and geography. "It must be admitted that neither Elman nor ubelik have any reason to be jealous of the young en and women—at least not yet. But they ayed among other things—a theme from Beethon, a Norwegian dance, *Auld lang syne, The weoring the green,* etc., for about an hour. Which after t thirteen lessons is some playing."

In speaking to the *World* representative Dr. itchell said; "Although only a small proportion those who take violin lessons develop into first ss musicians it instils an appreciation of music o the others. For years singing has been taught the public schools. Why not instrumental music th the multiplication table and geography?"

The following is taken from an account in the w York *Globe:* "Seventeen violins, all held at ctly the same angle—the correct angle; seven- bows, *ditto,* seventeen young men and women o, three weeks before, had never held either a lin cuddled up under their chins or a bow in ir hands; a soft-sounded chord on the piano, l—the violin class is soaring into the poignant etness of *Auld lang syne.* . . . Three weeks this class of seventeen knew no more of the lin than they knew of running a linotype machine. w they bow and finger correctly, and they are playing scales. They are really causing to soar upon the quiet, somnolent atmosphere of the iversity campus honest-to-goodness tunes."

n speaking of his work in the Boston schools, Mitchell said: "When I first planned to do this k I thought that perhaps fifty per cent of the dren might be found to have musical ability if y had opportunity. I underestimated the ber. Eighty per cent of the children show lity—real ability.

I have one school in which there are Russians, ians, Poles---children of almost every nationality. y go half mad with the joy of the music. Their ies sway to it and their eyes are rapt. They e any sacrifice to be able to buy their violins.

There are teachers who tell me that the whole of their schools has changed since their chil- have been able to express themselves in ic. The children are cleaner, happier, and more table.

To every child is given a practice card with the s of practice ruled off on it. An hour of prac- a day is the rule, and the card must be filled out and signed every week by the child's father or mother. If a child falls below a certain standard of practice he is dropped from the class. But few are dropped. And there are many who soon outstrip the class and make such rapid progress that they must have private teachers to supplement the class work."

The reporter for the *Evening Post* is full of the preparedness spirit of the day; it may be that he has been to Plattsburgh to tell what he saw there. Therefore when he went up to University Heights and saw a class of tyros drawn up before Dr. Mitchell he viewed it with recollections of a military camp.

"The squad took its drill standing up. Twelve music stands were ranged in a semicircle about an upright piano before which stood Dr. Mitchell. The rookies, ten women and two men, took their places before the stands and with the ease of veteran performers slung their shiny new fiddles into position and proceeded to tune up. You would think that that much alone would take two weeks to master. But everything has been simplified in this short-cut course in the violin.

"For instance there's the chin rest . . . that makes the gripping of the violin easy. The patent chin rest works in conjunction with another device called a shoulder rest that fits under the violin and keeps the instrument at the proper forty-five degree angle whether supported by the hand or not. Then there are the patent non-skidding pegs which tighten the strings and keep them tight. . . . These, plus the fact that Dr. Mitchell has introduced wire stringing, have practically eliminated all string troubles so popular with most novices. But the greatest simplifier of all is the finger chart of Dr. Mitchell's own invention. This chart is pasted on the neck of the violin and shows just where the fingers should press to obtain the desired tones."

At the demonstration of the work of the class given August 17, the following program was played, all of the numbers being found in *The Public School Class Method of Violin Playing,* compiled by Dr. Mitchell.

Au clair de la lune (page 20); *Auld long syne* (25); *Graduation march* (26); *The wearing of the green* (32); *A morris dance, A Norwegian dance* (36); *A minuet* (38); *A country dance, A lullaby* (39); *Cymbal dance,* Berner, (46); *Theme* from a violin concerto, Beethoven (51); *Andante,* Pleyel (52).

———o———

It is not often that a teacher is able to felicitate himself in regard to the gratitude of his pupils. And violin teachers do not differ, in this respect, from those who represent other instruments. Recently, however, Victor Küzdö, of New York, had a pleasant demonstration of the regard in which he is held by two of his pupils. Finding it necessary to undergo serious surgical operations they willed to Mr. Küzdö their valuable violins as a token of their appreciation for his work with them. It is gratifying to say that both pupils recovered.

———o———

The publishers of THE MUSICIAN have in press a new work on violin playing of unusual educational value, entitled HOW TO STUDY THE VIOLIN, by Pavel L. Bytovetzski. Every teacher and every player who studies about his art will want a copy of this book, which will be ready in a few months. Due announcement will be made in a later issue.

Only a small number of public school music teachers can play the violin. It will increase your efficiency as a supervisor, if you train yourself in this new line which is in big demand.

The Choir & Choral Department

CONDUCTED BY H. C. MACDOUGALL

THE WARRINGTON MEMORIAL LIBRARY

The Western Theological Seminary, Pittsburgh, Pa., has acquired the library of the late James Warrington, of Philadelphia, one of the finest and most complete collections on psalmody, hymnology, and church music to be found in the United States.

It contains 9,000 printed books and manuscripts, with 300,000 index slips, with extracts from diaries, biographies, histories, and travel, in fact anything and everything which throws even the faintest hght on the history of psalmody among English speaking people. It is the most complete collection of books bearing on the subject directly for it contains English books not found in the British Museum or any of the large libraries of Great Britain, and American books not in the Congressional Library or any library in this country.

The collection is rich in books of the sixteenth to eighteenth centuries, and also in early American books. Upwards of $50,000 is represented in the purchase of the various volumes and the work of classifying, cataloguing, and indexing.

———o———

THE LATE MAX REGER AS ORGAN COMPOSER

BY HARVEY GRACE

If mere fecundity were the test of genius there would be no questioning Reger's right to a position on the highest of fame's pinnacles. We have no record of his activities during the past two years but at the age of forty his opus number had reached 123, besides which he had to his credit a long list of works without opus number, and many arrangements.

Mere opus numbers may flatter, of course, but in the case of Reger, their multitude understates the quantity of his work, since many numbers comprise bulky sets of pieces. Op. 38, for example, consists of two volumes of folk-songs for male chorus, two volumes for mixed chorus, a volume of sacred songs for seven to twelve voices, and seven male-voice choruses; Op. 42, four violin sonatas; Op. 49, four sonatas for violin alone and two for clarinet and pianoforte; Op. 54, three string quartets; and Op. 79, fourteen (!) volumes of pieces for pianoforte, organ, violin, voice, etc. Bearing in mind the complexity of almost all his work, this amazing output points not only to immense industry and facility, but to an intellect of uncommon power.

The composer of today so frequently rushes to the orchestra as a means of expression that Reger must be accounted somewhat of a freak in having resisted its blandishments until his ninetieth work. (For orchestra alone, that is; Op. 21 and 71 are for chorus and full orchestra.) Since then he has written for it alone, and in conjunction with solo instruments; but his orchestral output in any case is so small as to be practically negligible. He has confined himself almost entirely to works for organ, voice, chorus, pianoforte, and strings. He is thus, perhaps, the only composer of our time who has built up a big reputation without the aid of orchestral or operatic works. Of his position in Germany it is only necessary to say that his works appear to have an enormous sale, that there is (or, at all events, was) a Reger Society, and that his fellow-countrymen have for a long time shown their appreciation of his music in the only way that matters,—by playing and listening to it. A complete list of his organ music may be of use and interest. I hear of some new works produced during the war, but can get no particulars. The list is as complete as I can make it up to 1912:

Op. 7—Three Pieces.
Op. 16—Suite in E minor.
Op. 27—Fantasia on *Ein feste Burg.*
Op. 29—Fantasia and Fugue in C minor.
Op. 30—Fantasia on *Freu' dich sehr.*
Op. 33—Sonata in F sharp minor.
Op. 40—Fantasias on *Wie schön leucht't* and *Straf' mich nicht.*
Op. 46—Fantasia and Fugue on B-A-C-H.
Op. 47—Six Trios.
Op. 52—Fantasias on *Alle Menschen müssen sterben*, *Wachet auf*, and *Hallelujah, Gott zu loben.*
Op. 56.—Five Easy Preludes and Fugues.
Op. 57—Variations on *God save the King* and Symphonic Fantasia and Fugue.
Op. 59—Twelve Pieces.
Op. 60—Sonata in D minor.
Op. 62—Twelve Monologues.
Op. 65—Twelve Pieces.
Op. 67—Fifty-three Easy Choral Preludes.
Op. 69—Ten Pieces.
Op. 73—Variations and Fugue on an Original Theme.
Op. 79b—Thirteen Short Choral Preludes.
Op. 80—Five Easy Preludes and Fugues, and Twelve Pieces.
Op. 85—Four Preludes.
Op. 92—Suite in G minor.

Without Opus number:

Introduction and Passacaglia in D minor.
Three Pieces.
Suite in E minor.
Arrangements of Bach's Two-part Inventions.
Arrangements of Fifteen of Bach's Clavier Works.

Reger is popularly regarded as an iconoclast; but I think this is a delusion, based on the fact of his being so frequently noisy and discordant. So far as his organ music is concerned (and, as will be seen, it is a very important and characteristic section of his work), he broke very little new ground either in the matter of form or harmony. His use of unrelated chords is generally crude, and his modulatory methods are often awkward and sometimes even a little old-fashioned. His most chromatic passages often strike one as being thick and restless rather than rich and luscious. He has next to nothing of the elusiveness that is one of the chief charms in modern music. In his worst moments, when he seems bent on dragging in every possible accidental, the result is mere Spohrishness turned sour.

He is generally acclaimed as the successor of Bach—chiefly, I suppose, on the grounds that he wrote largely in the forms used by Bach, and that counterpoint seems to be his natural method of expression.

But the resemblance to Bach is rarely more than one of idiom. Bach's music is so very much alive today because of the emotional impulse behind it. Other men before and since his day have written clever fugues and canons, but who wants to hear them? When we have played such organ master pieces as the great B minor, D minor, E flat, or A minor fugues, the impression left is not that of a composer showing his skill but that of a great mind expressing noble thoughts and choosing the fugue as a medium because it was the best available. This emotional impulse was almost entirely lacking in Reger. He had the letter of Bach, with little of the spirit. If Karg-Elert fulfils his early promise, I think the real successor of Bach is to be found in him.

Thanks to the use of some of his works as tests pieces for the Royal College of Organists' examinations, a good many of our young English organists are familiar with some of Reger's music. Those who wish to increase their acquaintance may be advised to turn to the *Fifty-six Choral Preludes* (many quite short and simple, and the collection, as a whole, showing him at his best), the *Five Short and Easy Preludes and Fugues*, Op. 56 (easy only in comparison with his other fugues, and containing in the *Prelude* in E music of almost uncanny beauty), the *Five Trios* (excellent for study, and mostly pleasing music—two of them, by the way, are in four-part harmony), the set of *Thirteen Little Choral Preludes*, Op. 79 (perhaps his easiest works, and more worthy than anything else of his of being placed side by side with the *Little Organ Book* of Bach), the splendid *Variations and Fugue* on *God Save the King*, the *Benedictus* from Op. 59 (a beautiful piece of music with unexpected warmth of feeling; had Wagner written organ work it might have been this one), and the *Introduction* and *Passacaglia* in D minor. He will find, even in these smaller works, that Reger, who was so often a crabbed Teuton, could on occasion reveal himself a Titan.

Heaven forbid that any of us should be judged by aught but our best efforts. When we have placed the dull part of Reger on that topmost shelf from which no composition returns, there still remains a goodly pile of short works full of vigor and admirably suited to the instrument, and a handful of big ones that in their stark elemental grandeur are unique.—*The Musical Times.*

———o———

MUSIC BY MEANS OF LIGHT RA

A New York inventor, Dr. Lee De Forest, cla that he has been able to change light rays i sound rays.

The essential part of the apparatus is the aud an incandescent lamp used as a detector for w less signals. It is by means of this that the extr dinarily long distances lately witnessed in transmission of wireless telegraphy and teleph have been made possible. This little bulb be made to generate alternating current; in o words, it is a transformer of energy. The alter ing current, if of low frequency, can actuate telephone diaphragm and make musical notes. F one bulb, by an arrangement of keys and swit the inventor produces the various degrees wi an octave, another bulb being used for next octave. The further statement is made it is possible to vary the tone quality, for exa and secure the characteristics of the flute, co and stringed instruments.

THE ORGANIST AS A CONDUCTOR

BY ROLAND DIGGLE, MUS. DOC.

low often do we find that the organist in a small ce is the conductor of the local choral society or hestra? This work calls for particular gifts, l an unfailing tact which will enable him to deal h all kinds and conditions of persons.

Training an orchestra is not quite the same thing training a choir, but both require an unlimited ount of patience. The organist will find his la- s much lightened if he knows, or is willing to rn string instruments. If you are ignorant of the lin or 'cello I would advise taking up the viola. re the notes do not lie so close together and the nands on the technic are not so great; even a v lessons and the ability to play the scales will of material help in many ways.

Such an orchestra as I am speaking of will con- almost entirely of amateurs, not the easiest of ple to deal with. The violins will be the easiest secure, violas can be recruited from the poorer lin players, 'cellos will not be so plentiful, and double-bass can usually be had even in the allest places. The wind is always a sore point. rinets can always be got, but oboes and bas- ns will be lacking unless you can get them from local theatre. The same applies to the trum- s and trombones unless there is a band from ich they can be recruited. But if the conductor the necessary enthusiasm to stimulate his flock hard work it is possible to get together a really od orchestra even in cities of a few thousand ulation.

As to the choice of music, the early Haydn sym- nies will be especially useful as they contain wind parts, and the finales are so bright and that the players will enjoy them. The Mozart phonies are a little more difficult but are excel- practice during the second season. There is, wever, plenty of excellent music to be had and no iculty will be found on that score.

n small places concerts are often given in a rch; this being the case the organ can be used h excellent effect in filling in the wind parts, . If in a hall or theatre I have used a good d organ and found it answered the purpose nirably.

As regards the conductor: He must train his ear make his band play in tune; he must be able read the score and feel what is required, as to t and shade; he must cultivate a clear sense of, five degrees of loudness, *pp*, *p*, *mf*, *f*, and *ff*, at t he must be content with three, the others will ne later as will *accelerandos* and *ritardandos*. will be all he can do at first to make his players any time at all. A well educated musician can something to help a young player with his in- ument, whether he is an actual player of that in- ument or not, and it should be possible, in a lit- time, to get together a number of players of a ndard of efficiency higher than is usually found a voluntary choir. The work is very interesting with encouragement and sympathy you can get reat deal more than you think, even out of the st unpromising material.

———o———

THE ECHO ORGAN

BY H. C. M.

OME of our readers may have heard of an English nposer named Joseph Holbrooke. Holbrooke is ting a series of letters on his "Adventures in erica," for *The London Opinion and Music Trade iew*. He scores us severely for our faults—and t they are many, we admit—and finds little or hing here to admire. Here is what he says about cago: "The parks are all fine, but the city unfor- able. Elevated trains, trains like railroads, eleva- , bells, whistles, yells, shouts, accents, Jews, dirt misery, with the hellish rush of everyone. What for? Poor devils! And the roads!—infernal roads—dangerous even to pedestrians! Motorists tear about the city like madmen. Their cars are cheap and nasty, but the owners are nastier! Good-bye, Chicago. And I have not seen the stockyards. No, Sir! d——n the stockyards and the men who traffic in them."

Poor old Holbrooke: he feels pretty bad, doesn't he!

* * *

THE English journal to which I referred a moment ago has a writer ("Autolycus") who has a pretty gift of satire. He has this to say in regard to the faults and foibles of singers:—

CARMEN VOCIS

Dedicated to the average English Singer.

My Soul is my Breath: and with my Breath will I lift up my Voice in speech and song.

A part only of my Breath shall be turned into tone: the residue shall be heard escaping, like unto the Gas when it escapeth.

And the sound shall not be true or steadfast: rather, by the insecurity of my breath, shall it tremble exceedingly and so be expressive.

My neck shall be the Ring in which my Adam's apple shall be set as a Jewel, and my Adam's apple shall bob up and down: as the notes of the song bob up and down, even so shall the Adam his apple bob up and down.

The inner portal shall be ajar only; thus shall I ensure that the tone be tight and the timber hard.

And I will shock my glottis: yea, I will so shock it that they who hear will say, "Lo! he is as one that hiccupeth."

About the outer gate my lips and jaw and tongue shall do all manner of things; and one thing only shall they not do,—they shall not bring to life the beauties of my native speech.

For I will lift up my Voice in unknown tongues: in tongues unknown to me and my hearers will I lift up my voice, and they that listen shall say, "Behold, he singeth in Italian, he chanteth also in French, and Russian is to him a familiar thing;" and they shall depart with my praises in their mouth. *Selah.*

And when I sing songs in my own tongue, they shall in no wise be the best that my countrymen can produce, but rather the worst; and of these I shall choose only such as the publishers thereof shall pay me for singing.

And to composers and publishers who pay me not I shall say "Tush; likewise go to; I will not touch your songs even with the pole of a barge."

And if I am a Tenor or a Soprano I will end all

WILCOX SCHOOL OF COMPOSITION

C. W. WILCOX, Director

Dept. "A." 225 Fifth Avenue, New York City

my songs with a very high note; and if I am a Bass tho last note or one of its fellows shall be very low and hollow, like unto a draught in a drainpipe.

And my countrymen at tho sound thereof shall rejoice and smite their hands together; and shall lift up their voices and prophesy in Italian, signifying "Sing again unto us!"

And I will do so with gladness, even though the hour be late, and the singers that are to come after me shall be many in number: and they shall wax impatient, and shall curse me in their hearts, though they shall smile and shall pat my back.

And to the singers who do not as I do, the agents and the public shall give the shoulder that is cold; but I shall swank, pose, wobble, and play unto the gallery and shall get me much gold.

And when I can no longer sing, I shall become a teacher; and shall teach others to do even as I did myself.

And my method shall be called the old Italian method, or the *bel canto;* because such names are pleasant to the ear, though the brain understandeth them not.

* * *

A SINGER who is at the same time a "good musician" is a tower of strength to any choir director. I remember one singer only in my personal experience who came under that designation; he is still living and practising his profession. I wish I felt at liberty to name him, but he is a modest man and would not relish the publicity. He had had a wide experience in concert and opera, had written a little, could arrange for orchestra, knew harmony, and was a man generally intelligent. Add to all these purely musical qualities that he was even-tempered and absolutely without a bit of jealousy in his make-up and I describe a very rare singer indeed. That man was a great comfort to me at a time when a feud in the choir was extremely troublesome.

* * *

WHAT is it to be a "good musician"? There are men and women to whom the title properly belongs that are not distinguished as executants or composers; yet there is something extremely solid and dependable about them. You appeal to them when you want to be sure of something. Here is a dispute in an orchestra as to a note in one of the parts or as to the correctness of the harmony; the "good musician" settles the question. A choice has to be made between two men as directors of a musical enterprise; the better musician of the two gets the decision.

Is a knowledge of theory necessary to a "good musician"? Certainly. Must a man be a composer in order to be in the class? I think so. He need not be a facile or successful one, but I do not see how he can have a real grasp of music unless he can make music himself. Must a "good musician" be able to arrange for voices in orchestra or both? He certainly ought to be acquainted with voices and with all musical instruments to a certain extent, for these things occupy a large part of the world of music. To be a "good musician" is not however to be a specialist in all these things. It is necessary to do one thing well and to be fairly proficient in many others

* * *

BUT this, you will say, is being a Jack-at-all-trades. Yes, the danger is there; a man may easily become so fascinated with the various sides of the art of music that he dips into many of them, mastering none. Every man must do one thing well.

The trouble with the ordinary musician, however, is that after studying five or six years on his instrument, he then considers himself finished and does no more studying! He does not look at the music-life as a grand adventure. And this is precisely where he differs from the "good musician." How many men are there do you suppose, who, after getting so they can teach a certain grade of piano or violin pupils, or play an organ in church, or get a position as soloist in a choir, or perform well enough on the 'cello to get a theatre "job," stay in precisely that position for the rest of their lives? They advance not a step. Such people will never be spoken of as "good musicians."

* * *

OUR colleges are graduating people who have taken the courses in musical appreciation and music history, possibly some courses in harmony, and who have on the whole done much for the development of music in their home towns.

But there is another side to it. Too much of the work in musical appreciation is founded on mere emotionalism; there is sometimes no attempt to lay a broad foundation of accurate musical knowledge. A certain proportion, then, of these college-graduated, musical missionaries are mere snobs in music. If they were conscious of their ignorance they would reserve their criticisms on things musical; as it is, they are ready to "yawp" on all occasions and in all companies.

* * *

I EXPERIENCED a striking illustration of this the other day. I walked out of a concert behind two ladies who were evidently well bred, well educated, and musical. They were discussing the playing of a violinist friend of mine, Mr. Blank, who had just given an excellent performance of his part in a well-known suite for violin and piano; the pianist was also very good. My attention was attracted by one of the ladies remarking: "Mr. Blank played the second movement beautifully, but the first one atrociously. I can't understand what was the matter." Here was a snap judgment, delivered with all the assurance in the world, and not founded on facts. The first movement of the suite was very florid and the two instruments often had cross rhythms which they interchanged freely and delightfully. The lady making the criticism simply felt the complexity, but had neither sense nor modesty enough to reserve her opinion.

* * *

ORGANISTS more than any other class of musicians are at the mercy of this kind of critic. There is the minister's daughter just fresh from college, or the wife of the chairman of the music committee who has had lessons from Mr. Poundtheivories; then there are the numerous people in the congregation whose social position and wealth qualify them to discuss, *ex cathedra,* every topic under the sun. It requires much tact to agree with all these sapient critics and yet do exactly as one pleases!

———o———

ANOTHER WAY OF DOING IT

(Mr. George M. Thompson sends a letter in regard to a paragraph in THE ECHO ORGAN for July. —The Editor.)

I WOULD like to take exception to the paragraph in THE ECHO ORGAN of July, protesting at the way music is treated in the prelude and postlude. The fact that the organist in question sums up his own work with, "I make a noise Sundays on the organ at the Twenty-ninth Avenue Church," expl the whole situation.

It is a sorry truth that most organists c "make a noise," and the congregation, not b interested in noises, prefers discussing hats. louder the organist plays in his endeavor to o power the conservation, the louder the people t

I have heard organists say, "I always play so thing loud for the morning prelude to cover up noise of the people coming in from Sunday-scho And for the noisy prelude they treat the people Bach fugue, a concert piece by Guilmant, or a m by somebody or other. All of those are above heads of the people in general, and also of a g many musicians. If, instead, the organists w play something simple, within the grasp of people, something that would touch their h strings, members of the congregation would s enter eagerly, but quietly, to hear the music know this to be true for I have seen it work.

In my present position I began by playing sim things in the song style, using beautiful soft c binations, and I had the absolute attention of audience of seven hundred, and I have kept it since. Now the people want to hear me and listen to whatever I have to offer. I still play simple things but every now and then I give the Bach fugue, a Mendelssohn sonata, or some o loud number; they listen with the same atten as though I were playing on the Aeoline.

One cannot expect people who have not an ou of musical education to understand music that t trained musicians. It is "noise" to them.

MODERN RUSSIAN PIANO MUSIC

(The Musicians Library)

EDITED BY CONSTANTIN VON STERNBERG

Oliver Ditson Company, Publishers, Boston, Mass.

[Several months ago the publishers of THE USICIAN issued a collection of music by Russian mposers with the title *Modern Russian Music*, ited by Constantin von Sternberg, the well-known mposer, pianist, and teacher of Philadelphia. opies were sent to leading daily and weekly pers. The review of the work in *The New Re-blic* of New York, by Mr. H. K. Moderwell, ew forth two rejoinders, one by Mr. A. Walter ramer, of New York, the other by Mr. Von ernberg.

We reprint the review and the two letters here they present the subject of Russian music in ation to modernity in a very interesting light. We sure that readers of THE MUSICIAN will find the ters full of suggestive interest.—Editor of THE USICIAN.]

THE musical output in recent years has become enormous that the amateur is mystified the number and variety of the pieces ered to him. He usually ends by buying some-ng "safe" and popular. The producing cost l the element of chance in the music publishing iness are far higher than in the printing of books. e resulting lack of stability is discouraging as ch to the consumer as to the publisher. One thless song which has hit the public fancy may e to pay for dozens of admirable works by nown men—works carried for years on dusty ic shelves which are plundered only for presen-on copies.

n these disheartening conditions a peculiar cal responsibility rests upon the publisher. e European houses have made a notable repu-on for themselves by their wise and disin-sted exploitation of new or lesser known com-rs. But here in America publishers seem ple or unwilling to undertake in the same spirit peculiar department of the business of market-In the purely technica] matters, such as ting and binding, they are always admirable. the scholarship behind their enterprise is able and timid.

ne of the readiest means of bringing some order of the chaos is the publishing of collections. ese, a few well liked pieces may bring to gen-attention a quantity of music which could not, e stress of competition, make its way unaided. ything, of course, depends upon the editor. But ublisher cannot escape responsibility by plac-ll the credit of blame on the shoulders of the r he has chosen. The music he publishes bears ame. Twenty years from now his reputation depend largely upon the character of the rs and musicians whom he is grouping about ow.

Two recently published collections, which have just come to hand from the Oliver Ditson Company in Boston, illustrate admirably what an editor may do to a publisher's reputation. One of the collections is the two-volume set of *Modern Russian Piano Music*, edited by Constantin von Sternberg; the other, fifteen *Songs of the Russian People*, edited and arranged for mixed chorus by Kurt Schindler.

The two volumes of Russian piano music form the latest addition to the admirable Ditson series, THE MUSICIANS LIBRARY, containing nearly fifty volumes, mostly of standard music, with a truly notable list of editors. To group into one volume the best of the seventeenth century Italian piano works is a bit of business enterprise to which our best thanks are due. But now comes this "modern Russian" piano music, selected by a man of slight capacity for the work, and neither modern nor Russian. With only a few exceptions it is composed of unimportant pieces of the sort which every composer tosses off at times, at the prompting of his publisher, for the sake of sales, and comparable to the minor poetry which a struggling littérateur peddles among editors. Most of the composers represented are of slight importance; nearly all of them write in an undistinguished style of the last generation. The poetic preface by the editor says much concerning the racial quality in Russian music, but there are scarcely ten pages in the two volumes which show any racial traits. It would seem that the editor has deliberately selected those pieces which are least distinctive and least distinguished. No one, playing through these volumes, would gain a notion of the power and individuality of modern Russian music. H. K. M.

The New Republic, July 8, 1916.

MR. VON STERNBERG APPRECIATED

SIR: I fear that I must intrude and correct a statement made in your last issue by "H. K. M.," the initials of Mr. Hiram Kelley Moderwell, I take it. In a review headed "Some Russian Music" on page 258 and 260 Mr. Moderwell makes this statement in regard to Constantin von Sternberg, who edited *Modern Russian Piano Music*, one of the volumes under consideration: "But now comes this 'modern Russian' piano music, selected by a man of slight capacity for the work, and neither modern nor Russian."

This is not only unfair, but part of it is unequivocally untrue. Mr. von Sternberg *is* a Russian; he was born at St. Petersburg (Petrograd) on July 9, 1852.

Mr. Moderwell has a right to hold the opinion that the gentleman in question has but slight capacity for the work he undertook; but he will find if he looks into the matter carefully that Mr. von Sternberg is one of the best equipped men to do this in America or Europe today. He is a really distinguished musician, a man who has won eminence as pianist, composer, and piano pedagogue. He is the leading piano pedagogue today in the large city of Philadelphia, a position which he has maintained for many years. Though less original as a composer than some other contemporaries his works in the larger forms are (and have been) published by the leading music publishers here and abroad. Josef Hoffmann played one of his compositions at his New York recital this season and on his entire concert *tournée*.

As to the music that Mr. von Sternberg chose to put into his "Modern Russian" collection Mr. Moderwell is again wrong when he says that the pieces do not give one a notion of the power and individuality of modern Russian music. They do *not*. I admit it. But they *do* give one a notion of modern Russian *piano* music, which is neither especially powerful nor individual. The individuality of modern Russian music has not been displayed by its composers for the piano, but by its composers for the ballet, men of the type of Igor Strawinsky, or rather Strawinsky himself, for there are not two in Russia today like him. Mr. von Sternberg was not able to create Russian piano composers of especial individuality, even for Mr. Moderwell's benefit, so he chose what there was—and the best of it.

There are all too many persons who believe that because modern Russia has given us a *Petrouchka* and a *Fire-bird* in the ballet form it must of necessity give us (or has given us) a *Symphonic Studies* or an *Appassionata* sonata for the piano. Mr. von Sternberg has done his task, in my humble opinion, as well as it can be done. There is really some very respectable music in his collection.

A. WALTER KRAMER.

The New Republic, July 15, 1916.

A REPLY FROM M. VON STERNBERG

SIR: My attention has just been called to two of your issues which did me the honor of discussing my work in connection with the two volumes of *Modern Russian Piano Music* published by the Oliver Diston Company.

Ignorantly assailed in the issue of July 8 by a Mr. Moderwell and manfully defended in the next issue by a Mr. A. Walter Kramer, I am sorry, indeed, to be an absolute stranger to both; but to the latter gentleman I feel deeply grateful, not only for his graceful and generous recognition of my modest merits, but also for disproving Mr. Moderwell's unwarranted assertion that I am "neither modern nor Russian."

Mr. Moderwell has fully expressed his personal opinion of my work, for our Constitution allows the expression of opinion even to those who lack the equipment to form one; and Mr. Moderwell plainly demonstrates that he belongs to this class by his careless statement of facts he cannot substantiate.

As Mr. Kramer correctly said, I was born and raised in St. Petersburg, now Petrograd; my family still lives there. From my correspondence with the late Balakireff and Rimsky-Korsakoff, with Glazounoff, and César Cui, also with Messrs. Maykapar, Kasuli, Karpoff, and others of tho younger generation (some of whom have honored me with the dedication of compositions) it can be easily seen that at its base are very pleasant personal relations which had their beginning when two of my trios were played in Petrograd by the Chamber-music Society. By flinging out the statement that I am no Russian, Mr. Moderwell has evidently acted upon very loose information and this does not

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment — a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

Sohmer

Publication Office: 437 Fifth Ave., S. E. Cor. 39th St., New York

speak well for his reliability as a public informant, nor for his feeling of responsibility to his readers.

Whether I am or am not modern is not left for him to decide; it has been affirmatively determined by men who enjoy general recognition because of their knowledge and judgment. Besides, upon what does Mr. Moderwell base his opinion of modernity? By what standard does he measure it? And if he should have a standard, by whom and where was it recognized? He evidently ignores the difference between "modernity" and its frenzied caricature "modernism," that conscious and somewhat vulgar effort at mere "newness." While there are some Russian compositions of this type they are cosmopolitan in spirit, not ethnical. What I endeavored to present to the public was music that expressed the national note and while I did not devote the two volumes entirely to composers of the younger generation, they occupy the bulk of the collection. I felt it to be my duty to give some consideration to the historical aspect of Russian music because the creations of their predecessors have a decided bearing upon the works of its present representatives.

If Mr. Moderwell is to assume the position of a critic of authority he must learn to subordinate his personal predilections to the ethical and critical principles that establish authority.

CONSTANTIN IVANOVITCH VON STERNBERG.

The New Republic, August 12, 1916.

MUSIC TEACHERS' NATIONAL ASSOCIATION

PREPARATIONS for the Music Teachers' National Association convention to be held in New York December 27-29 next, have been going on during the summer months. President J. Lawrence Erb has been completing plans for the standing committees, which are to follow up certain subjects in systematic fashion. Those already at work are as follows: Community Music, Chairman, Miss Kate Chittenden, Mr. Rossetter G. Cole, Mr. Waldo S. Pratt, Mr. William Benbow, and Dean P. C. Lutkin; Standardization, Chairman, Mr. Charles H. Farnsworth, Mr. Calvin B. Cady, and Mr. Adolf Weidig; Public School Music, Chairman, Mr. Ralph L. Baldwin, Mr. Francis L. York and Mr. D. A. Clippinger.

Among those who are to contribute papers at the December meeting are Miss Amy Graham of Buffalo, who will speak on "Music study as a basis for a general education." Miss Alice Fletcher, of New York and Washington is preparing an address on the subject with which her name is so prominently connected, "The music of the American Indian." Mr. H. W. Greene, of New York, a former president of the Association, is preparing a paper on the subject of voice teaching. Dean R. G. McCutchan, of De Pauw University, is preparing a paper on the result of an experiment in Standardization now being made in Indiana.

Following a new plan of the Association, bulletins are being issued at intervals this year. The July bulletin will be sent to any interested persons upon request to the secretary; the next issue will probably be early in October. Already a number of new applicants for membership have been received, and it is evident that the meeting in New York City between Christmas and New Year will attract an unusual number of teachers from all over the country.

Inquiries may be addressed to the President, Prof. J. Lawrence Erb, University of Illinois, Urbana, Ill., or to the Secretary, Mr. Charles N. Boyd, 4529 Fifth Ave., Pittsburgh, Pa.

THE BOSTON MUSIC SCHOOL SETTLEMENT

THIS enterprise, according to information at hand, was the second of the kind in American cities, being organized on the general plan found successful in the New York school. It has done excellent work and is limited only by its resources. Situated in the heart of a district inhabited largely by immigrants from Russia and Italy, its work touches two races which have a great love for music and more than ordinary talent.

It is interesting to note that according to the last financial report of the school the work from May 1, 1915, to April 30, 1916, was carried on for but a little more than $6000, but without incurring a deficit. Of this amount pupils contributed for lessons a little more than $1500, the individual fee being small.

Included in the work of the school was the financing of the People's Orchestra, under the direction of Mr. Jacques Hoffmann, of the Boston Symphony Orchestra. The purpose is to enable wage-earners and students to obtain orchestral training and musical recreation and to utilize the results of such training by providing good orchestral concerts for the wage-earning public at nominal prices for admission. The fee is $3.00 per year for 30 rehearsals, and the latter are held on Sunday afternoons.

INVESTIGATE

THOSE who have never investigated our "On Sale" plan should do so **at once,** and become acquainted with a method which has done more than anything else to lessen the labors of the music teacher.

The constantly increasing growth of our "On Sale" plan and the best proof that it meets with the approval of our patrons is the renewal of business relations each new season with customers who have dealt with us in preceding years and applications from many other teachers who have been recommended to us by old patrons, who appreciate our plan as being a very helpful and necessary adjunct in their teaching. All teachers realize the value of having on hand for immediate use available material such as studies, exercises, pieces for recreation, etc., but only those who give our "On Sale" plan a trial really know what a factor it is in reducing their labors to a minimum.

We employ only trained musicians in this department of our business, men who are practical teachers themselves and have made the wants of teachers the study of years. Half the work of teaching, and almost all the worry is due to the selection of just the right studies and music for the use of pupils; let us relieve you of this by accepting the aid of those who are **specialists** in this line.

Our business is **exclusively** the supplying of music and music books for teaching purposes, and our experience is ample guarantee that we can satisfactorily meet YOUR wants as we do hundreds of your fellow teachers.

Our terms are the **MOST LIBERAL**, our discounts the **LARGEST** and from the educational standpoint, our publications are second to none.

SEND AT ONCE

for our "On Sale" plan and full catalogs

There is no feature of the music teaching profession with regard to which we are not prepared to be of prompt and practical assistance, either by furnishing the necessary material or by giving helpful information and advice at all times.

We are always glad to answer inquiries from, and supply our catalogs and terms to all teachers or schools.

BOOK NOTES

andel. By Romain Rolland. Translated by A. Eaglefield Hull. Henry Holt & Co. Price, $1.50 net.

We have had works on Handel by English and by erman authors, and now comes one from a French riter, the foremost of a group of brilliant critics of usic and musicians. The point of view is, therefore, somewhat different from that of a native of the o countries first named, and comes to us with eshness of vision and impartiality of judgment hich is extremely gratifying. The work divides to two parts, a sketch of Handel's life and a study of s technic and his works, not only his oratorios and eras, but also his instrumental compositions, inding works for the piano. Of the latter, the thor says: "Its chief characteristic is that of a rpetual improvisation. If it was published it as more in spite of Handel than at his instigation. was not made to be played and judged coldly, t to be produced at white heat to the public. They re free sketches, in which the form was never mpletely tightened up, but remained always oving and living, modifying itself at the concert, the two sensibilities—the artist and the public—ne into touch with one another. It is necessary, n, to preserve in this music a certain measure of character of living improvisation. What we too en do, on the contrary, is to petrify them."

The musician who confines his library to one ok on a subject will find this book of Rolland's one on Handel. It shows him not as a preacher, as the composer of *The Messiah*, but as an artist.

e Violinist's Guide. The Violinist Pub. Co., Chicago. Price, $1.00 in cloth.

This book is a compilation of special value to the lin buying public, "the blue book" of the violinking profession. The old Italian makers are ed, with facsimiles of the labels of the most minent. The bulk of the book is given to inmation in regard to American makers of the sent day, about 450, a number which will probly astonish the average reader.

GENERAL NEWS ITEMS

LTHOUGH the artistic results of the civic ortral concerts in New York City have been sfactory it is a matter for regret that the receipts expenditures do not come near balancing, ng to the low admission prices charged. It ld seem that an orchestral program does not sufficient attraction to the people in New York, ent and non-resident, to draw them from summer recreations which can be had for l cost.

N FRANCISCO musicians are considering the nization of a woman's symphony orchestra.

AYE is announced for a concert tour in the ed States next February and to remain here some time in May. He will also give time to ng phonograph records.

R. HENRY L. MASON, of the Mason & Hamlin pany, has accepted the presidency of the le's Choral Union, of Boston, which was ized in 1898 and has now become one of the g choral societies of Boston. For several years s been under the musical direction of Mr. rick W. Wodell, whose name is familiar to rs of THE MUSICIAN as a contributor to the Department.

The world's greatest artists true to life!

The artists you want to hear in your home are the noted singers and musicians who are the favorites of the music-loving public; who by reason of their exceptional brilliance are universally recognized as the world's greatest artists.

Their performances in your home are all due to the wonderful achievements of one instrument—the Victrola. The artists themselves have chosen the Victrola as the only instrument capable of bringing their superb art into the home in all its natural beauty. That is why they make Victor Records exclusively.

Any Victor dealer will gladly show you the complete line of Victors and Victrolas—$10 to $400—and play the music you know and like best.

Victor Talking Machine Co., Camden, N. J., U. S. A.
Berliner Gramophone Co., Montreal, Canadian Distributors

New Victor Records demonstrated at all dealers on the 28th of each month

Victrola

Important warning. Victor Records can be safely and satisfactorily played only with ***Victor Needles or Tungs-tone Stylus*** on Victors or Victrolas. Victor Records cannot be safely played on machines with jeweled or other reproducing points.

To insure Victor quality, always look for the famous trademark, "His Master's Voice." It is on every Victrola and every Victor Record. It is the only way to identify genuine Victrolas and Victor Records.

THE Maine Music Festival is to be held jointly in Bangor and Portland, as usual this year, under the direction of Wm R. Chapman. Five concerts are set for Bangor, Oct. 5–7, and five for Portland, Oct. 9–11. Geraldine Farrar, Louis Graveure, baritone, Ethelynde Smith, soprano, and Eddy Brown, a young American violinist who has won public appreciation during the past season, are the leading soloists.

CHARLES F. FRENCH, of Chicago, business manager of the *Musical Leader*, died, August 17, in New York, as the result of injuries received in a fall.

RODOLPH BERGER, a composer best known by his charming waltzes, committed suicide in Barcelona in the early part of August. Although he had lived in France for many years he had never taken out naturalization papers, and on that account left Paris at the outbreak of the war in 1914.

NEW YORK papers make announcement that the Aborns will present a season of grand opera at prices ranging from twenty-five cents to one dollar. Operas will be sung in English and also in the original. Many former members of the Century Opera Co. will be in the new organization. A tour of a few of the larger cities will be made before opening the season in New York some time in January.

CLARENCE EDDY, the eminent American organ virtuoso, has arranged for a transcontinental tour beginning next January, playing in recital and inaugurating a number of new organs. Mr. Eddy is now organist of the First Presbyterian Church, Oakland, Cal.

ALBERT SPALDING and RUDOLF GANZ gave two joint recitals at Ocean Grove on Labor Day. Beethoven's *Kreutzer* sonata and Grieg's in C minor were features of the program.

JOHN SPENCER CURWEN, head of a London music publishing firm, and a well-trained musician, died in London, August 6. Mr. Curwen was a son of the Rev. John Curwen who was the principal English promoter of the Tonic Sol-fa System of music

THE FINISH IS WHAT COUNTS

—Endurance is as important in a typewriter as in an athlete.

Many a runner starts out looking fit, but after a lap or two, falls behind and is "all in" at the finish of the race.

So it is with typewriters. Some of them do good work at the start, but under the strain of continued use lose the close adjustments necessary to produce neat, clean-cut typewriting. They fail before they reach the home stretch.

The L. C. Smith & Bros. typewriter will run the ordinary course, come in as strong at the finish—and be ready for another race. One of the reasons for this is the *ball bearings* found in all much used parts. Constant use can only make them run smoother and "sweeter."

The L. C. Smith & Bros. typewriter is as good at the finish as at start.

Send today for catalog of **Silent** (8-7-6-3) or **Standard** (6-5-4-3) **Models**

Have You Studied Harmony

Harmony is the grammar of music, a knowledge of which will make you a better musician and more appreciative of the music you play, teach or hear. Harmony teaches you to analyze music, memorize more rapidly, transpose at sight, analyze melodies, detect wrong notes and faulty progressions, and to compose, arrange, or orchestrate in a musicianly manner.

Your musical education is not complete without a thorough and correct knowledge of Harmony. You can quickly overcome any deficiency and round our your education by taking our weekly lessons under America's eminent teachers, Adolph Rosenbecker and Daniel Protheroe, in the quiet and privacy of your own home at small cost.

In these Master lessons you don't merely learn "cut and dried" rules without knowing how to apply them in a practical way, but ample original work with written examinations develops your knowledge and fixes the principles in your mind for future use. Read what eminent authorities say and realize that this is

Your Great Opportuni

P. C. Lutkin, Dean of the Northwestern University School of Music, says: "Students who complete your Harmony Course and pass the examinations with satisfactory grades, will be given credit for two years' work in the Northwestern University School of Music in that study."

Robert W. Stevens, Instructor at the University of Chicago, says: "I am pleased to use Protheroe's Harmony Lessons as material for our classes, both in the elementary ones in the Divinity School of the University of Chicago, and in my advanced grades. This work correctly done is well worth the credit."

Walter Damrosch, Director of the New York Symphony Orchestra, writes: "The lessons are admirably prepared and serve their purpose in every particular. I had no idea that such sound knowledge of music could be imparted in this novel fashion, and I beg to congratulate you and your pupils."

Valuable Art Catalog sent free, contains sample lessons, a musical dictionary and full details of these Harmony Lessons; also our courses in Piano (Students' or Teachers' Course with Paderewski's endorsement) by the great Sherwood; Pipe Organ by Clarence Eddy; Violin, Cornet, Mandolin, Guitar, Banjo, Public School Music, Choral Conducting, History, Advanced Composition, etc., by equally eminent teachers. Satisfaction guaranteed. Write today and learn of remarkable Scholarship Offer. It costs you nothing—you have everything to gain and nothing to lose. State age and course in which interested. Get the catalog, then decide.

Siegel-Myers School of Music,

1841 Siegel-Myers Building, Chicago, Illinoi

notation, and was the author of a large number of books relating to music education.

Hamish MacCunn, an English composer, died in London about August 1. His works include a number of pieces in large form for orchestra, operas, musical comedies, cantatas, part-songs, and songs. He was highly esteemed as a conductor for opera.

Statistics are offered by a physician to prove that musicians who play wind instruments are long-lived. Cornet players show an average of 69.1 years; clarinet players come next, with 64.4; the oboe and bassoon players have an expectancy of 63; flutists are the lowest on the list with an average of 61.2 years.

Baltimore is to have a new choral society, to consist of professional singers supplemented by members of choirs and other choral bodies, to be directed by Gustav Strube, conductor of the Baltimore Symphony Orchestra. A local music patron has promised support adequate to the organization of a string quartet by four members of the Orchestra, which will add very materially to the musical resonances of the city.

A movement is under way to establish a school of music on property formerly belonging to Mme. Nordica where she had planned to found a school for opera.

The San Francisco Musical Association has adusted various difficulties and it is thought that the Symphony Orchestra has been established on a permanent basis with Alfred Herz as conductor. The organization will have eighty men who will devote their entire time to the Orchestra.

Saint Louis appropriated $17,000 this past season to be expended for community musical recreation.

A program of works by American negro composers was given at Birmingham, Ala., August 24, by the Birmingham United Choirs, 100 voices, under the direction of Mr. Carl R. Diton. The composers represented were Hebron, Burleigh, Brown, Diton, Vodery, and Dett.

The Washington State Music Teachers' Association will meet at North Yakima during the Christmas holidays, and it is expected that the Oregon Association will meet at the same time. Up to a year ago the teachers of the two states were in one organization.

Corsicana, Tex., school authorities have adopted a plan for school credits for music study similar to that described in the present issue of The Musician, page 597.

The MacDowell Association did not conduct a festival this year, but considerable activity was evident at the Colony, during the past summer. August 8 the MacDowell Choral Club gave a concert, Arthur Nevin, conducting, and the Zoellner String Quartet assisting.

Karl Klindworth, distinguished as a pi and teacher, and editor of numerous classical w such as Chopin's, Beethoven's, Mendelssohn's, died during August, the exact date not being g in the reports which reached us. He was September 25, 1830, in Hanover, was a of Liszt, in 1868 teacher of piano at the Mo Conservatory, in 1884 locating in Berlin. founded a school for piano players which was absorbed by the Scharwenka Conservatory.

Martha, opera by Flotow, was given in co form under the auspices of the Ogunquit, Village Improvement Association, August under the direction of Mr. Frederick W. Wod Boston, the solo parts and the chorus being su by villagers and summer guests.

Mr. Edwin Hughes, an American pianist for several years an assistant to Leschetizky, locating in Munich, has opened a studio in York. Mr. Hughes was well received in Ge concert performances as a pianist.

Mr. H. L. Baumgartner, formerly a stud the Indianapolis Conservatory, was awarde $100 Steinert prize at Yale University for th original composition for full orchestra, a sym in A minor, of which one movement was ent the contest. Mr. Baumgartner accepted the p of organist and choirmaster at the Inde Presbyterian Church, Savannah, Ga.

Bullard's Winter Song
IN THREE NEW EDITIONS

Directors of Choruses, Glee Clubs and School Music:

This is ample evidence that Bullard's "Winter Song," because of its qualities of vitality, melody, and simplicity, is one of the most popular numbers ever offered by an American publisher. Yet many of you have been debarred from using this song because of a few convivial allusions in the text.

Recognizing the "Winter Song's" musical fitness for the widest possible use, we are publishing three new editions with a slight revision of the text, retaining throughout the dash and spirit of Hovey's splendid lyrics.

The new editions cover every possible chorus ensemble.

Send for sample copy of any of the edition or editions adapted to ensembles which you direct.

No. 12,944	For sopranos and altos (Alto II *ad lib.*) ..... Price	$0.12
No. 12,945	For tenors and basses (Bass II *ad lib.*) ..... Price	.12
No. 12,986	For mixed voices and general use..... Price	.12

Note: The original edition for Men's Voices, with unchanged words, Octavo No. 10,160 is of course continued

OLIVER DITSON COMPANY, 150 Tremont St., Boston

e is some interest in the replies to questions in d to music. For example:
hat musical instrument do you play?
e answers showed 77 per cent play the piano, cent the violin, 4 per cent the guitar, and a few mandolin, cornet, or banjo.
the number who replied 45 per cent own pianos, an additional 8 per cent expect to buy instrus within a short time.
r the future development of music in the United s we hope that a larger number of school ers will equip themselves to play the violin. instrument should have a definite place in the l music curriculum. Some pupils cannot sing have but little interest in vocal music. But they will be glad of a chance to share in instrumental music. And a violin costs much less than a piano, and it has the merit of being easily portable. And it forms the basis of useful organization into orchestras of various sizes.

The 4 per cent of school teachers who play the violin ought to be 40 per cent.

—o—

Teachers who want to strengthen their work with pupils should do as other instructors have found it worth while, namely, encourage all pupils to become subscribers to THE MUSICIAN.

WITH THE SCHOOLS AND TEACHERS

During a trip on the St. Lawrence river, Mr. Wilbur Follett Unger, of Montclair, N. J., gave an impromptu recital to about 500 persons.

The Von Ende School of Music, New York, opened the fall session, September 11. An addition to the faculty is Harold Vincent Milligan, organist of the Fifth Ave. Baptist Church

Miss Frances I. Brock, of Philadelphia, who represents the system of the late D. William Mason, reopened her studio September 18. Miss Brock will conduct a class in playing music for two pianos this season, besides other ensemble music classes.

Mr. Frederick Wodell, of Boston, and Miss Louisa Hopkins, of Philadelphia, gave a recital for the benefit of the American Red Cross Society, at Ogunquit, Me., during the past summer. Mr. Wodell gave a number of songs by American composers, and Miss Hopkins played pieces by MacDowell, Scott, Wagner, Liszt, and Alabieff.

Miss Edith L. Winn of Boston, violinist, gave a recital at the Hotel Lincoln, Swampscott, Mass., in August.

The Vilim American Violin School, of Chicago, was opened for the eighteenth year, September 6. After an absence of a year Mr. Joseph Vilim has returned from California and resumed the management of the school. A feature of the work of the school is the Juvenile Orchestra which meets on Saturdays.

Mr. Ralph B. Ellen has reopened his studios in Boston and Arlington. Mrs. Ellen will take personal charge of the kindergarten work. The work of the school is thoroughly systematized, and the lesson material carefully planned as to quantity. Mr. Ellen is a pupil of Isidor Philipp.

The Wolf Institute of Pianoforte and Organ Playing, Lancaster, Pa., reopened September 5. Special attention will be given to the preparatory department.

Mr. H. Guest Collins, director of music in the Texas School for the Blind, Austin, sends us several excellent programs given by members of the Collins Music Club and by the Senior Chorus.

From the Cosmopolitan School of Music and Dramatic Art, Chicago, comes a handsomely printed catalog of the school. The new season opened September 18.

The Weltman Conservatory, Malden, Mass opened September 11, for the third season. Th Weltman Orchestral Society is a feature of the wor of the school.

Mr. Arthur Bowes, of Denver, has recentl published four piano pieces which he calls *Idylls Colorado*, intended for use in teaching and concer and of moderate difficulty.

SECOND CONTEST OF THE FEDERATED CLUBS

The National Federation of Musical Clul following a plan inaugurated in January, 191 and carried to a successful conclusion at the nin biennial convention in June, 1915, has now a nounced the second national contest for you professional musicians. The first contest broug to light a remarkable array of American-train musicians, gave them a public hearing and demo strated that we have in our own country teach and students as good as the best to be found el where.

The following conditions in the contest are p sented by the committee in charge:

1. Contestants must be entirely America trained.

2. Contestants must be under thirty years of a

3. Contestants must be screened from the jud and be known to the jury by number only.

4. Contestants must perform entirely with notes before their State jury, and later before th District jury, at least three or, if desired, m compositions.

5. Compositions to be performed must be specified composers. The list from which cho may be made will be furnished by the chairman the committee.

6. The contestant, to be eligible, must join Student and Young Professional Department of National Federation of Musical Clubs by send name and address and annual dues of one dolla the chairman of the department, Mrs. Louis Yager, 300 Forest Avenue, Oak Park, Ill.

7. Contestants must arrange for their own penses in the contest. To the winners in the f contest will be given a public appearance at tenth biennial festival to be held in Birmingh Ala., April, 1917.

8. Should there be in large cities a great nun of contestants, a preliminary contest similar to State contest will be arranged by a local comm

NEW ANTHEM FOR CHRISTMAS

For Quartette or Chorus — Ditson Edition No. 13001—12c

"Let Us Now Go Even Unto Bethlehem"

By George B. Nevin

This Anthem is Full of the Christmas Spirit and is Highly Recommended

ONE OF THE MOST SUCCESSFUL ANTHEMS OF 1915

Arise! Shine For Thy Light Is Come

No. 12838—12c

BY GEORGE B. NEVIN

ALSO ARRANGED FOR MEN'S VOICES. No. 13028—12c

An Eminent Composer Writes As Follows:

Dear Mr. Nevin:

I have your finely written anthem of festival character, and congratulate you upon a straight-forward manner of setting Isaiah 60: 1-3 (ARISE! SHINE, FOR THY LIGHT IS COME.)

It is a dignified and stirring work with the true musician's stamp upon it. Cordially,

Charles Wakefield Cadman.

Our Most Successful Christmas Cantata, 60c

The Adoration

BY GEORGE B. NEVIN

The exceeding large sales and performance of this work by representative choirs justifies the statement that this is our most popular Christmas cantata.

Over twenty-two thousand copies of The Adoration sold with the ending of 1915.

The Church Standard (Episcopal) says:

Mr. Nevin is one of our most successful composers, his melody is unfailing, that which he writes is not merely popular but of excellent quality.

Musical America refers to Mr. Nevin as follows:

A well-schooled musician, capable of dignity in his ecclesiastical writings, and abundantly supplied with a pleasing melodic flow.

VICTOR TALKING MACHINE RECORDS FOR OCTOBER

THE reader of THE MUSICIAN who has in his home a Talking Machine of one style or another will be interested to know that two years ago the annual production of machines passed the half million mark, and that the number of the records issued in the same period was more than 27,000,000. Certainly a business idea of great importance. And the production keeps up, month by month, with but little variation in the matter of quantity or quality. The following, among a much larger number issued for October distribution, claim the attention of those who are interested in the better class of music.

Caruso, Enrico, tenor: *Santa Lucia,* the well-known Neapolitan folk-song which has charmed not only the people of Naples and the travelers to that picturesque city, but the entire musical world.

Culp, Julia, contralto: *Immer leiser wird mein Schlummer* (*Lighter is my slumber*), one of the exquisite songs which Brahms has given to us, a number which the popular Dutch contralto gives with fine feeling and artistry.

Destinn, Emmy, soprano, and **Maria Duchene,** contralto: *O viens mon doux berger* (*My dear shepherd*), from Tchaikovsky's opera *Pique Dame* (*Queen of Spades*), sung in French, a duet which is counted among the masterpieces of the composer's vocal compositions.

Farrar, Geraldine, soprano: *Thy dear eyes,* by Homer N. Bartlett, a charming song, delightfully rendered by this favorite artist.

Garrison, Mabel, soprano: *Voce di primavera* (*Voice of Spring*), by Johann Strauss, a brilliant waltz song, and a remarkable coloratura number. It is a fine display of artistic vocal technic, and a song to please the average listener.

Gluck, Alma, soprano: *Still wie die Nacht* (*Calm as the night*), by Bohm, a song of rich melodic and harmonic beauty, exquisitely sung by one of the popular artists of the day.

Hempel, Frieda, soprano: *Voices of the Woods,* a vocal version of the favorite *Melody* in F by Rubinstein, with accompaniment of string quartet and harp, sung in English by a well-known Metropolitan Opera Company star.

Homer, Louise, contralto: *Flee as a bird,* by Mrs. Dana, a favorite sacred song of more than a generation ago, one in which the magnificent contralto voice of the artist is shown to exceptional advantage. Put this record on for the older folks.

Journet, Marcel, bass; *Chant de guerre cosaque* (*Cossack war song*), by Massenet, a stirring number in which the warlike spirit of these great cavalry fighters is expressed in suitable music, and sung by one of the greatest artists of the French operatic stage.

Kreisler, Fritz, violinist: *Adagietto* (from *L'Arlesienne*), by Bizet, one of the loveliest numbers of a suite for string orchestra by the composer of *Carmen.* It is perfection in melody and in rendering.

Martinelli, Giovanni, tenor: *Fra poco a me ricovero* (*Farewell to earth*), from Donizetti's opera *Lucia di Lammermoor,* one of the great airs of the operatic repertoire, a thrilling number for tenor.

McCormack, John, tenor: *Then you'll remember me,* the ever popular air from Balfe's opera, *The Bohemian Girl,* a beautiful song rendered by the most popular tenor of the concert stage of today.

Powell, Maud, violinist: *Humoresque,* by Dvorák, a violin number which has a tremendous hold upon the great mass of the people and also charms the musically educated. This sterling American artist gives an eminently satisfactory presentation.

Williams, Evan, tenor: *Face to face,* by Herbert Johnson, a sacred song which has won widespread appreciation. Mr. Williams' fine art is shown in the great simplicity of style he has achieved in the song, so full of feeling and deep sentiment.

Zimbalist, Efrem, violinist: *Serenade,* Op. 15, No. 1, by Moszkowski, a number which has stood the test of time, much playing, and a charming piece for the violin.

Among the lighter numbers we note songs by Mizzi Hajos, the light opera prima donna, Harry Lauder, and quite an array of singers and players known to the vaudeville stage.

A NEW OPERA COMPANY

AN opera company to bo known as the ... State Grand Opera Company has been orga... to play on a circuit composed of those spl... music centers and growing cities in the ... West, Cleveland, Pittsburgh, Detroit, Cinci... Yvonne de Tréville will be the leading ... donna soprano taking such rôles as Lakmé, M... Julietto, etc. Carl Jörn is to be the leading ten... Wagnerian rôles. Other artists are Eleano... Cisneros, Graham Marr, Bettina Freeman, ... Scott, and Evelina Parnell. The operas will b... in the original languages.

Twenty Grand Opera Transcriptions

FOR VIOLIN AND PIANO
BY KARL RISSLAND

Price, $1.00, Postpaid

Most of the numbers in this collection consist of a selection from the favorite airs in the opera, so arranged as to exhibit pleasing variety and contrast and give a good idea of the best music in the opera. A few consist of a single popular number, like the *Sextet* from *Lucia* or the *Barcarolle* from *Tales of Hoffmann*. In the operas included are the most popular works from all schools—Italian, French, German, etc. The editor has provided phrasing and fingering with great care and thoroughness.

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Single Copies.....$0.15
Subscription Price, Per Year..... 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in the United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, Germany, France, and all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured*, money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew.

We do not send receipts for subscriptions. On the wrapper of the first issue sent after your order is received is the date to which your subscription is paid. This is a receipt.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of *The Musician*. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of *The Musician*.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in *The Musician*, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 10th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

Announcement of New Book Publications in Press

NEW FORMULAS FOR THE PIANO TEACHER AND PIANO STUDENT

BY WASSILI SAFONOFF

Price, $1.00 net

The effort of earnest educators in piano playing is to classify and group practically the principles upon which the art of the pianist rests. This important new work by one of the leaders of music in Russia, perhaps better known to many Americans as a conductor of extraordinary ability, is practically a short way for an advanced pupil to acquire and maintain the independence of the fingers, evenness of touch, agility, and beauty of tone. It is the result of long years of experience in teaching some of the finest musical talent of Russia who received his instruction in the Conservatory of Moscow, where Safonoff is musical director, and also shows the deep researches of the author as to the most practical ways to secure a rich, pure tone on the piano. The formulas are not merely finger exercises; on the contrary, in consonance with modern ideas, they are really brain exercises, involving, so to speak, a constant telegraphy between the brain and the finger-tips, and require, on the part of the player, a complete concentration. Special attention is called to the fact that each formula presented is simply the basis for numberless exercises which can be worked out by the player in a great variety of fingers, rhythmic groupings, changes of accent, etc. We recommend this work as a contribution to the literature of the piano of great importance to teachers and students. It will be ready in several months.

—o—

HOW TO MASTER THE VIOLIN

A PRACTICAL GUIDE FOR STUDENTS AND TEACHERS

BY PAVEL L. BYTOVETZSKI

Price, $1.25

The author very modestly says that the only justification for a work on this subject is that it shall present the material in a simple, clear, practical manner, which shall enable either teacher or player to make use of it satisfactorily. We are of the opinion that the author has done this very thing. The evident main purpose is to present definitely the most direct paths to those acquirements coveted by every earnest student of violin playing. The material offered by the author consists of explanations, musical examples, and many photographic illustrations. The text consists of independent chapters, each dealing with one important department of violin technic and offering methods to conquer the special difficulties met in that department. These suggestions are suitable for the average student as well as the more advanced player, for they state fundamentals as well as special devices for the good player who is striving to improve his technic. Some chapter headings are: The left hand, Shifting and gliding, Action of the fingers, Schools of bowing, with full discussion of the various bowings and their application in playing, Double stopping, Vibrato, etc. An Appendix contains valuable lists of classified material for specific technical uses. This book is being pushed vigorously and ought to be ready during the early winter.

—o—

PROGRESSIVE VIOLIN STUDIES BY FAMOUS MASTERS

SELECTED AND EDITED BY EUGENE GRUENBERG

VOL. III. STUDIES IN ALL THE POSITIONS

Price, $1.00

These are for the violin, without accompaniment, and are selected from the works of the great masters of violin music such as Alard, Baillot, de Bériot, Dancla, Depas, Léonard, Meerts, Rode, Schoen, Venzl, Vieuxtemps, etc., not merely one or two, but several from each composer, equally meritorious with those better known. The book is conspicuous for the most careful bowing indications and explanatory remarks.

Best Selling Novel Ever Published

Harold Bell Wright
Author—Illustrator

WHEN A MAN'S A MAN is a story, true, of the real heart of the life of the unfenced land of ranch and range of Northern Arizona.

A Girl Graduate Says, "When a Man's a Man" is so clean, so wholesome, so uplifting that it impels me to shout from the house-tops to every young man and every young woman in the land and implore them to read this wonderful story of manhood. It just thrills with interest. It strikes the responsive chord of your heart's purest and best wishes and desires.

The New York Times: There is much of the vigorous outdoor life of the Southwest in the story, and Mr. Wright writes of it with knowledge and with graphic truth.

Messenger of the Sacred Heart: Through it runs a pretty love story that has the charm of being sweet and clean.

The Continent, Chicago: Harold Bell Wright knows you and me, our temptations, our sins, our struggles, our hopes of triumph over ourselves and also the certainty of our triumph, if we go straight after the task and with the proper leading, stick at it until victory comes. He writes of life as it is lived and of you and me as we live it. * * The novel is an inspiration.

MADE SUCCESSFUL BY THE TEACHERS THEREFORE EVERLASTINGLY FOR THE TEACHERS.

Concerning a Great Book

PETERS' MODERN PIANOFORTE METHOD, Price $1.00

DESCRIPTION: A practical, melodious, and progressive introduction to the art of pianoforte playing. Both the Treble and Bass Clefs are used simultaneously from the very beginning. Especially excellent in possessing many new and practical teaching hints and ideas of sound educational value. Exhaustively annotated and thoroughly fingered and phrased. The explanatory text is couched in the plainest and most simple language, and can be readily understood by the youngest pupils. However, no "baby" or "dollie" titles are used. It may be recommended highly for the older or adult-beginners. Suggests a helpful supplemental course of technical work. Closes with a dictionary of musical terms and signs. Forceful and effective in that it is concise and contains no dull parts. Every page has an object and accomplishes something tangible. The mechanical production is pronouncedly good—the binding will stand hard usage.

USE: As the sole instruction book for pupils from the beginning to easy medium grade. As the central or foundational work in a beginner course involving additional study works on special branches. As a guide to teachers in acquiring a standard system of teaching. As a supplemental work to any graded course, etc., for the particular study of the rudiments, the various elements, and such special branches as correct usage of the pedal, etc. As the beginning book for pupils of any age.

WILLIS SERVICE has no limit. It is for teachers everywhere. A letter asking about it is time and two cents well spent.

Edition Wood

850 VOLUMES

THE Best Series of Standard Musical Works, including Studies, Recreations and Classics. Carefully edited, perfectly engraved, printed and bound. Teachers, Students and Music Lovers admit the superiority of this edition.

EDITION WOOD is pre-eminently the Teachers' Edition,---planned for teachers, built up to meet the requirements of teachers. The best evidence that the efforts of its publishers have been in the right direction is the large number of teachers now using it,---a number constantly and rapidly increasing.

The high position it now occupies has been attained only by virtue of consistently giving the Teaching Profession the maximum of *practical value.*

SCHIRMER 100% SERVICE

INSIST
on getting Schirmer Editions of the Classics

GOOD SERVICE in the music world means:

Orders filled promptly and accurately.
Prices and discounts that are right.
A complete and well-classified stock.
Correct editing and perfect printing.
No unnecessary transportation charges.
And, of course, courtesy.

100% SERVICE is "good service" plus:

The ability and willingness to furnish authentic information on every phase of musical research.
The material with which to fill any order, however rare and complex its requirements may be.

FOR NEARLY SEVENTY YEARS we have studied the musical development of this country and abroad. We have unswervingly maintained a standard of the best—first, last and always. We carry the largest and most comprehensive stock of musical literature in the world, both American and foreign publications. **Our editions are unsurpassed as to correct text and perfect typography.** Our orders are handled by specialists in the various branches. Our mechanical facilities are unequaled, as we now have the largest and most up-to-date music-printing plant in the country.

We are equipped in every respect to render **100 PER CENT SERVICE** to musicians everywhere. Dealers all over the country have for years recognized the value of this service and availed themselves of it. Their patrons, in turn, receive the benefit of it. This announcement, therefore, is intended specifically for those **Schools, Colleges, Teachers, Students and Music Lovers** who do not enjoy the advantage of local service. To such we wish to say that we are at all times desirous of rendering prompt and practical assistance, whether it be in the filling of a mail order or giving helpful information as to the arranging of a program, data in regard to a composer, etc., etc.

BULLETINS *containing announcements and reviews of our new publications sent free to any address. If you are not receiving them, send us your name and state the class of music you are interested in.*

G. SCHIRMER - - 3 East 43d St., New York

To Colleges, Schools and Teachers

1. We Make a Specialty of College, School and Teacher Trade.

2. Our terms are the **MOST LIBERAL**; our discounts the **LARGEST**, and from the educational standpoint, our publications are second to none.

3. Our Facilities Are Unequaled.

4. All Orders Are Filled by Experts. We pride ourselves on promptness and correctness, two important things for your consideration.

5. Our Own Publications Are Noted for Accuracy and Mechanical Excellence.

6. Our Plan of Sending Music on Sale (full particulars sent on request) is Liberal, and only the latest and best music is used for this purpose.

We Carry a Complete Line of All Foreign and American Publications.

Send for Our

I. Catalogue of Sheet Music.
II. Catalogue of Music Books.
III. Addenda to Catalogue. (Latest Publications, 36 pages.)
IV. Teachers' Guide—Thematic illustrations of over 500 of our most successful easy and medium grade Teaching and Recreation Pieces for Piano.
V. "On Sale" Plan. The most liberal offer by any dealer.
VI. Discounts to Teachers. Better than made by any other publisher.

There is no feature of the music teaching profession with regard to which we are not prepared to be of prompt and practical assistance, either by furnishing the necessary material or by giving helpful information and advice at all times.

We solicit your trade, and are positive that we can save you both time and money.

Ten First-Grade Piano Pieces Almost Entirely in Treble Clef. Words (ad libitum)

By MATHILDE BILBRO

A new volume of teaching pieces by a successful American composer.

This collection of **First Grade pieces** have characteristic titles, accompanied by appropriate verses, so that they can be both played and sung if desired; all are full of vigor and originality.

The Author's aim has been **simplicity,** not simpleness; to attain the **childlike** but not **childishness.**

The intelligent use of this little collection will amply repay both teacher and pupil.

An especially **large note** has been used in engraving the plates.

Printed on heavy paper, full size plates, artistically bound in attractive illustrated cover printed in colors.

CONTENTS

The Bad Chickens
In the Awful Dark!
Little Willie Bureh, Went to Sleep in Church
The Little White Rose
Little Yellow Buttercup
The Morning Glory
The Summer House
A Warning to Robin
What Makes Butterflies?
Who Broke the Lily?

Mentality Behind Piano Technic

Richard Epstein Discusses Problems of Modern Piano Playing

REPORTED BY OLIN DOWNES

'UST what is meant by "modern piano technic"? Something more, I take it, that the mere hitting of a given number of notes in a given nount of time. In the piano we have an instrument th certain fixed limitations, it is true, but also an strument of extraordinary eloquence and resource, ven a great musician and a virtuoso in complete mmand of the keyboard.

This command involves, certainly, much ore than going through the motions and tting the keys.

It presumes nervous and muscular control so inately related to and so completely at the service musical conceptions that it is almost as one with em. It means a mastery of the instrument so mplete that the interpreter, acknowledging the servation of certain fundamental scientific princies, will evolve a style of playing which shall be e one inevitable counterpart of his musical imination, and distinctively characteristic of himself.

How can this be taught?

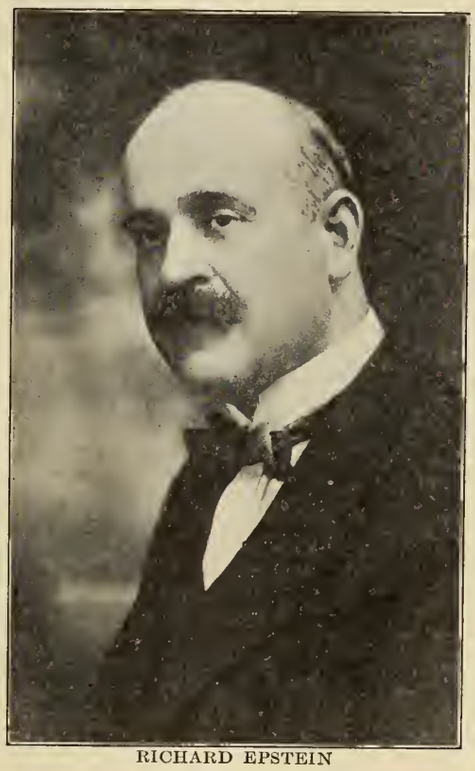
When the inquirer puts that question he is usuy met by defense or condemnation of a "method." ot without reason, he feels discouraged; for he beves that "method" came after and not before nusic." And when he hears the performances of presentatives of these various methods it seems him that that cardinal fact has been forgotten. me teachers rise above this provincialism. All anists who succeed have to. Not that one can learn play without scientific principles, but **these inciples must be intelligently applied to dividual problems.**

A well known teacher of the city of Boston told e one day that a pupil had come to her to study, th the announcement that she had already thorghly mastered "the method."

"I told her," said this teacher, "after she played, at having mastered the method it might be a good ing to try to master the music!"

In search then, of technical "principles" of a en ific and artistic character, rather than "meth-" I recently interviewed Richard Epstein, the anist and piano pedagogue, who, though he has en in this country but two years, has already ade for himself an enviable reputation among the ding musicians now in America.

I went with more than ordinary hope, for I knew at Mr. Epstein was in the first place a practical d not a theoretical piano teacher and player; that had had, as a soloist, accompanist, and coach of ny of the greatest singers now before the public, portunity of putting every theory and experiment the acid test of concert performance; also, that h pianists as Harold Bauer and Ossip Gabrilitsch had sent him pupils for special work, and t recently Gabrilowitsch announced that he had de a careful study of Mr. Epstein's ideas and had deavored to apply them in my own playing."



RICHARD EPSTEIN

STUDENT PERIOD

"Your questions interest me particularly," said Mr. Epstein, "because they correspond so nearly to the questions which troubled me as a performer and a teacher for a good many years. I studied at the Conservatory in Vienna, in the piano class of my father, Julius Epstein. In due course I graduated there and later became a professor of the piano at this Conservatory. I should say here that my father was himself an excellent pianist and a very fine musician of the older school. As an interpreter of Mozart he was generally looked upon in Europe as having but one rival, Reinecke.

"At any rate, I studied very carefully the piano and piano teaching, and early acquired a great love for chamber music, which remains, to my mind, one of the highest and most engrossing activities open to the pianist. I later became very much interested in the literature of song and in the course of long years learned at least the principles of good accompanying. Admitting that an accompanist must be born before he can be made, I am, at the same time, of the opinion that nothing less than many years of experience can fit a man adequately for this difficult art.

"In the meantime, I was listening to all of the great pianists of the day.

"In some respects I had unusual advantages. For instance, I heard Johannes Brahms, a frequent guest at our house, play published and unpublished compositions of his own by the hour. It is the fashion to disparage the piano playing of Brahms. As a matter of fact, in the earlier part of his career, he was a remarkable virtuoso, and in certain of his compositions he has contributed most valuably to modern technical idioms. Also, I heard repeatedly the greatest of all the pianists the world has known since I was old enough to listen intelligently—Rubinstein!

"Listening to Rubinstein, whose tone had a fulness, a carrying quality, even in piani simo, and a superb sonority in fortissimo passages, in chord and octave playing, superior to that of any other pianists, and watching him as well, I noticed certain things which afterwards had a profound influence on my theories of piano playing.

"Rubinstein did certain things which other pianists of the day did not do, or at least did not practise to anything like such an extent as he did.

"His effects were so varied and so wonderful, his virtuosity, in spite of his proverbial carelessness about purely technical finish, was so stupendous, that it was not always easy to analyze the precise way in which these effects were attained. Is not this, in fact, very often a quality of genius? The genius instinctively grasps certain laws, and follows them with a readiness and a lack of preconceived method which is sometimes as misleading as it is amazing to lesser men. Misleading because, after all, a thing cannot be done unless it is done scientifically. The science may be unconscious, and often is. Nevertheless it is there. At the bottom of every real accomplishment there is science.

"I finally came to the conclusion that the essential difference between Rubinstein's technical methods and those of the majority of pianists—not all of them, for great artists will each approach, though from different directions, fundamental laws of art —was

His wonderful employment of weight,

his instinctive mastery of muscular relaxation, and the enormous power which lay less in the broad strong fingers of his astonishing hand than in the concerted action of upper arm, forearm, hand and fingers, all combined.

"Well, the more I thought over the technical methods then in vogue, useful as they were, and by no means unproductive of artistic pianists, and compared them with Rubinstein's, the more striking appeared the limitations of the old system and the possibilities of the new.

"Which should a teacher choose from, the pedagogic theories of piano teachers or the actual practices and accomplishments of a giant like Rubinstein?

"Obviously Rubinstein, in so far as he transcended the old teachings in his results, was right, and the teachers wrong. It would be necessary to make a new study of the technical problems of piano playing, not based on the theories and traditions of the schools, but on the playing of the great masters of the piano.

"I have implied that Rubinstein was not the only one who employed weight and relaxation, problems recognized today as essential elements of modern piano playing. Naturally he was not the only one nor the first one. Liszt, of course, had been a prophet of prophets in developing new technical means which made a new piano necessary—a piano of far greater capacities of sonority and tone-color, and an instrument requiring far more power and virtuosity than the piano of the Beethoven period.

"But, as always, the artists were leading, the theorists following, in a rather slow and blundering fashion.

"In my desire to come nearer to the principles of modern piano technic, I studied, of course, very carefully all the 'methods' and books thereon that I could find—Deppe, Breithaupt, and others—I culled an exercise here and one there, but I gained more from an authoritative treatise on the physiology of the muscles of the arms and the hand than I did from any piano method! (Steinhausen.)

"My principal difficulty, one which it took me many years to solve, was a difficulty which still seems to me to stand in the way of some modern piano teaching, namely,

"The difficulty of developing a new freedom of the arm and the wrist, new muscular movements, without sacrificing the strength and the accuracy of the fingers.

"Some who studied problems of weight and relaxation, seem to me to have become so absorbed with the possibilities of this phase of technic, that they ended by neglecting the fingers, with the result of flabby and inefficient finger work which led to general helplessness. How anyone can honestly and scientifically follow out this one-sided doctrine I am utterly unable to understand. How with all the weight and relaxation and flexibility in the world is a pianist to play if he cannot summon at will the necessary tension—I did not say stiffness, but tension—in the finger tips? You might as well take from a machine any one of its most essential parts.

"And now commenced my years of experimentation.

"I had given up my position at the Conservatory in Vienna and had gone to London. There I was teaching, coaching, accompanying, playing extensively in chamber music concerts, for which purpose I had organized a Trio of my own, and, what with the new ideas which were troubling me and the constant efforts I was making to work out a system which should be practicable and a rounded whole, with a device for meeting every essential technical problem of playing, I had a time of it which only a person who has gone through a similar experience will understand. There were days when courage left me, when I wondered whether I had not been led wholly astray, and whether a return to the 'safe and sane' doctrines of the past would not save time and bring the real results. But I could not leave things alone, I could not turn back. And by and by established definitions and principles began to take shape in a manner more to my satisfaction.

"When was I satisfied?

"Only when the theory proved itself in the practice!

"And I had several excellent standards of self-criticism. I had long discovered, as an accompanist, that the old hitting touch did not support or blend with the tone of the singer. I knew that before I could go farther I must find the tone which *would* blend with the voice, and must formulate the technical principle of tone production which lay behind it. And, then, you will admit that many modern songs require almost extensive technic.

"Songs, indeed, have often a very special value as technical problems, for very often—indeed, in the majority of cases—the song accompaniment will consist of the persistent and varied treatment of a single technical figure. This figure will be transposed in various keys, treated to various rhythmic transformations, and so on. Well, even if you can play pianistically such a comparatively simple accompaniment, with its characteristic technical figure, as Schubert s *Auf dem wasser zu singen*, you have done something toward making yourself a pianist. And there are much more difficult things than that in the accompanist's repertory.

"To make an accompaniment a perfect thing, technically finished, tonally always beautiful, and an eloquent commentary on the vocal part—be assured that it is not an inefficient player who can accomplish that! I had an abundance of technical problems, ready-made, to work out, and theories of tone production to demonstrate.

"As I have said, the firm, strong finger, the finger stroke, and, what is equally important, the release of the pressing finger, must be developed carefully and logically before starting on an extensive system of exercises for relaxation and weight.

"The fingers must be exceedingly accurate and efficient. Movement must not be wasted. The straight line, which is the shortest distance between two points, must be the aim for that matter, of all studies in finger, wrist, or arm technic.

"Do you remember the story of Paganini and the Englishman who thought he would learn his secrets if he could once watch the great violinist at his practice? Well, the Englishman pursued Paganini for seasons from town to town. At last he secured a room in a hotel adjoining the room reserved for the virtuoso. He concealed himself, after providing a point of vantage from which he could look into the neighboring room without himself being seen. Paganini appeared, and the Englishman, his eyes glued to the wall, held his breath as the violinist took his instrument from his case. The moment was at hand. But Paganini did not pick up the bow at all. He simply put the violin to his chin, and with his left hand on the keyboard went through a series of what one might call geometrical exercises, double-stopping, shifting, etc., all with the most scrupulous precision, and in utter silence. After a quarter of an hour of this he put the instrument back in its case and left the room!

"The Englishman, according to the story, was disappointed. Had I been in that Englishman's place, I think I would have felt that one branch of my inquiries was ended.

"I endeavor to cultivate, simultaneously, in preparing a pupil, the maximum of quickness, accuracy, and economy of movement, finger strength and tone accuracy, side by side with some studies which I believe are new for the wrist and the arm. An interview is not the place to describe these studies in detail, which, indeed, require to be illustrated, to be fully understood, at the keyboard. But perhaps I can put it this way:

"Relaxation of the muscles of the wrist and arm must be achieved, and the force of gravity inherent in the arm and hand itself utilized, not as one would utilize the weight of inert matter, but in a manner to permit the free play of sensitized members. Not only must there be, in my opinion, an absence of tension under any circumstances, but there must be the free, co-ordinated, and rhythmic motion of groups of muscles, according to what I will call the particular technical formation of the passage itself. Any absolute lack of motion should never occur. A dead stop of all of the muscles will make itself felt at once in the tone and also the musical rhythm. The immediate effect, whatever the intention, will be one of rigidity. Even in inaction we seldom leave our muscles long at rest for any great length of time. They require play and interplay, if only for their physical well-being.

"Now, I also think that this rhythmic ebb and flux, as it might be called, of muscular action, is a imperative to a solid and fluent natural technic a the musical rhythm is to music. And, of course, in ex change for brute physical force, we must have phys ical weight concentrated and controlled!

"Laws of gravity, of balance, of the rebound of moving bodies when they come into col lision can and should, as I think, be incor porated in the basic practices of the moder pianist.

"Thus, octave playing, I think, should be almos entirely a matter of the rebounding of fingers fro the keys, I can illustrate it for you."

He sat at the piano, raised the hand, the finger hanging down almost perpendicularly from th wrist, and lowered the arm slowly. First the thum and little finger, the octave grip being sustaine came into contact with the keyboard, struck th octave, and, rebounding rapidly, struck the octav repeatedly as the wrist gradually lowered; so that b the time the wrist was on a level with the white key six octaves, full, resonant, had been heard.

"Let the weight of the hand, the looseness the wrist, and the natural rebound from th keys, give you your repeated octaves," said M Epstein.

"I know your next question—the wrist once dow how to get it up without breaking the octave re etition. Let me show you:

"The wrist is now lower than the keyboard, whe it has fallen by a natural and definite motion. N I commence to raise my wrist. In doing this, throw the weight again into the tips of the thur and little finger, which always keep the 'octave gri and the natural rebound of the fingers continu thanks to the weight that comes from wrist as rises. Not contraction but weight from this wr gives me the continuance of the octaves, by alt nately and rhythmically raising and lowering t wrist, preserving my 'octave grip' and allowing t fingers their natural ricochet from the keys.

"That is only one thing, and a detail, not the m novel, of my practice. The raising and lowering of wrist is not new, You will find it exemplified in first of the two books of Kullak's *Octave School*. T distinction between my ideas of octave playing a the practice of Kullak is that where Kullak mer for the sake of a change of muscular action, rai and lowers the wrist, I reduce positive muscu effort to the place where it is only represented the 'octave grip,' while the looseness of my w and the weight of my arm do the work for me.

"I need not go on with illustrations such as th I have my own sets of exercises. They are not ta from books, with the exception of two or th They are few in number, but designed to become p of the daily practice and keep the hand in the pin technical condition. I also use a few studies, as instance certain of the studies of Czerny, a v great pedagogue, some of Clementi, one or two Brahms' exercises for the development of fi independence and so on.

"But I believe in emphasizing the fundam tals of technical problems.

"Those once mastered in a scientific way, the l trained so that it instinctively meets a techn problem in the right way, it only remains to w out the incidental difficulties which occur nearly every composition. The more of these d culties that are worked out, the greater the techn resource of the player, of course. But they all be worked out by the player, with little assistanc he once thoroughly understands his fundamen

"On the other hand, unless fundamental princ are understood there cannot be technical maste a solid, reliable, fluent, and characteristic tech The essentials once understood, I try to make pupils work out amplifications and variation technical difficulties which they encounter themselves. They can learn to do this. It m them more scientific and thorough in their tech

work, gives them mental initiative and basic understanding

"And, finally, I try by every means to make the pupil develop an ear for tone and listen for himself.

"Once this criterion is established, once accustom the pupil to being his own critic, super-sensitive to ugliness of tone or awkwardness of execution, you have made him his own teacher and master, which, certainly, is the aim of every pedagogue and musician with the necessary love and enthusiasm for his work!"

AN INTERESTING PHOTOGRAPH

The photograph on this page has peculiar interest since the one of the group in the center is Karl Klindworth, the renowned pianist, teacher, and editor, who died about the end of last July, the exact date not being available, due to uncertainties of news transmission at the present time. The original from which the reproduction is taken is in the collection of Mr. Adolph M. Foerster, of Pittsburgh, to whom it was given by Klindworth in 1888. With him are two other pupils of Liszt, Tausig, at the left, Von Bülow, at the right. As Tausig died in 1871 the photograph carries the reader back nearly fifty years. Klindworth's most noteworthy contributions to piano music are his edition of Chopin's works and the piano score of Wagner's *Ring* music dramas.

TAUSIG, KLINDWORTH, VON BÜLOW

SELECTING THE TEACHER

BY HAROLD S. CLICKNER

The parent, having decided to give his children a musical education, must, first of all, select a teacher. Important as this is, as a rule very little attention or judgment is displayed in making the selection.

Most parents proceed in the following manner: they choose the "cheap teacher," or, perhaps they have a friend who is a teacher, or they take the teacher who has been recommended to them by some one else. Is this all the judgment and attention required? Far from it.

This is just as important as it is to purchase a home. You certainly would use more reasoning power in the latter because it involves so much. In selecting the right teacher for your child you should make it a point to get only the best at hand in the profession. Of course you must consider your "pocket-book." If you can only pay one dollar and a half for a lesson you cannot expect to get the six dollar teacher.

Below I will show you how I selected my teacher. One suited my "pocket-book," and he lived or came up to the qualifications listed below. If you use these in the selection of the teacher for your child you will profit likewise and have no cause to regret later on. The foundation is so important in music. See that your child gets the proper start.

First: See that the teacher is one of experience, for he can save your child Time. He will also be able to make "short cuts" for the child, thereby saving him Time and Drudgery. He will know how to keep alive the interest of the pupil. He will make the task of learning music less laborious.

Note:—Beware of the teacher who has experience but is lazy, impatient, has no ambition, has died mentally years ago. There are many of them. So you must be careful to make sure on this first point.

Second: Avoid cheap teachers. They seldom give anything good, but are sure to take your money and waste your child's time. They also allow the pupil to acquire bad habits from the start. Remember that to unlearn is the hardest and also very discouraging.

Note:—I do not condemn all teachers who get small fees for lessons. I have found some who are worth much more than they ask, but they are located in poor localities such as "factory districts." As the wages are very low they adjust their price for lessons in accordance with the wages. Others have had little experience as teachers, just starting out, and cannot charge much for lessons. Yet they had the best of teachers and in the course of time will make excellent teachers. So you see there can be the good "cheap teacher" as well as the bad "cheap teacher."

Third: See that the teacher is wide awake. He should be of the kind that keeps abreast with the times. He should take an interest in his art by writing articles pertaining to music in the local papers as well as in the musical magazines. In this way he not only shows that he is interested in music but is also trying to advance it. This is a very good point.

Fourth: The real live teacher is the one who constantly keeps himself before the public by playing concerts, accompanying singers, instrumentalists, and the like. In this way he shows his ability as a performer on his instrument. He should also see that his pupils give several musicales during the season, to show what his teaching is accomplishing. It also trains the pupil for public playing. What good is music to the child unless he or she can use it in public, and in this way help the community to become more musical. See to it that the teacher lives up to this point. It is valuable to the child.

Fifth: The teacher should have a fine general education. He should not confine himself solely to music. He must be able to converse on other topics. I have found the best of teachers well-versed on such subjects as psychology, physiology, esthetics, mechanics, acoustics, etc. All of these subjects help the teacher and make his equipment stronger.

Sixth: The teacher should also be one who does not stop studying, for, he has learned that it is only by hard work and study that he may reach his goal. He will give you more for the money.

Seventh: See that the teacher is honest, industrious, sympathetic, and religious. If these qualities are developed in him, they serve as a good guide for you in making your choice.

In closing I would suggest that you try to find a teacher who lives up to all that I have said. This will take some time on your part but you can rest assured that he will give your child a good start, save time for him, and that you will be money in by making such a selection. In order to find out all of these points I advise that you consult people who are musical in your town. They will help you.

LETTING PIECES REST

BY LEONORA SILL ASHTON

Every painstaking musician learns early in his career the value of laying aside for two or three weeks a composition upon which he has worked faithfully, to let it rest for a while. By that time the drudgery is forgotten, and the firm touch and sure technic greet him with a freshness all their own.

It would be wise if this fact could be dwelt upon a little more fully in all music teaching.

Think of the very young pupil, for instance. Very naturally, in his lessons there will be easy little pieces of a melodic quality in which he will delight. But why let him play all the meaning out of them, simply because they are tuneful, and please his ear? He will pick them up quickly. And then, without doubt, drum them on the piano many times a day, to his own detriment, and to the annoyance of those around him.

When a piece is well learned, take it away from him for a week. The discipline may be hard, but it will make him appreciate the piece more in the end. It will be a joy to him when it is returned with its technic firmly established.

With more difficult pieces, the same scheme will prove one of encouragement to the pupil.

After long, hard work, which does not seem to bring the desired result, follow the same steps. Take the piece away from the pupil for a while. When it is placed before him again, at the end of the allotted time, he will realize how much success he has gained instead of seeming failure.

Always avoid allowing a student *to play the meaning out of music.*

When the page is first set before him, you will doubtless explain the whole to him, and he will have an idea, more or less clear, as to what the printed notes are meant to interpret. But work very often dulls this idea for a time, while the whole attention is given to correct notes and fingering, phrasing, pedaling, and the other myriad points.

Never be afraid to let music rest.

Like everything else in the world under the same conditions, it will come back to you with a newness and freshness that, having once learned it, you could never have gained in any other way.

MAKING A PHONOGRAPH RECORD

BY
YVONNE DE TRÉVILLE

Photo by Goover Art Co. Los Angeles

YVONNE DE TRÉVILLE IN HER MUSIC ROOM

When I first sang for the phonograph several years ago, during my first engagement at the Imperial Opera of Petrograd, the company was not to be outdone in courtesy by the Imperial Intendant, General Teliakowski, who had sent the opera troupe to my hotel for rehearsals!

The phonograph company therefore sent the recording machine and operators to my suite in order not to "derange Mlle.," as they said. The results, however, were so unsatisfactory to me that I not only insisted on having the records immediately destroyed, but felt very unwilling to undertake a second experiment.

However, having heard some remarkably lifelike tones coming from those weird little wooden birdhouses lately, I allowed myself to be persuaded to another trial.

"Trial" is, I think, a particularly appropriate word. For to sing the same song over seven or eight times, in front of a tin horn, with no audience except that tin horn and the operator who gently but firmly pushes you back and forth, is anything but inspiring! Of course, I was practically a novice, and no hint was given me as to the method of procedure conducive to best results, save the laconic remark, "Sing just as you would in public," which is insufficient and misleading.

So many persons have exclaimed eagerly, "Oh, do tell us how and what you did!" when they heard that I had yielded to the golden arguments of one of our prominent companies, that I decided to write it for the many rather than tell it, personally, to the few.

Fortunately, I carried away from the recording room many mental notes to be sorted out later! Most professionals prefer to sing after noon, and the longer after noon the better. So I stipulated for an appointment at three and arrived promptly and gaily, thinking that the ordeal would be over in an hour's time. To tell the truth, I had promised to take a cup of tea with some friends at half past four, but it was nearer seven when I gulped down that stale beverage, between the hurried narrative of my experience.

Well, to return to our "muttons," as the French say (which in this case are tin horns). I was led to the slaughter—no, to execution of my friend, Eva Dell' Acqua's *Chanson provencale* for a preliminary rehearsal with the orchestra, during which I pointed out the cuts and changes Eva had made for me. Of course, we had to run through it again to make sure it was all understood. That fact established, I was led behind a high cloth screen, where I had the company of a wooden chair, a tin horn projecting through the wall, and the aforementioned "Gentle Pusher."

During the scraping and tuning of the musical instruments I peeked around the edge of the screen and laughed aloud to see the first violinist seated astride of a little, low, rolling box, for all the world like the push cart of the beggar who has had his legs cut off and propels himself around Fifth Avenue, selling matches and shoe laces. It was explained to me that experience had taught the violinist to do for himself what the "Gentle Pusher" was doing for me, and he approached or rolled back from his particular tin horn as the pitch of the note made it advisable.

The 'cellist had a similar seat, but on a raised platform, and woe betide him should his enthusiasm carry him too far! He would certainly collide with the conductor and drive both their tin horns through the division wall. Other members of the orchestra did not occupy such elevated positions and were stationary, their music racks hung on wires pendant from the ceiling.

My curiosity satisfied in that direction, I turned to the opposite wing of the screen and, looking around that corner, saw the wall, from floor to ceiling, covered with various sizes and shapes of the ubiquitous tin horn. The size and shape vary according to the quality of the tone to be recorded, I was told.

The door leading to the next room, into which our receiving horns protruded through the wall, was covered with signs, "No Admittance," "Keep Out," etc., but, nothing daunted, I slipped through, to find directly under the small ends of the transmitting horns from the front room a machine that resembled a seismograph placed on top of a large pumpkin pie!

As I could not be on both sides of the wall at once, I was unable to watch the operations of this delicate series of tiny levers, disks, and cylinders while I sang from the first room.

At the close of the long, high trill with which I finish the *Chanson provencale*, hearing the continued light thrum of the recording machine, I exclaimed, "Why, if I had known there was more space on the cylinder I would have trilled longer," and perceived too late the horrified expression and admonishing gesture of silence of the "Gentle Pusher."

We all followed eagerly the operator who emerged from the "sanctum sanctorum" bearing aloft the pumpkin pie, like the Herald of Old King Cole in the nursery rhyme. After watching him place this cylinder on an ordinary phonograph, I experienced that peculiar sensation of hearing my own voice. If, at the end of the trill, I had not heard the words "Why, if I had known there was more space on the cylinder I would have trilled longer," followed by a horrified "S-s-h," I would not have been sure it was my own voice.

You doubtless hear your voice as others hear it, on the phonograph, but, presumably owing to the passage of the tone upward through the head it certainly sounds quite different to you coming from your own throat. Two operators bending over the phonograph, the orchestra leader, and the manager, each with a pencil and copy of the song in hand jotted down effects as they kept up a running fire of comment! "She was too near the receiver," "The oboe should be stronger there!" "Bring out the flutes more!" "That A is too strong and the trill would have been more distinct if she had been farther from the horn!" etc.

I listened, speechless from excited interest and impatient to profit by what I had heard. A second, then a third time I returned to my screen for trial records until there was only one verse that needed a slight change. When I asked if they could not run through the same record (the aforementioned "pumpkin pie") the operator smiled at my ignorance and said:

"Why no, this cylinder has been ruined putting it under the needle while so soft." So back we went to my tin horn to repeat that particular passage.

At last the master records were to be made, and I trembled lest I should repeat some of the extreme dynamic shading which, while very effective in public, is disastrous on records. In order to concentrate my attention I closed my eyes, and although I could not, as in the case of the "trials," hear the three "master" records immediately after making them, I was glad, on my return in a few nights, to hear they were the best of the eight-and-a-half repetitions of the *Chanson provencale* which I sang that afternoon.

———o———

MUSICAL PHRASING

BY JANET CUTLER

Musical phrases may readily be likened to phrases in literature. No child in school is ever allowed to read on and on regardless of indicated pauses. No more should a piano student be allowed to play line after line without noting the beginning and ending of phrases.

Comparative study is always of value. Therefore explain to the piano pupil that he has more right to play a line of music, disregarding the small, individual thoughts known as phrases, than he has to read in a one-tone sing-song voice a sentence such as this:

"The boy went to town to do an errand for his mother, but stopped on the way to watch his uncle make hay."

In this sentence, the boy had a destination which was town; so that much represents a musical phrase with a main thought and a climax. The next main thought to be reached is the purpose, namely, "to do an errand for his mother." So this is a phrase with a climax, "an errand." "He stopped on the way," and "to watch his uncle make hay" each represent a musical phrase with climaxes.

That phrases do not, of neeessity, begin with a measure bar and end likewise often troubles even quite advanced pupils. Sometimes a phrase begins just before the measure bar and ends just after one, as on page two of S. Yaroff's *Elegie*. These odd phrasings can often be determined if attention is called to the patterns of phrases. Even young pupils are interested to see how phrases begin with the same kind of a note, sometimes long, oftener short.

If the student is a boy and is interested in athleties, here is another way to approach the subject: The aim of a boy in a race is the goal. A race course without a goal would be of little interest. So there is a goal in every phrase of music, which are the little race courses of the entire piece. If in this goal a climax is missed the music becomes characterless, and the musical value is lost.

Phrasing gives tone, character, and interest to piano playing, which otherwise might prove an uninteresting and valueless performance. No audience is satisfied with anything which lacks inter-

TWO ESSENTIALS FOR CHILD STUDENTS

BY HAROLD BAUER

[About two years ago Mr. Bauer gave an interview to a representative of the Little Rock, Ark., *Gazette*, in the course of which he discussed the training of a child who aspires to become an artist piano player. After mentioning certain essentials of a technical character he continued as follows.—The Editor].

THERE are in my opinion two other essentials for the child's development at this period: first, a familiarity with singing or playing the violin; second, appearing in public.

My reason for wishing a study of singing or the violin is founded on appreciation of the vast help it is to an understanding of correct phrasing. There being no physical limitations, so far as the piano is concerned, for carrying long phrases, I regard it as imperative for the child to learn thoroughly that the true phrase should last as long as only the breath required for its delivery.

I urge appearing before audiences at an early age on account of the confidence thereby created; for confidence is essential to the concert artist. As the sensitive musical nature always holds a certain shyness and a strong appreciation of responsibility in the delivery of the composer's message, I should carefully observe what sort of thing happened when the child grew nervous while playing for an assemblage of people.

It might be that the little pupil's hand became cold. Very well then, our task would be to discover how to play with cold hands. It might be that the child's knees shook, so that the pedals could not be worked as they were when there was no feeling of nervousness. In that event a plan would have to be devised to enable the player to use the entire leg, possibly, instead of merely the knee.

Or the memory might be affected. There are at least three kinds of memory in piano playing. The first is purely musical, in which the player knows instinctively that one note comes after another, because it has to. The second is visual, in which the printed page appears continually before the pianist's mental eyes. The third is muscular, one that relies upon the fingers to proceed as they have been wont to proceed in the execution of the phrases.

Approaching the nervous problem surrounding any child pupil I should persist in the practice of commoning at call mental and mechanical means of resistance to the physical manifestations; and in time the child would conquer. By adhering to the courses herein prescribed, the child, at 16 or 18 years of age, would be broadly equipped in expression, have a sound technic, be a ready sight reader, have self-control in public and be well developed individually.

DO YOU WANT PUPILS?

BY SAMUEL RULON-FOSTER

The very fact that you have hung out a sign reading:

T. WILLIE JONES
Piano Teacher

doesn't make you one. A teacher is one who teaches, and, in order to teach, he must have pupils.

If you are going to sit back and wait for your pupils to bring your pupils to you, you are doomed to a long wait. I know a young man who waited twelve months for his sign to bring them, and then he had to do what I am going to tell you to do—go get them!

There are various ways of going after them. The two principal ways are: print and person. You employ the former to tell them about yourself—your aims and methods. That is why so many sensible people are strong supporters of the ——— shoe: The manufacturers have taken the pains to tell them and show them just why their shoe is better adapted for foot comfort than any other. And in the same manner it's up to you to show the parent how you are better fitted to teach his child than the teacher across the street.

Circularizing is the best way to do this. A circular goes right into the home and the chance that it will be read is great, if it is set up in an attractive fashion. A nice four-page pamphlet, well printed and not too flashy, will answer the purpose well. A cut of some first class musical picture adds much to the attractiveness of the thing, and helps to illustrate your ideas more clearly. Place a two cent stamp on your envelope—your circular will seem more like a personal appeal.

It is a good idea to carry an advertisement in the local newspaper. It keeps your name before the people and shows them that you are doing business at the old stand.

When you receive an inquiry, it is your part of the job to get around to that house and talk music. Talk it up, down and crosswise. Show them what the study means from an educational standpoint, how it helps in the formation of character, and finally how it may be turned into the means of a future living. In other words, you must bring out the practical, as well as the ideal, in music. This means that you have got to show a man why your profession is so advantageous that he should pay you for teaching his boy, instead of binding him out to a carpenter or plumber and receiving three or four good dollars per week by doing so. If you can do this, and are fitted for your profession, your success is insured.

This applies to older teachers as well as to those just starting out. If your pupils don't seem to come fast enough, then get busy! One of the leading clergymen in Philadelphia, in an address a few weeks ago, said, "When I look over my congregation and see a member here and there going to sleep—I wake up!"

To be "in the swim" nowadays you must look alive—and be alive.

Exercises vs. Pieces

Editor of The Musician:

Dear Sir: I send you our Junior and Senior recital programs. Three of the pupils—Mr. A, Miss B, and Miss C—are exceptional, considering that they all stand high in High School. . . . These students never get over one and one-half hours a day of practice, but their memory and recital work were exceptional.

When one comes to remove by relaxation, all, or nearly all, stubborn and superfluous muscle—in a word, reduce friction to a minimum—difficult passages yield quickly. Then I have cut out Tausig passage or daily studies, and most scale practice (except a little work with one hand alone, short groups of notes); have also eliminated most of the usual routine studies and exercises.

There are so many good, inspired compositions from which I take passages for practice in all sorts of rhythms, touches, etc., articulating them in various groups, legato and staccato. Then the student sees exactly where his work is to apply. The music being inspired, makes a strong appeal for interest.

Many teachers and writers take issue with this idea, claiming that by the use of Tausig and other routine exercises through all keys, many figures are encountered not found in pieces.

That is just the reason I do not ask pupils to do this excess practice. What is the use of accumulating a lot of positions and figures never used in pieces?

LeROY B. CAMPBELL.

HOW DO YOU FEEL?

BY MAUDE BURBANK

How do you feel? Nervous?

Would that the word might never be spoken! Yet the omission of the inquiry is more noticeable than the accusation. Yes *accusation*, for one might as well say "Are you thinking of yourself rather than your music? Of your audience or of what you have to give them for musical uplift?" In a word, are you superficial or have you learned to *feel* in the finest sense?

The education of mental sensitiveness to the heart of musical expression should begin with the first lesson, and a successful instructor must teach *feeling* as well as playing.

There is a pleasurable way of doing the most menial task and loveless labor never spells success. Is the keyboard, then, an anvil to be laboriously hammered by the successive notes of the first scale, or is it a smooth toboggan down which slide five little coasters?

How can a teacher be bored by "routine" when no two minds are touched by the same appeal, and the study of human nature is of such infinite scope that the variety of characters passing within her influence can make only for a broadening life and unflagging interest?

Among the various modes of appeal—sometimes it might be nearer an "attack," I would place:

1. IMAGINATION: Without it there is no beauty in the most wonderful; no awakening to the deepest thrill of inspiration; no answer to the vital questions life demands of the living; no result to eternal striving.

2. COMPETITION: Art for art's sake is not engraved on the conscience of youth. A spur must be used, encased in such a velvety, personal sheath that it is invisible and so all the more powerful. Pride and ambition is present in all.

3. APPRECIATION: An enjoyable insight into the composer's life and musical messages and a realization of the privilege it is to interpret such to the hearts of a multitude.

4. PATIENT ENCOURAGEMENT: Complimentary criticism, in other words. The pupil's attitude is unspeakably different when he is told "You have done well. Now we'll brush up the dusty spots here and here, round off those sharp edges, and then we shall have made this our very own," than if he hears "Bad! Foggy there. Dull here. Needs much more careful execution. Work on it hard next week." Yet the criticism is the same.

These four points are merely details of the main idea. *Learn to feel:* to explore the depths of your own nature: to glimpse the soul of the composer: to enter the hearts of your hearers.

The great Siddons never talked to anyone except in the character of the part she was to portray, for two hours before her entrance. She not only felt but *was* that character. Her nerves were not her own—hence there was no dread.

You are not studying music for your own personal satisfaction in a sound-proof closet.

Give then! Give largely to whomsoever has the privilege of appreciation and with all petty thought of self—leave nerves behind where they cannot mar the message you may bring.

Have you worked out any good teaching or study devices this year? Give THE MUSICIAN an opportunity to present them to a large circle of readers. We want to hear from you.

Community Music and the Public Schools

BY THOMAS TAPPER

The Schools Should Prepare Men and Women for Cultural Life as Well as the Problems of Everyday, Practical Existence

I

ONE need read not even a music journal to be aware that Community Music has arrived and intends to stay. New York City, even in midsummer, goes in for it with all the joy of a small community. The citizens of the great metropolis flock to hear the civic concerts with the enthusiasm of a small town's people flocking to the "sing" on the church steps. There is every indication that in time we shall become a truly musical people.

There is an amazing amount of singing going on the country over.

It is increasing with vigorous determination and a lot of it is truly for singmg's sake. Therefore not much of it is merely singing for the sake of the public exhibition of the singer.

They say that the critics—some of them—sneer at the music efforts of our communities. But I do not believe this.

There is a phase of public music making that merits consideration because it is an investment of public means. In many places it has fallen to the lot of the Music Supervisor to inaugurate community singing. He is naturally depended upon to plan, organize, and produce. His activities have resulted in the spread of the Community Music idea; in the establishment of many skilled groups of singers; and in

The advent, into public life, of the children of the schools.

It is in reference to this last factor that we desire to speak.

Many educators have expressed the conviction that public school music is of decidedly great value. But many educators have been convinced that, in not a few places, the actual school-room work of the children, as prescribed by the curriculum, has been set aside for the purposes of working up a program for community singing or for the local festival. This is nobody's fault in particular, if fault it be.

Children have sung amazingly well on many significant occasions. And the public—the fathers and mothers—want to be amazed some more.

When we stop to think of the musical ability and educational skill of many of our Supervisors of Music, we need not wonder that they are enabled to keep the curriculum going and at the same time prepare the children for public appearance.

Men like Dr. Mitchell, of Boston, Will Earhart, of Pittsburgh, W. H. Aiken, of Cincinnati, and Arthur Abbott, of Buffalo, with others "too numerous to mention," are fully capable of producmg these significant, public results in music during the process of training children, just as other teachers are able to produce results in their department; say, in fractions, geography, and the history of the kings of France.

These men do not consider the results of their work to be any greater than they know them to be, which is an awkward way of saying that they know exactly what children are capable of, they know how to develop their capability, how to make it permanont and effective. And all without stopping the forward moving work of the class-room.

The public, however, is apt to regard children's singing as wonderful beyond its just deserts; and to demand it without giving a thought to the cost.

Of course there is a little personal pride in it, due largely to the "setting" as a mother once betrayed to me as she watched her boy, a truly angelic picture, singing in a boys' choir. She had spanked him that same Sunday morning at breakfast time for a bald offenso against the household law. But as she sat in church and looked upon his superhuman purity of countenance, listened to his voice blending with the others, she wondered if she might not have been unjust to him. The truth of the matter was that the little rascal did not receive one-half of what was "coming to him." Well, this illustrates one phase of public favor and forgiveness that goes out in full heartodness to the young singer on the public stage.

But, in the midst of the matter, let us stop a moment and figure out the cost.

If public school music is ever to contribute its best to society as an artistic possibility which has been raised up at considerable expense as public education, it should not be too frequently disturbed and exhibited while in the process of making. That is, the active educational effort necessary to make the child a good singer, a somewhat capable lover of music, one unafraid to raise his voice in the presence of others,—these require all the time there is during the school years *in order that the best results for after-school life may eventuate.*

Briefly, school work in music should not be too often set aside for the exhibition, the festival, or the public song service. It should never happen that the year's study outline be wholly disregarded in order that the public may pull up the seeds to see if the roots are growing. The loss thus sustained is never made up. The public school program moves too rapidly to permit that.

Hence the loss is not merely for the year—it is for all adult life.

Much wonderful singing by school children is possible that does not materially interfere with the progress of the daily lesson program. The wisdom of long plan efficiency should permit nothing beyond this. For while he is in school the child's value as a community singer is merely incidental. He goes to school primarily for training.

The child's value as a community singer should really begin when he leaves school.

It is then that he should be taken in hand if the quality of his voice permits, made a member of a choral body, given further training, and so his school training conserved and augmented. But as things are at present in most communities it is at this very point, when he leaves school, that the boy drops out of sight as a singer, and the girl along with him. Not everywhere, to be sure, but nearly everywhere.

What could be more uneconomic? In what way can we more directly waste money than by fitting a school pupil for a certain community possibility and at the point of the completion of training, to throw him into the scrap heap, because we are so busy training others for the same destination?

II

Here then is a phase of ordinary business management worthy of the gravest attention. The master of community music ceremonies, or town music, or whatever it may be, should make it his business (I am speaking particularly of the smaller, moderate-sized communities) to confer with every momber of the graduating class of tho public schools and arrange to take over into the town chorus those who prove to be worth while. If a graduato movos to another community, he should be advised to keep up his singing and to seek somo means of entering a choral body.

Singing is an asset that can be developed to public benefit and value.

A body of singing citizens is a valuable property. Any community should be not only proud of such a possession, but should know its worth.

But are we not in a sense wasting the product of our training? And simply by following this program?

1. We require our school children to study music presumably because we think it has value.
2. During school life we find delight in the spectacle of seven hundred boys and girls looking like cherubim and seraphim and singing like the higher angels.
3. We go on developing them as singers until they graduate from the grades or from the high schools.
4. Then we watch them pass out of the hall carrying their diplomas in their hands, and we say good bye to the great possibility in their hearts never to delight in it again.

WHY DO WE NOT DO THIS INSTEAD?

1. Give them—as we are now trying to give—the finest school music training possible *as a permanent investment?*
2. Refrain as much as is reasonable from interrupting the school music work for exhibition purposes.
3. Graduate them well-trained in music as a permanent community asset.
4. And THEN, turn them into the community chorus, as many as are worthy, as a thing of beauty produced by the taxpayer's labor, the teacher's skill, and the child's application, a thing of beauty which may remain a permanent joy.

———o———

COMMUNITY MUSIC NOTES

If you have been interested to read about the work various communities have been doing, has it occurred to you that in your own town some thing is being done which should be made known to others. THE MUSICIAN is waiting to hear from you.

NEW YORK CITY, with its civic concerts given during the summer, has a New Singing Society of which L. Camilieri is conductor.

The purpose of the Society is:

To spread the knowledge of music among young men and women.

To teach young people to use the voice effectively—the most beautiful and appealing of all music instruments.

To place within the reach of the people, the uplifting influence of music through appropriate vocal compositions.

To reveal the pleasure and inspiration which is derived from singing with others.

To make the meetings of the Society periods of enjoyment, education, and recreation.

To establish branches of the Society in different centers in New York City.

Of the Organization Committee Mrs. Martha Schirmer is Chairman, and Miss Edith L. Jardine Secretary.

———

THE San Diego, Cal., outdoor organ has put value on music in the open that seems to be attaining distinct results. Walter Damrosch of tho New York Symphony Orchestra played out of doors in San Diego in a setting of sunshine, sky, open spaces and enthusiastic crowd that was remarkable.

———

Musical America prints this news item in a late issue: "The New York Community Chorus held its twelfth outdoor meeting Sunday afternoon, Sept. 3, in Central Park. Regular rehearsals are in progress at the DeWitt Clinton High School in preparation for the Song and Light Festival, which is to take place in Central Park. All are invited to join the chorus."

———

THE Apollo Chorus, of Fort Worth, Texas, gave an open air performance of *The Rose Maiden.* The concert took place on the church steps. E. Clyde Whitlock conducted the chorus and orchestra of one hundred. Trees were lighted and a report says that every note was audible.

POSSIBILITIES

I. THE TOWN BAND

We have hitherto spoken with appreciation of the unselfish civic work in music which is being done by Mr. Edwin Litchfield Turnbull, of Baltimore.

Mr. Turnbull, while on a visit to Cazenovia, N. Y., contributed to a daily paper, *The Republican*, a letter urging upon the public the wisdom of founding a small town band.

In the band Mr. Turnbull recognizes an opportunity for actual music making that is beneficial to the players and pleasurable to the community listeners. Every teacher interested in this subject will recognize the soundness of the reasoning which is based upon the facts that follow:

"Public taste in music, in this great, luxurious country of ours, which we Americans are so boastfully proud of, is lamentably low. We are a century behind the art loving nations of Europe, where the laboring classes are provided with many opportunities for hearing good music, much of which is supported by government endowment. Our government, the richest in the world, contributes nothing officially in support of musical art, and the American people, as a nation, have shamefully neglected to cultivate themselves in musical taste. We have been obsessed with the idea that we are too busy "chasing the dollar" to devote much time to art, although the average American finds plenty of time for athletics, theatres, movies, the races, or any other diversions in which he cares to indulge.

More music means less crime and drunkenness. More than 40 per cent of our population are industrial workers and laborers who cannot afford to indulge in the luxury of high priced opera and symphony concerts but must rely upon cheap or free concerts for their supply of musical culture.

II. THE RURAL CHURCH SONG SERVICE

Fifty, seventy-five years ago, it was not unusual for a rural community to have a singing school which formed a social and musical center for young and old. They enjoyed coming together for the weekly lesson and practice, and looked forward keenly to the "exhibition" with which the season closed.

In certain sections contests would be arranged between classes from different villages, and as a climax all the singers would combine in a sort of festival concert to which the people from the county and vicinity would come.

Thus gradually shaped the old time musical conventions which played a really important part in the musical life of the people in the period before the war. Quite a number of communities gave considerable attention to vocal music, largely under the auspices of the churches and church choirs.

But the day of the old-fashioned singing school and the musical convention has passed, and in too many cases, the rural community has nothing to replace it in a musical way, nothing which will keep alive the musical interest of the people and develop the latent ability which we know is found in all villages. There is no organized musical life.

The present writer recognizes that in every rural community the church is one of the most strongly organized factors and our suggestion is that through the church—which means the various societies in combination—the people of the community may be brought together, especially in what is known as "song-services."

In August we received a letter from Mr. O. R. Crooks, of Orleans, Ind., telling of an effort he has made in his section of the state in behalf of church music and getting the people out to sing, the impulse to the work coming from the inspiration of the articles published in The Musician on the subject Community Music. He says that the people were greatly stirred by this "revival of music" in their midst. In one place a choir of fifty-two voices was organized to keep up this practice of bringing the people out regularly.

According to the newspaper report Mr. Brooks has the power to bring people together and get results. That is the problem in every community: The leader.

Perhaps you who read this may be a leader!

ILLUSTRATED LECTURES ON THE HISTORY OF MUSIC

BY RALPH B. ELLEN

I had long thought seriously of giving the mind the assistance of the eye in remembering facts in regard to the history of music, and finally decided that it can be done successfully.

The first step was to get pictures relating to musicians and musical subjects. I bought half a dozen histories which were more or less illustrated and canvassed the second-hand book stores with fair success. In the public library I found many illustrations of early musicians which could be reproduced with pen and ink.

My first lecture covered the development of music from earliest times to the Christian era. The first musical instrument, a bone whistle, was pictured, and the development of music through Egyptian, Greek, and Roman history was well pictured. Also Chinese and Hindoo music was touched upon and their instruments illustrated.

In my second lecture I tried to picture the development of music from the beginning of the Christian era to the classical age. Pictures were shown of the troubadours and minnesingers, of Notre Dame in Paris, and the Cathedral at Antwerp, and St. Mark's in Venice, each of these places having been the seat of musical as well as religious instruction in their day.

In another lecture the development of notation was shown, how the lines and staff originated, and the notes developed. It was also very interesting to show how the organ grew from the simple Pan's pipes, and how the piano came into being.

When I came to the lives of the musicians it was plain sailing. Of course I gave several pictures of the Master under discussion, his place of birth, his study, and any picture relating to him which I could find, closing with a view of his monument, and possibly his death mask.

For a lantern I have the largest size Radiopticon with an eight foot curtain which gives very satisfactory results in the small hall which I use. I find the work very interesting, and those who see the pictures will certainly remember them when, perhaps, some of the other facts are forgotten.

SOME SUCCESSFUL METHODS FOR INCREASING THE NUMBER OF PUPILS

BY C. L. CHAMBERLIN

A teacher of kindergarten music classes will work well with a piano teacher. The former gains admittance to the musical families of a city upon the latter's recommendation, while the piano teacher takes the little pupils after they have completed their kindergarten course.

A piano teacher will often find it a great advantage to be able to teach some one of the various kindergarten music courses. She will organize this class among the smaller children of the families in which she already has piano pupils, and when they complete this course they are prepared for piano lessons. Such a class will prove an excellent feeder for the piano classes.

Many teachers in smaller towns find it advantageous to organize classes in singing or elementary theory, history, and biography for pupils too young for instruction on an instrument. It serves the double purpose of interesting such pupils in music and thus preparing them for regular lessons, and also gives them a much better preparation, one under which they will gain much more rapidly on the piano or other instrument, so many facts of theory and notation having been learned.

Sometimes two or more teachers of different instruments may unite to conduct a sort of "school of music." Each gains admittance to the families of the other's pupils and each may take some part in conducting certain classes in singing, theory, history, and biography to which the pupils of both have access. The advanced pupils of both unite to appear in public recitals when a program entirely of selections on one instrument would become tedious.

The teacher in a small town who prepares for and secures a position as supervisor of music in the public schools will find her acquaintance in this capacity bringing as many private pupils as time will permit her to teach. The same may be said to a less degree of a church position. The school gives her acquaintance in all families, whereas the church position will bring her into contact with the people of a single church affiliation.

A teacher will often find it of advantage to donate her services to a choir for the publicity the position affords. This refers of course only to small towns where unpaid choirs are the rule. A few minutes' time at home, one night's rehearsal, and the Sunday service will comprise all the time necessary. The school work is of a different nature, requires more time, and no teacher will think of donating her services unless for an occasional preparation of special day exercises.

The teacher who has an opportunity to gain experience with amateur orchestras should never fail to improve the chance. The ability to read music for the different instruments, to explain the features of notation peculiar to certain instruments, and to direct rehearsals from the piano is of the greatest value on many occasions. It is now so common to maintain small orchestras in high schools, Sunday schools, or in connection with church choirs that any teacher competent to conduct an orchestra of from five to ten pieces will find her services in great demand. Such ability always increases public opinion of a teacher's ability in her own special field, and frequently leads to favorable introduction to new families desiring musical instruction.

The teacher who writes music has a strong drawing card in that fact. Although skill as composer has no direct bearing upon skill as teacher of piano or voice, yet its possession opens up a vast field of general musicianship which must remain a closed book to one ignorant of a practical knowledge of harmony and musical composition. The ability to compose is always taken by the public in general to imply and require a wide knowledge of music and its possession raises a teacher greatly in its esteem.

Use an original piano composition when called upon to play at a public entertainment. See that an original sacred, four-part song is rendered by the choir some Sunday morning. Permit these facts to become known and the local press reports and conversation that follow will furnish the best of advertising.

Specialty advertising in business circles consists of the giving of some useful article directly to those whose patronage is sought. Thus the local merchants hand out calendars, paper holders, and the like, to their customers. A music teacher who was a composer and had two or three compositions for piano and voice in print, sent a copy of one of these compositions to every musical family in the town wherein she desired to establish herself. The expense of one hundred copies would be met by the tuition of one pupil for fifteen or twenty lessons.

Any teacher who composes may find a hint in this teacher's plan and its success. She estimated that two hundred copies sent out secured her thirty-eight pupils who at the end of the year had taken an average of twenty-one lessons each. Pretty good investment.

THE PIANIST AND HIS DAMPER PEDAL

BY EDWIN HUGHES

II

IMPRESSIONISTIC PEDALING

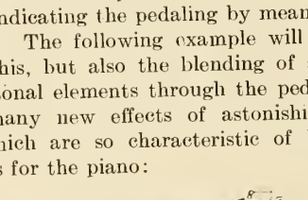
COMPOSITIONS which possess a peculiarly veiled, mystical character, such as the *Waldesrauschen* of Liszt or the Chopin *Berceuse*, demand a certain license in pedaling, even to the point where distinct melodic outlines almost lose themselves in a shimmering play of tone-color.

But this manner of impressionistic pedal-painting seems only indicated, barely touched upon, by Chopin and Liszt, when we compare it with the extent to which Debussy has carried it. The mingling of keen ecstasy and stinging pain in his harmonies, the filmy iridescence of his passages, music, half sound, half delicate perfume, would be unthinkable without the largest play of license in pedaling.

DEBUSSY'S USE OF THE PEDAL

Debussy has discarded entirely all attempts at pedal-marking according to the time-honored manner, and has substituted instead in many of his compositions the writing of long notes in the bass, which indicate more or less accurately the duration of the pedal, especially when it is to be sustained a longer time. But the composer has not carried out this method consistently, by any means, in his piano compositions, even not in those written after the idea occurred to him, so that we cannot at all accept the long bass notes, or the lack of them, as an infallible indication of his intentions as to pedaling. Better still, however, they are most valuable hints to the reproductive artist as to Debussy's whole idea of the use of the pedal, and the pianist who follows in the direction indicated cannot fall far short of reaching the composer's intention, while at the same time there is plenty of margin left for the play of individual taste.

In his set of *Estampes* Debussy has been most careful in indicating the pedaling by means of long bass notes. The following example will illustrate not only this, but also the blending of seemingly unrelated tonal elements through the pedal, bringing out many new effects of astonishing exotic beauty, which are so characteristic of Debussy's later works for the piano:

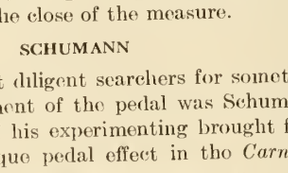


The pedaling here is so accurately indicated by the very manner of writing the left hand, that any further markings are superfluous. The pedal is held of course throughout the first measure and half of the second, being changed at count three and held then to the close of the measure.

SCHUMANN

One of the most diligent searchers for something new in the treatment of the pedal was Schumann. The early days of his experimenting brought forth the following unique pedal effect in the *Carnaval*,

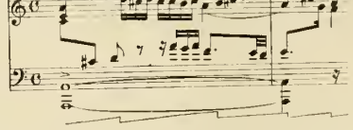
From Schumann's *Carnaval*



which was very successful. Schumann's piano compositions, the *Concerto*, the sonatas, *Fantasiestücke*, *Kreisleriana*, *Noveletten*, *Humoresque*, and the rest, are full of latent pedal effects of singular beauty, which require, for their unearthing, a high degree of intuitiveness on the part of the reproductive artist.

LISZT

Liszt, in his transcriptions of the Bach organ preludes and fugues, embarrassed, perhaps, by the long held pedal notes in the organ scores in places where the two hands had all they could well attend to in the manual parts, finally took the bull by the horns and wrote the original organ basses in the piano arrangements, leaving opportunity for them to be re truck at intervals where he could, but necessitating in many cases a new variety of pedaling at the piano, sometimes erroneously called the "half-pedal," as though the pedal were released half way and then pressed down again.



Here we have a three-voiced texture over the octave organ-point A. Using as few changes of pedal as possible we must still have a new pedal on counts two and four, and on count one of the succeeding measure, otherwise the polyphonic structure becomes an indistinct blur of tone, highly *un-Bachish* in character. In order to preserve as much as possible of the low A, the pedal must be changed in this passage as quickly as possible, contrary to our previous rule for syncopated pedaling, without, of course, allowing the dampers to fall with a direct thud upon the strings.

QUICK CHANGE OF THE PEDAL

By this instantaneous changing of the pedal, the strings in the upper and middle registers are almost completely damped, while the bass strings, if the trick has been cleverly done, continue to sound still, with but little diminution of tone. If the left hand is taken very strongly, the pedal may be changed in such cases three or four times even, on a full-toned piano, before the bass becomes completely inaudible.

The above example permits in fact of no other execution. In this particular case the third (middle) pedal, found on all American grand pianos, is of no use, for through its employment the chord in the right hand would continue to sound throughout the passage, along with the bass octave, blurring the progressions of the entire example in an impossible manner. It must be remembered also that Liszt wrote for an instrument without the sustaining pedal, which, although a European invention, is now to be found on practically none of the modern European grands.

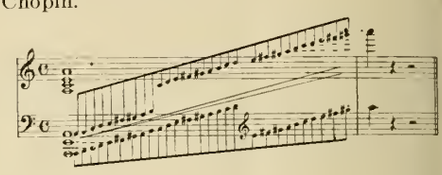
In practising this sort of pedaling, it is well to make the experiment during the playing of pressing down the bass note silently at different points in the passage, and then raising the pedal, so as to see how much bass has really remained after each change of pedal. In the Liszt *Eclogue*, in the passage quoted as the second example in Part I of this article, there is an instance (at count four of the complete measure) of this kind of pedaling used in original composition. Many other modern compositions, such as Rachmaninoff's well-known *Prelude* in C sharp minor, also call for its use.

"HALF-PEDAL" A MISNOMER

The fact that the term "half-pedal" is a misnomer should be quite apparent; for in order that the dampers may affect the strings at all, it is very necessary that they should touch them, something which does not happen when the foot is only half released from the pedal. It is merely a matter of the quick syncopated pedal, in distinction from the usual slowly changed pedal.

SCALE PLAYING WITH PEDAL RELEASED

Among the daring pedal effects of which the piano admits is the playing of a *creseendo* scale passage with the dampers entirely released from the strings. The earliest instance of this is found at the end of the *Etude* in A minor, Op. 25, No. 11, of Chopin.



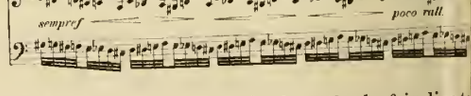
The chromatic scale passage at the close of the same composer's B minor *Scherzo* (more effective when taken in interlocked octaves), the scales in the A flat *Polonaise* and those near the end of the G minor *Ballade* also call for the same treatment. In Brahms' B minor *Rhapsodie* there are similar scale passages, and many others might be cited. Such passages are most effective when they begin with a strongly accented note or chord.

The same pedaling may be even used for ascending scales without *erescendo* (provided the player is in possession of an exceptionally even, pearly scale technic), as in the Chopin *Nocturne*, Op. 48, No. 2, or, to apply a modern effect to a classical example, even in the *Rondo* of the Beethoven sonata, Op. 2, No. 2. In both these cases the pedal should be raised slightly before the end of the scale, in order that the vibrations may completely disappear before the entrance of the new harmony. Scales downward on the keyboard allow of similar pedal treatment in the hands of a capable performer.

These are peculiarly piano effects, particularly in the case of the *creseendo* scale first mentioned. The treatment of a mass of tone in such a manner is something which could not be accomplished on any other instrument or combination of instruments. The imitation of the same passage on the harp *glissando* of course, would be tame in comparison to the mighty torrent of tone at the piano.

THE TREMOLO PEDAL

The tremolo pedal is of use in passages in the more sonorous parts of the instrument where a full tone quality is required, and yet where a continuous pedal would result in blurring. It may be used to advantage in such passages as the following:



There is no well-recognized method of indicating the *tremolo* pedal, and in fact none is needed, for the pianist who has progressed far enough in the art of pedaling to be justified in using it at all, may rely quite confidently on his own good taste as to where it may be applied. It is at best an adjunct which is not absolutely unconditional to good and effective pedaling, and is just as well let alone by those who are not yet complete masters of the subject. Many excellent pianists do not find it necessary to employ it at all.

Technically it is not so difficult of execution as might appear from its name. The foot does not need to move up and down with anything like the speed which we connect with the *tremolo* upon the keyboard. It is sufficient if the up and down motions of the pedal approximate the speed of sixteenth notes in moderate tempo.

A NOVEL EFFECT

An original pedal effect has been aimed at in the following modern example, where a slight *crescendo* is noticeable after the pedal is changed on the dotted half-note:

From Leschetizky, *Scherzo*, Op. 47, No. 1

The left hand, after striking the high B, returns and takes silently the lower dotted half-note; at the same moment the pedal is changed, not too quickly.

PEDAL NOTATION

Various schemes of pedal notation have been devised as improvements on the customary "Ped. . . ★" manner of marking. The simple "P. . . ★" is certainly more accurate than its predecessor and has been adopted to some extent. Hans Schmitt, in his lectures on the pedal, in Vienna, in 1875, recommended an additional line under the two staves, indicating upon it the use of the pedal through ordinary notes and rests with a great deal more exactness than was possible by the methods before employed. This plan did not come into any general recognition, however, probably on account of the additional trouble to the composer in writing and to the printer in engraving pedal markings of this sort. The method of marking adopted for the examples in this article combines ease of writing with as much accuracy as is well possible.

The points that are so difficult in all methods of pedal marking are the indication of the exact moment at which the foot is to be *re*-pressed in the slower sort of syncopated pedaling, and the indication of the quick syncopated pedal in distinction from the slow. Far better than the attempted invention of more complicated systems of marking the pedal is the acquisition of sufficient knowledge of the principles of pedaling and of taste in their employment, leading to the independence in such matters which was recommended earlier in the article.

CRITICAL STUDY

During the study period let there be frequent pauses when the fingers are lifted from the keys and the pedal held, in order that that *arbiter elegantiarum*, the ear, may be given the opportunity for passing judgment upon the quality of the pedal effect just attempted. The pianist who would carry the inherent powers of his instrument to their utmost possible heights must ever be on the search for such specifically pianistic effects as have been discussed in this article, and for others as well, demanding from the instrument through the fine co-operation of fingers and pedal ever new and more varied manners of expression.

TEACHER AND PUPIL PAPERS

BY HELENA MAGUIRE

THE IDEALIZATION OF THE TEACHER'S WORK

"The teacher who re-freshens whatever his thought touches"

"From antiquitie to posteritie" is the passing of music, and even as, in the days of Walther von der Vogelweide and the other minnesingers who linked medieval collectivism to modern individualism, those who become music teachers today exchange their privacy for the interest of the masses just as much as any other public workers. We must be public workers both for the advancement of our pupils and our art. But all the good that we do in our active life will be drawn from "that wise, sensitive seclusion which alone keeps intact our preferences and exclusions."

It is in this interior, reflective life that individuality, personality, is bred and sustained. It is one of the strange powers of human nature to weave so closely into the texture of its life things altogether external to it that it soon fails to separate the personal from the sphere of its activities; fails even, in time, to be able to detect where the machinery of life ends and where his own personality begins. Wise teachers guard against this weakness by a right balancing of the active life with an interior life wherein he dwells alone. And it is in this "wise seclusion" that all the practical and helpful things have their first inception.

"WE CALL THEM DREAMERS"

Since even the most practical things in life must exist first as "ideas," we find everything, from a tallow candle to a tempered scale idealized first in the minds of those whom the world laughs at as "dreamers," sneers at as visionaries, and refuses the means to realize their ideals because they are—impractical!

Today musicians are idealizing, dreaming, what you will, and being laughed at in much the usual way. Would it not be more in keeping with the movement of this progressive(?) age that musical dreamers be given at least as much chance as are the other experimenters? We have had enough of the inevitable pessimism of the isolated worker in music. Everywhere throughout the country the government is providing experiment stations where workers in agriculture may have their ideas tested and their value ascertained.

MUSICAL EXPERIMENT STATIONS

Why is it not possible to have musical experiment stations? A new idea, therefore laughable. But, just now, when so many things are struggling for an opportunity to be "tried out,"—the duodecuple scale, the "whole tone system," the alteration of the system of notation, the re-adjustment of all our ideas of rhythm (to *bar* or not to *bar!*), the ever increasing modal influence, and the experiments with the "aural-mental" or sixth sense—instead of laughing at these experiments of modern musicians, and leaving these ideas to fight their way to acceptance in the old, old way, why not have an experiment station where all these may be tried out, given "the acid test," and given a fair chance, at once? Why should pupils wait a hundred years for the duodecuple scale if it is something that the student needs?

The teacher of music needs the experiment station as much as does the writer of music. She needs the endorsement of some such authoritative place for every new idea which she presents to her pupils, and she needs it now. It need not take a generation to pass to the general use of the twelve tone scale, to the new numbering and lettering which this necessitates, and to getting rid of accidentals which this would mean. But how long is it going to take teachers to call number three of the diatonic scale "five," for instance, if they have no other authority than that which comes, eventually, and after a long time, from "usage"?

We need a closer working relationship between those who are writing music and those who are teaching and studying it. This is what an experiment station would supply. It would give authority to men of modern musical ideas that are worth while, and it would help teachers to know what to accept and what to reject. If there are new and better ideas taking life in the minds of the music-thinkers; if the harmony of the *old* masters is being, *not* supplanted, but widened, freed, re-freshened, by the men of today, then the teachers of today want these new ideas and these new ways for their pupils right now. They cannot wait until the long struggle against prejudice and "good enough" has been fought, and their pupils have left them and gone into mature life and other occupations.

The *good* has always been the enemy of the *best*. The diatonic scale, the barred off rhythm, the conventional form, all are good; we have no wish to destroy these. But the thinkers of our day are seeing and hearing *better* things. Instead of laughing and waiting, let us have an experiment station, and get the benefit of modern thought for our pupils *now*.

There is the thought,—for the practical ones, who realize the need, to work out. It is absurd for us to say that a musical experiment station is an impossibility when it has been so well proved, despite many difficulties, that an agriculture experiment station is possible, and worth while.

A "TALENT-SAVING BUREAU"

Along with the music experiment station we are going to have talent-saving bureaus, and this just as soon as teachers are able to convince their fellow-citizens that talent saving is a community duty. Every teacher counts among her most pathetic experiences the shipwrecking of talented children's ambitions. High school principals and teachers have suffered with music teachers in this, helpless while circumstances have dragged the talented children into factory and shop life; while music, as well as the other arts, has been popularized and vulgarized by being "taken up" by those incapable of putting anything, even the most beautiful art in the world, to any but low purposes.

Already efforts toward talent saving have been begun by those who believe that organized work in this direction is possible—in New York by the Scholarship Committee of the Henry Street Settlement, and in Cincinnati by the Schmidlapp Fund.

What teachers are "dreaming" of is a talent-saving bureau in every city and town. And it is for us to prove, or help to prove, that when there are fewer "round pegs in square holes" there will be less vice and less misery. The gain to the community will be as great as to the music teacher, to musical children, and to musical art.

MUSIC CIRCULATING LIBRARIES

Music teachers in America certainly have been working under unfavorable conditions, and perhaps two of the heaviest handicaps have been the lack of musical literature, and the impossibility of seeing the pupil more than once, or, at the most, twice in the week.

In the past art was produced for a public that wanted it, and understood it, by artists and musicians who understood and sympathized with their public. But modern art has been, for the most part, produced for a public that does not want it and that does not understand it, by artists who despise the public for which they must work. It is this dislocation of the right and natural relations between musician and public which has made it so difficult for the music *teacher*.

In the past music was distinctively an aristocratic art, created for the spiritual and intellectual aristocracy of the Church, or else for a luxurious nobility. Along with this, however, has gone, all through the Middle Ages and the Renaissance, the arts of the people, the folk-music, and the long apprenticeship which Wagner's *Die Meistersinger* so illuminates.

But the apprenticeship system is a thing of the past indeed. Our machine-made industry destroyed the "arts of the craftsmen," and at about the same time that the musician lost his patronage from above he lost his support from below. As Kenyon Cox says: "He has become a sort of demi-gentleman, with no longer a nobility to employ him or a world of artist-artisans to surround and understand him."

And so the American musician has stood alone, with no tradition behind him, with no encouragement or direction from above, with no support from below, asking in vain for the things which were necessary for the teaching he was expected to do by a sort of sleight of hand, without books, without time. While there have been circulating libraries and traveling libraries of every kind under the sun except music for years, we are just now getting to where it

(*Continued on page 706*)

How Shall a Music Teacher Invest Savings

BY FRANK ANDREWS FALL
Bursar of New York University

IT is to be hoped that at least a few teachers of music were convinced by arguments recently advanced in this publication that it is possible for even a moderately paid teacher to save money. If so, the next step is obviously to inquire how such savings may be invested for the securing of the largest possible annual yield consistent with absolute safety of principal.

SAVINGS BANKS

For month-to-month saving, no method offers so many advantages as the savings bank. Amounts set aside from current income each month should be regularly and promptly deposited, and then forgotten until enough is accumulated to warrant withdrawal for investment in a bond, shares of stock, or an equity in real estate.

Some music teachers never get beyond the savings bank stage of investment. Regarding the matter as a hopelessly complicated one, they accept the savings bank rate of three to four per cent as the best that can be done. This has the advantage of practically complete safety of principal, but there is every reason why the teacher should seek the advice of a reputable banker or broker and secure an investment that will produce a safe one or two per cent beyond the normal savings bank return.

One does not need, to be sure, to draw the savings bank account down to bed rock each time an investment is made. A permanent cash reserve of a few hundred dollars is a very comforting thing to have at one's command, and in a special emergency may mean the difference between peace of mind and serious discomfort.

A good plan is to fix an arbitrary amount for this reserve and then invest all savings beyond it, as they accumulate in investable amounts.

LIFE INSURANCE

Life insurance may or may not be a matter of investment. In general it is perhaps better to consider it as entirely apart from investment. If the teacher has a family or any dependent relatives the need of proper insurance protection is obvious.

But the best form of insurance, under ordinary circumstances, is the straight life policy rather than any of the various endowment forms.

One who buys ordinary life insurance for protection only, reducing the cost by the application of all dividends toward the annual premiums, has the cheapest and best form obtainable.

Even in this form of insurance there is a certain investment value, represented by the cash surrender provisions of the standard policies. This means simply that the insurer, after paying premiums on a straight life policy for two years or more, has the option of surrendering the policy and receiving a refund of a stipulated proportion of the premiums paid. If the music teacher sets up an annual balance sheet, as was suggested in a former article, accrued cash surrender values should by all means be put in on the asset side of the account.

BONDS

The safest, most convenient, and, in many respects, most satisfactory form of investment for a saver who can get together a hundred, five hundred, or a thousand dollars at a time is a listed railroad or industrial bond.

Such an investment combines a maximum of dependability and convenience with a minimum of trouble in handling and, if necessity require, in turning back to cash.

When the music teacher begins to study the subject of bond investments he discovers that there are many kinds of bonds. He learns that railroad and other corporations issue not only first, second, and third mortgage bonds, but income bonds, debentures, convertible bonds, consolidated bonds, redemption bonds, renewal bonds; terminal, divisional, sinking fund, "blanket mortgage," collateral trust, equipment, and participating bonds, and so on to the end of a long list.

This apparently endless complication of varieties need not alarm the prospective investor. He soon grasps the meaning of the various terms and finds that the matter is not nearly so complicated as it appeared at first sight.

Bonds are usually based on some kind of a mortgage as underlying security.

The most notable exception to this rule is afforded by governmental issues, such as national, state, or municipal bonds, the principal of which is secured entirely in other ways. The usual denomination is $1000, but there has recently been a marked tendency toward the issue of bonds in denominations of $500 and $100, or even $50, which is obviously to the advantage of the small investor.

Some bonds bear coupons, which must be cut off and collected through banks or other designated agencies on interest dates specified in the bond. Others are "registered," which means that the interest is paid directly to the registered owner by check, just as stock dividends are paid. Some issues are registered as to principal but provide the coupon form of interest payment.

COMMON FORMS OF BONDS

It will be expedient briefly to define some of the common forms of investment bonds. A First Mortgage bond, for example, is one secured by a deed of trust, and directly covers the property on which it is secured, being subject to no other lien. The security of a second mortgage bond is always subsidiary to that of the prior or first mortgage. Third, fourth, and fifth mortgages, etc., are secured subsequent to the several preceding issues, but this does not necessarily make them inferior in value. A fourth mortgage on one property may be a better investment than a first mortgage on another.

A Consolidated Mortgage bond is generally issued as a result of a reorganization, or a readjustment of the finances of the corporation concerned. A Debenture bond is not a mortgage, but simply a promissory note or promise to pay. In case of a default the holder cannot foreclose as he can in the case of a mortgage bond. In fact, the debenture is not unlike a cumulative preferred stock, except that it carries no voting power.

A Collateral Trust bond is an indirect mortgage on a piece of property, made through the deposit with a trustee of other securities which are usually directly secured. A Convertible bond is an issue which carries the privilege of conversion into stocks or some other issue of bonds. Usually the act of converting is optional with the holder.

Further definitions might be given but these will suffice to show that the technical terms used in connection with bond investment are not at all forbidding when examined at close range. Moreover, the average teacher will probably not have occasion to deal with more than one investment at a time, and so will be able to study the science in sufficient detail as he goes along.

As to yield, the investor must not expect a high rate of interest unless he is willing to run the risk of a loss of principal.

Five to five and one-half per cent is all that can reasonably be expected as net yield on first-class railroad or industrial bonds. Many of the most desirable issues net four per cent or even less.

STOCKS

The difference between bonds and stocks is extremely simple.

Bonds represent liens on property. Stocks are the property itself.

If you own one share of stock in the New York Central Railroad you are actually a part owner of its great properties, but if you own a bond of the same corporation you merely share with others a mortgage which is secured on the property. It follows that if you are a stockholder you gain or lose when the property goes up or down in value; but if you are a bond-holder, so long as the mortgage is well secured your asset remains practically the same in value.

As a stockholder you have a voice in the management of your property. That is to say, you may cast one vote for each share of stock you own at annual meetings called for the election of officers and directors or at special meetings for the authorizing of mortgages or of new issues of stock. As a matter of practice, the small investor does not usually bother to exercise this right, being content to let the large stockholders dictate the policy of the corporation.

A Preferred Stock is that part of a capital issue which takes precedence over the remainder of the issue.

This may apply either to assets or to dividends, or to both. Common Stock is generally entitled to dividends from earnings only after all prior charges and preferred stock dividends have been satisfied. Therefore, common stock is more often than bonds or preferred stock a speculative security.

Yield of standard stocks generally averages higher than that of standard bonds. Six per cent on a stock investment may often be obtained without undue risk to principal. Nevertheless, the small investor should not go into stock investments without competent advice from a banker or broker whose business reputation is unquestioned and whose experience has qualified him to sift the wheat from the chaff in the wide field of investment securities.

REALTY

It is impossible in a few short paragraphs to lay down any code of procedure to cover investments in Real Estate. Here again the matter of expert advice is most important, but the investor must make sure that the advice he receives is unbiased and not affected by the desire of a broker to make a sales commission.

Real estate, especially in rapidly growing urban centers, has produced great fortunes and will doubtless continue to do so. Even in small towns and in rural communities investments in land and buildings may yield a very satisfactory return. It is to be doubted, though, whether the average music teacher can give to a real estate investment the time and the careful attention that are essential to its success. Stocks and bonds are a far more convenient form of investment, and if wisely selected are practically as safe.

WHAT NOT TO DO

A few warnings should be sounded. The first and most important is this:

Do not risk the loss of your principal.

That means that you must be satisfied with a *safe* investment, even though the interest rate is not so high as you might desire. Suppose you were to get ten or twelve per cent for two years, or four or six, and then wake up some morning to find the company smashed and your principal wiped out. The extra five per cent would not be much of comfort to you.

Do not do business with agents who offer to show you how to "double your money."

They will double it neatly, put it in their pocket

and give you in exchange a beautifully printed stock certificate which will be a source of chagrin to you until you tear it up and throw it away, as indeed you might just as well have done with your money in the first place. Deal only with reputable bankers and brokers and you will have few regrets.

Finally, do not weary in well-doing.

Keep everlastingly at it. Feed the savings bank account every month, or oftener if you can, and some day it will return the compliment and feed you and yours. Buy bonds or conservative stocks, even if you can get but a $100 bond or a single share of stock at a time.

KEEP GOING! Fortunes are built in exactly the same way as palaces,—one stone at a time.

TEACHING EFFICIENCIES

BY THOMAS TAPPER

A Time Efficiency Device

I

FROM time immemorial men have preached the great value of persistence of effort toward a fixed purpose. In the matter of saving money it has been shown how rapidly small sums, *regularly set aside*, accumulate to large amounts.

In the matter of the use of leisure time for reading, it was pointed out by Samuel Johnson that a man could become learned in any subject of his selection if he would persist in his reading of it for one hour a day for five years.

Every human being—practically—has that one hour a day somewhere waiting to be turned into the fruits of APPLIED EFFORT.

For the students of the Public School Music Department (Summer Session), New York University, the accompanying card was arranged merely as a means for check-up in review work. The subjects given are merely suggestive, so far as the readers of THE MUSICIAN are concerned. The point is that one who needs, for example, to review Rudiments of Music may, by giving it a half hour's full attention every Monday for forty weeks, get such a grasp of it that

He will be able henceforth to keep it abreast of his needs.

So, for example, with History of Music. A year's required reading can readily be accomplished in twenty hours. There is a distinct benefit to the student to perform this reading not in scattered moments, but in regularly appointed half hours, falling, for example, on Friday.

The whole scheme is based upon the law of accumulation by regular effort. The moment we introduce into our lives the factor of **Rhythmic Recurrence** things begin to go much better for us. Conversely, the mind does not seem so readily to accumulate into a concrete unit what is picked up in scattered moments. Only rarely is there a great centralizing intention which brings scattered gleanings into a single unit.

II

The application of the idea embodied in this card, to readers of THE MUSICIAN, is so obvious that it is scarcely necessary to specify subjects which may be entered in the second column.

If the reader be a singer whose knowledge of French, German, or Italian is not efficient, a half hour weekly for forty weeks will show a truly amazing gain. But the time must be given without fail and given to a hundred per cent of efficient use of the thirty minutes involved.

The group of six subjects which anyone may formulate for study has all the fascination (and very much indeed of the value) of a year's college course. It is true that a daily half hour seems little (one can make it an hour it one prefers).

But it accumulates.

This is the one great and valuable feature of it. The student will learn to spend a few minutes of his half hour recalling the corresponding day's reading of the week before. He will find, after a little practice, that it will come back with surprising vividness.

This simple device is not only constructive for the teacher and advanced student, but it may be used effectively with the youngest pupils, reducing perhaps the number of days and the number of subjects.

THE MUSICIAN is glad to have the opportunity to present this plan of the New York University Music Department to its readers and to recommend it as a simple yet valuable help to anyone who is desirous of controlling a little time daily for study.

———o———

PIECES WITH AND WITHOUT TITLES

BY ARTHUR SOMERVELL

PIANO pupils often evince a determined resistance, in the first year or two of their practice, to pieces of the sonatina type; that is, generally, to pieces without specific titles. Conversely, they find pieces with specific titles attractive if the title represents something with which they had had experience.

It is easy to see why this is so. A class of players and listeners exists to whom music means nothing unless it arouses mental imagery through suggestion. This is true not only of children but of adults. The mind often seems literally to depend on the hint of the title before it can concentrate on the music.

The explanation lies in the content of the subconscious mind, and the appeal made to it. For a healthy-minded boy the word "sonatina" may stand for no subconscious impression. He is much more apt to react with enthusiasm to such titles as the *Boy Scout March*, or the *Pirate Band*, or *Flying Kite*. In brief, to anything indicative of the activity of his own world.

If a pupil has been so skilfully taught, so tactfully instructed in music that the word sonatina has been, so to say, built into the subconsciousness pleasurably, that word will, like many another, always evoke pleasure. If, on the other hand, the little player has had an unexplained and consequent hard time mastering Kuhlau and Clementi, it is likely that he will always shy and run away from them and their kind.

Unreasonable titles should never be placed before children. It is clear that the *Blue Bells March* is not a worthy suggestion, for blue bells do not march.

Foreign titles that have no correlation, no place, in the American child's experience, often fail to arouse interest. The mind does not know what to expect and so cannot build its imagery. To test this out the reader is invited to try his image-making faculty on this piano title: *The Little Sapengro.*

Nor do abstract titles, as a rule, win a young student's interest unless they are most skilfully explained. Thus *Arietta, Fate, First Loss, Lament,* and the like often fail to arouse enthusiastic interest.

The following statements seem to be true in respect of children and piano music titles.

1. Music's appeal is to the subconscious.
2. When titles suggest what lies within the subconsciousness, they liberate or stimulate mental images.
3. If titles are outside the range of subconscious experience, they must be explained to establish that experience.
4. Rhythm and the melody line are often more effective than the title in arousing mental images.
5. But the truly skilful music-listener pays no heed whatever to titles, finding the utmost of pleasure in tonal beauty itself.

———o———

THE MUSICIAN is looking for examples of "Teaching Efficiency" to quote the caption to Mr. Tapper's article. You may have devised some methods which fellow teachers will be interested to know. Give us the privilege of placing an account of such methods to the teachers of the United States.

DAYS	SUBJECTS	40 HALF-HOUR PERIODS
Mon.	Rudiments of Music	
Tues.	Melody Writing	
Wed.	Harmony	
Thurs.	Pedagogy	
Fri.	Music History	
Sat.	Sight Reading	

The purpose of this Calendar is the conservation, regularly, of a small amount of time and the use of that time over a period of forty weeks for a single specific purpose each day.

It is suggested that the students indicate by an X mark those days when the assignment has NOT been accomplished.

The total number of assignments for a single day when the work has been done, multiplied by 2½, will be the efficiency percentage of time use for that day. For example: If, of the forty Mondays, only thirty are devoted to the assigned subject in the course of the forty weeks, the efficiency percentage of time use is 30 x 2½, or 75 per cent.

THE PROFESSOR DISCUSSES THE VALUE OF THE STUDY OF ACOUSTICS

"During the month that has elapsed since our last meeting, Professor, several of your auditors on that occasion have asked me to tell them precisely what you intended to convey by *the inborn appreciation of sound.* While, of course, I quite understood your exact meaning, I felt it only right to leave the explanation to you; you know"—continued the Editor, with a humorous twinkle—"you are such a difficult man to please, that I would not attempt to gild the gold of your discourse. Therefore I have left it for you to elucidate."

"Very kind of you, dear boy; your exquisite tact is only excelled by the euphony of your eloquence. I *am* a very 'touchy' old fellow, in the matter of requiring exact definitions for every subject about which I write or speak. Although no one can esteem you as a literary gold refiner more highly than I do, yet my mettle is such that no one may, with impunity, meddle with the minted metal of my mind. But, a truce to jocularity; let us to the more serious business of the moment.

THE APPRECIATION OF SOUND

"The word 'appreciation,' according to Webster, means: 'to be sensible of; to distinguish; a nice and delicate perception.' 'The appreciation of sound' means, therefore, that the auditive organ is so sensitive to the action of sound that it is able to distinguish sounds of every nature, musical and otherwise, and that it exercises subconsciously a 'nice and delicate perception' and distinction of differences of pitch, quality, and intensity.

"The inborn appreciation of sound means, in every-day language, to be 'born with an ear for music.' That is as far as concerns our immediate subject; although, in all deference to my touchiness concerning the need for exact definitions, the word 'sound' includes every audible atmospheric disturbance, whether 'musical' or not."

"Professor," said a teacher—a man of about forty-five years, of a somewhat forbidding appearance and a frigidly precise manner—"if the **ear is the chief factor in the formation of a musician,** would it not be fairer and more logical to begin the instruction of music with the science of Acoustics? You would thus train the ear to a just appreciation of musical sounds to such an extent that, instead of rejecting a pupil who had no 'musical ear,' you would create the musical sense and sentiment by that same study of acoustics?"—and the teacher sat down with the self-satisfied air of having propounded a panacea for ears that are musically deaf.

LEARNING FROM AN APPLE

"I am very much afraid, my dear sir," replied the Professor, ignoring the aggressiveness of his questioner by the courtesy of his smile, "that you are somewhat confounding cause and effect, *post hoc* with *propter hoc*, a mathematical explanation of a *natural occurrence.* You remind me involuntarily of Newton's law of gravitation and the fall of the apple. Of course, you know the story: how the scientist, reclining under an apple-tree, was struck on the head by a falling apple; how, instead of being incensed that someone or something had presumed to strike him, he mused philosophically upon the event and, finally, educed the Law of Gravitation. Although no law of gravitation existed, in so many words, apples (and most other things) had been falling from time immemorial with more or less dire results (the first apple and the first fall; the apple, Helen, and the fall of Troy; and so on); but no one has yet blamed the law of gravitation for the fall . . . . . of the apple. It fell because of the wind, or because it was over-ripe, or from some other cause. In short it fell *down* and not *up:* and that is why Newton philosophized.

"Now, sir, please notice the point: the law was educed to fit the event, and *not the event from the law.*

"Exactly the same order of things occurs with regard to musical sounds and acoustics (I might say 'sounds' without the adjective, and yet be perfectly true; but we are considering the musical aspect). **Music has also existed from time immemorial, in some form or another;** whereas the science of acoustics *was invented to fit* it thousands of years later!

"As for the idea that a musical sense and sentiment could be created by the study of acoustics, you might as well pretend that a man who is color-blind might be made a painter by the study of optics, or a lame man might become a Marathon racer by the study of the laws of locomotion, or any similar impossible proposition. **Music exists only for the person who can hear."**

"I am afraid you are wrong there, Professor. I do not have to hear music to enjoy reading a piece of music: a sonata, or a symphony, or any instrumental music. I can hear mentally what I read."

ACOUSTICS CANNOT EDUCATE EAR

"Of course you can, sir: at least I take your word for it. But *why* can you hear it 'mentally,' as you say? *Because you have already heard and appreciated musical sounds. You* know the relative values of pitch, timbre, intensity, and duration which are comprised in the word 'music.' But, most positively, you will not try to maintain that one who has been deaf from birth and who has, therefore, never heard music could be made to appreciate music! No, sir; the science of acoustics cannot take the place of the ear; it cannot even educate the ear."

"What, then, is the use of the science?" asked another teacher present.

"It is the *post hoc,*" answered the Professor; "it is a scientific explanation of a natural event, just the same as Newton's bump from the apple's fall evoked his philosophy, and *not* the philosophy the fall."

"I do not question the exactitude of your reply," said the frigidly precise one; "I have no doubt you are right. But what is the science of acoustics? Why need musicians learn it? What has it to do with practical music? Why . . . . . ?"

SCIENCE OF SOUND

"My dear sir, my *very* dear sir, one question at a time, *if* you please. The science of Acoustics is the *visible* representation of sounds; the perception, *by sight,* of the phenomena of sounds—any sounds. By means of the science, it has been discovered that sounds, in common with all natural phenomona, are produced by motion. These motions have been analyzed. The sounds perceived by the ear had already been studied; those which might be seen by the eyes were examined and their vibrations were compared with the ear vibrations according to their pitch. Therein is all the science of Acoustics. But, remember, that **there is nothing more exact than the perception of hearing.**

"A knowledge of the science is very useful in the construction of musical instruments, and for the architectural proportions of an auditorium; but there ends its practical application to music.

"There is no real need for musicians to learn acoustics. Indeed, in a measure, the study might be harmful to them, seeing that the scientists have not based their observations and conclusions on the results obtained from experienced and sensitive ears but, on the contrary, have created an entire system that has nothing to do with a musical ear.

C♯ AND D♭

"It is unnecessary here for me to enlarge upon this point. I will take it up with any one of you who may desire further light on it. It must suffice now to ask the practical musician, what on earth does it matter to him that there is the difference of a comma ($\frac{80}{81}$) between a sharp and a flat? It is represented by the same note on a keyed instrument; C♯ and D♭ sound alike. Yes, and so they do on string instruments, despite what certain scientists say to the contrary. Voices, also, are so accustomed to the accompaniment of piano and organ that they sing exactly the same scale as produced by the instrument. Why then try to split hairs to please acousticians, who are most frequently—bitter irony—*not* musicians?

PROOF OF MUSIC IS HEARING

"Our music is a practical Art and not a dry-as-dust Science. Our music has the breath and life of motion and soul and sound. It must be judged by the ear, and by the ear alone; not by rule and compass. The 'proof of the pudding is in the tasting,' and the proof of the music is in the hearing. The sense of taste has to be educated. Everyone does not at first like olives, or oysters, or caviare. So, also, **the sense of hearing has to be educated—by hearing, practical hearing, and not by any science whatever.**

AN AMIABLE MAN: MUS. DOC.

"There is a vast amount of music (so-called) that is not music. It belongs to the rule and compass category. I once knew an amiable man, a Doctor of Music (whatever that may be! We might have also druggist of music—to administer narcotics; an ambulance could be well employed, also pardon the frivolity, it is so rare), whose chief income was derived from coaching musical aspirants for the multitudinous degrees granted by various corporations in England. He was a Doctor of Music, who had composed a sacred cantata for his thesis and had had it performed by soloists, chorus and organ, upon receiving his degree. But he was so anti-musical that he could not distinguish, by ear, between a major and a minor third; he was deaf to music. But he was a clever mathematician, and he had written his cantata by rule and compass, and he had passed his examination by swallowing text books. His name? No matter; he was a well-known character and a most amiable man; besides . . . R. I. P."

"Must we, therefore, conclude, Monsiour le Professeur," asked a young Belgian lady, a teacher of piano, "that the study of Acoustics is a waste of time and absolutely unnecessary?"

"Not at all, my dear Madam; no study is altogether time wasted. But we must not take a side issue for the real thing. There are many truths in acoustics which are worthy our attention: the harmonic series, based on a fundamental and proceeding by 8ve, 12th, double 8ve, and so on, and other observations are highly interesting but they are only *observations based on the natural phenomena of sounds. We must not mistake the shadow for the substance.* IT IS OUR SENSE OF HEARING THAT REQUIRES TO BE EDUCATED AND CULTIVATED, FIRST AND LAST AND ALL THE TIME. *For it must not be thought that in music, a knowledge of mathematics is more exact than the sense of hearing. The former is based on the latter; therefore, education of the sense of hearing is the all-important essential.*

CULTIVATE THE MUSICAL EAR ALWAYS

"It would be very illuminating and instructive to inquire how much acoustics was known by the great virtuoso-composers, such as Mozart (at the age of seven), Chopin (at the age of nine), or Liszt (at the age of twelve)? And it would be still more illuminating and instructive to learn who among the great acousticians ever became remarkable musicians?

"Let science of every kind find its place in our musicians' studies—the more they know, even of extraneous subjects, the more complete will their musical knowledge be; let them study everything that excites their sympathies; knowledge, even of dissimilar subjects, knocks off our sharp corners and makes us more polished and perfect. But, again and *ad nauseam*, do not let us forget for one instant that **the ear has to be educated always. When in doubt, sacrifice judgment by intellect to the appreciation of sound—that is, the cultivated sense of hearing.**"

"Accept my thanks, Professor," said the frigidly precise one; "you have converted me; I see clearly now."

"*Vel eaceo appareat,*" said the Professor.

NOTES ON THE MUSIC IN THIS ISSUE

"JUST getting into stride again," is about the way teachers and students would be apt to express their idea of the present condition of the musical season. But few teachers, and hardly any in the large cities, start their work before October 1, and the whole month is given over to uncertain progress.

But with November 1 the faithful students, at least, are getting down to work once more and calling on their teachers' time and thought. If the latter are not willing to devote a goodly measure of thought to the work so much the worse for them. There is no difference between the teaching of music and other activities worth while. They all demand thought. And if anyone finds that his daily stunt does not call for thought and planning, if it does not give some measure of "lift," he would better try to find some other job that does.

With the present issue of THE MUSICIAN we aim to place in the hands of teachers and pupils material which has claim to a place in the repertoire. Not all pieces used in teaching should present technical problems primarily, although, in the lower grades, it would seem desirable that no lesson assignment be made which does not contain material to promote technical proficiency. But in the higher grades, even in the third, it is worth while to place before pupils music which will stimulate musical growth by presenting problems for which good taste and refinement of style are necessary. Therefore we seek a useful variety in the music section which accompanies each issue, as will be evident after an examination of the fifteen pieces included.

Elegy (*Elégie*), Op. 7, No. 3, by Nicolas Amani (pronounced *A-mahn-ye*), is by a Russian composer, and has that tinge of melancholy which is so characteristic of the Russian lyric music, not wholly due to the use of the minor mode. Note the frequent use of the dissonance of the minor second, as in the second and fourth measures, the use, in close succession of the seventh degree of the minor, raised and not raised, as in the seventh measure, and the appearance in almost every measure of the upper or lower auxiliary note, as the B sharp in measures one and three, the C sharp and F double sharp in measure five, etc.

This suggests one point worth insistence here, namely, that the pupil who has a working knowledge of harmony and musical structure has a big advantage of the student who, for one reason or another, has passed the subject by. And still another suggestion: The pupil who has studied harmony and has failed to master the fundamental principles, has put a big handicap on his progress.

This *Elegy* is essentially lyric and all melodies, whether played by right or left hand, must sing out clearly and sweetly; round, full tone, properly supported by the damper pedal, should be the aim. It is from the first volume of *Modern Russian Piano Music*, in the MUSICIANS LIBRARY.

Menuetto in B minor, Op. 78, No. 3, by Franz Schubert, is from the classical repertoire, a fine number for the playing of repeated chords and staves—but never with rigid arm or wrist—a movement to which the Trio in the parallel major offers exquisite contrast. Note *una corda* effects.

Autumn sunset, by Walter Rolfe, shows the work of an American composer who has marked gifts for poetic delineation in music. The opening theme, delivered mainly by the thumb of the right hand with supporting chords above, is broad and sustained in style. In a way it may be thought of as a melody for the 'cello. In later measures, transferred to a higher octave, it gains in power and brilliance. An interesting section is the melody passage for the left hand, which works into a duet passage, bass and treble. Keep both distinct as if two voices are singing. Broaden the style of playing near the close.

TIMING PUPILS

By WILBUR FOLLETT UNGER

The method of "timing" pupils in daily work as well as in the "contest" is a subject that should not be lightly dealt with.

There are great possibilities in the idea, and the results, as I have witnessed them, have been wholly satisfactory. Since formulating my system I have learned that prominent schools—among them the Imperial Conservatory of Russia—use a metronome to "time" pupils, and insist on certain speed-standards, but none, to my knowledge, insist on "self-racing"—timing pupils, as I do, with a watch and recording the time in a book for that purpose, to show the improvement from time to time.

Hungarian dance, Op. 15, by S. Hamilton Nussbaum, places before our readers the work of an experienced American teacher and pianist. The outstanding feature is the use of thirds in the right hand, a helpful technical point. It is difficult to get pupils to play scales in thirds for each hand, the result being that many of them go into the higher grades insufficiently prepared for the more or less frequent use of passages in thirds as used by composers. Practise this in short sections, for example, the first four measures, trying to strike the two notes exactly together, no "chip-chop" as one child said.

A dainty gavotte, by Percy E. Fletcher, is for the player in the lower grades, about the end of the second. It will also make an excellent piece for a third grade player, for sight-reading drill, etc. Read about the gavotte as a dance. This is by an English composer.

The fox hunt, Op. 318, No. 6, by Carl Wilhelm Kern, comes from the pen of an American musician who has won high appreciation for the fine quality of his compositions for study purposes. Here is a good number to stir up sluggish players and infuse some life and snap into their work. Keep the hand and the touch light.

Leaf from a sketch-book, Op. 47, No. 5, by R. Glière (*Glee-air*), is taken from the Russian repertoire for the easier grades. We offer this as an interesting technical problem in interlocking playing in which the student must pay careful attention to hand position, particularly as to which hand is to be above the other, so as to reach the keys most readily. A few indications of this kind are printed in the text as a guide for the player. Attention is called to the fact that in the second measure the notes on the second and third counts are quarters, the G sharp of the left hand leading to the A of the right, the C sharp to the D. Note also the chromatic succession of the two hands in the ninth and tenth as well as other measures. The harmony student will find some interesting problems in following the different tonalities through which the composer takes his main figure, first F major, then A minor, F sharp minor, etc.

Gavotte, Op. 24, No. 2, by Stepán Esipoff, is in the Polish style, with a touch of the classic gavotte, carefully fingered and phrased. The pedal markings, we suggest, should be added by the pupil. In general the pedal will be changed with each changing harmony. Certain measures may be played without the pedal with good effect. It is not well to furnish a pupil with complete directions for playing. He will learn the principles of pedaling best by actually indicating how he will use the pedal.

Danse rustique, Op. 62, No. 4, by Théodore Akimenko, for four hands, is from the Russian repertoire. The tempo is not so fast, and the general effect is suggestive rather of heavy shoes than the light dancing pumps so familiar to American boys and girls. In the *Secondo* part, first and following measures, note the special accent on the half note which comes on the second beat. Work out the imitations between the *Primo* and *Secondo* in the middle section, in which the *Primo* answers the *Secondo*.

Cradle song (*Wiegenlied*), Op. 25, by Josef Nesvera, has the real Slavonic quality, and is well-suited to the violin. It is not a difficult number although it requires facility in playing in the higher positions. Do not overlook the direction to use the mute in playing this piece.

Prelude, in E (*Cortège*), for organ, by Victor Marchot, has the French style. The structure of this piece presents a very interesting use of a main motive, first heard in the pedals, and furnishing the basis of the entire composition. Even in the fourteenth measure from the close the pedal figure is simply an elaboration of the first motive. This makes a very brilliant recital number and displays a facile pedal technic.

Your presence, song for medium voice, by Charles F. Webber, is a number of marked simplicity in melody and harmony, in which the rendition of the text is the main thing. It is therefore a fine study in diction. And it can also be used to advantage as a preliminary study in sustained tone. For example, take a moderately full breath and then with easy attack sing the first line of the text on one pitch, say F, gradually raising it until A is reached. Then, after freedom is evident, allow the pupil to sing the syllables "out you," in the second measure of the song proper, to the degrees C and B♭ as set by the composer. At first sing the words rapidly, and gradually more slowly, until a good singing tone—not breathy—can be maintained. at a slow tempo. If you have never tried this method of securing freedom it will show you something to make a test of it.

Foreboding, by William T. Miller, for medium or high voice, is of the art song character, modern in style and treatment, and calling for emotional delivery. Let the text determine the tone color used in the various passages.

Sweetheart, your smile, by Wilson G. Smith, is a light, graceful song in which the piano accompaniment suggests the harp. The tempo is not slow, neither is it fast, being determined largely by the ability to sing clearly the words set to eighth notes. This song can be used with pupils in the first year of study.

Ghosts, by Victor Harris, is a particularly applicable song for this season of the year, with its pictures of autumn weather. Like the other songs in the present issue the student is advised to deliver the text with the utmost care and freedom.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

WHAT'S THE SCORE?

LOOKS rather odd as a caption in a musical magazine, doesn't it? But it belongs there, just the same.

It's not the thing, but the idea back of the thing that counts.

A philosopher of high reputation said that he got many fine ideas from uneducated men with whom he talked. And the world of Sport has many ideas to offer to the man (or the woman) who is concerned with education in music.

That is if he has the open mind which recognizes and appropriates to itself a good idea when it is before him.

Sport (Play) is just as serious to the one who pursues it as Work (Business) is to the man or woman who must earn a living.

But just think of the tremendous enthusiasm which men and women show for their favorite sports!

Now also think what it would mean to the teacher as well as to the student of music if he apply himself to his art with even one-third of the enthusiasm he devotes to his sport. There is an idea worth while!

When the race between the great league teams is very close it is common to hear the inquiry: What's the score? When the end of the season is reached and world's series games are being played the question occupies a much larger place in the public mind and in the daily newspapers.

And finally we reach the time when the deciding game of the series is in progress, the outcome depending upon the play just starting. The highest prestige, the full climax of a long season, large sums of money, and many other things are now in the balance, and the scales are to be tipped to one side or the other by the player now at the bat, poised, tense, expectant, with thousands of eyes riveted on him, and millions of persons in all parts of the country waiting to learn through the telegraph about the pending play.

A dramatic moment.

Or it may be that the championship in the college football season is at s take in the last few minutes left for play. The quick thinking bra in, the nerve of steel, and the brawn that moves with irresistible mi ght are now called upon to ensure victory. There is no time to redeem a wrongly chosen play, an error of strategy, a careless fumble, a bad pass, unsteady footing, poor tackling, hurried punting, or failure to put into the play the final ounce of strength, weight, and speed The several players who are to participate in the next play must ac with the highest efficiency to win for their respective sides.

Isn't a man's work worth doing with at least one-half of this mental and muscular efficiency applied to sport?

Aside from the spectacular phase of baseball and football described above there is another which is not seen save in results, namely Careful Preparation, Intense Concentration, Firm Discipline, Good Physical Condition of the Body, Experimenting with Plays, Study o Competitors, etc., all intended to develop individual and team pla to the highest efficiency.

A matter of the greatest moment to the ball player is his Person Efficiency, as shown in his batting and fielding averages, as well a in other items of playing skill set down in records kept by the clubs And not only by the clubs but by others.

Every ball player's efficiency is a matter of public knowledge and is printed in the papers at least weekly, while the daily report enable the curious reader to tell exactly what the player did in a game not neglecting to give ample consideration to errors of omission a well as commission.

How would the music teacher like to have a daily or weekly record of his efficiency published in the local papers, or otherwis brought to the attention of the public? Pitiless publicity might work havoc with some reputations.

WHAT'S YOUR SCORE

But whether you keep your score and record it, whether you dodge it, or whether no one is concerned as to it, do not lose sight of the fact that you are making a score. And furthermore you cannot avoid doing it.

Then why not make it a good one?

When you play in public it is a fair parallel to the game which the public *sees*. So also when you arrange for a recital by your pupils, public or semi-public. This, too, is the spectacular side of your score-making. You may display in this public way 100 per cent efficiency, and make a big hit. But this is not all of your score.

The actual return, the *quid pro quo*, the Fair Deal for the money paid to you by the parents or guardians of your pupils, is what you do during the lesson hour.

This is the Score in which your patrons are interested.

Here are six items which go far to determine your efficiency as a teacher, items which you should study with the utmost care:

1. PREPARATION OF THE LESSON: Includes accurate and thorough knowledge of the lesson material, its place in your scheme of instru tion; promptness in beginning, having everything ready, etc.

2. RECEPTION OF THE PUPIL: Teacher should meet the pup with sympathy and encouragement; has no right to carry a "grouch, due to outside causes into the lesson.

3. CONCENTRATION ON THE LESSON (THOROUGHNESS): Mak every minute of the thirty count for advancement; no useless co versation; no interruptions; no telephone calls; no attention to priva affairs. The pupil should have one-half hour of undivided attentio

4. DISCIPLINE: Hold a pupil to his work; discourage sulking becau of corrections; allow no slighting of directions or of required practic

5. CORRECTION AND SUGGESTION: Criticism should be constru tive, and not consist of mere pointing out of faults.

6. ASSIGNMENT OF NEXT LESSON: Decide exactly what you wi the pupil to do for the next lesson and why the materials selected a just what you should use. Go over the assignment with the pupil necessary.

What would be the effect on your professional standing if a report similar to the following of a few hours in Miss Parry's studio should be distributed among your patrons?

At 9.05 Mary Davis appears, five minutes late. Sharply reproved for tardiness. While Mary lays aside her wraps Miss P. writes note to a friend so that Mary can post it. (She could have saved time by putting the music opened at the right place on the piano; she could have made an effort to get the child in a good humor after the reproof.) Lesson begun at 9.11, satisfactory in the main, showed fa amount of practice. Closed at 9.35 wi remark: "Take the next two pages."

The SINGER and His ART

FOUR QUERIES FOR TEACHERS OF SINGING TO ANSWER

[Quite recently Mr. John C. Wilcox, of Denver, sent to THE MUSICIAN an attractive booklet with the title *About the Study of Singing*, in which he discusses four questions which are usually raised by persons who are considering the matter of beginning a course of lessons in the art of singing. We regret that lack of space prevents the reprint of the booklet complete, but avail ourselves of the author's permission to use in THE MUSICIAN some extracts.—The Editor.]

ALMOST every potential student who seeks the advice of the teacher of singing asks:

"Will it pay me to advertise?"

Too many persons recognize no paying result of vocal study save the ability to make money through singing. Viewed strictly in this light vocal study will not pay the majority of those whose ambition leads them to consult a vocal teacher.

It is a great mistake to commercialize the impulse to sing. Why should singing not be recognized as a cultural study and considered worth while for all who can be given the opportunity to pursue it? What other accomplishment than the ability to sing agreeably, to listen understandingly to the singing of others and to talk intelligently about the art of song, contributes more to one's pleasure and social desirability? Those fortunate ones who are ahead of the average in gifts of voice, health, and aptitude for expression will always make singing pay in dollars and cents, but it would be a crime to deny the many-sided advantages of vocal study to all save the comparatively few thus gifted.

The person contemplating vocal study, and uncertain as to natural gifts, should seek out the teacher who has been in the community long enough to have demonstrated ability and honesty; one recognized by those who have actual knowledge of his ethical standards as a man of conscience, who realizes the deep responsibilities of his position in giving advice that may influence largely the lives of those who seek it, and would far rather lose a prospective pupil than gain one through even the slightest misrepresentation. The advice of such a teacher is of almost priceless value.

SELECTING THE TEACHER

The question as to whether vocal study will pay having been decided the selection of a teacher becomes the next important step.

"I can't afford the best teacher to begin with," is frequently heard. "You can't afford any *but* the best to begin with," is the proper rejoinder.

Would a wise builder begin an elaborate and enduring structure by employing inexperienced or incompetent workmen to lay his foundation walls. . . . The foundation of a vocal method must be skilfully and honestly laid else no amount of later embellishment will produce a satisfactory and enduring method.

There are a score of teachers who are capable of helping singers in the external phases of the art-style, interpretation, traditions, general musicianship, etc. —to one who has the ability, the patience, and the conscience to lay a permanent vocal foundation.

The time to employ the best available teacher is at the very beginning. . . . The cheapest teacher is very likely to prove—in the end—the most expensive of all. There is no wish to give the impression that the teacher who charges the highest tuition fee is necessarily the best one, although the one who commands a large fee is usually one of proven efficiency. The point to be emphasized here is that whatever the comparative tuition charges, the incompetent teacher is dear at any price and the competent one relatively cheap at any price.

At what age should vocal study begin?

The average girl may begin vocal study at sixteen. Some voices mature even earlier; some a little later.

The average boy is ready for voice training at eighteen. Some male voices are sufficiently "settled" younger; occasionally one is not sufficiently matured before nineteen or twenty.

Parents and guardians of boys or girls who give promise in early youth of having good voices should exercise care to prevent over-use of the voices.

More voices of potential greatness are probably ruined through too early and too strenuous use than ever realize their possibilities.

The average supervisor of music in the public schools does not understand the voice sufficiently to conserve its quality and freshness, with the result that many a promising voice is ruined in school singing.

Parents of vocally gifted children should impress upon them the necessity of voice conservation, and provide, instead of singing, instruction in piano, harmony, and musical history during the early years. Then they may, at the proper age, go to the vocal teacher with voices fresh and uninjured, and with minds ready for the comprehension of musical expression.

How long does it take to develop a singer?

No intelligent teacher will deny that a considerable time is required for the proper development of the voice. The necessary period of study will vary greatly in accordance with the natural gifts and adaptability of the individual student.

A nominally endowed student will probably secure a good vocal foundation and a working knowledge of singing technic in about three years, if wisely guided. It must be remembered that taking more or less frequent vocal lessons during three years does not constitute *work*, as here implied. The student who would emerge, after three years of study, equipped with a thorough vocal foundation and a working knowledge of vocal technic must take at least two lessons per week during at least ten months of each year, and *practise* faithfully and intelligently each day of these months of study.

The vocal study should be supplemented by some work on the piano unless that instrument has already been studied to a considerable extent; by the study of sight singing and fundamental harmony; of one or more song languages; of the history of music; by frequent hearing of artist singers and by enough public singing to bring platform poise.

The writer recognizes that many persons who are not prepared to devote themselves exclusively to study for a considerable period nevertheless desire to develop their vocal talents as completely as may be done with the time and the means at their disposal. Such as these must, of course, adapt themselves to governing conditions, and the teacher should meet them half way. Without self-deception they may study as thoroughly as circumstances permit and reap rewards in proportion to their efforts. Many a young man or woman studying voice as a recreation in this manner, has become a singer of charm, and not a few who commenced thus have demonstrated such talent that a way has been found for them eventually to make of singing a main instead of a side issue.

———o———

THE DIAPHRAGM IN SINGING

BY OSCAR SEAGLE

AMONG singers, professionals as well as students, is there a subject which has been more discussed than "diaphragm"? We may add is there a thing which has caused more sorrow and woe and has been more misused than this important part of our anatomy?

Strange as it may seem, but what is Nature's way, and consequently, should be the easiest, is always the most difficult to reach. This has been my observation during the years I have been teaching, and I presume such will be my experience during the years to come unless this little treatise should perform its mission, that is, enlighten the serious vocal student about the proper functions of the diaphragm.

"So many minds, so many ways," says the old saying. If we would take the time to visit the various vocal studios in our cities many interesting facts could be collected to strengthen my opinion that this proverb is sound.

One believes that by breathing from the abdomen the proper result will be obtained; another uses the diaphragm to raise the chest and another to expand the ribs. Again, by jerking it inward some believe the "puzzle" is solved. Some firmly claim that it is a trick to have this muscle perform correctly, and others that some special method has a patent on it. Some of these ways are right to a certain point, and all are wrong.

The diaphragm should always be thought of as a lever governing the entire breathing apparatus. We feel the abdomen pull in, and the diaphragm muscle, the sides and the back expand. At the same time the lungs must be filled to their deepest capacity. By the action of the diaphragm the inhaling as well as exhaling is regulated. When this natural way of breathing is to be applied to singing it is, of course, exaggerated to quite an extent. In the beginning the diaphragm will perhaps be flabby and unsteady, which results in poor control. The remedy is found in long, constant, and correct exercising.

There is no "short cut" in developing a diaphragm firm and elastic, and only the "survival of the fittest" may enjoy its wonderful usefulness.—*Musical America.*

———o———

Has it occurred to you that you may have had an educational experience worth repeating? THE MUSICIAN wants it.

DIRECT AND INDIRECT CONTROL

BY D. A. CLIPPINGER

The control of the vocal mechanism in singing is a matter upon which vocal teachers have as yet come nowhere near an agreement; notwithstanding, it is, to my mind, the thing which should be settled first.

We are told by some that the larynx should be held firmly, braced, as it were, in order to produce a solid tone. Some say it should be held low, others that it should rise as the voice rises.

Many are still talking about open throat and using as an infallible guide the time honored, patriarchal "yawn." Others would put us through a long course of lip, tongue, and lower jaw gymnastics before allowing us to sing.

One came into my studio to show me how to make the chest flexible. He kneaded it until his ribs all seemed to be "floating" and it had no more stability than a sofa pillow. This was his idea of getting ready for breathing exercises. When he undertook to sing a simple song his voice broke and it was evident that he knew nothing whatever about breath control. As a contortionist he was fairly successful, but as a singer he was dismal and depressing.

A rather wide experience in training singers has convinced me that a great many teachers are making the subject of voice training more complicated and difficult than it really is, and the reason is that they are thinking too much about *how to sing* rather than *what to sing.* The artist always thinks of the *finished product,* the scientist of *how he does it.*

I have no hesitancy in submitting that the mistake too often made is that of training the mechanism when they should be training the mind. It amounts to trying to teach the student how to do a thing of which he is yet unconscious. This results in what we call direct control, which, to my mind, is a distinct reversal of the natural process of singing.

Here are a few facts which should not be lost sight of: First: Everything exists first as idea, whether it be a chair, a piano, or a tone.

Second: An idea has definite form. This applies to a tone no less than to a chair. "Form," said Hegel, "is the realization in matter of an idea."

Third: It is the mind which originates and controls action.

Fourth: All causation is in mind, and the effect will be no better than the cause.

Fifth: We never see or hear cause. We only see and hear effect.

Here is where the fallacy of direct control appears. Tinkering with effect will not change the cause.

The singer will never sing a better tone than the one he creates mentally. Teaching him how to hold his throat will never supply him with the mental picture of a pure tone.

There is such a thing as a pure tone, but it will be, it must be, first in the mind of the singer, or it will never issue from his throat. The singer must think the quality of his tone no less than its pitch. This is what is meant by tone concept, the first, the most important, and the most difficult thing to teach him.

Man is primarily mental. When I talk to my pupil it is his mind that hears, not his voice, therefore I must train his mind. As Dr. Fillebrown very wisely said: "The process of singing is psychologic rather than physiologic."

Narrowed down to first principles, two things only are involved, namely, the idea and the medium through which it is expressed; or the singer and his instrument; and the training of the idea, the singer, is as necessary to good singing as the training of the pianist is to piano playing. In both instances the instrument does what the performer makes it do.

If my pupil produces a bad tone one of two things is wrong: Either he does not know a good tone, or else the conditions are not right. In the beginning it is usually both. I have, therefore, two lines upon which to proceed. I must develop his tone concept, and I must show him how to get the conditions right for its expression. I never can develop his concept of tone, which is his taste, by teaching him how to hold his throat, tongue, larynx, and lower jaw, etc., because taste is a mental quality, which is demonstrated by the fact that many persons who neither sing nor play have it in a marked degree. Either by explanation or example I must make my pupil acquainted with the pure singing tone, because it must exist as definite mental entity before he can sing it.

What does it mean to have the conditions right? It means, in short, to free the throat from all muscular tension and properly manage the breath. The great enemy of the singer is interference, resistance, which is the result of tension. Get rid of this and the thing which prevents the pupil from expressing his concept of tone will be removed. Get rid of interference and there will be no further need to talk open throat to the pupil. The mechanism will then be controlled by indirection, by the thought of tone quality, in the same automatic way that the vocal cords are controlled by the thought of pitch. It is well understood that the tone gets its color, character, quality, whichever term is preferred, from the cavities above the vocal cords. It is impossible to form these cavities accurately by direct control. It is as bad to have the throat cavity too large as too small; and an attempt to hold the throat open will result not only in wrong form of the cavity, but it will be practically certain to induce tension and impair the tone quality. What we want is a free throat. When this is attained it will never be necessary to try to open the throat, for it will respond automatically to the tone concept.

The command to open the throat is in line with the other command, to direct the tone into the head. To attempt to drive the tone through the head is to set up a resistance which prevents it from vibrating in the head cavities. But if all resistance is removed the tone finds the right channel automatically. There is scarcely a probability of its going wrong. This thing called "placing the tone in the head" many find difficult and the difficulty lies in the throat interference. It will continue to be difficult so long as the resistance continues.

We are constantly hearing the remark that "Few teachers know how to place the voice." Now voice placing is learning to produce beautiful tone. It is not a difficult thing. On the contrary, it is easy and simple if one will get a working acquaintance with two fundamental principles.

First, know what you want. This means correct tone concept, or musical taste.

Second, have the conditions right. This means to free the mechanism from all resistance and properly manage the breath.

On these two things hang all the law and the prophets. The control of the mechanism must be by indirection. The pure singing tone can be gained in no other way.

A STRANGE PUBLIC AVERSION TO CONTRALTOS AS COMPARED WITH THE SOPRANOS OF GREAT FAME

BY ROBERT GRAU

Although Madame Ernestine Schumann-Heink was the first contralto to possess the qualities for absolute stellar honors in this country, the circumstances by which the German singer became a unique figure in the history of contraltos are in themselves so extraordinary as to affect but little the often proclaimed theory that no contralto has ever had the potency to attract the public to the box office through sheer personal magnetism of her own name.

This theory was held about violinists for more than a quarter of a century, and was only abandoned through the amazing financial results attending the tours of Ysaye and Kubelik, and in recent years of Kreisler and Elman, but in the instance of contraltos there is no record where any of this class of singers has ever been regarded as a sight draft on the public purse.

It was this fact undoubtedly that influenced Maurice Grau when he meted out to Mme. Schumann-Heink the very inadequate honorarum of two hundred and fifty dollars a week though he must have known that her artistic status warranted larger financial appreciation.

But so soon as he saw, with his own eyes, that here was one contralto who was likely to rival the great sopranos of opera he increased the sum in the singer's pay envelope in a manner that Madame has never forgotten, for he was not obligated to do this, nor did Madame make the least effort to turn her amazing popularity into cash at that time though her artistic affairs were in the hands of one of the shrewdest *entrepreneurs* in musical history Henry Wolfsohn.

Sofia Scalchi surely was a great contralto. Moreover by reason of her association with Patti her name became so well known that many believed that here was a contralto who would conjure the public to the box office. But she did nothing of the sort—in fact the career of Scalchi merely emphasized the contralto theory.

With Patti especially in *Semiramide* the two represented about the greatest musical attraction of the period from 1880 to 1890. It was quite the same in concerts and it did seem as if Scalchi was the magnet at least to some extent. But alas when Scalchi sought to realize on her fame she failed to disclose any extraordinary power to draw the public. It is true that Scalchi was in demand for fair-sized fees for concerts and opera but that is not the point up for discussion here.

Here was a contralto whose fame almost equaled that of Patti's, and surely her name was calculated to draw people to hear her alone. Yet Scalchi's concert tours, if my memory serves me correctly, were chiefly notable for the manner in which her management was able to "dig up" new territory. For many years Scalchi was compelled to sing in the very small towns and her tours were never on a scale such as characterizes the itinerary of great sopranos.

At the last, while yet in her prime, Scalchi was unable to secure proper bookings and she made several vain efforts to enter the vaudeville field.

If ever there was a contralto who was beloved the people of this country, that one was Annie Louise Cary. Operatic and concert history is replete with records of her great triumphs and here we have an artist who not only possessed a rich, glorious contralto voice, but whose physical qualifications were of that character that always counts. Besides, Cary, like Scalchi, had the great advantage of long association with Nilsson and Kellogg.

The spectacle of Nilsson and Cary together in the old Academy was something inspiring.

THE HERMAN KLEIN PHONO-VOCAL METHOD

Based upon the Famous

School of Manuel Garcia

Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

hen Strakosch brought out *Aïda* with Cary as mneris, the name of the contralto became that of nation-wide celebrity.

But if the truth must be told Madame Cary did ot draw the public when she was put forth alone as stellar figure. At a Sunday concert at popular rices Cary would pack the house; but the at-action was the Sunday concert and the prices ore than the contralto.

No impresario or manager ever prospered with ie direction of a contralto on a permanent lengthy ournée until the advent of Schumann-Heink, when, due course, all theories as to the potency of ontraltos were completely shattered. But, as I ave stated before, this is a most unusual case, ot entirely musical in its explanation of her amaz-g vogue; for her popularity as a woman and her markable disposition are qualities that have aided establish a new record. But this does not, by any eans, affect the theory as to contraltos. It is explicable that the contralto voice seems to lack ie potential qualities at the box office.

I have observed the careers of all of the contraltos the last half century and in that period we had ar Adelaide Phillips and our Zelda Seguins, great tists all, but not one ever brought any profit to y impresario who had the courage to undertake oncert tours with them.

THE PUPIL'S FUTURE

BY CHARLES N. BOYD

THE music teacher is often placed in a difficult sition when the future of a present or prospec-ve pupil is concerned. If every teacher had of. Seashore's laboratory for the testing of a pil's musical qualifications, and that scientist's ill in diagnosis, prophecy might give place to ience, and the honest, well-meaning teacher ight be encouraged to go on record more defi-tely regarding the future of the pupil. But e scientific measurement of talent and ability nnot become general property for many a long ar, if ever, and the teacher must fall back on experience and its resultant judgment if he called to predict the success of the young usicians entrusted to his care.

Perhaps the pupil may so successfully disguise s talent or application that the teacher may el called upon to advise against the adoption music for a career. This may be done in all nesty, and with the best intent, but in so do-g the teacher may commit an egregious nder. Think of what we would have been deprived had the advice of certain authorities been followed in the cases of Beethoven, Wagner, Verdi, Bizet, Saint-Saëns, and many lesser lights. And yet this advice was doubtless impersonal; probably well-meant and without a trace of malice.

On the other hand, think of the number of willing students who have, perhaps with advice of best intention, been led to the adoption of a career which brought nothing but disappointment. One needs but to consider the circle of acquaintances, musical and otherwise, to realize the possibilities in this direction.

Recently there has come into my hands a correspondence which is well worth the consideration of every serious teacher. It is genuine, and all the more valuable because it is sincere on the part of parents, student, adviser, and teacher. A young lady, who may be designated as Miss X, felt called to be a singer. Her parents were able and willing to provide any necessary education, but being without musical experience, sought the advice of a friend who, though a business man, had himself studied singing for years and was in close touch with many singers and teachers. With his introduction Miss X and her parents visited four teachers of singing, and each teacher was asked to express a sincere opinion as to the young lady's qualifications for becoming a successful singer.

The result was that two teachers were perfectly willing to take Miss X as a pupil. The third teacher put himself on record as unwilling to make a definite statement. The fourth was a woman of wide experience, and fully aware of the importance of her decision. She refused to give an opinion until the young lady had spent a day in her home to give the teacher an opportunity to know something of the candidate's general as well as musical qualifications. Here is the gist of the letter she wrote the adviser after the first visit:

"Miss X came here on Thursday and remained until Friday. So we had ample time and opportunity to talk over her future and the advisability of taking up singing as a career.

"I fear it is a disappointment to her that I cannot honestly think it quite the right course for her to seek singing as a vocation.

"So far as her voice is concerned, there is not much out of the ordinary either in volume, range, or quality. The interpretation shows no particular talent.

"It seems to me, though of course I may be mistaken, that she has strained her voice a bit. There is quite a change between the chest and medium registers, and this may also cause an unpleasant quality in her speaking voice; it is guttural and rather lifeless. I am afraid this sounds brutal, but I assure you it would be far easier for me to write what would be pleasing and flattering.

"I do not mean that Miss X should give up singing for her own pleasure, or taking lessons. Many of her faults she may overcome, and, of course, there is no knowing what changes may come with proper care and work in the right direction. I advised her to take up some vocation (with her music, also), one that was *wanted* in some community, such as physical culture. She seemed fond of healthy exercise and outdoor life. We know how long it takes to get financial returns from the music professions, how precarious it is, and how engagements are few and far between, and church jobs dependent upon the good will of some wealthy, but probably ignorant member of the church.

"I think almost any profession is less disappointing than that of a singer. Even those with great ability have a hard time. Anyway, I am doing my best not to raise, in a young girl, hopes that may never be realized."

This opinion was transmitted to Miss X and her parents, and brought this reply: "I want to thank you sincerely, both for myself, my wife, and my daughter. We are talking the matter over with Alice, pointing out to her the actual situation as we view it, which I believe she sees very clearly also. I am not sure just the steps we will take first, but will follow very largely, in fact, I may say altogether, advice as received from you and Mrs. ——. It is strange but the outcome seems to be very nearly as I had summed it up in my own mind long ago, but was not satisfied until I had advice of those in whom I have every confidence. We all believe and know that what Mrs. —— and yourself have told us is the plain truth, and I cannot thank you enough for this kindness.

"I wish also that you at a convenient time would convey to Mrs. —— our sincere thanks for what she has done for us. I myself have been lied to by various persons in days gone with reference to music, until I know it is very difficult to get an honest expression; but we have every reason to believe and prize every word that both of you have told us. Instead of being discouraged, Alice is relieved and encouraged, for I have always tried to keep her from being inflated in the matter.

"We shall try some time, probably not this year, but we shall try to have Alice take training with Mrs. —— for the benefit of her influence on Alice. We want her to go on with her music, and she wants to, and we shall do all in our power to let her develop as far as she will, working along the lines suggested by both of you which seem very reasonable to us. Again thanking you and Mrs. —— for your interest and kindness, I beg to remain," etc.

This is a concrete example which is worth the serious consideration of every teacher. Those who were willing to take Miss X as a pupil may have realized all the factors in the case, but the chances are that a fair improvement in voice or style, which might reasonably have been expected, would have had to do duty for ultimate "success." But at least the first two teachers did not view the problem with the seriousness of the fourth teacher, and perhaps they should thank their lucky stars that the pupil did not accept their advice.

CONDUCTED BY HELENA MAGUIRE

A SONG

I MADE a song one morning,
Sitting under the thornbeam hedge,
I played it on my pipe
And the clear notes delighted me,
And the little hedge-sparrows and the chipmunks
Also seemed pleased.
So I was very proud
That I had made so good a song.

From AMY LOWELL'S *Merchandise.*

THE LESSON OF THE MONTH

THE KIND OF MUSIC WE PLAY

IT will help you, children, in studying the selections your teacher gives you, to think a little about the *kind* of music you are learning to make.

We might say that your pieces may be of two kinds—either of the kind known as "sound patterns," or of the kind called "free," because it does not conform closely to a "pattern." With this last kind little children do not have much to do.

The first kind of piece, the "sound pattern" kind, is made something as your wall-paper is made. You have all drawn wall-paper patterns in school, and know how this pattern, or "design" as we call it, is repeated all the way around the room.

Mr. Bernard Shaw says: "When a musician composes according to a set pattern, the selection of the pattern, and the composition of the first stave (a *stave* in music corresponding to a *line* in verse) completes the creative effort. All the rest follows more or less mechanically to fill up the pattern, an air being very much like a wall-paper design in this respect. Thus, the second stave is usually a perfectly obvious consequence of the first stave, and the third and fourth an exact or a very slightly varied repetition of the first and second. For example, given the first line of *Pop goes the weasel,* or of *Yankee Doodle,* any musical cobbler could supply the rest."

Now watch for this in your selections. If you learn the first stave thoroughly well the chances are that you have learned a goodly proportion of your entire selection. For you will find this first stave repeated over and over again, with just little changes and differences to be learned in the repetitions. And here is where you must watch out for fingering!

The second kind of music is more difficult to learn, just as it is more difficult to write. It is just as if the composer took a strain of music, and tried how many different and strange things he could do with it. He turns it upside down and inside out—shortens it, lengthens it, doubles, reverses, weaves it in with new bits of melody, making of the whole a rich musical fabric which passes before the ear in a continually varied flow. This is the way the fugues of Bach and the sonatas of Beethoven are made.

You might think of it as a little like taking a word, say "gravitates," and trying what you could do with it—you can make from it other words, long or short, as "grave," "great," "aviates," many, many more; then you can string these words together into a sentence, as —"a great, great rat aviates," and keep on doing all sorts of things with this one word, until it is really wonderful what you have made of it. And then you begin to see the fascination there might be, for a musician, in taking a little melody and working over it, and even forgive him for the difficulties which his doing this makes for you who have to study it.

But get your "sound pattern" selections well first. And then the music that is not so simply put together will be possible for you to learn when your fingers are ready for this kind.

HELENA MAGUIRE.

A CHILD'S STORY OF "HANDEL'S CHILDHOOD"

BY HELEN RUCE

HANDEL was born in 1685. When he was a small boy he loved music. His father wanted him to become a doctor or lawyer. But Handel had his mind set on learning music. One night while he was still small, all the people were in the parlor, and *he* was supposed to be in bed. When all at once they heard music in the attic! And on going up to see what it was they found it was little George playing on an old harpsichord that was there. His father scolded him severely because he didn't *want* him to be a musician. But after a while he consented to his learning music and sent him to a school.

Many people were sad when this great composer died.

A DIALOGUE FOR THE THANKSGIVING CLUB MEETING

BY JANET JOYCE

Six girls seated in studio.

Enter Mary, throwing music on table in petulant manner.

Mary. "I'm sick and tired of practisin scales. They are the most *troublesome* thing and no use, anyway. Miss Wood is so fuss about the fourth finger. It must go on certain key and no other. but I can't bothe to remember which one. Then she near takes a fit if the nail joint collapses or th thumb runs off the keyboard, and altogethe there are so many little things to think that it makes me tired."

Sarah. "I used to feel that way too, but just made up my mind to learn the scal thoroughly, and now I really enjoy ther You know, every time you do a thing, makes a track in your brain, or somethi like that, and if you always do it right, after while there is a nice *clear* track, and th you have no more trouble; but if you do it different way each time, you make so mar little criss-cross paths in your brain, that y don't know which to take. There is a bit Psychology for you girls."

Jean. "My, but you are learned! takes brains to study music, doesn't it? I found out it isn't all finger work. Miss Wo says we ought to *think* the music first a then if the fingers are well trained little s vants, they will do just what the brain wan them to."

Christine. "Oh, dear! My little servan are very careless sometimes."

Marjorie. "You'll have to train the better, my dear."

Margaret. "I wish I could play witho my notes. The other day at Aunt Anni I tried two or three pieces, and couldn't through one of them. I was so ashamed th I didn't know what to do."

Ruth. "I can give you a pointer on th You ought to *analyze* your piece. Stu the key and note any modulations. Th you generally find that the endings are tric but if you get right down to business, you commit them just as you do any other less It means work, but it pays."

Marjorie. "I think so too. I'm going memorize all my pieces after this. Ru that's a nice little Bach album you ha Don't you feel grand, playing Bach Beethoven."

Rachel. "Girls, I believe we would be m interested if we studied more about mu There are so many things I want to kn Let's ask Miss Wood to have a Club for next year."

Mary. "That would be fine. We'll it the 'Allegro Club,' that means *lively* know, and would just suit our crowd. Al favor please say *aye.*"

All shout "aye," and leave the room.

THE MUSICAL HUNTER*

BY LAMBERT GREENAWALT

[It is suggested that the following game be used a class or club meeting, being read out loud, and e pupils required to clap their hands, or in some her way *signal* whenever a word which has musical plication is spoken, prizes being offered for quick- ss and correctness.—Editor]

A VERY *sharp* hunter went a-hunting for *ıes* (lions) one day.

He traveled a *score* of miles over a very *t piece* of jungle-land. For his defense he rried a *repeater*, and a *bar* and a *staff* for ıergencies.

As he walked along, night began to envelop e world, and our hero thought he would lie wn and *rest*. However, his repose occupied uch more *time* than he had at first antici- ted it should.

While sleeping, he heard not the variety of *ıes* that came forth from the *pitch*-dark night, r all the *sounds* blended together to soothe e sleeping hunter. So his slumber was very *nquillo* for some hours. Suddenly, in the rkest of the night, a powerful, *crescendo*ing ice broke out. It could be heard above all ıer *discords*. *Presto!* the hunter awoke!

He was none too soon; for, in the silvery ht of a moonbeam shining through a broken ud, he could *note* that a ferocious, roaring *e* was approaching where he lay! He mped about an *octave* from the ground and tered some *bass* (base) language.

But the *line* had no intention of *ritard*ing, d he continued to send forth his *melodies* of ried *tonalities*.

Since our hero's *intonation* was excellent, he ew that the enemy's *tremolo enunciations* ant that danger lay in their wake. In t, to him, the beginning of that *grand ra* did not seem to forecast the idea that the *dition* of the entire *composition* would make n feel very *allegretto*.

Realizing that there was *poco* time to be t, and that to hesitate now would mean nation, our *agitato* huntsman turned to his r, which he had been using for a pillow, and fed through it in a *vivace* manner to find at he should do in such a dire calamity.

n the mean *tempo*, the wild beast came *copating* along *giocoso*, yet *spiritoso*, to the *ck*. He grumbled some words in a *fortis- o* voice; but such foreign *accent* was mani- ed in his speech that our hero failed to perly *interpret* the remarks.

t any rate, as the terrible, *risoluto* animal ıe closer and closer, the noble hunter could his heart *metronom*ing as fast as a little nch clock; and he knew that the meeting ut to take place would not be very *monious*.

n a short *space* of time he sprang to his , swinging his *leger* above his head in a *rhythmic*, yet *dynamic* manner. Finding this did not bring any *re*(ray) of hope, and conscious that his *forza* was *diminishing* by *degrees*, he took a sudden *step* forward, flung his heavy *leger* at the *line*, striking him directly between the eyes.

Thus the on-rush of the infuriated beast was in some *measure rallentando*ed; and our gallant hunter found himself *ad libitum* to think for a moment.

"*Hold!*" exclaimed he. "I am in search of the *key* to the famous gold mines, discovered and operated thousands of years ago by Rameses II.

Lunga and *forte* was the *line's* laugh upon hearing these words. "You must think," said he between laughs, "that I am an *ancient minor!*"

Then he laughed and laughed until his sides nearly split, for he supposed that he had sprung a good joke at the hunter's expense.

But our hero was undaunted, and mustering all his skill in repartee, he called out in a *tenuto voce:*

"You need not laugh any longer, for the sounds you make while laughing or growling make *mi* (me) very sure that you are not a *melodic minor*."

In an instant, the maddened beast's eyes flashed like deadly *brio!* The roar that issued from his cavernous throat seemed to make a complete *enharmonic scale*, *ascending* and *descending*. The *dominant tone*, *augmented* by the echoes which resounded for miles around would have struck fear into braver hearts than that of our noble huntsman.

We can readily understand that at this point he needed a very strong *tonic*,—aye, one much stronger than *ti* (tee)! And he did not feel at all *composed*.

His thoughts formed in a *prestissimo* manner; and the first thing he did was to write his *signature* in his faithful *leger*, which he had regained during the wild creature's fit of laughter. But *si* (see)! The blood-thirsty animal is upon his prey, crushing him beneath his heavy *paws* (pause).

In a pitiable tone, the victim offered to buy his freedom. But even when he promised his antagonist a *tenor*, the brute simply scoffed at him, saying, ironically, "I care not for your *do* (dough)! It's your flesh I want.—Don't offer me a *fi* (fee)!"

The valiant one managed, after superhuman efforts, to fire one shot into the *line's* side; but found that his revolver would not *repeat!* In desperation, then, he *beat* the brute with his heavy *staff;* but all in vain. How he wished he had a *double bar!*

In his last death struggle, the brave musical hunter did not even then forget that he was a singer. And, in a gentle, *pianissimo* voice, he sang, "Rock of ages *cleft* for me."

Then his *sol* (soul) fled.

The moral of this tale is: B *sharp* if you can; fall *flat* if you must; but in any event, B *natural!*

*n order to facilitate the reader's understanding of the y proper, the following musical terms, not commonly rstood, together with their exact or modified mean- as used in the story, are herewith set forth: legretto, lively; poco, little; agitato, agitated; vivace, y; giocoso, sportively; spiritoso, energetically; risoluto, ute; forza, power; rallentandoed, slackened lunga, tenuto, sustained; and brio, fire.

"HELPS TO REMEMBER" VERSES

EIGHT KINDS OF NOTES

BY LAURA ROUNTREE SMITH

(Write on cards and give pupils to read or copy in notebooks.)

1

Eight different kind of notes to learn,
Whole, Half, Quarter, come in turn,
Eighth, Sixteenth, and Thirty-second,
Nearly all here we have reckoned.

2

Sixty-fourth is in a flurry,
Little Note, now hurry, scurry,
One-hundred-twenty-eighth, ah me!
He is out of breath as all can see.

3

And his eyelids never waver,
As he says, "hemi-demi-semi-quaver."
HalfNote says, looking down at you,
"My other name is 'minim' too."

4

Quarter Note says, " 'Crotchet' I like better
If you'll be sure to use each letter."
The shortest note got "*good behavior*,"
With his "hemi-demi-semi-quaver."

———o———

MUSICAL GAME—TO TEACH KINDS OF RESTS

BY LAURA ROUNTREE SMITH

(Book rights reserved)

THE children choose the Music Master. They stand in two lines facing each other, forward and back, singing to the tune of *Lightly Row*.

Music Land, Music Land,
Is a place you understand,
Where 'tis best, where 'tis best,
We should stop and rest.
And though pretty tunes we play,
We will rest along the way,
Music Land, Music Land,
Skipping hand in hand!

The Music Master runs through the lines holding up a card with any kind of rest upon it, and says:

"If you'll travel on with me,
Tell me please, what rest you see!"

The first child to answer correctly changes places with him and the game continues as before.

The Music Master may recite the following verses or they may be written on cards and distributed among the music class for recreation:

RESTS

BY LAURA ROUNTREE SMITH

1

Oh blow it east or blow it west,
We like to stop and take a rest,
And one day out in Music Land,
I met a curious fairy band.

2

Whole Rest sat below the line,
And my! how his black eyes did shine!
Half Rest sat above the line,
And said, "This place is really mine."

3

These two Rests just looked to me
As much alike as twins could be.
So I was glad they took their places,
Just that way upon the spaces!

4

The Quarter Rest was quite polite,
And turned his hook up toward the right,
Sometimes two hooks he would display,
And turn them in the opposite way!

5

The Eighth Rest said, "Will you ever learn
Why to the left my hook I turn?"
The Sixteenth said, "Though I'm your brother,
Of hooks I think I'll add another!"

6

The Thirty-Second Rest began to call,
"I will have three hooks or none at all!"
The jolly little Sixty-Fourth Rest,
Said, "With four hooks I look the best!"

7

The One-Hundred-and-Twenty-Eighth began to smile
And said, "Five hooks I find worthwhile!"
All turn to the left and as you see,
We are a *silent* company!

8

So blow it east or blow it west,
We like to stop and take a rest,
In Music Land where'er we meet you,
We will know your NAMES and greet you!

———o———

A MUSICAL GAME TO TEACH VALUE OF NOTES

The children choose a Music Master. They skip in a circle, singing tune, *Comin' thro' the rye.*

Whole Notes, Half Notes, all are going
Into Music Land,
Quarter Notes and Eighths will follow
As you understand,
Notes upon the lines, dear children,
Hurry to keep pace,
And see the notes upon the spaces,
Show a smiling F–A–C–E.

The Music Master stands in the center of the circle and holds up cards, one at a time with notes upon them. He calls on any child to tell what kind of a note he holds up. If he fails he is out of the game.

The Music Master says,

"If you'd continue in this game,
What is the note? Come, tell its name."

———o———

JACK'S GYMNASIUM

BY ANNA S. WEST

Jack had been allowed to join the gymnasium class where all of the fellows went every Saturday morning, "just for fun" they said, but the fathers and mothers knew how much good those exercises were going to do for those young bodies; how strong and straight the backs would grow, and the bones and muscles develop properly, as they used the exercises which their careful teacher knew would bring about such things.

Now after weeks of waiting,—and I am afraid, a great deal of teasing,—Jack was going with "the fellers" every week, and wasn't it fun!

And then he began to grow, and wasn't he the proud big brother when mother measured him beside his younger sister, and found he had grown *three whole inches* taller than she, in only five weeks! Why at that rate, if he learned to stand up straight, as the gymnasium instructor insisted the class should do, in a few more weeks he might be just as tall as father. So you see Jack was learning the value of proper exercise.

Now I am sorry to say that although Jack had been studying music for some time, he,—like many other little boys, didn't like to practise. (Isn't it strange sometimes, when little boys,—yes, and little girls too,—love music, and are fortunate enough to be able to take lessons, that they don't like to practise?)

Now what has this to do with Jack and the gymnasium class you say? I am going to tell you right away. So listen.

One day when Jack said, "Oh, do I *have* to practise?" when mother told him it was his time to go to the piano, he was so surprised when mother said,

"Yes, it is time for you to take your fingers to the gymnasium now."

"Gymnasium, mother? Why 'gym' comes on Saturday, and it's only Thursday!"

But mother said, "Yes I know it, but your fingers need some gymnasium work, and I am quite sure you could be a very good teacher for them."

"Why, mother, *I* don't know how to give exercises like Mr. Beach gives us boys,—not a bit!" said Jack.

"No,—but Miss May told me only yesterday how well you practised your scales and exercises, only, she added you don't practise regularly, and long enough at a time.

"And another thing," said mother, "you always make such a fuss when you have to practise."

"Now your piano is just a gymnasium," mother went on, "where you take your fingers and teach them to grow stronger, until after awhile, they are able to run quickly and freely over the piano,—just as you are trained in the gymnasium where you go regularly each week. All of the boys learn to run the races, and some win, because, on account of the exercises they have had, they can breathe better, and their muscles are so trained that they can run faster, and so they do the work well, and are known to be good athletes.

"Just so, if you teach your fingers to exercise properly on the piano keys, after awhile you will be better able to make sweeter music, which will bring so much happiness and pleasure to others, and to yourself also.

"But your fingers won't work properly, you know, without exercise every day, and unless you tell them just what to do. Miss May tells you *what* they must do, and *how* they must do it, but after all, you are the master, and they are obedient little pupils, and will do just wha you tell them, after you have trained them care fully and long enough.

"So run along," she concluded, "and star your gymnasium class today for your te fingers."

"I just believe I will," said Jack, and of he went whistling, and quite willing now to g to the piano.

Each day after that Jack had his gymnasiu class, and his fingers really grew *so* muc stronger, and more nimble in a little tim How glad mother was, as she heard the musi and happy too, because she seldom again ha to send Jack to the piano to practise. H always went now without being told.

It is hard work for mothers to have to sen their girls and boys to the piano all of the tim you know, and I would like to think that eac girl and boy who reads this little story, will sta a "finger gymnasium" just as Jack did.

———o———

THE JOY OF TEACHING BEGINNER

BY LUCILE CORBETT

There is so much room for the beginni teacher, so much unexplored land, so litt known about the working mind of the child music that here is a great field for the earne teacher.

To be successful a teacher must study t child from every viewpoint, find out why does everything, what he likes to do, what he most interested in, how he lives, his spec likes and dislikes, the weak and strong poin Observe him closely at each lesson. P yourself in the child's place. Stoop down a get the focus. No two children can be taug alike. Each one is an individual problem to solved.

Story-telling should go hand in hand w primary work. It develops the imaginati and gives the child a better idea of life. Ma each lesson full of new interest and use n illustrations. Children live in Playland a Storyland, and they must be taught in th way. Make their lessons journeys into land of melody. Never try to teach in abstract. Make each lesson a story to told at the piano; the notes, words to spelled correctly; the story told clearly and just the right words. Or, have each tun game to be played or sung. That will put and energy into it. Let them live each tu They will soon memorize and play correc Practice will not be hard, dry work, the children will enjoy coming for their less

A child constantly lives with imaginat personages, carries on conversations with th So the teacher should tell a short story, ful interest, one in which something is happen all of the time, and then have a piano p with words to go with the story.

When the child sees the story clearly in mind, he will interpret the music as he wo tell the story; he will play it with expres and put into it his own individuality wh can come no other way than by feeling living the story.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

HOUSING A BEAUTIFUL TONE

BY RAY G. EDWARDS

WONDERFUL is the effect upon the child mind when, for the first time, the tone of a violin is produced. To draw the bow across so small a thing as a violin string and produce so large a tone is quite enough pleasure for one time. In fact, it has a charm that lasts for days. At this stage a young pupil can be interested for some time in tone production, without using the fingers of the left hand at all.

How is the tone produced? That is a great question, one that even violinists may often be quite incapable of explaining. Nor is it my intention to go into the theory of vibrations in this paper, further than to explain why it is that a violin is so responsive to the strings.

Wire strings are not used extensively because they are too thin to set the wood in vibration. On a very small, impossible violin they might have sufficient body to accomplish the result wanted, if there were not other disadvantages. Gut strings, however, have the required body to set into sympathetic vibration a sufficiently large piece of wood for the purposes of the violinist. Violin strings strung on a cello or double bass would be incapable of stirring the souls of these instruments.

Not only is the size of the instrument limited by the capacity of the strings, but its arches are as necessary as the arches of a bridge. They provide strength without the thickness of wood that flat top and back would necessitate. With a flat box we could have the strength if we made the top and back thick enough, but the strings would be incapable of stirring such a bulk of fibers to action to get vibrations adequate to the needs of a musical instrument. Fasten the best of violin strings to a broom handle or a table top and what do you get? Nothing that could stir the souls of men, or be heard by an audience of five thousand people, or even one-tenth of that number.

So we must have thin plates of very responsive wood, arched to give strength to the instrument and power to the toue. Why have an enclosed body of air? Why not one large surface? The arch in that case would be arched against what? Nothing. Or if sides were added of great strength they would have to be very thick. This would do away with the back, but the back gives body and carrying power to the tone. It is an arch of denser wood than the top, which enables the violin maker to use very thin strips for ribs and sides. If you have never seen a violin opened it would surpise you to see how thin these ribs are. Attempts at making an instrument without a back have never resulted satisfactorily. One reason given, that I have not yet mentioned, is the theory of air capacity, which would obviously be lacking entirely in a violin without a back, having no capacity whatever, no enclosure.

The narrow waist of the violin became necessary in order to give play for the bow in going over the upper and lower strings, and so we have the beautiful curves of the *f*s. The solid, extended neck gives play to the left hand and strength to resist the strain of the strings. The latter do not touch the vibrating plates at any point but are carried clear across to a secure fastening in the tailpiece, which finds its support in a solid block in the end of the instrument. The strings are supported, however, near the middle of the top by the bridge, which conveys the vibrations to about the center of the instrument, from which point they radiate outward in circles. So the basic form of the violin is a circle, cut away on the sides, however, to facilitate bowing. The vibrations, radiating outward in circles, are very much aided by the graduation of the plates from a thickness of about 3-16 where they begin to an extreme thinness near the edges. Less than half an inch from the edge, however, the plates begin to thicken again, so as to increase the strength where they are joined to the sides.

How does the back enter into vibration? Chiefly through aid of the soundpost, situated near the right foot of the bridge. The graduations of the back are not so varied as the top, as the purpose of the back is to give body, resistance, and power to the tone coaxed from the strings and amplified by the top. Power is also increased by adding pressure to the bridge. The strings help here, and to increase their pressure the neck is tilted back. Even the pressure of the bow helps a little to press the bridge down and add tension to the vibrating plates.

High arching makes possible a thinner plate and gives intensity to the tone, while the bass bar helps to stiffen the arch and thus to allow of still further reduction of the thickness of the top without reducing the volume of tone produced by the delicate strings.

To reduce the plates too much would result in a tone such as cheap violius have made familiar to all. This is the easiest way of making an instrument responsive to the strings. Their response, however, is unsupported, the carrying power is *nil;* the power of the artist cannot be expressed because the instrument is itself lacking in depth of feeling, in resistance.

To know just how to graduate the plates so as to coax the decreasing power of the vibrations to travel to every part of the plate, and to know where certain tones can be found on the plate, so as to bring them out, is the task (and the joy) of the violin maker. To this he devotes years of experimenting. If he masters the art he is to be classed with painters, sculptors, architects, and poets, and paid accordingly. This, of course, provided he has in the meantime developed a cunning with his knives and chisels, gluepot, and varnish brush. In other words, he must know how beautifully to house the soul of the violin, its tone.

I once examined a Stradivarius belonging to a great concert artist for fifteen minutes, carried away by its beauty of outline, its magnificent varnish, its perfect scroll. The owner awakened me with a smile and the remark, "Why don't you try it?" as he handed me the bow.

Such was the harmony of outline and color, the temple of a superb tone, toward which all violin makers strive. From what has appeared above it is reasonable to conclude that cunning hands have succeeded in producing violins satisfactory to the eye more often than they have satisfied the ear. Color of varnish and harmony of lines are easier to produce than color and harmony of tone.

THE PREPARATION FOR ENSEMBLE PLAYING

BY EDITH L. WINN

FAULTS OF THE YOUNG ORCHESTRA PLAYER

UNSTEADINESS of the left hand is a great menace to technic. The fingers should fall with force. They should also be curved. The fault of putting the fingers down in such a way that they fall in at the first joint, that is, counting from the finger-tip, is a common one, and the consequences will be disastrous if it be not promptly checked.

Care must be taken that they go down on the fingerboard, having the shape, as near as it can be described on paper, of three parts of a square. The majority of teachers have a very trying time getting the third and fourth fingers of a pupil's hand to go down on the string with the proper formation; and the difficulty is supplemented by an additional trick which the fourth finger has of sinking underneath the neck of the violin when the third finger is put down. The fourth finger should be in the plane of the third.

The fingers must fall with force. In chromatic scales, the fingers move forward on the string lightly but they should not be raised.

Amateurs always jerk the bow because they cannot estimate how far to draw the bow in a given length of time. Repose of the bow arm is often believed to be coincident with lack of force and fire. The classical soloist rarely makes a good orchestra routinist, because he exaggerates the legato and its purport in works requiring short, sharp strokes.

PASSING FROM A LOW STRING TO A HIGH STRING

Passing from the first string to the fourth string and at the same time refraining from sounding the intervening strings is difficult. Practice should be developed along the following lines:

Play nearly a full bow and stop. Then pass to the fourth string with that part of the bow which remains without making the slightest sound, at the same time retaining the pressure on the bow. The same principle holds good for the up bow. This should be practised slowly until some measure of success be attained; then gradually increase the speed.

The same principle is applied to the passing from the second to the fourth string, and fourth to second; only, of course, fourth to first and first to fourth passes are the most difficult, there being more space to traverse. Relax the elbow instantly. Auticipate the plane of the new string.

METHODS OF OBTAINING TONE COLOR

Graduated tone is a necessity to the young orchestra player. A virtuoso always practises slow bowings. Here are a few rules:

Practise the G major scale in three octaves, thus:

1. Whole bow, count 10 slowly.
2. Whole bow, count 20 slowly.
3. Whole bow, slowly, several shades of tone.
4. Use other scales (the vibrato is necessary).
5. In order to increase tone, draw the first finger out and away from the other fingers.
6. Connect the tone well at the point and heel of the bow.

Very few bows remain fit for orchestra work unless rehaired once in two or three months. One should have a solo bow and an orchestra bow. The bow should be used in its entirety. Rules of orchestral bowing are such that the amateur is easily noted,

as he invariably plays with a small, hesitating stroke. A good idea of varied bowings should first be obtained from Kreutzer's études, using Massart's bowings. Then standard works should be analyzed.

THE CONTROL OF THE RIGHT ARM

Only skilled orchestra players understand the routine of bowing. There are two ways of producing a telling tone:

1. By placing the finger firmly on the strings; 2. By controlling bow pressure. This pressure, I affirm, comes from the first finger. People schooled elsewhere, affirm that it comes from the second and third fingers. The fourth finger need not leave the stick.

There are four elevations of the right arm, one for each string. When playing on the first string the arm should be on a plane toward the A string. The elevation for the second string is a little higher than for the first string, but the arm should be raised higher still when playing on the third and fourth strings.

Put up the violin and draw a down bow on the fourth string till the bow is in playing position at the point. The arm should be lowered slightly to pass to the third string elevation, but there is a difference when passing to the second string, for the arm lowers considerably in its course to that string, showing that the elevations for the third and fourth strings are near each other, whereas between the second and third strings the difference is considerable. the elevations for the second and first strings resembling the third and fourth in being in such close proximity to each other.

The upper portion of the arm is used for two purposes—the principle being to cross from one string to another, the arm being worked up and down according to the string the player wishes to reach. In fast work, however, and where only a small portion of the bow is used, the wrist makes the crossing from one string to another, only, however, on adjacent strings. See Sevcik's *40000 Bowings*, Book V, or Casorti's *Technic of the Bow*.

The second duty is to begin and complete whole bows. If the bow is not parallel with the bridge and fingerboard, the tone will not be satisfactory. Attention must therefore be directed to the working of the down bow, and great care taken to watch that the upper portion of the right arm never comes past the line of the back.

The down bow should be played thus: Place the bow near the nut on the string, and let the bow descend until the upper portion of the arm comes into line with the back. When the arm reaches this position the elbow-joint comes into play; the forearm should descend; the full bow is completed with a slight inturning of the wrist.

Playing a full up bow, however, is much more difficult than down bow. The point of the bow should be placed on the string; the wrist moves first, and the upper portion of the arm should meanwhile be practically steady. After the wrist has moved, the forearm should rise towards the strings, using the elbow-joint only; when it is up as far as it will go, the upper portion of the arm should complete the whole bow, the wrist, the forearm, and upper portion of the arm moving in sequence.

When playing on the first and second strings the bow is worked on the elevation which has been already explained, but achieving the mastery of playing up bow on the third and fourth strings is more tedious. Anything of the nature of downward pressure in violin playing is bad, and if the arm is kept on the same elevation all the way while playing an up bow on the third and fourth strings, the tone will be very unsatisfactory. The attention of the student is drawn to the following explanation:

When about half of the up bow on the third and fourth strings has been played, the elbow should sink slightly during the latter half. If the bow has been raised all the way while playing full up bows on these strings, the pressure will be downward; and it is a "draw" across the strings that is required, not perpendicular pressure. Some players curve the wrist too much when playing up bow. It must be distinctly understood that there should be no exaggerated curve on the wrist, for it is useless. An easy curve is all that is required.

If the bow arm seems awkward, practise forearm bowings (Kreutzer, second étude), and bend in elbow sharply in up bow. The arm should always be brought well under the violin. Chin rests or pads should be used. If an unsightly bunch appear on the jaw, place a silk handkerchief over the chin rest.

Do not press the corner of the jaw on the chin rest. but hold the head more erect and press only on the edge of the chin rest with the front of the jaw. Do not raise the shoulder when playing.

EDWIN GRASSE

EDWIN GRASSE, A MUSICIAN WITH A VISION

BY EDWIN LITCHFIELD TURNBULL

(From *The Evening Sun*, Baltimore)

When I first met Edwin Grasse at Nantucket last summer I heard of an incident in his life which gives the keynote to his character.

A famous oculist had suggested that an operation might partly restore sight to the musician, who had been blind almost from birth. But Grasse replied that the world seemed so beautiful to him now that he would prefer not to have the operation, lest in gaining his sight he should be robbed of some of his delightful impressions of the world he had never seen. What an example of cheery optimism is this remarkable musician, to whom life means joy and to whose sightless eyes all things are beautiful!

Small wonder that such a spirit should find happiest expression through the noble art of music, and that those who hear the soulful tones of Grasse's violin should become converts to his cheery philosophy of life!

And so Edwin Grasse is a musical missionary. Not yet thirty-two years of age, a tall, graceful figure of a man, with broad brow and always a happy smile, it would be remarkable for any musician with normal sight to have accomplished what Grasse has done.

At seven he began to compose. At fifteen he was graduated at the Conservatory of Brussels, with first honors of the violin school, as pupil of the famous violinist César Thomson. Soon afterward he made a tour of Europe, winning golden criticisms in some o the chief musical centers of the Old World.

He is an excellent pianist and a masterly accompan ist. He hears a song once and then it is fixed in hi marvelous memory and he can give his whole atten tion to the singer. Need I say that they love to sin to his accompaniment?

He does some wonderful musical stunts on a littl melodeon, almost pocket size, which he carries aroun with him, and from which he produces prodigiou orchestral effects. It is marvelous to hear him pla the *Vorspiel* to *Die Meistersinger* or the *Liebesto* from *Tristan*. The sound of cymbals and other or chestral effects he cleverly imitates with his lips, an the little organ becomes a whole orchestra!

Another remarkable musical stunt which alway greatly delights his audience is a wonderful imita tion of chimes upon the piano.

Of his violin playing, a recent article in *The Ou look* says: "His violin does not speak, it sings. Ac cording to Mr. Grasse, life is happy. There ar minor strains in his music, but they are not th strains of real deep grief. They have that sort o youthful sadness that is part of life's pleasure Mr. Grasse's technic is remarkable, but he wi his audience, not because of his technical mastery o the violin, but because he understands the musi that he plays and knows how to convey it to h hearers."

As a composer, Grasse has been likened to Men delssohn, his writing having much of that sam buoyant joy and graceful melody. Much of his mus is already published and his violin compositions ar favorites with the greatest living woman violinis Maud Powell, who is generously reported to hav remarked of Edwin Grasse, "He has more music i his little finger than have I in my whole body."

He writes for piano and for voice, and also fo orchestra, and there, indeed, seems to be no lim to which the ambition, achievements, and spirit o Edwin Grasse may not attain.

He is a great artist, a poet, and a philosopher noble spirit.

NEW DISCOVERIES REGARDING PAGANINI TECHNIC

BY ALBERT GREEN

Paganini used a method thoroughly in acco with scientific principles and yet differing absolute from the prevailing systems of his time and from t systems now in vogue in all the musical institutio of the world.

That this method was productive of most r markable technical results cannot be disputed, f he played as no man had ever played before. Y the principles governing his technical method r mained a secret, simply because violinists tried master his compositions, using the methods o ployed by the schools; and they attempted t impossible.

Paganini's method was based upon several scie tific laws governing string vibration. Sympathe vibration played an important part in the soluti of the rules governing these laws.

To how great an extent open strings affect t other tones on the violin can be demonstrated removing all the strings save the D string. Note h poor and thin are the tones of this string under th conditions. Replace the E string and very lit noticeable difference in its tonal quality resul Replace the A string and there is quite a cons erable improvement; and when the G string added resonance and quality are imparted to the semitones.

51 West 76th St., New York City

Every violinist of ability uses sympathetic vibration to a certain limited degree, consciously or unconsciously. Generally the performer depends upon the natural keenness of his hearing to determine pitch, unconsciously noting the more vibrant quality of true semitones, but not perceiving the reason therefor. One of the main reasons why semitones, perfectly in tune, are more resonant and smooth than untrue or false tones is due to the fact that true semitones are closely related harmonically with one or more of the open strings, while false semitones receive no sympathetic vibration from any of the open strings.

Paganini noticed that the open strings G, D, A, and E exerted an influence over every G, D, A, and E on the fingerboard, giving undue prominence to these tones, so he tuned his violin a semitone higher to remedy this unmusical effect. He did not thus tune in order to deceive the public and musicians, as has so often been stated in his biographies. That he did this for purely scientific reasons can be proven beyond cavil by one other act of his which thus far seems to have escaped the attention of investigators. His violin, being tuned to A flat, E flat, B flat, and F, and the string orchestra which generally accompanied him having their instruments tuned to C, G, D, A, and E, he thus had nine of the twelve semitones in music in open strings, adding sonorousness to his solo part. Nor is this all.

The keys of E flat, B flat, and F contain, in their major scales, these tones, E flat, E natural, F, G, A flat, A natural, B flat, C, D, exactly the same tones, as are open strings in his ensemble. Then note this fact that all Paganini's compositions in so far as his concert pieces are concerned, that were played with orchestra, were written in these keys of B flat, E flat, and F. (The difference in the signature of his solo part is due to the raised pitch of his violin.)

In his G string solo *Moise* he raised the pitch of his G string to B flat and thus had in open strings B flat, E flat, B flat, and F. This composition is written in the key of E flat and in this way he had the octave and fifth of his keynote in these upper strings. The tonal effect of these upper strings upon the resonance of his lower string is something remarkable. (He did not tear his strings from his violin when he played these G string solos as has been stated by some fiction writers.)

Nor did his use of the sympathetic vibration cease here; these facts are the mere beginning of the use of his marvelous force.

His studies disclosed to him that lower tones affect upper tones in all cases to a greater extent than when the case is reversed. He learned that in octaves this lower tone so controlled the upper one that finger pressure was almost unnecessary, that sympathetic vibration caused the upper tone to vibrate in harmony with the lower tone. But he also found that bow speed must replace bow pressure, and followed this rule throughout his lifetime. Nowhere in his compositions do we find slow heavy bow strokes as in compositions by Spohr and others.

He found that tenths, sixths, and thirds were susceptible in a lesser degree to this sympathetic influence.

Finding that sympathetic vibration allowed of a lighter finger pressure in this case, he sought to evolve a system that would be founded upon the minimum finger pressure instead of the maximum pressure as demanded in the Spohr method. That he was successful is shown by the results.

This minimum finger pressure brings other scientific truths to light, foremost being this fact: The entire string vibrates under the fingers at all times, and thus tone quality is improved from the additional overtones resultant from that portion of the string usually shut off by finger pressure. This method demands considerable readjustment from the prevailing methods but the results are immediately apparent. Finger pressure must no longer precede bow pressure but becomes a simultaneous act, both finger and bow must gradually breathe the tone, there is no forcing of tone. The smaller tone of this method possesses more carrying power, due to the additional overtones mentioned above, and the quality is of the utmost sweetness.

This method also allows of the utilization of the rebound of the string as a string forced from its natural horizontal position is pushing in the opposite direction with exactly the same amount of force as the finger is exerting.

This method compels relaxation and allows the fingers a freedom utterly impossible under the Spohr method. Effects seemingly impossible of accomplishment become perfectly easy when the string is allowed to vibrate in its natural manner.

Other truths which have yet to receive the approbation of science become apparent when the string vibrates naturally, the most remarkable and almost unbelievable discovery being that every true string will produce only perfectly true semitones unless the string is forced from its natural full length vibration.

When our artist violinists apply these rules as did Paganini then will we hear his compositions played as he played them. As it is now the few artists playing these works apply these rules to only a limited extent or they would not be able to play them at all.

Relaxation and speed must act together. Under the Spohr rules relaxation to the extent necessary to play these works is a physical impossibility.

———o———

VIOLIN PIECES BY LEO ORNSTEIN

THREE RUSSIAN IMPRESSIONS, OP. 37

VIOLINISTS will be delighted to see these recent works by an American composer who looms big in the public eye because of the extremely modern and impressionistic character of his compositions for the piano, and his splendid art as a virtuoso pianist. No. 1, *Olga*, is a rather animated waltz, moderate in difficulty. No. 2, *Natascha*, a romantic minor melody introducing some strange melodies. No. 3, *Sonja*, brilliant, and with a strongly marked rhythmic character.

These pieces are quite in the violin idiom, and not in the extreme modernist vein which distinguishes the composer's piano works. They are being used this season by artists of distinction.

———o———

Only a small number of public school music teachers can play the violin. It will increase your efficiency as a supervisor, if you train yourself in this new line which is in big demand.

RICHARD KEYS BIGGS

THE MAKING OF THE CONCERT ORGANIST

BY RICHARD KEYS BIGGS

Organist and Choirmaster of St. Luke's P. E. Church, Brooklyn, N. Y.

It is unnecessary to attempt to fix any definite line of demarcation which shall at once separate the field of the concert organist from that of the church organist.

In nearly every instance these two branches of the profession go hand in hand. It may, however, be reasonable to say that the one is merely an enlargement or outgrowth of the other. All concert organists have, at one time or other, been church organists, and indeed we find that most of them continue to retain church positions even when their concert horizon has assumed definite proportions.

Just wherein the subtle quality lies which enables an individual to become a successful and truly great concert organist is difficult to point out.

To begin with, we must look at the concert organist and his development in the same light as we do the pianist or violinist of the same inclinations. He has, without doubt, had from early youth an overwhelming ambition to become a skilled performer upon the instrument for which nature has selected him. This ambition is of such a character that it enables him to center his entire thought and endeavor upon the instrument in question. Its every aspect is the object of his sincerest admiration, the goal of his dreams. As he grows older he is enabled by closer contact with the instrument to form within his mind certain definite ideals relative to his future attainment.

At first these ideals may be limited in scope. If limited through excessive modesty, as is often the case (and this is a decidedly good sign), these ideals will grow in size and gain in strength and breadth as attainment brings added confidence. The degree of his attainment will be measured by the quality and intensity of his early ambition, the loftiness of his ideals, and the persistence with which he overcomes every obstacle standing in the way of the fulfilment of his desires.

And in no other branch of the musical profession has the young aspirant more to contend with than in organ playing.

I will not here enumerate the many difficulties he encounters in obtaining daily practice; the defects of the organ he finds; the interference which he continually meets with. Every student has encountered these time and time again. I wish merely to point out that all these hindrances must be expected, and, what is more, they must be unflinchingly accepted and overcome if success is ultimately to crown his efforts.

Let me here again emphasize the importance of undaunted persistence, of dogged determination to continue and to succeed, even in the face of the most disheartening circumstances. The reason we have today so few really good church organists and still fewer good concert organists is because the problems which confront the student in his early and most important stages of development seem to him of such insurmountable proportions that he too often allows his ambition and ideals to be shattered.

Many a time have I heard a really talented player, perhaps one filling a splendid church position, which he manages to hold by virtue of his talent alone (he having attained almost nothing by hard work), complain that the organ offered such a limited field for concert work, is so little understood by the masses as well as the critics, and is so difficult of access for practice, etc., that to spend the amount of energy necessary to master it in a concert way seems to him an absurd task.

True, the field for the concert organist is somewhat limited, the instrument is not so well understood as many others, and the difficulties of practice are often very trying. But to the man who has deeply rooted within him the real ambition, the lofty ideal, and the determined persistence, all these handicaps will, in some manner, be met and overcome, and his endeavors will, in the end, be rewarded with success and recognition.

I have often heard organists say that their churches are so cold during the week that it is impossible for them to do any practising. This excuse is absurd.

By spending a little less than five dollars plus a certain amount of ingenuity any organist can build or can have a carpenter build for him a light, collapsible cloth screen consisting of three sides and a top to enclose the console of his organ. For a couple of dollars more he can purchase a small electric or gas heater to place inside. This outfit can be put up in place in five minutes on Monday morning and taken down in half that time on Friday or Saturday night. In the meantime he will have provided himself with a snug, warm little tent in which he can do his daily practice in the coldest weather.

The trouble is that organists *don't want to practise.* So long as they can play the hymns, anthems, and simple preludes in a manner somewhat acceptable, they are satisfied. And indeed many organists who give weekly recitals rely upon a paltry three or four hours in which to prepare a program. Who would go more than once to hear a pianist or violinist in concert if his week's preparation had consisted of three hasty hours, and these given mostly to technic? And yet many organists expect this amount of practice to enable them to show the public what organ music sounds like.

To become a concert organist of equal rank with our best pianists or violinists it is necessary to spend many hours daily in hard mental and physical work. The pieces must be studied with that close attention to detail, that intimate knowledge of the possibilities of every measure and every phrase of the music which alone can make for greatness in the performance.

The present writer has spent many pleasant hours in the company of pianists of distinction comparing notes upon certain aspects of pieces common to both the piano and organ, in which the exchange of ideas upon the interpretation of certain measures in question and the broadened horizon resulting therefrom has been most stimulating and helpful to both alike.

When will organists realize that only by constant and persistent daily work upon technic, upon the details of interpretation, and by the enlargement of their mental horizon through study will they be able to reach the goal for which so many set out but so few attain?

THE CONGREGATIONAL HYMNARY

BY DR. ORLANDO A. MANSFIELD

As the home country of the hymn tune, the chant the service, and the anthem,—musical forms dating for the most part from the days of the English Reformation,—it is not surprising to find that in England there exists a school of church music superior to all others, that throughout the British Isles every variety of worship music is taken seriously, and that the greatest composers of that country exhibit some of their finest workmanship in the very simplest form of their national church music. Hence all the "chief musicians" of Great Britain write interesting chants, hymn tunes, and anthems, while the advent of a new hymnal is regarded as an event of no small musical importance.

In 1887 the Congregational Union of England and Wales, under the able editorship of the Rev. D. G. S. Barrett, of Norwich, recently deceased, issued the *Congregational Church Hymnal*, a work which placed "not only Congregationalism but the whole Christian church under a deep debt of gratitude." As no modern hymnal is supposed to last more than a generation, the Congregational Union has just issued a new work,—the *Congregational Hymnary*, edited by a strong committee of Congregational ministers, with Sir J. D. McClure, Mus. Doc., as president of the Free Church Musicians' Union, chairman, and Mr. Josiah Booth, organist of Cronn End Congregational Church, London,—perhaps the finest hymn tune writer of the day,—as musical adviser.

Nearly two-thirds of the hymns are to be found in the earlier hymnal, the special features of both collections being theological breadth and textual fidelity, all deviations from the original poems being acknowledged, and the name of the writer or writers responsible for the alterations being fully designated. The hymns number nearly eight hundred, the mu

ernity of their selection being demonstrated by the exclusion of purely doctrinal and meditative poetry, and by the inclusion of numerous hymns for children, young people, and special seasons and festivals, also patriotic hymns, and others suited to the more peculiar needs of twentieth century church life. The authors represent every possible school of religious thought and period of hymnological history. Thus there are about thirty American contributors, including Whittier, Oliver Wendell Holmes, William Cullen Bryant, Dr. Ray Palmer, Theodore Parker, Samuel Longfellow, Mary Ann Lathbury, Timothy Dwight, Washington Gladden, Dr. Rankin, Judson Savage, Samuel Johnson, Samuel Wolcott, Pierpont, Sears, Doane, Hosmer, Burleigh, and many others. The hymn section is followed by an excellent selection of psalms and selected Scripture passages, intelligently pointed, and set to standard and modern Anglican chants, this second section being in its turn followed by a third and final section containing over one hundred anthems, canticles, and responses of moderate difficulty and sound musicianship, in which are to be found compositions by some of the most distinguished English church musicians, past and present.

No human undertaking, however excellent, can expect to be absolutely "without spot or blemish." So we have to regret that there are a few things in the *Congregational Hymnary* which we should like to have been different. In the first place we should like to have seen a larger number of fine new tunes peculiar to the work. This was the strong point in the first edition of *Hymns Ancient and Modern*, the *Hymnary*, and some other collections. Hymn tunes of permanent value will never be discovered if the doors of modern hymnals are too tightly closed in the face of capable but comparatively unknown writers. In the second place we deeply regret the paucity of contributions from representative Congregational organists and church musicians. In the anthem section the late Prof. Prout, Mr. Booth, and Mr. E. Minshall, the former organist of the City Temple, London, are the only Congregationalist contributors, while in the chant section the number is about the same. In the hymn tune section the finest tunes are the forty or fifty contributed by Mr. Booth. These alone would establish a reputation for any musician and should be carefully studied by young composers as models of this class of composition. But besides Mr. Booth the contemporary Free Church contributors are not numerous. They include Dr. Coward, Dr. Leonard Fowles, Messrs. Heddon Bond, M. A., Sidney Hann, J. E. Leah, F. C. Maker, Ebenezer Minshall, and a few others, including the writer of this notice, whose two tunes, *Torquay* and *Chelston*, are named after his former English residence. After twenty-five years' experience in English church music, and as a past president of the Free Church Musicians' Union, the present writer is convinced that there are in England today many Free Church musicians whose contributions, if solicited or secured, would have been an ornament to any compilation. In the third place we deplore the insertion of a few tawdry specimens of the weaker and wickeder American mission melodies which reflect no credit on either composers or compilers. These and some traditional melodies of more or less doubtful origin could have been well spared to make room for representative modern compositions.

But we note with great pleasure the insertion of some of the principal tunes of the English Reformation period, the melodies of which are far superior in source and material to the much-vaunted German chorals. The *Hymnary* also contains a small representation of the fine old English tunes of the 18th and earlier 19th centuries, and includes some of the finest specimens of the work of such representative English psalmodists as Barnby, Calkin, Dykes, Hopkins, Parry, Prout, Stainer, Sullivan, and Wesley,—tunes which have stood and still withstand the fanatical attacks of misguided musical medievalists and antiquarians.

NEW OCTAVO MUSIC

ANTHEMS: MIXED VOICES

BARTLETT, J. C.
No. 12,967. **O eyes that are weary**..... $0.12
Arranged from the popular song, *A dream.*

BERWALD, WILLIAM
No. 12,943 **Again as evening shadow falls** .... .10
Easy, and with a broad lyric style.

BRIGGS, C. S.
No. 12,832. **O God of mercy**..... .10
Short and easy, with bass solo.

HOSMER, E. S.
No. 12,985. **We march to victory**..... .12
A good processional anthem, with optional unison section.
No. 13,026. **We may not climb the heavenly steeps**..... .10
Short and easy, with alto solo.

JAMES, PHILIP
No. 12,956. **O be joyful in the Lord** .... .12
Festival in style; fine organ part.

REED, WILLIAM
No. 12,928. **If ye love Me**..... .16
Suitable for Communion service on festival occasions; baritone solo.

ROBINSON, CLARENCE C.
No. 12,966. **Come, gracious spirit**..... .12
Easy and melodious; tenor solo.

ROGERS, JAMES H.
No. 12,917. **The Lord is my strength**..... .12
Short, easy and inspiring in style.
No. 12,968. **Who is like unto Thee?**..... .12
Strong and vigorous; alto solo.

ROSS, GEORGE
No. 13,010. **Our soul waiteth for the Lord** ..... .12
A singable anthem, with a pleasing section available for a duet, or to be sung by women on one part, men on the other.

STEANE, BRUCE
No. 12,976. **Be merciful unto me, O God**..... .10
Simple and pleasing.

SUDDS, W. F.
No. 12,982. **The day of rest**..... .12
Quiet in style; no solos.

WOOLER, ALFRED
No. 12,970. **My trust is in the Lord**..... .12
Easy and melodious, with tenor solo, and duet for soprano and alto.

SECULAR PART SONG: MIXED VOICES

ANDREWS, ADDISON F.
No. 12,984. **O lady, leave thy silken thread** $0.12
Interesting, with some of the English glee style.

SECULAR PART SONGS: WOMEN'S VOICES

BARNETT, WALTER
No. 12,934. **Sing a song of sixpence** (Arr.)..... .12
For three-part chorus.

BULLARD, FREDERIC FIELD
No. 12,944. **Winter song.** Arr. by L. Lewis.... .12
A special text for women's chorus; four parts.

NEVIN, GEORGE B.
No. 13,002. **With pipe and song** ..... .10
For three-part chorus; fine piano accompaniment.

THOMSON, SYDNEY
No. 12,961. **There is sweet music here**..... .10
A fine concert number; piano accompaniment, humming effects; four parts.

SECULAR PART SONGS: MEN'S VOICES

BANTOCK, GRANVILLE
No. 12,925. **Princely visitors**..... .12
Specially suited for concert use.

BLAND, JAMES
No. 12,952. **Carry me back to old Virginny**..... .12
For chorus, with soprano solo.

BULLARD, FREDERIC FIELD
No. 12,945. **Winter song.** Arr. by Leo R. Lewis... .12
For boys' (school) glee clubs; with 2d bass part *ad lib.*

HATCH, HOMER B.
No. 12,997. **The owl**..... .10
A fine humorous number.

QUEEN LILIUOKALANI
No. 12,964. **Aloha oe.** Arr. by A. F. M. Custance .10
Hawaiian song; chorus for men; baritone solo.

WARD, FRANK E.
No. 12,977. **Field song**..... .12
Southern negro dialect.

Möller Pipe Organs

Twenty-one Hundred in use. The highest grade instruments at moderate prices. Specifications and estimates on request. Write for catalogs.

M. P. Möller, Hagerstown, Maryland

When you write to advertisers, mention The Musician

But in spite of its little defects which could, perhaps, have been remedied by the appointment of a larger and exclusively professional musical committee, the *Congregational Hymnary* stands at the head of all purely denominational hymnals, and represents the high water mark of average English worship music. For worship, for contemplation, for comparison, for study, or for any other lawful purpose the work is practically unsurpassed. Its permanence, too, is fairly well assured. Already a second edition is within measurable distance, and this after only a few months' sales. And we of this hasty and all too inadequate survey would be the last to say that the success of the work is not well and thoroughly deserved.

———o———

THE ECHO ORGAN

BY H. C. M.

On a past occasion I quoted in this column the description of an enthusiastic player as an "unmitigated" organist. Now that the musical season is fully on, may not every occupant of the organ bench profitably ask himself whether he ever gets away from his instrument? Do you, dear friend, practise organ, think organ, dream organ and nothing else? Are *you* an "unmitigated" organist?

* * *

"But," you indignantly exclaim, "why shouldn't I practise, think, and dream organ? How else can I arrive at the technical proficiency, at the mastery which is my dream and ideal? Would you have me rest satisfied with my attainments? Might I not as well croak' as give up hard, absorbing work on my instrument?"

* * *

It is indeed true that with the average organist there is more danger of laziness (see Mr. Biggs' article in this number) than of excessive, too-absorbing work. On the other hand, to reach the highest success in any walk in life we must remember that, as in the case of the broad river, it takes many small streams of endeavor to make the full wide stream of success.

* * *

The point I am trying to make is kept in mind by the conservatories when they insist on a *second study*. I have a friend who is a concert pianist; when going through the conservatory he took the bassoon as second study, playing for four years in the conservatory orchestra. Another friend, also a pianist, took violin as his second study, and led the local symphony orchestra for several years. A violinist I know, not an orchestral player, had the French horn for second study.

* * *

An "unmitigated" organist is one "who thinks of everything in terms of the organ and the church." He is a squirrel in a cage.

* * *

It is impossible to attain the highest success in any branch of our art unless we set Musicianship as the goal.

* * *

The fees of fashionable music teachers appear astonishingly and embarrassingly high to the person with little money to spend. A Boston singing teacher, answering a knock, found a poorly dressed girl at her studio door.

Teacher—"Good morning!"

Would-be-Pupil—"Go-o-d morning!"

T.—"Will you come in?"

W. B. P.—"Yes—no—I guess—"

T.—"Did you want to see me about singing lessons?"

W. B. P. (*much relieved*)—"Yes, that's it,—about lessons. (*Long pause.*) You give lessons?"

T.—"Yes."

W. B. P.—"How much are they?"

T.—"I have three dollars for a half-hour lesson."

W. B. P. (*thunderstruck*)—"Oh! ah! well,—well,—(*with much relief as a happy thought strikes her*) I'll take a dollar's worth."

* * *

"Do you know Jones, the chap who sings first tenor in the Stravinsky Male Quartet? No? Well, you haven't mi sed much; for although he's not a bad fellow, he has settled down into a groove and is no longer progressive. It is an unfortunate thing for any musician when he feels he has reached his limit; a man must always tell himself in bold, confident tones that the world has much to give him. Whistling to keep your courage up is based on a sound psychology. The cessation-from-whistling period occurs much too early in many people's lives.

"Well, however that may be, Jones is now in the stationary class: his 'job' in the quartet is the only thing that keeps him going, save a church position. He told me about the latter the other day. The organist and director is Smith. You know Smith; he was a pupil of Guilmant and Widor, a very nice fellow and an awfully good organist. According to Jones, however, Smith wears the life out of his choir. Cranky? No,—as pleasant a fellow as you'll ever meet, but with no more idea of the way to treat singers than a horse. Smith seems to think that a singer's lungs are equal to an organ's bellows. Why, they rehearse an hour and a half every Friday afternoon, and a half hour after Sunday morning service. Then, Smith has no idea about phrasing from the singer's point of view, and he never has a clear notion of what he wants. The result is the choir sing a thing over and over again *ad nauseam*. Smith never seems to know just what he is to sing the next day, never looks ahead, wastes a lot of time at rehearsal hunting for music; in fact, he apparently never thinks of the church music from Sunday evening until he gets into the organ loft at rehearsal. But, say, can't he play like a streak!"

[*Overheard in Nostid's Music Store.*]

* * *

Suggestions to directors of choirs:

1. Having chosen your singers, treat them fairly; have no favorites.
2. Work the choir hard in short rehearsals.
3. Keep the choir so busy that they have no time to talk. Only thus can you logically call for their undivided attention.
4. Be your own "boss"; think over the music carefully before rehearsal; mark the phrasing places with blue or red pencil in all the copies so as to secure unanimity of phrasing; anticipate every difficulty and be prepared with practical suggestions for overcoming each one.
5. Have a librarian, even if the choir is a quartet. You can save many minutes.
6. Never rehearse longer than an hour.
7. Look ahead.

* * *

Mr. John Spencer Curwen, the son of the man who made Tonic Sol-fa famous, died in London, August 6. While his activities as editor and publisher of *The Musical Herald*, head of the firm of J. Curwen and Sons, Ltd., and president of the Tonic Sol-fa College, were many, he found time to interest himself in all sides of musical education, and was probably the biggest and broadest minded man in the music business of Great Britain. Mr. Curwen knew everybody in music, and was especially kind to American musicians visiting England. Mrs. Curwen has written a children's piano method, which has been very successful from the point of view of the most modern and sanest thought; she occupies a very influential position in Londo musical education circles. I presume some orga ists have seen Mr. Curwen's *Studies in Worsh Music*, published some thirty years ago; *every rector of music* in church, no matter whether Rom Catholic or Protestant, ritualist or congregatio alist, ought to read these intensely interesti volumes.

A much more than ordinarily strong and usef life is ended. *R. I. P.*

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley-Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY-MATHEWS

It is inspiring to note the change in the attitude of the average piano teacher toward her work. It has been my privilege to come in close contact with something over two hundred earnest teachers during the past summer. As a result, I feel that the change which is taking place in the teaching body in piano work promises a wonderful future for music in America.

Teachers in the country towns and smaller cities are awake to the situation and to their opportunity as never before. All are ready for modern methods, modern music, and a finer understanding of the music that has made this world of new music possible.

They are beginning to realize that music is a formative factor in education and that they can be a power in their communities if their eyes and hearts are turned toward Zion.

How many times during this past summer I have heard, "I must get the inner content of this work, for I want to take it home to my people!" A very different attitude from that of the teacher of twenty-five years ago who came to the city for a name rather than for *work*.

I know of nothing more refreshing and stimulating than to work hard all winter with little ones and others, and then to have the privilege of meeting teachers in the summer, and of going over methods and materials as well as practical helps which all teachers are so anxious to find.

We are anxious to serve teachers and students through this Department, and any service that is within our province will be eagerly rendered.

Questions will be answered as soon as possible in the order in which they are received. Subscribers must bear in mind that THE MUSICIAN goes to press thirty days before it is delivered, and will therefore make allowances for the time which must of necessity elapse before their questions can be answered.

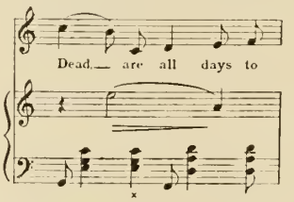
In playing a dotted eighth and a sixteenth note in the treble against a sextolet in the bass, as in the accompanying music, mathematically speaking, should not the sixteenth note in the treble be played a fraction before the last note of the sextolet in the bass?

S. I. O.

Yes. I always think this passage in $\frac{2}{4}$ for right hand and $\frac{6}{8}$ for the left-hand part. It seems to me that it would be so written if noted for orchestra, and that it is easier to understand if the measure is thought of this way. Many teachers think it goes so fast that it doesn't matter; but it seems to me that it does matter. I like to have the sextolet even without any subdivision, and if it is taught as above it sounds free rhythmically and very different than if subdivided.

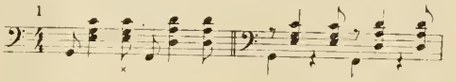
* * *

Will you please explain the time in marked measure enclosed? In this time I thought it takes four quarter notes or their equivalent to fill a measure. But here I find three quarter notes and three, instead of two, eighth notes. In some passages I find marks of this kind /, connecting notes in the lower with those of the upper staff. What are they for?



S. L.

1. There is a misprint (X). It could have been written in two ways as given below, but I imagine the first way is what was intended.



2. This mark shows the direction of a melody voice. It simplifies writing sometimes to carry a melody into the G clef from the F clef or *vice versa*. In the *Sandman*, by John Carver Alden, on the second page, you will find extract given below. The melody runs from E to the C♯ on the F-clef staff, then back again to the C♯ on the G clef (which is the same tone as the C♯ in the F clef previously played), then down again to the B on the F clef staff, and then the melody closes on A in the F clef.

I give this example, as I fancy it illustrates what you want to know. Mr. Alden has written this in this way, as it shows which *hand* is to play the melody. All the notes on the F-clef staff are played by the left hand, and those on the G-clef staff by the right hand. These marks help to direct the attention of the young student to the melody and still have the distribution of the hands as the composer wishes.

* * *

Will you please print in the next issue of THE MUSICIAN the answers to the following questions:

1, What store in Chicago sells all sheet music for the grades for ten cents a copy?

2, How can a girl just starting to teach prevent her few pupils from loving her to death and wanting to be with her all the time? I would love to have them, but have other things to do.

3, What shall I do with a mother who is so strict with her child that she is going to make her hate music? I can do almost anything with her through kindness. An Earnest Beginner.

1, I do not know, for the reason that I never use the ten-cent editions.

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment—a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

Sohmer

315 Fifth Ave. New York, N. Y.

When you write to advertisers, mention The Musician

2, Here again you are outside of my experience. I have never had that trouble. You will have to turn their regard to the art rather than to you personally, and I imagine that when school begins and hard work and discipline in music along with it, you will be able to hold their affection, but not to such an extent that it will take your whole time. I do not believe in knowing one's pupils too well socially. If you can keep them with you only for the lessou hour, in the long run you will have more influence with them in the classroom.

3, We all have such parents, and sometimes they cause us more trouble than those mothers who have the "bridge" habit to such an extent that they cannot look after their children at all. There are some parents who appreciate so little how to handle their children that they punish them by makiug them practise an extra hour.

It is very hard tc make such parents over, but it has to be done before one can succeed with the child. I can find only one way to succeed with children, and that is by insisting that the parents keep out. I am very frank and honest in my dealings with them.

I tell them that I am supposed to know my business, that they think so or they wouldn't apply for time for their children; that I take the contract to not only give lessons but to *teach* their child. I am not taking the contract to teach parents, and if they will leave the music entirely in my hands I can give them results that will bear out my statements of doing creative music teaching.

But I insist that they must keep their hauds off. All their duty in regard to the music is to make a regular time for practice, to take a deep interest in what the child is learning, showing that interest by asking him to play at every opportunity as well as to converse about the work, and last, but not least, to pay my bill promptly. In this way I am enabled to keep out the element of nagging as to practising, and find that my children practise more, and, which is still better, far more intelligently than when the parents are constantly demanding hours of work which the pupil puts in merely because he must and the parents are calling time on him.

I judge by your letter that you are going to be a success in the highest sense of the word. If you can keep the affection of the pupils and still get the work done as you want it, you will fiud music teaching one of the most satisfying of professions.

LEARN PIANO TUNING

AN OLD PROFESSION

EDITORIAL NOTES

(*Continued from page 668*)

Sue Baxter waiting to begin lesson, set for 9.30. At 9.36 telephone rang, Miss P. spent three minutes talking with dressmaker; vexed over delay in finishing a gown. Sue seated at piano, 9.40. "What is the lesson today, Sue?" Two minutes to find it. Recitation not very satisfactory. Miss P. still irritable on account of trouble with dressmaker. Corrections made sharply, and very frequently. Sue sulks and lesson ends at 10.06, with child in tears; told to take lesson over again.

At 10.10 Christine Nelson appears, out of breath. Five minutes used in reproofs and explanations as to cause of tardiness as well as finding place, 10.15 to 10.40 spent in lesson, well-played, with suggestions for further study. Three minutes taken up in discussing next lesson and in writing order on music store. Postman knocks, 10.43, and Miss P. reads two letters while another pupil waits. New lesson begins, 10.46.

This is a typical studio experience. It indicates a low ideal of Efficiency or indifference to Fair Deal. On a basis of 100 per cent Miss Parry will get a marking of about 45 per cent.

It's not enough, is it? It's not fair to the pupil, either.

TEACHER AND PUPIL PAPERS

(*Continued from page 663*)

is possible for students who live elsewhere than in the two or three largest cities to get the books which they must read.

Chicago, I think, leads in this movement of circulating musical literature, and it would seem as though at last municipal and federal encouragement would take the place of the old nobility.

THE DAILY LESSON

Also, the daily music lesson, once thought so impossible a thing, is at last passing from the ideal into the actual state. A *Daily Lesson System*, entirely practical, has been published by A. H. Hamilton, and used with success by many teachers, and in one of the schools, the Washington Irving in New York, there is actually a room devoted entirely to music. This is something which needs only to be started to be widely copied, and why should musicians wait for someone else to do the starting?

There is no reason why the musician should not be subjected to the efficiency test as well as all the rest of the world. It is for us to *prove* that music is a necessary part of the child's education and a real character builder; it is for us to *gain the means* by which it is possible to do this. It is not enough to make our pupils mere "singers" on the piano; we have got to make them musical *thinkers*.

To do this it is necessary to have the very best musical thought of our day to give them; we must have a means of saving musical talent for the music life; we must have the right kind of music and musical literature available in the rural districts as well as in the cities; and we must have *time* enough with the pupil to make music a *living* art form to him, that he in turn may be prepared to pass the "efficiency test" and to be able to do, musically, all that is expected of the Young Person of today in the community of which he is a member.

BOOK NOTES

Listening Lessons in Music, graded for schools. By Agnes Moore Fryberger. Silver, Burdett & Co. Price $1.25.

The great question of public school music is closely bound up with material and equipment. So long as the work was confined to vocal music as sung by the children, the problem was by no means complicated. But it proved impossible to make the pupils familiar with instrumental music until the player-piano and the phonograph were improved and commercialized. And the former is not so easily accessible to most schools on account of the expense.

But the comparatively small price for a good Talking Machine has made it possible to bring to the children of a school the masterpieces of music, vocal and instrumental, and thus open the way to a familiarity with music such as is the case with literary masterpieces.

The pressing problem has been a text book which shall indicate the methods whereby the subject of the appreciation of music shall be practically and clearly presented to our children in the schools. There is an education in participating in music by listening. The organ of judgment for music is the ear and we must educate the ea to a refined and sensitive appreciation of art a expressed through music. *Listening Lessons* is pioneer effort to assist teachers and pupils to sol the problem. The book offers a definite course study extending from the first grade through t four years of high school, and is just as helpful to t grade teacher as it is indispensable to the mus supervisor.

Mrs. Fryberger is assistant supervisor of mus in the schools of Minneapolis and presents mater which has been thoroughly tested in the classroo

What We Hear in Music. A laboratory course study in music history and appreciation. Anne Shaw Faulkner. Victor Talking Machi Co. Price $1.00.

The Talking Machine has become one of the factors in home music life as well as in the ec cational work of the schools, and the rate of progr has been so rapid that educators have only beg to meet the demand for material to assist in t

27-29 GAINSBOROUGH ST., BOSTON, MASS.

work. The Victor Company, through its Educational Department, of which Mrs. Frances Elliott Clark is director, has been active in the field, and this new work supplies most admirably the needs of music students in high and normal schools, colleges, universities, conservatories, and music lovers in clubs and the home. The text of the book covers the following subjects: The principles of music; The history of music; The orchestra; The development of instrumental music; The opera and oratorio. Each of these courses is divided into thirty lessons with illustrations to be given with Victor Records and Victor Talking Machine.

GENERAL NEWS ITEMS

W. H. Liddle, an English song composer, well known to American singers through several fine sacred songs, died last July.

Albert Spalding is using a number for violin and organ in his recitals this season, the *Prelude* from Saint-Saëns' *Deluge*.

The Music Teachers' Association of Connecticut held a meeting at Hartford, October 6. Miss Kate Chittenden gave an address on "The personal relationships of teachers." It is expected that a fair representation from this Association will be present at the convention of the Music Teachers' National Association, in New York, during the Christmas holidays.

Mr. Bernard Sturm, of Cincinnati, has resigned from the Symphony Orchestra, and accepted a position as head of the violin department of the Pittsburgh Musical Institute.

The Zoellner String Quartet recently made some records for the Columbia Graphophone Company. Ensemble music for stringed instruments is one of the effective styles of phonograph records.

The Symphony Society of New York, Walter Damrosch, conductor, will have several tours this season, the most extended being that to the Pacific coast, and back, March 19-May 22. Efrem Zimbalist will be the soloist. This is Mr. Damrosch's thirty-second season with the orchestra. Two Americans, Chadwick and Loeffler, will be represented on the programs of the Society.

DeKoven's new opera, *The Canterbury Pilgrims*, is included in this season's program of the Metropolitan Opera Company, New York. The season begins November 13 and continues for twenty-three weeks.

Charles Wakefield Cadman assisted by the Princess Tsianina Redfeather, Indian mezzo-soprano, gave a recital at New York October 17, presenting interesting examples of Indian music.

During the month of October, Lyon & Healy, the well-known music house of Chicago, made a large shipment of their instruments to Iceland.

The Royal Choral Society of London, Sir Frederick Bridge, conductor, will give eight concerts this season. Handel, Mendelssohn, and Bach are represented on the program, despite some outcry against German music; Verdi, an Italian, is represented by his *Requiem*,—eminently suited for use during the war period, the other composers being English.

The Guildhall School of Music, which is supported by the London City Corporation, showed a loss of about $20,000 last season. The deficit is almost wholly due to a loss in the number of pupils seeking instruction.

Victrola

The chosen instrument of the world's greatest artists

The instrument which plays the greatest music is the instrument you want in your home! The Victrola is supreme. Its supremacy is founded on a basis of great things actually accomplished. It is in millions of homes the world over because it takes into these homes all that is best in every branch of music and entertainment.

The artists who make records exclusively for the Victor are the greatest artists in the world. The Victrola tone is the true and faithful tone of the singer's voice and the master's instrument. It is for this reason that the Victrola is the chosen instrument of practically every artist famous in the world of opera, instrumental music, sacred music, band music, dance music, vaudeville and entertainment.

Go today to a Victor dealer's and listen to this instrument for yourself. Hear Caruso or Melba or Elman or Harry Lauder or Sousa's Band on the Victrola.

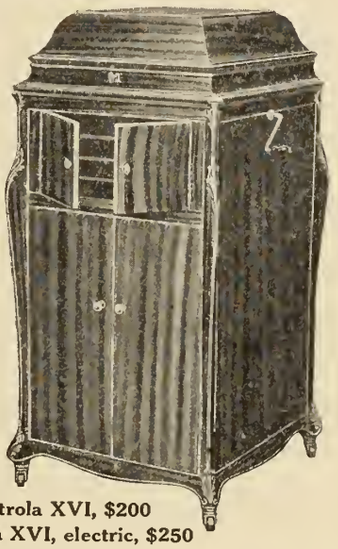
Victors and Victrolas—$10 to $400

Victor Talking Machine Co.
Camden, N. J., U. S. A.

Berliner Gramophone Co., Montreal, Canadian Distributors

Important warning. Victor Records can be safely and satisfactorily played only with ***Victor Needles or Tungs-tone Stylus*** on Victors or Victrolas. Victor Records cannot be safely played on machines with jeweled or other reproducing points.

To insure Victor quality, always look for the famous trademark, "His Master's Voice." It is on every Victrola and every Victor Record. It is the identifying label on all genuine Victrolas and Victor Records.



New Victor Records demonstrated at all dealers on the 28th of each month

Victrola XVI, $200
Victrola XVI, electric, $250
Mahogany or oak

The Oratorio Society of New York will give five concerts this season: *Joan of Arc*, by Bossi, December 6, *The Messiah*, December 28 and 30, *Elijah*, February 13, and Bach's *St. Matthew Passion*, April 5.

The Philharmonic Society Orchestra, New York, will give forty-four concerts in that city this season. This is the seventy-fifth season of the Society. The orchestra will be directed by Josef Stransky.

The St. Louis Orchestra has been increased by the addition of ten men, mostly in the string section. The orchestra will make an out of town tour as usual.

The Oregon Music Teachers' Association will meet in Portland Thanksgiving week.

Monthly meetings will be held this season by the Associated Musicians of Saint Louis, an organization of local musicians, George Enzinger is president, and Ernst C. Krohn, secretary. The last season was a very satisfactory one, Mr. Krohn reports.

The series of concerts at the University of Michigan this season includes the Boston Symphony Orchestra, which appears January 26. Prof. A. A. Stanley is already preparing for the great Festival in May, 1917.

WITH THE SCHOOLS AND TEACHERS

The Institute of Musical Art began its twelfth year, under the direction of Dr. Frank Damrosch. The total registration last year was 659, with 78 instructors. The Institute has an endowment of $500,000.

The New England Conservatory announces the engagement of a large number of pupils lately registered in the Dramatic Department, with leading dramatic companies.

Miss Eva Emmett Wycoff, former New York correspondent of The Musician, has accepted the position of head of the vocal department at the Northland College School of Music, Ashland, Wis., a rapidly growing city in the northern part of the state.

Music Lessons Sent Free

You too, can now quickly and easily satisfy your musical ambitions—learn to sing or play your favorite instrument, whether for pleasure, social prestige or to teach music, by our wonderful home study lessons under great American and European teachers. The lessons are a marvel of simplicity and completeness, endorsed by Paderewski and other great authorities.

Any Instrument or Voice

Write us the course you are interested in, age, how long you have taken lessons if at all, etc., and we will send you six lessons, free and prepaid, any of the following Complete Courses: Lessons in PIANO (students' or teachers' courses) by the great Wm. H. Sherwood, HARMONY by Dr. Protheroe and Rosenbecker, PIPE ORGAN by Clarence Eddy, VOICE COURSE (with aid of Phonograph) by Crampton, PUBLIC SCHOOL MUSIC, by Frances E. Clark, VIOLIN, CORNET, MANDOLIN, GUITAR, BANJO, REED ORGAN, CHORAL CONDUCTING, by equally eminent teachers.

This offer is Free—we do not ask you to pay one cent for the six lessons, either now or later. We want to prove in this remarkable way what fine lessons they are—SEEING IS BELIEVING. This offer is limited, so write today. A few Special Introductory Scholarships now being awarded by our Faculty. Full particulars sent along with free lessons. Send no money.

SIEGEL-MYERS SCHOOL OF MUSIC,
CLARENCE EDDY, Dean
Siegel-Myers Building, CHICAGO, ILL.

We have received the ninth annual announcement of the Jacksonville, Fla., School of Musical Art, Bertha M. Foster, director, with a faculty of ten instructors.

Mr. Henry T. Wade, director of the Department of Music, Lake Erie College, Painesville, O., has engaged Mr. and Mrs. David Mannes for a violin and piano recital during the coming season.

Mr. Harold Henry, pianist of Chicago, is to give a recital at Carleton College, Northfield, Minn., December 7. Edward Strong is director of music at this important college.

Christine Miller, contralto, gives a recital at State College, Pennsylvania, December 8. The music department of this institution is under the direction of Clarence C. Robinson.

The Pittsburgh Musical Institute opened for its second season with a fine registration. The enrolment last year reached the 400 mark.

Dana's Musical Institute, Warren, O., claims the distinction of being the only music school in the world in which pupils receive daily instruction in every branch of musical and dramatic art. It opened for the forty-eighth season this fall, under the direction of Lynn B. Dana, son of the founder, the late W. H. Dana.

Mr. Arthur Hartmann, the eminent violinist, gave a recital at Houghton Seminary, Houghton, N. Y., September 29, just before he returned to New York to begin his numerous concert engagements.

Mr. Frederick A. Franklin, director of the Fredericksburg, Va., School of Music, acquired a new building for the use of the school which grew very rapidly last season.

Mr. Walter L. Bogert, baritone and teacher of singing, New York, made a number of extensive automobile trips the past summer. He reports a number of engagements for his lecture recitals.

Among the visitors to The Musician office the past summer was D. A. Clippinger, of Chicago, the well-known teacher of singing. In addition to his studio work this season Mr. Clippinger will direct the musical work of the Chicago Madrigal Club, the Berwyn, Ill., Choral Society, the Carson, Pirie, Scott & Co. chorus (200 voices), and the Women's Chorus of the Chicago Culture Club.

Mr. Walter Wismar gave his sixth public organ recital at the Holy Cross Lutheran Church, St. Louis, October 8.

An interesting catalog comes from the Cosmopolitan School of Music and Dramatic Art, Chicago, organized less than ten years ago, and showing a large number of graduates in the various departments.

The Southern School of Musical Art, organized in 1914, has sent us a handsomely printed catalog. Among the faculty we notice Mr. Frederic A. Dunster, who is in charge of the vocal, organ, and theory departments. Music education is making big studies in the South.

Enrolment at the New England Conservatory of Music, Boston, shows an increase in attendance from foreign countries.

A faculty recital was given at the San Marcos, Tex., Baptist Academy, September 12, by the department of music and expression. The music department is under the direction of Albertus Shelley Hiester.

Members of the faculty of the Southern University of Music, Atlanta, Ga., gave a concert, September 28.

Mr. Charles N. Boyd, of the Pittsburgh Musical Institute gave a lecture recital on *Orchestral transcriptions for the organ*, October 12. At the same school, October 31, Mr. T. Carl Whitmer gave a lecture recital on *Some phases of ultra-modern music.*

Miss Jennie Slater, soprano and teacher, of New York, finds the song volumes of The Musicians Library useful in her professional work.

The Combs Conservatory of Music, Philadelphia, reports a very much increased registration. To accommodate this growth an additional building has been purchased and remodeled for school use. A modern three manual organ has been added to the equipment of the school.

THE FIRST AND ONLY BOOK ON THE SUBJECT

The Music Supervisor
HIS TRAINING, INFLUENCE and OPPORTUNITY

By THOMAS TAPPER
Principal of the Department of Public School Music, Institute of Musical Art of the City of New York. Lecturer at the New York University.

Price, $1.25, Postpaid HANDY, POCKET SIZE

The Scope and the Eminently Practical Character of the Book is Shown by the Chapter Headings:

What Music Supervision Involves
The Supervisor as Member of the Teaching Faculty
As Team Worker
As Efficient Educator
As Efficient Musician
Music in Education
The Efficient Assignment
The Grade Teacher's Equipment
The Cradle of Genius
Community Music, Its Possibilities
Community Music from the Private Teacher's Point of View
The Social Value of Music
Music in the Home
The Mechanical Musical Instrument
Music Appreciation
The Newer Problems
Teaching, a Public Service
Studies in Types of Mindedness
Books for the Supervisor

All professional men and women make their way by capitalizing their knowledge, skill, and energy. The better the equipment and preparation, the greater the investment (principal), and the better the return in dividends (salary). "THE MUSIC SUPERVISOR" tells what to do to become thoroughly efficient in the work of music supervision.

TESTIMONIALS

Should be read by every music supervisor.—Victor A. Oswald, Supervisor of Music, Freeland, Pa.

Every chapter contains valuable suggestions and helps.—Harold B. Maryott, Teacher of Public School Music, Chicago Musical College.

A splendid work. I heartily recommend it.—W. G. Alexander Ball, Supervisor of Music, Tacoma, Wash.

Full of very helpful suggestions to any supervisor or prospective supervisor, or any teacher of music.—A. S. Ebersole, Director Goshen College School of Music.

The Child World Playground Series of Seasonal Festivals and Pageants

Arranged by MARI RUEF HOFER

Responding to the revival of interest in Pageants and realizing the **tremendous cultural value** to Child Life to be derived from familiarity with folk lore and mythological tales.

TEACHERS AND DIRECTORS

in Kindergartens, Schools, Playgrounds and Settlements will welcome the recent publication of

CHRISTMAS IN MERRIE ENGLAND **$0.25**
A Pageant with old carols, dances, and a masque.
In this Pageant the quaint old Christmas Carols mirroring the traditions and social customs of Merrie England are woven into a play which faithfully preserves the spirit of "Ye Olden Times."

HARVEST FESTIVAL . . . . . **.50**
The Harvest Festival enacts the story of Mother Earth and her children celebrating the Ingathering in a series of Harvest Dances, preceded by a Processional and a Prologue chanted by an aged Harvester.

SPRING PANTOMIME . . . . . **.50**
Story of the Changing Seasons—
SPRING—SUMMER—AUTUMN—WINTER
The Spring Pantomime depicts the miracle of the awakening of Spring.

These miniature Pageants are woven dramatically out of the folk lore, mythology and the symbolic Nature Characters familiar to the everyday school life of the child. Adapted to small or large classes. Each volume contains detailed directions for performance and all the appropriate music.

CLAYTON F. SUMMY CO., Publishers
64 E. VAN BUREN STREET - - - - CHICAGO, ILL.
Send for full descriptive circular

MR. H. NORDLIN, of St. Paul, presented a number of his pupils in a recital, September 25.

MR. OTTO PFEFFERKORN, director of Brenau College Conservatory, gave a piano recital September 15.

THE Kissimmee, Fla., Concert Band gave a Sunday afternoon of music, September 17, under the direction of G. M. Shearouse, Jr.

MR. PAUL DE LAUNAY, director of the School of Music and Art, Columbia, S. C., sends us a number of interesting concert and recital programs given under his direction. We notice a large number of compositions by French composers on the various programs.

MR. HANS SCHNEIDER, a valued contributor to THE MUSICIAN, sends us an attractive booklet descriptive of his Piano School at Providence, R. I. Mr. Schneider reports a satisfactory registration for the new season.

MISS IRMA SEYDEL, violinist of Boston, and Mr. Clefton Wood, baritone, gave a joint concert at Leominster, Mass., October 6.

THE Horner Institute of Fine Arts, Kansas City, sends us an interesting catalog for the new year. Mr. Earl Rosenberg is director of the school, and we note that Mr. Carl Busch, conductor of the Kansas City Symphony Orchestra is a member of the advisory board. The school shows an enrolment of upwards of 500 students.

SECULAR SONGS

HIGH VOICE

ANDREWS, ADDISON F.
I love my love. [D] [d-*g*] $0.60
A fine lyric song, with an attractive swing to the melody, just that combination of ballad and art song which attracts the hearer and satisfies artistic taste.

HUERTER, CHARLES
Pirate dreams (Lullaby). [G♭] [d♭-*g*♭] 50
A charming lullaby, in which "dreams" are the "pirates" who capture the "slumber boat."

MEDIUM VOICE

ANDREWS, ADDISON F.
I love my love. [C] [c-F] 60
For description see Secular Songs, High Voice.

BEHREND, A. H.
Bon jour, ma belle. [D] [d-E] 60
A humorous song, with an attractive melody; requires a slight knowledge of French or some one to teach the pronunciation of a few words to the singer.

LOW VOICE

BOHM, CARL
Still as the night (*Still wie die Nacht*). Violin or 'cello obbligato. [B♭] [a-E♭] 60
A song from the standard repertoire, English and German text, especially useful for tone color and full resonant voice quality. Obbligato for violin or for 'cello.

HUERTER, CHARLES
A gift. [G] [c-E] 40
A short song, dainty in style, especially suitable for encore use. It can be used by a medium voice.
Pirate dreams. [E♭] [b♭-E♭] 50
For description see Secular Songs, High Voice.

SACRED SONGS

HIGH VOICE

CUSTANCE, ARTHUR F. M.
The Comforter. [D♭] [d♭-*a*♭] 50
A song of broad style, very effective for the church service.

FLORIDIA, PIETRO
Entreat me not to leave thee (Song of Ruth). [A♭] [d-*a*♭] 60
In the arioso form—a fine interpretation of the text, and a welcome addition to the church service repertoire.

MARZO, EDUARDO
More love to Thee, O Christ. [D] [d-*g*] $0.60
An effective lyrical setting of a favorite text; demands simplicity of style and clear enunciation.
Take my life and let it be. [G] [d-*g*] 50
A fine song by a well-known composer, lyric in style and effective in climax.

STEVENSON, FREDERICK
I sought the Lord. Op. 76. [G] [d-F♯] 60
A fine song in the broad, churchly style, with organ accompaniment, with a certain elevation of spirit which will make it effective for church use. The text makes it useful for general or special occasions.

LOW VOICE

LAUBIN, EDWARD F.
I heard the voice of Jesus say. [E♭] [b♭-E♭] 60
A simple, flowing melody makes this a song easy in its demands on the singer; especially good for contralto.

MARZO, EDUARDO
More love to Thee, O Christ. [B♭] [b♭-E♭] 60
For description see Sacred Songs, High Voice.
Take my life and let it be. [E] [b-E] 50
For description see Sacred Songs, High Voice.

STEVENSON, FREDERICK
I sought the Lord. Op. 76. [E] [b-D♯] 60

SECULAR DUETS

SAAR, LOUIS VICTOR
Lovely, kind, and kindly loving, Op. 79, No. 1. Soprano and tenor 60
A charming duet, text and music in the old English style, suitable for recital or concert.
The witch in the glass, Op. 79, No. 2. Soprano and tenor 60
A humorous duet, requiring clear diction in order to make the story clear; useful for concert or recital.

PIANO SOLOS

AMANI, NICHOLAS
Orientale, Op. 7, No. 2. IV 40
A good example of the modern Russian piano music, but not extreme in difficulty. (From the *Musicians Library.*)

BARMOTINE, S.
Berceuse, Op. 5, No. 3. IV 40
A charming lyric number by a Russian composer, included in the *Modern Russian Piano Music* collection edited for the *Musicians Library* by Constantin von Sternberg.

BLUMENFELD, FELIX
Impromptu in G♭, Op. 13, No. 2. IV-V 50
A concert number of unusual interest, musical and technical; both hands play big chords. (From the *Musicians Library.*)

ENGELMANN, H.
Harlequin pranks. (Humoresque.) III 30
A delightful little piece of moderate difficulty, written by this popular composer shortly before his death.

GLAZOUNOFF, ALEXANDER
Valse in D major, Op. 42, No. 3. IV $0.50
A very useful piece for teachers and players who are looking for pieces of moderate difficulty by composers of high distinction. (Taken from *Modern Russian Piano Music.*)

GRODZKI, BOLESLAUS
Valse capricieuse, Op. 47. IV-V 50
A fine concert waltz by a Russian composer, included in *Modern Russian Piano Music,* edited by Constantin von Sternberg.

PACHULSKI, HEINRICH
Prelude in B major, Op. 21, No. 1. IV 50
Musically a piece of unusual interest, and technically very valuable, especially for the left hand. It is taken from the collection *Modern Russian Piano Music.*

ROLFE, WALTER
Birth of Beauty (Waltz). III 60
A light, graceful composition, just the thing for pupils' recitals or home use.

VIOLIN AND PIANO

ORNSTEIN, LEO
Three Russian Impressions, Op. 37:
1. **Olga** 60
2. **Natascha** 60
3. **Sonja** 75
Violinists will be delighted with these new compositions from a composer who is one of the most interesting and talked-about of modern writers. They are not in the extreme vein which distinguishes Ornstein's piano works, and are quite in the violin idiom, and will be used this season by artists of distinction.

RISSLAND, KARL
Poeme legendaire, Op. 21, No. 1 75
Perpetuum mobile, Op. 21, No. 1 . . . . . 1.00
Two concert pieces of unusual value and interest by a member of the Boston Symphony Orchestra, which are to be used this season by Mischa Elman and other distinguished players in their programs.

ORGAN

GODARD, BENJAMIN
Berceuse from *Jocelyn.* Transcr. by J. H. Rogers 50
A useful arrangement of a favorite piece.

JAMES, PHILIP
Meditation à Ste. Clotilde 75
A fine organ number in the modern French style, with very effective registration; suitable for concert or church use.

NEW YORK NOTES

SIX symphony concerts for young people are to be given at Carnegie Hall, on Saturday afternoons, by the Symphony Society of New York, Walter Damrosch, conductor. The first will occur on November 18. Mr. Damrosch will give verbal explanations of the principal compositions presented.

THE New York Chamber Music Society of piano, wind, and stringed instruments, Carolyn Beebe, director, will give recitals again this season, presenting a variety of combinations of two or more performers.

ALBERT SPALDING, violinist, gave his first New York recital October 28. He will include in his programs this year some new compositions written during the past summer. Mr. Spalding will play at most of the American universities this season.

GEORGE HAMLIN'S first New York concert is set for November 28; December 10 he will present a Hugo Wolf program.

EVAN WILLIAMS, tenor, opened the song recital season in New York, October 8, singing his entire program in English.

MICHAEL PENHA, a Dutch 'cellist, made his first New York appearance October 12. He came to the United States from South America where he had been *en tour*.

FRANCES NASH, one of the younger pianists, appeared at Aeolian Hall, October 10. Her program consisted mainly of modern works.

LOUIS GRAVEURE'S first New York recital for the present season took place October 25. He made his usual success at the Maine Music Festival concerts in Bangor and Portland.

LOVERS of song will be interested in the recital by Charles W. Clark, baritone, who is to be heard in Aeolian Hall, November 3.

Two series of six chamber music concerts, Frida and Saturday evenings, will be given under th patronage of the People's Symphony Concer Auxiliary Club, New York, at the Washingto Irving High School. The Flonzaley and Kneis Quartets will play in both series.

THE Music School Settlement of New Yo entered upon its twenty-third year this Fall. Arth Farwell is in charge of the School. This year special effort is being made to extend the Wi Instrument Department which has already deve oped some good players. The Director is payi special attention to the 'cello which has been ne lected by the pupils. From the professional poi of view it is a desirable instrument. Mr. Chest Ido has taken charge of the Department of Theor

Favorite Songs of Famous Singers

In these beautifully printed books the art of the printer and the book-binder is rivaled only by the art of the composers and of the famous singers themselves

My Favorite Songs

By Geraldine Farrar

High Voice Low Voice

Price, each, $1.00 postpaid

THIS gifted singer shows her musical training by the preponderance of German songs in the collection she has brought together. The various numbers have been sought out with indefatigable zeal, largely from treasures of song buried or neglected in the works of great writers, and are therefore, in many ways, new to the average teacher or singer. Songs from other lands, such as Russia and Scandinavia are also included. The book contains a biographical sketch, portraits, a striking portrait on the cameo plate paper cover, in the engraver's best art.

Miss Farrar's selection evidences a most eclectic and at the same time impeccable musical taste.—*Musical Courier.*

My Favorite German Songs

By Elena Gerhardt

High Voice Low Voice

Price, each, $1.00 postpaid

AS an interpreter of German lyric art, Miss Gerhardt has few rivals. From her recital programs she has selected the most effective and successful numbers to make up this desirable volume, which thus forms a representative collection of vital mastersongs chosen from the works of classic and modern composers of the *Lied.* The book contains an autobiographical sketch in German and English, and portraits.

A notable volume and stands high in the productions of American publishing houses. It is, indeed, a treasury of German *lieder* chosen with rare judgment.—*Musical America.*

My Favorite Songs

By Julia Culp

Books I and II

High Voice Low Voice

Price, each, $1.00 postpaid

THE favorite songs of this highly praised *Lieder*-singer are drawn from the music of many different lands, from her native Holland to our own America, and including France, Germany, Ireland, etc. This collection is made up of such numbers as have won Mme. Culp's affection as well as proved their acceptability to her enthusiastic audiences, and the volume is of extraordinary interest. A charming introduction from the singer's own pen and portraits enrich the book.

The triumphs of the singer are reflected in her book.—*The Musician.*

My Favorite French Songs

By Emma Calvé

Books I and II

High Voice Low Voice

Price, each, $1.00 postpaid

THE great singer here gathers together her favorites among French songs—mostly modern, some operatic, and a few of the ultra-modern school. To these she adds a group of "Songs my Grandmother sang," making a truly unique and distinguished collection. From these charming old melodies down to the songs of Debussy the singer indicates all that is best in the realm of French song composition. Complete with biographical sketch with portraits and an introduction from Mme. Calvé's pen.

A splendid group of songs valuable to both singers and concert goers.
—*Boston Times.*

VICTOR TALKING MACHINE RECORDS FOR NOVEMBER

TEACHERS of singing who have found the Talking Machine with vocal records a useful adjunct to the studio work, or singers who are making repertoire studies will find value in the month's records, especially those by the famous artists issued in Red Seal series. Note the unusual variety in the following:

Calve, Emma, mezzo-soprano: *Frère Jacques* (Brother James), *Au clair de la lune* (In the moonlight), and *Une poule* (The hen), three little songs for very little children, from the French folk song literature, sung in French, but fascinating as given by the great prima donna.

Caruso, Enrico, tenor: *Cantique de Noël* (Holy night), by Adam, a favorite song for the Christmas season, sung in French by the great tenor. It is one of the classic Christmas songs.

Culp, Julia, contralto: *Du bist die Ruh'* (My sweet repose), by Schubert, one of the great songs of the German *lied* literature, sung by one of the great artists of the day.

De Gogorza, Emilio, baritone: *Das Zauberlied* (The magic song), by Meyer-Helmund, a song of great beauty adequately interpreted by a master of style and diction.

Garrison, Mabel, soprano: *The bell song,* from *Lakmé,* an opera on a Hindoo theme, by Delibes. It is a beautiful air with embellishments of a very showy character which demand a high order of technic on the part of the singer. This is a fine display record.

Gluck, Alma, soprano: *Sing me to sleep,* a favorite English song by Greene, with violin obbligato played by Mme. Gluck's husband, Efrem Zimbalist.

Hempel, Frieda, soprano: *The last rose of summer,* an exquisitely sung interpretation of the favorite old ballad.

Homer, Louise, contralto: *Where is my boy tonight?* by Lowry, one of the great hymns of the world.

McCormack, John, tenor: *Cradle song,* the music adapted from Kreisler's *Caprice Viennois.*

Powell, Maud, violinist: *Guitarrero,* by Drdla, a brilliant composition for the violin, with a somewhat fantastic rhythm, one that pleases the hearer.

Whitehill, Clarence, baritone: *Tramp, tramp, tramp,* by George F. Root, one of the Civil War songs, given with male quartet accompaniment.

Witherspoon, Herbert, bass: *Just you,* by Burleigh, a charming song in the high class ballad style.

Werrenrath, Reinald, baritone: *The house of memories,* by Aylward, and *Tommy lad,* by Margetson, two fine songs in the English style.

—o—

THE LUTHERAN QUADRICENTENNIAL JUBILEE

LUTHERANS all over the world will celebrate the anniversary of the founding of their church, the period extending from October 31, 1916, to the same date in 1917. Beginning with the first named date, there will be a campaign of education in which music is to play a part. The Committee on Program plans very elaborately and pageants with music will figure in the observances. Composers will be interested in an announcement which appears on page 704, in regard to original anthem compositions suitable for use during the celebration. The address of the committee is 925 Chestnut Street, Philadelphia.

Preserve Your Copies of THE MUSICIAN

THE MUSICIAN BINDER

is the most convenient and substantial form of binder obtainable. It is very strongly and attractively made from cloth and board; will not warp or break and keeps the copies in good condition, ready for instant use. One or more copies may be taken from the binder at any time without disturbing the remainder; each copy is held in place by a separate metal strip. The binder holds twelve copies. Price prepaid, 75c.

Sent with a year's subscription to THE MUSICIAN (new or renewal) for only $1.75

Holiday Gifts for Little Pupils

PIANO COLLECTIONS FOR CHILDREN

CHILDREN TREASURE EVERY MEASURE

Fourteen Easy Pieces, Vocal or Instrumental, Especially Adapted for Use With Very Young Pupils

By GEORGE L. SPAULDING

In this collection the youthful mind is approached by a trio of pleasant paths, poem, picture and melody, any of which are usually considered sufficient to interest, without the aid of the others. Only the easier keys, C, F, G, are used; there are no octaves or great hand extensions, being genuine First Grade pieces. Pupils will be delighted with these pieces, as they will both amuse and instruct, and teachers will find them of great value for pupils in the earlier grades.

Price, 50 Cents

RHYMES TO BE PLAYED AND SUNG BY THE MUSICAL YOUNG

(Words Ad Libitum)

By GEORGE L. SPAULDING

Among experienced teachers it has become an accepted fact that the young mind is better and more lastingly impressed in the study of music by having the subject presented in a definite form illustrated by accompanying words — and through the opportunity to produce the sounds with the voice, which is nature's instrument.

There are no large chords to embarrass small hands; no more than two notes are played at one time, and the extension is not greater than a sixth.

From the vocal standpoint the subjects are extremely varied, and are for boys and girls. All are within the range of the child voice and within the compass of an octave.

Price, 50 Cents

JOLLY TUNES FOR LITTLE PLAYERS

(Words Ad Libitum)

By MATHILDE BILBRO

Nine little pieces for the piano of the easiest grades and provided with rhymes, so that they can be both played and sung if desired.

It is not easy to conceive of a more pleasing, interesting and instructive little recreation book. It embodies such a variety of rhythms and keys, major and minor, and the rhymes which accompany each number are of such quaint and original character, that the "little player" cannot fail to be delighted.

An especially large note has been used in engraving the plates.

Price, 50 Cents

THE LITTLE BEGINNER'S BOOK

OF PIANO PIECES (with Words)

By PERNA MINER WHITNEY

The material contained in this book was originally written for use in teaching the little folks in the composer's own class, and the results found so satisfactory the author was encouraged to offer it for publication, with the hope that it might prove equally helpful to other workers in the primary field of piano teaching.

Price, 50 Cents

SUNNY DAYS

Nine Melodious and Instructive Piano Pieces

By W. ALETTER

The governing ideas in this beautiful collection are the **study of the scales and the development of the strength of the left hand.** This is carried out in the most attractive manner. Each number while appearing as a recreation is really a little study of an interesting character. Beginning in the key of C, and proceeding by very easy, gradual steps to the keys of four sharps and flats, the youthful player is led almost imperceptibly through little difficulties that are not noticed, so pleasant and easy has the path been made.

Price, 50 Cents

IN GRANDMOTHER'S FLOWER GARDEN

Ten First-Grade Piano Pieces Almost Entirely in Treble Clef

(Words AD LIBITUM)

By MATHILDE BILBRO

A new volume of teaching pieces by a successful American composer.

This collection of **First-Grade pieces** have characteristic titles, accompanied by appropriate verses, so that they can be both played and sung if desired; all are full of vigor and originality.

The Author's aim has been **simplicity**, not simpleness; to attain the **childlike**, but not childishness.

The intelligent use of this little collection will amply repay both teacher and pupil.

An especially **large note** has been used in engraving the plates.

Printed on heavy paper; full-size plates, artistically bound in attractive illustrated cover printed in colors.

Price, 50 Cents

All printed on heavy paper, full sheet music size plates, artistically bound in attractive illustrated covers printed in colors.

Increase the interest of your young pupils in their music by the gift of one of these beautiful collections.

NURSERY RHYMES

Nine Little Piano Pieces for Children

By T. L. RICKABY, Op. 25

Excellent little piano teaching pieces in the First Grade. Each piece is but **one** page, and **brevity** is a **virtue** in early grade teaching material.

There is a quaint child-verse to each number, which serves to stimulate the mind of the young pupil. **Treble** and **Bass** clefs are used at once.

An especially **LARGE** note has been used in engraving the plates.

Price, 50 Cents

MERRY MELODIES

A collection of original melodies with well-known words, so arranged that they may be sung or played separately or both together.

All are **very easy, instructive and entertaining,** presenting an exceptionally fine combination of clever words and bright tunes.

Price, 50 Cents

A Booklet giving contents of all the volumes will be sent FREE ON REQUEST

WEE FOLKS IN MUSIC LAND

TEN FIRST GRADE PIECES

So arranged that they may be used as

PIANO SOLOS OR SONGS

By MATHILDE BILBRO

The pieces are all in very First Grade and are daintily melodious and rhythmical, showing the same attractive originality that has made **"Jolly Tunes"** such a quick favorite; the verse accompanying each piece further enhances the interest of the youthful players, as they can both sing and play each piece if desired.

The purpose of the collection is to supply a first book of melodies as an aid to the successful teaching of children to play and love music.

An especially large note has been used in engraving the plates.

Price, 50 Cents

SPELLING NOTES FOR LITTLE FOLKS

By L. A. BUGBEE

A unique and delightful collection of twelve attractive melodies in the first grade, designed to facilitate the beginner's knowledge of the notes.

Each piece is provided with words to be sung or read, in which the principal word is formed of letters **spelled** with corresponding notes on the staff, which are in this way impressed on the mind of the little learner, and increase the interest in tracing a connection between the sign and its musical meaning.

An especially large note has been used in engraving the plates.

Price, 50 Cents

TUNEFUL TALES FOR LITTLE MUSICIANS

Fifteen Easy Pieces, Vocal or Instrumental

By ALBERT J. RUSBY

This charming collection for little players in the First Grade has been formed with the idea of presenting, in the most attractive manner, the primary musical forms, and the easier keys —both sharps and flats.

They are short characteristic pieces, full of life and vigor, and each piece has verses, which may be sung by the player or another pupil, making them especially suitable for elementary or kindergarten work.

Price, 50 Cents

RHYMES AND RHYTHMS FOR LITTLE MUSICIANS

By HANNAH SMITH

A most valuable collection of easy pieces for the piano, that have the attribute of being instructively elevating, as well as intensely pleasing. In this beautiful congregation of first grade compositions will be found all the varieties of primitive forms. All the styles are here combined, each one furnishing its example of touch and phrasing, thereby giving instructive advancement while affording recreation. Great extensions of the hands are avoided—so often the bane of young players.

Price, 50 Cents

TALES OF DOLLS FROM MANY CLIMES

TOLD IN MELODIES and RHYMES

Fourteen Easy Pieces, Instrumental or Vocal, Especially Adapted for Very Young Pupils

Words by JESSICA MOORE

Music by GEORGE L. SPAULDING

This collection of song-pieces will be found instructive, entertaining and beneficial to beginners in music.

Each composition tells a bright, attractive story, and in such an agreeable manner as to fairly draw the pupils to the piano of their own free will. The entire idea of the volume is novel and ingenious, and teachers will readily recognize the usefulness of this collection for recital programs.

An especially large note has been used in engraving the plates.

New Formula
for the
Piano Teacher and Piano Student
by
Wassili Safonoff

(The author was born in the Northern Caucasus, studied law and at the same time received piano instruction from Leschetizky. When he was twenty-six he decided to take up music as a career, entered the Petrograd Conservatory, and graduated with high honors. After concert tours he became a teacher in the Petrograd Conservatory, later at Moscow, where he is now dirctor. He has trained a number of fine Russian artists.)

Price $1.00 postpaid

The exercises here presented might almost be termed a valuable discovery, and are the result of long years of pedagogic experience on the part of a noted and inventive musician. They are really *formulas* which provide a short way for an advanced pupil to acquire finger-independence, evenness of tones, agility and tonal beauty with the utmost economy of time and strength. They cannot possibly be played mechanically, and are therefore brain as well as finger-exercises, thus compelling the student to concentration.

SECULAR SONGS

HIGH VOICE

KING, CLIFFORD
Butterflies (*Papillons*). [Eb] [b♭-g]..... $0.50
A dainty little song, with English and French text.
A fine study for style and diction.

MEDIUM VOICE

HUERTER, CHARLES
A gift. [A] [d-F♯]..... .40
A well-made piece in the art-song style; the countermelodies in the piano accompaniment are very effective.

SACRED SONG

LOW VOICE

LUDEBUEHL, J. P.
Now the day is over. [B♭] [b-D]..... .50
A fine musical equivalent to this favorite text.

SACRED DUET

HUHN, BRUNO
Sing, O ye heavens. Soprano and Tenor. [E♭]..... .60
Broad and melodious in style, and "big" in effect.
The same. Alto and Bass. [C]..... .60

PIANO SOLOS

CALLUP, MINER WALDEN
My lady dances (*Petite valse*), Op. 8. III..... .60
A charming little waltz, interesting in a modern way, in harmony. A fine recital number for a pupil with taste and refinement.
Whimsies (*Valse de salon*), Op. 7. III-IV..... .60
A brilliant waltz number of moderate difficulty, moving mainly in eighth notes, rapid tempo, and calling for accurate finger velocity. It is a good teaching piece.

HEINS, CARL
Longing of the rose (*Röslein's Sehnen*), Op. 82. III .50
In the rhythmical style usually called Tyrolean.

KERN, CARL WILHELM
Five Instructive Piano Pieces, Op. 322:
1. **In a garden of roses.** III.....$0.40
2. **The advance of the guards** (*Marche militaire*). II..... .40
3. **Souvenir de Warsaw** (*Polish mazurka*). II-III .40
4. **Souvenir de Bornholm** (*Barcarolle*). II-III.. .40
5. **An autumn morn** (*Valse sentimentale*). III.. .40

A set of unusually desirable and useful teaching pieces; they will make a fine group in a recital program.

MACY, J. C.
In the twilight. III..... .50
In the *Song without words* style, melodious and pleasing.
Sweet lavender (*Old court dance*). III..... .30
A charming little piece in the old-fashioned minuet style.
Scintillo (*Valse caprice*). III..... .50
An attractive waltz, brilliant in effect, lying well under the fingers.

ROLFE, WALTER
Priscilla (*Dance in ancient style*). III..... .50
A melodious, pleasing piece in a rhythm of the gavotte order.

STERNBERG, CONSTANTIN VON
Three Intermezzi, Op. 113:
1. **Fairy elves.** V..... .60
2. **Revery.** IV-V..... .50
3. **The clown.** V..... .75

Three pieces for the concert player. No. 1 is an étude of fine musical quality; No. 2, in the modern impressionistic style, with colorful harmonies; No. 3 is in the scherzo style, brilliant and virtuoso in quality, and is used by Mme. Bloomfield-Zeisler in her programs the present season.

ORGAN

BARTLETT, J. C.
A dream (Arr. by Gatty Sellars)..... .50
An effective arrangement of a well-known song.

FEDERLEIN, GOTTFRIED H.
Meditation in A♭..... .60
A broad melody, working up to a fine, rich climax.

FOERSTER, ADOLPH M.
Pastorale in A minor, Op. 62, No. 4..... .60
Charming in melody, rich in harmony, and piquant in rhythm.

GLIÈRE, REINHOLD
Melodie in D, Op. 47, No. 9 (Arr. by H B Gaul)..$0.50
Romance in E♭, Op. 47, No. 4 (Arr. by H P Gaul) .50
Two pieces in characteristic Russian style by a composer of marked modern sympathies. They are not difficult, and effectively registrated.

VIOLIN

HUERTER, CHARLES
Souvenir ..... .60
A broad andante melody, with an appeal through tone; requires familiarity with the higher positions.

RIES, FRANZ
Adagio from Suite III, Op. 34. (Ed. by Rissland) .75
A number from the concert repertoire.

SUDESSI, P.
A petits pas (*By little steps*). (Ed. by Rissland) .... .50
A delightful little piece in a march rhythm, with muted strings.

MISCELLANEOUS

Songs of the Russian People. Edited by Kurt Schindler..... 1.00
Fifteen choruses for mixed voices, unequaled for concert use.

Handbook for the Catholic Choir. Compiled by Edoardo Marzo..... 1.00
For the use of the average choir; the various numbers are partly Gregorian, partly by standard composers.

Album of Songs. High Voice. Charles Wakefield Cadman..... 1.25

HOW TO MASTER THE VIOLIN

A PRACTICAL GUIDE FOR STUDENTS AND TEACHERS

BY PAVEL L. BYTOVETZSKI

Price, $1.25

The evident purpose is to present definitely the most direct paths to those acquirements coveted by every earnest student of violin playing. The material offered by the author consists of explanations, musical examples, and many photographic illustrations. The text consists of independent chapters, each dealing with one important department of violin technic and offering methods to conquer the special difficulties met in that department. These suggestions are suitable for the average student as well as the more advanced player, for they state fundamentals as well as special devices for the good player who is striving to improve his technic. Some chapter headings are: The left hand, Shifting and gliding, Action of the fingers, Schools of bowing, with full discussion of the various bowing and their application in playing, Double stopping, Vibrato, etc. An Appendix contains valuable lists of classified material for specific technical uses.

PROGRESSIVE VIOLIN STUDIES BY FAMOUS MASTERS

SELECTED AND EDITED BY EUGENE GRUENBERG

VOL. III. STUDIES IN ALL THE POSITIONS

Price, $1.00

These are for the violin, without accompaniment, and are selected from the works of the great masters of violin music such as Alard, Baillot, de Bériot, Dancla, Depas, Léonard, Meerts, Rode, Schoen, Venzl, Vieuxtemps, etc., not merely one or two, but several from each composer, equally meritorious with those better kn wn. The book is conspicuous for the most careful bowing indications and explanatory r marks.

An Acceptable CHRISTMAS Remembrance for a Music Loving Friend

The Opera Book

By EDITH B. ORDWAY

575 Pages, 32 Full-page Illustrations

Price, in box, $2.50 net
Sully & Kleiateich, New York, Publishers

Practically all of the operas played in the four great opera centers, New York, Chicago, Philadelphia, Boston, during the past five or six years, novelties and revivals, are included in this book, 111 stories in all, such as Montemezzi's *Love of Three Kings*, Moussorgsky's *Boris Godounov*, Zandonai's *Conchita*, Herbert's *Natoma*, Parker's *Mona*, etc.

The stories of the operas are given in synopses of 800 to 1500 words, and form a real guide to the understanding of what actually takes place on the stage and the accompanying music.

A useful feature is an index with pronunciation of names in foreign languages.

THE ART OF ACCOMPANYING

EVERY pianoforte teacher realizes the esteem in which accompanying is held when the mother of a new pupil remarks, "I don't mind if my daughter can never play a piece properly. I only want her to be able to play well enough to play accompaniments." To "play well enough to play accompaniments" necessitates, however, far greater natural abilities and a far more arduous course of study than is generally realized, even for those who are content with the modest standard of efficiency attainable by the intelligent amateur; but the qualifications necessary for those who wish to embark upon the career of a professional accompanist are infinitely more exacting.

THIS valuable work is literally the first book to deal with the subject of accompanying in a practical manner. And the subject is one of vital interest, not only to the student accompanist, but to the singer—for the accompanist may make or mar a song. For the student accompanist himself, the book is a veritable *vade mecum*. The author has been in touch, often intimately, with nearly every English accompanist of note, and their methods, as well as those of the famous Continental accompanying artists, supplement his personal experiences. The work covers in Part I everything essential to the equipment of a student who desires to become a competent and artistic accompanist; ability to transpose and read at sight, knowledge of the traditions associated with opera, oratorio, and classic song, skill in varying style in playing, as the music may demand, and special gifts required in accompanying violin and 'cello solos. To each chapter is appended a suggested repertoire of standard works every accompanist ought to be familiar with. Part II deals with a lighter type of music. Ballad-playing, "playing by heart," accompanying music-hall artists, "vamping," for recitations, etc., is treated with a wealth of practical detail. Mr. Lindo's book is the only one on its subject and covers it in a thorough and interesting manner, valuable information being presented in an altogether readable way.

Gifts for Music Loving People

The Gift of Good Music is for every day of the year. These five successful collections are bound in dark green cloth, lettered in gold. An air of quiet elegance recommends them as the ideal Christmas offering.

THE MOST POPULAR PIANO PIECES....$1.00
35 selections from Wagner, Gounod, Mendelssohn, Rubinstein, Schumann, etc., each easy enough for the average pianist to play well.

THE MOST POPULAR MODERN PIANO PIECES.....$1.00
The work of MacDowell, Dvorak, Paderewski, Schutt—others as distinctly eminent. 27 selections more difficult than the average, but fascinating enough to compel easy mastery.

THE MOST POPULAR SELECTIONS FROM GRAND OPERAS..$1.00
The themes you can't forget from 29 grand operas, every one embodied in arrangements that the pianist can play at sight.

THE MOST POPULAR SONGS FROM THE GRAND OPERAS..$1.00
Medium-voice arrangements of the heart-songs of 24 operas. The words are in the English translation as well as in the original.

THE MOST POPULAR VOCAL SELECTIONS FROM THE COMIC OPERAS.....$1.00
The most stimulating snatches from light operas like Pinafore, Mikado, Erminie, Beggar Student and 20 others.

THE MOST POPULAR ILLUSTRATED MOTHER GOOSE SONGS.....75 cents
Just what the little tots will enjoy—a big book containing all the favorite nursery songs, each one beautifully illustrated in colors by Mabe jB. Hill. Music arranged by Carrie Bullard. Attractively and durably bound, this collection represents truly exceptional value.

100 NEW KINDERGARTEN SONGS AND GAMES....$1.00
The little ones who have passed the nursery stage will find many an hour's enjoyment in this beautiful and artistic collection.

MUSICOLOGY by Maurice S. Logan.....$1.25
For the serious student of music this splendid work, dealing with the science of music rather than the art, complete in scope yet concise in form, will prove a most acceptable gift.

HANS SACHS HOUSE (Front)

NUREMBERG and its MASTERSINGERS

"In the valley of the Pegnitz, where across broad meadow lands
Rise the blue Franconian mountains, Nuremberg the ancient stands.
* * * * * * *
Not thy Councils, not thy Kaisers, win for thee the world's regard,
But thy painter, Albrecht Dürer and Hans Sachs, thy cobbler-bard."—*Longfellow.*

BY EDWIN HUGHES

HERE is hardly a traveler whose way leads him to the old medieval town on the banks of the Pegnitz who does not leave it filled h an enthusiasm over its picturesque charms l admiration for the achievements of its golden of art quite equal to the feelings which prompted ngfellow's verses on Nuremberg. For the musi- pilgrim, either on his way to or returning from summer festival performances in nearby yreuth, the interest is of course centered in remberg's sixteenth century shoemaker-poet, ns Sachs, around whom Wagner's great comic era is built, and in the doings of the little band of ldsmen who took unto themselves the proud me of *Meistersinger.*

f his train comes from the north, he will not ve left Bayreuth many miles behind before he kes the acquaintance of the lazy Pegnitz, and ile nearing Nuremberg he can pass the time culating as to which of the broad, grassy meadows the banks of the stream might furnish a fitting ting for the last scene of the opera. Arrived in town, and with his suit-case safely deposited one of the numerous hostelries near the depot, first way leads him up through the walled city, er the Museum Bridge, to the right down the row Spitalgasse and so over the open place to very center of Hans Sachs memories.

THE HANS SACHS MONUMENT

Across the Spital Platz is a large bronze figure, l when the visitor passes over to inspect it more sely, the genial face of Sachs himself beams down m his marble pedestal. Historical likenesses of hs we have none: if he ever sat for Wohlgemut Dürer we know not; but in the presence of Kraus- 's statue in bronze there comes the feeling that sculptor has succeeded in embodying in the stal- rt, kindly figure which he has created those racteristics which we most like to connect h the best-loved and longest remembered of the stersingers.

A few steps to the right and one is face to face with the actual street scene of the second act of the opera, more or less accurately reproduced in every staging of the piece. Straight ahead is the tiny Heugasse, down which Walther stealthily comes to the midsummer eve's rendezvous with his gentle lady love, and into which, at the end of the act, the night-watchman disappears, to the accompaniment of one of the most beautiful musical passages of the entire opera.

THE HANS SACHS HOUSE

It is hard to imagine Veit Pogner's medieval dwelling in place of the modern house at the right, but to the left of the Heugasse there still remains the real abode of Sachs, rebuilt during the long interim, it is true, and quite without the tiny front garden and lilac bush of Wagner's fantasy, but sufficient as it stands to give the visitor an inkling of the sixteenth century scene. The front room on the ground floor is now a cozy little restaurant, where one may indulge in further memories of the former owner over a glass of good Rhine wine or a mug of brown Tucher beer. In order that the audience might have a front view of the shoemaker as he plies his trade in the middle of the night to Beckmesser's vast discomfiture, Wagner was obliged to place Sachs' workshop on this side of the house. In reality it is in the rear of the building and one must turn the corner of the Heugasse and pass under an archway in order to view it from the outside.

HANS SACHS MONUMENT

HANS SACHS HOUSE (Rear)

This back portion of the house looked into the garden of its owner, and although the garden is no more, this part of the building itself has stood off the attacks of time with marked success. Its arched doorway and window, and the quaint brick-and-cross-beam construction of the upper stories have served as a design for many a stage decorator, so that they are already more or less familiar to all Meistersinger lovers. Within, many of the old arrangements remain, the bench at which the master shoemaker worked with hammer and last, his tools, and other belongings. At the bench there now sits a plaster figure in place of the original Sachs.

OTHER SACHS ANTIQUITIES

Climbing the ever-ascending, narrow streets toward the castle-crowned heights to the north of the town, one reaches, just about half way, the *Bratwurst Glöcklein.* Every tourist knows the delicious taste of the freshly roasted sausages which are served at this toy-box of a restaurant, leaning for support on the adjacent St. Moritz Chapel. Tradition has it that not only Albrecht Dürer and his boon companions, but also Hans Sachs enjoyed similar delicacies and quaffed his measure of beer in this comfortable little corner some four hundred years back.

Still further up the ascent is the Five Cornered Tower, where, among other relics of old Nuremberg, a harp is preserved as having formerly been among Sachs' possessions. Other objects having a direct connection with the cobbler verse-maker there are none in the town, only his grave is still

pointed out in St. John's cemetery, a short distance outside of the city walls when one goes forth through the New Gate. Even the manuscripts in the Municipal Library, which were once thought to have been from the hand of Sachs, are no longer regarded as genuine.

Of the real Sachs, however, we know much, thanks to records which have come down through four centuries, and to no less than 6048 of the cobbler-bard's literary efforts, which are still extant. Over four thousand of these are "Master Songs," some seventeen hundred are comic tales and fables in verse, and two hundred and eight are plays.

SACHS, THE APPRENTICE

Sachs was born at Nuremberg in 1494, just two years after Columbus set sail on his first adventurous voyage westward. He was a son of the people, his father being a master tailor. His schooling was had at the Nuremberg Latin School, and afterwards, in addition to learning his trade of shoemaker, he was apprenticed to one Leonhard Nunnenpeck, weaver and mastersinger, by whom he was initiated into the musical and poetical practices of the Guild.

It was the custom on those golden days in Nuremberg, when the ambition of every artisan was to become an artist as well, that apprentices to a trade, before they settled down finally to its practice, should pass several years in traveling to foreign parts, gathering all the knowledge possible from outside sources. This custom was undoubtedly a great factor in raising craftmanship in Nuremberg to the exalted point which it reached at the time. Sachs' *Wanderjahre* were passed in Munich, Salzburg, Regensburg, Passau, Osnabrück, Leipzig, and Lübeck, working at his trade and gathering experiences and impressions which kindled and strengthened his resolve to devote himself to poetry throughout his whole life. Quite a liberal education for a bootmaker!

Returning to his native city he warmly embraced the Reformation, for he was ever a man of his time, steeped in every movement of the day for spiritual and intellectual advance, and went so far in his poetic polemics against the Roman church that the town council, anxious to preserve peace among the burghers, prohibited his writing any more poems on the subject.

SACHS, THE MASTER AND POET

In spite of his daily occupation, Sachs evidently succeeded in acquiring an education quite unusual for a man of his position, and in this respect probably stood head and shoulders above most of his fellow mastersingers, whose activities we shall presently discuss. The subjects of his poems, besides being taken from the Bible, as was customary among his fellow guildsmen, were also culled from the classics and the Italian novelists. His plays included tragedies, comedies, and farces, in some of which he himself acted. Several of the plays were in seven acts, and some of them were produced in the Marthakirche and in the City Hall. From Sachs' time, in fact, the drama began to make progress in Germany, and although he himself has been denied any great knowledge of the essentials of dramatic composition, some of his plays have even been given on the modern stage.

That he did not allow his muse to be bound hand and foot by the stilted rules and regulations for rhyme-making which guided the efforts of his colleagues in general is no mere fancy of Wagner's in the stage picture of Sachs which he has given us. For although Sachs reduced all the rules of the mastersingers to writing and codified them, his own originality and literary fertility did a great deal to spread the reputation of the Nuremberg poets and near-poets beyond the limits of the guilds and among the German people at large.

The episode of Sachs' more than fatherly affection for Eva in the opera had its counterpart in his actual life, and from Sachs' point of view a much more happy outcome, for after his first wife had died in 1560, he married the next year a very beautiful young widow, he himself being sixty-seven at the time. Fifteen more years of domestic happiness at the side of his second wife were granted him by the Fates, and he died in 1576 full of years and of achievements.

THE OTHER MASTERS

And now for the rest of the Mastersingers: Pogner, Vogelgesang, Nachtigal, Beckmesser, Zorn, Foltz and the others. Did they once tread the hilly byways of Nuremberg, or are these names mere figments of Wagner's imagination? The latter by no means and the former most assuredly, for in Johann Christoph Wagenseil's chronicle of Nuremberg, published in 1697, appear all the names of the Mastersingers of Wagner's opera, as well as the details of their customs and traditions. Let us look a bit into the history of the Guild, for we shall not want to leave Nuremberg without seeing if we cannot discover some traces of the society and some reminiscences of its doings.

THE ORGANIZATION OF THE GUILD

After feudalism had passed its flower and there were no more rich prizes at hand for the artistic descendants of Tannhäuser, Wolfram von Eschenbach, Walter von der Vogelweide, and the other Minnesingers, the practices of these sweet songsters of the nobility experienced a period of decay. The arts of poetry and song came to be neglected almost entirely among the aristocracy and were taken up and practised instead by members of the burgher class, now growing in wealth and beginning to feel its power and importance. Tradition names Heinrich von Meissen as the last of the Minnesinger and the founder of the original guild of the Master singers, which came together for the first time i Mayence in 1311.

The members of this society of amateur poets ters and musicians pledged themselves to observ certain rules laid down by the founder, and me together on long winter evenings to delight them selves with one another's efforts in song and rhyme The movement spread in short order all over Ger many and soon there were guilds of Mastersinger in every important German city. The desir to get together and make music has ever been strong one among the German folk, and the ancien societies of the Mastersingers find their counter part today in the *Liederkranz* and *Männercho* which are in evidence not only in every city of th Fatherland, but in our own country as well, whe ever there are enough German speaking membe of the community to organize a men's choru And it is curious to notice that the modern *Sänge bund* draws its members largely from the very classe of society that the *Meistersinger* guilds four hundre years ago did; the artisan, the small official, and th little tradesman form, as of yore, the greater pa of the members of such organizations.

THE AIM OF THE MASTERSINGERS

But the Mastersingers aimed to be somethi better than mere chorus singers. They were, aft their fashion, poets and composers as well. T larger part of their creative activity was confin to the manufacture of rhymes to fit together wi one or the other of the various tunes which h been either handed down from their musical fo bears, the Minnesingers, or added to the stock trade by one of their own more or less musical gifted members. The instructions given by Dav to Walther in the first act of the opera, when t apprentice endeavors to initiate the young knig into the mysteries of the Guild, were gathered Wagner from Wagenseil's description of the pra tices of the Mastersingers and have not been exa gerated in the least. The stock "tones" or tun of the society were labeled with the most imp sible titles, which, to the modern imagination least, bear not the slightest relation to the charac of the music. So there were the *Pelican Tune*, t *Ape Tune*, the *Writing-Paper Tune*, the *Lon Gormandizer Tune*, the *Cinnamon Tune*, the *Sn Tune*, the *Black Ink Tune*, and dozens of oth with quite as outlandish names.

THE VERSES

The exact manner in which the verses were to composed and fitted to the tune selected is gi in the first act of the opera, in Kothner's addr to Walther, after the latter's vain attempt to g

ST. CATHERINE'S CHURCH, NUREMBERG

PEGNITZ RIVER, NUREMBERG, FROM THE MUSEUM BRIDGE

ıtrance to the Guild. These rule-of-thumb direc-ons for the manufacture of poetry, handed down om the practices of the Minnesingers, reached a gh pitch of absurdity among the Mastersingers, he limit was arrived at in 1646, when one Hars-rfer, of Nuremberg, published the "*Nuremberg unnel*, for pouring in the art of German poetry id rhyme, without the aid of the Latin tongue, six lessons." The subjects of the poems were sually taken from the Scriptures, although secular emes, such as Aesop's fables and various tales of icient scribes also furnished inspiration at times the Incorporated Rhymsters. As may be imag-ed, the "poetry," resulting from such methods was rgely of the rough and ready sort.

THE MUSIC

The music, so far as the genuine *Meistersinger* oduct is concerned, was no better than most of ıe poems. The melodies, for the greater part, were or in invention and wholly lacking in charm. eal musical inspiration was at such a premium ıat folk-songs were sometimes appropriated in ace of the lame efforts of the guildsmen, for the ke of a little variety. The Mastersingers had pparently a quite undeveloped sense of rhythm, ıd for this reason, as much as any, their attempts musical composition fall on unsympathetic ears day.

THE CONTESTS

Churches were the usual places of meeting of the ilds. From time to time the members came to-ether for a prize contest, each bringing his best iginal work to the tribunal of judges or *Merker*, ho were four in number. The first had to see ıat the song-text adhered faithfully to the Holy rit, for only sacred subjects were allowed to be eated at the prize contests, the second watched r mistakes in the prosody, the third corrected the ıyme, and the fourth criticised the melody. The ize was a chain of coins, called the *David*, from e fact that one of the coins, a gift of Hans Sachs, ore an image of King David, and so the whole ntest came finally to be known as the *David*, ıd the winner as the *Davidwinner*.

The term *Meistersinger* was applied strictly only those members of the Guild who had invented ther a new melody or a new meter, the others being nown simply as *Sänger*. The winning of a bride one of the contests, as in Wagner s opera, was a iversion which did not occur to the old Master-ngers, the idea being one of Wagner's own inven-on.

Of the *Freisingen* or "Open Trial," which oc-ırred before the real contest, Wagner gives us a icture in the first act of the opera. Anyone was llowed to take part in these trials, in order to rove his worthiness or unworthiness to enter the uild and take part in the regular contests.

THE PERIOD OF "DIE MEISTERSINGER"

The Nuremberg Guild was founded at the begin-ing of the 15th century, so that at the time when *ie Meistersinger* is supposed to have taken place, out the middle of the 16th century, it already ad something of a history behind it. Each year ıe Guild had to secure special permission from the own Council to conduct its singing schools, and, ıd to relate, this permission was sometimes re-ısed on the ground that the masters often sang ery improper ditties and bawled them in a man-er most offensive to all the good citizens who hap-ened to live in the vicinity. The regular Guild ıeetings occurred usually once a month, and were eld in St. Catherine's Church after the Sunday 'ternoon service. Three times a year there were ublic performances in the presence of an audience Nuremberg burghers.

THE CHURCH

Old St. Catherine's, the scene of the first act of ıe opera, is still to be seen in Nuremberg, and, nfortunately, with the exception of a painted tab-let in the German Museum, is the only relic left in the entire city which has any connection with the old medieval singing society. If the visitor, after his inspection of Sachs' house, turns back to the river again instead of proceeding toward the castle, he can reach the church in two or three minutes' walk by crossing the Spital Bridge and then turning to the left up the sharp incline.

In case he has cherished the expectation of finding a building of the character of the beautiful St. Lawrence Church or St. Sebaldus he will be doomed to a rather keen disappointment when, after turning another corner or two among small, shabby alleyways, he comes upon a plain, weatherworn structure with a red tiled roof, the apexes of its pointed windows proclaiming its Gothic origin and boasting a tiny amount of carving, but otherwise quite devoid of any sort of charm whatsoever. The whole presents rather a barn-like appearance and there is neither belfry nor tower to ring worshipers to service. But on searching out the caretaker in one of the low-roofed houses just across the street, one learns that there are no worshipers any more, nor has the church been used for religious services for over a century. The interior is even more forlorn than the outside, for not a vesture of church furniture and fixtures remains. The walls are stained and dirty, and in the dusty corners spiders go about their trade quite undisturbed. Since it ceased to be used for religious services the edifice has been put to half a dozen different purposes. When the present writer last visited it, it was being used as a repository for various huge dust-covered plaster casts, which stood or lay around the interior in every conceivable attitude. Even with a strong effort of the imagination it was hardly possible to magic them away and call up instead the picture of the first act of *Die Meistersinger*.

The tablet mentioned above is of wood, with two side pieces and a middle section, and is the work of one Franz Hein, who painted it in 1581. The two wings are adorned with the portraits of four prominent Mastersingers of the time. The middle section is divided into an upper and lower part, the former exhibiting a delightful anachronism in the shape of King David kneeling with his harp before a crucifix, and the latter representing a gathering of the Mastersingers, with the singer perched up in his box and the other members of the Guild grouped about him, dressed in medieval German attire with Elizabethan neck-ruffs.

THE GUILD IN GERMAN LIFE

Guild life played such an important part in medieval Nuremberg that it seems quite natural to find the gay banners and other relics of these artisan organizations in abundance at the German Museum. The butchers, the bakers, the candlestick-makers, are all represented, the master-tailors, master-carpenters and master-bricklayers—but alas, there is nothing to remind one of the doings of the proudest of all the guilds, the Mastersingers, except this bit of painted wood. And of Veit Pogner, Sixtus Beckmesser, and the rest there is not a trace left in the whole town.

DISSOLUTION OF THE GUILD

The Mastersingers were not to be put out of countenance in the practice of their art by any such impious young reformers as Walther von Stolzing, did any such persons exist and attempt to challenge their methods and usages, but continued to chant their ditties in one part of Germany or another even down to the first part of the last century. The last Guild held its meetings in Ulm. In 1830 there were still twelve members. By 1839 this number had dwindled to four, who came together for the last time in this year and solemnly pronounced the dissolution of the ancient and honorable society, which had long outlived any usefulness that it once may have possessed. The eldest of the last four members is said to have lived until 1876.

MRS. EMMA SUMMERS

FROM MUSIC TEACHER TO "OIL QUEEN"

BY CHARLES ALMA BYERS

[In THE MUSICIAN for September we printed an article by Mr. Frank A. Fall of New York University, entitled, *Can a Music Teacher Save Money?* The story which follows below was sent to THE MUSICIAN to show that one teacher did find it possible to save, and invested her savings to such great advantage that today she ranks with the capitalists of her section. We print this article not to maintain that every teacher who saves can duplicate Mrs. Summers' wonderful success. But the point is: If she had not saved, and had not had her $700 at hand when it could be used to big advantage, she would have missed the chance. The lesson is that one *should* save. —The Editor.]

IT has been said that there is nothing that man can do which is not also possible to the modern woman. It is well known that she has invaded nearly every field of endeavor, and has invariably met with remarkable success. She has quite successfully coped with practically every trade and profession, and has not infrequently carved out an enviable career in the financial world.

As an illustration of what it is possible for her to accomplish in the latter field, the case of Mrs. Emma A. Summers, of Los Angeles, California, is particularly illuminating and unusually interesting.

Twenty years ago this frail little woman was giving music lessons in Los Angeles at so much per lesson, and earning only a little more than a living. Today she is known throughout the country, especially among oil producers, as "the Oil Queen of California," and is rated financially as almost a millionaire.

Such a rise in the business world, without an inheritance of any kind to assist her, certainly merits admiration. She is one of the largest individual operators in oil in the west, and her success is due to her own efforts alone. She not only has inherited no part of her wealth, but has had no help in acquiring it and no male relative upon whom to depend for advice.

THE FOUNDATION

The story of Mrs. Summers' career in the business world, if given in detail, would read like a romance of high finance. Her father, William L. McCutchen, was a merchant of Hickman, Kentucky, at which place she was born. She was sent in girlhood to Boston to study music, and on

PACKER MEMORIAL CHURCH, HOME OF THE BACH FESTIVALS

BELFRY OF MORAVIAN CHURCH WITH TROMBONE CHOIR

OLD MORAVIAN SEMINARY (1749)

Dr. J. Frederick Wolle: Bach Champion and His Views on Choral Training

BY WILLIAM ARMSTRONG

THE PEOPLE: MORAVIANS

TO understand fully the intense love for Bach's music which has inspired the tireless activity of Dr. J. Frederick Wolle's life, it is necessary to have some knowledge of the early influences upon him of the old town of Bethlehem, Pennsylvania, made musically famous by his Bach Choir.

A little band of Moravians of sturdy, simple faith, fleeing by way of Saxony from religious persecution in Bohemia, came to this country in 1740. One year later they founded a settlement in the then wilderness bordering the Lehigh River, a settlement which took its name from a hymn sung there on Christmas Eve in 1741:

"Not Jerusalem,
But Bethlehem
Gave us that which
Maketh life rich."

Along with them they brought a rich store of stately chorals, anthems in faded manuscript, and a church ritual noble in its simplicity. All these have been handed down unchanged through successive generations since. The same poetic services held one hundred and seventy-five years ago in Bethlehem on Christmas Eve, and at Easter dawn in the old graveyard, are celebrated on these anniversaries today.

A choir of trombones heralds them, as it does all festivals, from the church belfry; again, the same choir plays there to usher in for a departed soul the festival of an eternal life; one choral for the boys, another for the girls, and so on through youth to old age, for men and women each a different one. Anyone knowing the town closely can tell by the majestic melody who has passed away.

THE PLACE: BETHLEHEM

The Moravian section in the heart of Bethlehem contains a charm which makes for poetic influence; gray stone buildings a century and three quarters old, as beautiful as any in America; their white, solid shutters pierced with crescents; their gardens full of flowers; an old stone sun dial set high against a wall, and eaten by the weather's ravages; a graveyard where, side by side, lie Indians and their converters; while over all there still broods the spirit of a peace ineffable, a peace inspired by the faith and lives of the town's founders.

For twenty years as boy and youth Dr. Wolle lived in one of these quaint gray stone buildings, the old Moravian Seminary, of which his father Dr. Francis Wolle, a Moravian clergyman of Polish ancestry, was the principal.

THE RELIGIOUS ELEMENT

From the outset of the future Bach conductor's life the poetry of old customs and surroundings was about him, a poetry that the Moravians had brought over along with choral, anthem, and ritual. But of these things that which seems to have sunk deepest with him as a little child, was the series of services held in Passion week; services that later proved to him a link with Bach. The scriptural passages read were identical with those used by Bach in the *Passions* according to St. Matthew and St. John, even the words of the chorals sung were utilized by him in their text, and if the accompanying music was not of Bach's making it bore resemblance in majesty of spirit to his own. And so, when the youthful Wolle family discovered finally Bach, "It was," as he expressed it, "like coming home."

BOYHOOD TRAINING IN MUSIC

Dr. Francis Wolle wrote a noteworthy book on *Fresh Water Algae*, drawing the illustrations himself with evident strong love for beauty of form, which he found in the humblest things that most men pass by unheeded. But alongside his idealism he had a well-developed strain of the practical. To his son he gave a choice between college or a business training that he might know in future life how to manage affairs. All the while young Wolle's one desire was music. As a boy he had delved between the covers of *Grove's Musical Dictionary*, then coming out in parts, being specially directed by a teacher to the article on Bach, which meant an introduction to the life of that composer to whom he was to give so large a portion of his own.

The piano he studied, and found it uninteresting; the organ he loved, every spare waking minute he gave to it, although he never had a lesson on the instrument until he was twenty. In boyhood he played daily at the opening services of two schools, the Moravian Seminary for Girls, and the Parochial one which he attended, anything to be near the organ keyboard.

When the day came for a decision between Lehigh University and business, he chose to learn to be a druggist, because that would mean to him, a shorter time spent away from music. For two years of apprenticeship he toiled industriously happy at their end to escape a calling which grudged him the free time to play in church on saints' days. Shortly after he founded in Easton Pennsylvania, a choral society and also a singing class of two hundred, and in Bethlehem a Choral Union, combining the first and last in an Easter concert annually.

Rink's Organ School young Wolle had, meanwhile, studied alone from its first page to its closing ones, which contained a fugue on the name of Bach but his introduction to the master himself came when he went to study with Mr. D. D. Wood blind organist of St. Stephen's, in Philadelphia, who started his young pupil in with the *Eight Little Preludes and Fugues* by Bach. The structural beauty of Bach from the outset overwhelmed him.

"Where has my time been going?" was his question. "This is the real music for the organ!" And from then on his ardent desire was to study all that Bach had written for the instrument.

BEGINNING HIS CAREER

Going to Munich on money he had earned himself, young Wolle, passing a strict examination, became one of the four pupils whom Rheinberger accepted at a time, studying, at his own request, only the organ sonatas of his teacher and the works of Bach. At the end of one year Wolle returned to Bethlehem, destined to be linked so prominently in the coming years with his name and that of his best beloved composer. There he assumed the post of organist at the Moravian mother church, where, as a boy, he had developed his appreciation of the severely pure church song.

With the exception of six years spent as musical director at the University of California, in Berkeley, Dr. Wolle has made Bethlehem his home ever since.

FIRST BACH PERFORMANCES

The introduction of Bach in Bethlehem by Dr. Wolle was in 1888, when he gave *St. John's Passion*; other works followed until, in 1892, *St. Matthew's Passion* was sung under his direction. During the autumn of that year he put Bach's *B Minor Mass* into rehearsal, but his chorus rebelled at the stupendous difficulties presented. Dr. Wolle, who had already worked wonders with his chorus of untutored singers, and who was willing to put superhuman effort into bringing the great mass to a hearing, found his courage break at this crisis. Then it was that he retired

a musical leader, after declaring that until Bach's *Minor Mass* would be sung in Bethlehem, his forts there as choral conductor were at an end, nd the chorus with which he had so bravely bored was disbanded.

After a dreary wait of six years, two women pproached him to conduct rehearsals of a glee ub. His answer was, "If you make it possible or me to give Bach's *B Minor Mass*, I will train ou, otherwise I keep my vow never again to conuct anything choral here." Undaunted by an utcome already recorded, his two visitors set out o get once more together a chorus, "And let im give his old Bach," as they expressed it.

THE BACH CHOIR

In 1898 the Bach Choir of Bethlehem was oranized; in March of 1900 the great Mass was ung, and annually it is sung there now, with an rdor, a devotional spirit, and complete mastery of echnical detail which combine to make it unique s an example of choral singing in the United tates. When one considers that these ends have een accomplished with no other material than mateurs, gathered from Bethlehem and neighoring places, singers to many of whom musical otation was unknown, it would seem that only genius could have achieved such results.

THE SPIRIT BACK OF THE CHOIR

And yet, one day last summer, Dr. Wolle said vith quiet calmness: "What I have done was so asy that anyone could do it—if he wanted to do t as much as I did."

Those final words were the keynote of it. He ad willed to do it with all the strength of mind nd body in him. He had been brought down by llness in the struggle; he had faced defeat in the ebellion of his chorus; at the moment of his eturn from Europe had come the advice:

"Go to some other city, people have no respect or the man grown up among them. Go to New York or Philadelphia, where strangers will listen o your music."

"They can come here to listen to me," was Dr. Wolle's answer, "and," he added in mention of the pisode, "I started in to do it."

The triumphant end of the story is nationally nd internationally known; but to Americans s a lesson taught by an American it becomes a particularly impressive one.

REHEARSAL METHODS

Before Dr. Wolle resumed rehearsals of the *B Minor Mass* with his Bach Choir, the thought occurred to him forcibly that in the past he had not made things as easy for his singers as he might. Thereupon he evolved a plan all his own.

Instead of beginning at the opening bars of a number, he chose the final ones to start with; the cadences, resolving themselves naturally, proved an easy task to sing. His choristers left the rehearsal on that opening night fresh, and of the enthusiastic opinion that the *Mass* was, after all, not so hard. This is but one phase of the revolutionary course by which Dr. Wolle secured from untutored singers finished results and absolute assurance in performance, no matter how difficult the work attacked.

His methods and means employed to gain a given end, employed identically by him with the Lancaster (Pa.) Oratorio Society and the Choral Society of Harrisburg, may prove illuminating.

PLAY UPON THE SINGERS AS UPON AN INSTRUMENT

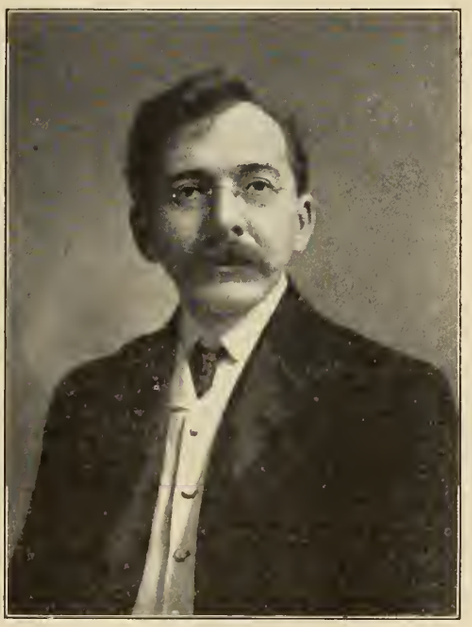
"I do not ask for voice, ear, or knowledge of musical notation," declared Dr. Wolle, in turning to the subject. "And in all my experience I know of only one man who simply could not grasp the intervals of a scale. I do not place stress on voice in selecting singers. In the Bach Choir I have, for instance, one lady of eighty, and another of sixteen. It has happened that when I cautioned about the singing of a certain F, a chorister inquired, 'What is F?'

"Bach or any work that I take up with choir or chorus, I know a year ahead. Then comes the point, how I am going to inject that knowledge into the minds of my choristers.

"In the first place I speak very little in rehearsals; in stating musical terms I give them invariably in English. I never require the services of an accompanist, for none can know what one wants in the instant of stopping, and the psychological moment for explanation is gone.

"Standing on locked pedals before the organ, as I did at the Moravian mother church in the days when I conducted our rehearsals there, I would, on the instant of stopping the singers, play things as I wished them to sound. It might be one bar or a single note, for instance, where the alto would come out and fade away. But I never kept at one point or a collection of points.

"After explaining the effect desired in a certain bar, or the interweaving of a tone at that point where we had stopped, I would go on to another passage in the work, and then return again from time to time to the bar in question.



DR. J. FREDERICK WOLLE

" 'I am an organist,' as I sometimes tell them, 'I have made it my instrument; if you will let me I will play, instead of on pipes of iron and wood, on your throats and souls.' For the chorus must be sensitive, plastic, and obedient to its leader.

" 'Why do you not work on one thing instead of jumping about?' my singers have asked me.

" 'Because,' I have replied, 'I know human nature enough not to stick at one thing too long.' To keep a chorus on a few difficult places for two hours is wearying, wearing toil. There must be contrast in rehearsals, the grave alternating with enlivening or brilliant passages to hold the interest of the singers, for the moment interest ceases nothing more is gained.

BEGINNING AT THE END OF A PHRASE

"The second time I began rehearsals for the Bach *B Minor Mass*, after that first occasion six years previous, when they had found the work too difficult, I determined to make things easier for them to learn than I had done before. Consequently, in the first rehearsal we took three or four closing bars of a cadence which resolved itself naturally, presently going on to another closing passage, and they were so quickly mastered that none saw any difficulties.

"Always working backward in the study of a work, in the second rehearsal I take out, for instance, four bars preceding a closing cadence, have them sing those, and later combine them with the closing cadence, afterward proceeding to another four bars somewhere else in the work. Every bar, its color, effects, balance, is worked out as a solo pianist would in study of his repertory.

" 'Why do you not tell us where you want exactly this or that effect that we may write it out?' may be asked, and I answer, 'Because I do not want you to feel that you know all about it, and shoot it out mechanically.'

"Sometimes I take a chorus faster than it is written, sometimes slower, that the singers may not feel afraid of anything, and to impress upon them that they must watch their leader. When all is going well, I broaden out and broaden out, demanding power of breath. I want to control; I have a definite idea of what I want to do. I am adjustable myself; I want to do the best I can with the inspiration of the moment.

"In florid passages of Bach I begin, for example, with the sopranos on the last four notes, then the last eight, then the last twelve, working very, very slowly, taking afterward, in this gradual process of working backward, maybe half or the whole scale passage on which we have studied.

"Giving the sopranos a long rest, I take up the same thing with the altos and so on; finally, all sing together, first the natural phrase ending, and then repeat exactly as before. When I work backward from a new starting point, I begin again with the natural ending of the phrase. By this process of working from the end toward the front, I find when we sing the whole passage through that it goes fluently.

"I never stop my chorus in the middle of a passage; they must never get accustomed to stopping. I always tell them not to assume that we will stop; I might take them ahead, knowing it to be the psychological moment to carry them across the bridge, and dovetail that section on to the one next following.

ELASTICITY OF RHYTHM

"An important part is the elasticity of the rhythm; not the crudity of merely giving the accent of the bar stroke, but the accent of the melody. How lamentable it is if a chorus pounces upon the first note of a measure when it is the end of a phrase, and should, instead, fade away. Take a long note tied over, a fine point is to carry it with tone increase on that tied first beat.

DELIVERY OF FUGUE THEMES

"In bringing out themes properly in the singing of a fugue there is so much in the *tessitura*, whether it lies high or low. The fugue's theme may, for instance, be given out by the tenors, and answered in turn by the basses, sopranos, and altos. The higher the note the more easily it is heard. In making the theme clear, if it is in the bass, I want the tone volume enormously increased, with tenors and altos suppressed in accordance with their carrying quality; the soprano will be audible in *mezza voce*.

TEMPO

"As to the speed, the acoustic properties of a building must always be taken into consideration; if the place is large, too rapid a tempo, will, of course, result in blurred effects. Slow melody is the most difficult for a chorus, not merely because of its sustained character, but because slow melodies demand soulful effects in expression or they fall flat, while in fast and brilliant passages the expression is not so much missed.

VOWEL QUALITY

"I lay great stress on the purity of a vowel, for the vowel characterizes the music; I want a broad A and a reedy E, and as much as possible a picturesque meaning given to the word in keeping with the character of the music. In the singing of Bach I aim to secure all possible warmth, color, and dramatic meaning in the higher and spiritual sense; that is the basis of my interpretation."

THE SUPERVISOR AND THE CONDUCTOR

A Community Christmas. Community Music expressed in organized activity requires a leader. The following indicates some of the things a conductor must do.

BY THOMAS TAPPER

THE following distinctive paragraphs are taken from a *Bulletin* published by the Extension Division of the University of Wisconsin. To anyone interested in Community Music, this *Bulletin* cannot fail to prove valuable.

CAROLING

In some cities it is the pretty custom to fill the late afternoon and night with the strains of wandering musicians. These may be the school children, who, under the guidance of their teacher, spend the hours between the close of school and supper time in singing before the homes near the school building; a group of young men may satisfy their desire to sing in the open by presenting some of the jolly old Christmas carols; or a church choir or other choral organization which revels in the possibilities of showing that the message of music is rendered doubly beautiful when sung under the open sky.

Whatever group it may be, this out-of-door singing is always a joy, and oftentimes it is a revelation.

Hymns and carols which seem quite ordinary when sung in the church, Sunday school, or home, become really beautiful when sung in the crisp night just before Christmas.

Any person who has not had the experience of listening or taking part in this caroling, or who is faint-hearted regarding the possibilities of it in these modern days, should read Thomas Hardy's charming story *Under the Greenwood Tree.* In this book he describes the experiences of a country choir which, year after year, has tramped about on Christmas Eve singing the old carols and which does not allow its ardor in the singing and the belief in the message to be lessened even when some hard-headed farmer who is out of sorts, objects to having the quiet of the night disturbed. The songs which would be sung by these nightly visitors may include any of the fine hymns and carols particularly associated with the Christmas season.

If the singers wish to add a touch of gaiety and color to their costumes, or if the night is so cold that it requires additional warmth, caps and hoods of scarlet may be easily procured or made. Lanterns or torches with candles or kerosene wicks will also be found useful and decorative. In some towns the singers even apparel themselves with masks and quite gay and elaborate costumes.

This caroling may include not only the homes of friends, but the residences of prominent officers and social workers, the hospitals, the jails, and, especially, those poorer quarters of the city in which music is all too rarely heard. Any group of people with even mediocre voices may make a contribution to the Christmas season which will be welcomed on every side.

THE COMMUNITY CHRISTMAS TREE

The focus of the community celebration, however, is the big tree, which is erected in some prominent place near the center of the town, and which is intended for everyone. It differs from the home tree in that it is larger and its decoration is more elaborate, and, especially, that it contains no gifts. Frequently, the tree is donated by some one individual or an association, put up by volunteer help, and is decorated by various contributions. In nearly every town the electric light company undertakes to wire it and to light it free of charge. In Chicago, the telephone company and the electric light company combined in the erection of a monstrous tree which had been contributed by a man in Michigan.

The decorations vary in different places. There is always gleaming at the top of the tree a brilliant electric lighted star. The New York tree was called the "Tree of Light," and this name has been adopted in many places. In some of the larger cities, notably in San Francisco, instead of one tree several were erected at important points throughout the city.

There is already a strong movement to utilize live and growing fir trees located in suitable places within the city instead of transporting from the forest a tree that has been cut especially for the occasion. This is an extremely desirable plan where there is a park properly located, for the presence of the tree throughout the year would be a continual reminder of the glory of the Christmas time.

While the community Christmas tree will unaided shine forth with its message of brotherhood for several nights before and after Christmas, much will be added to the celebration if there can be one or two occasions when a little program is given. This may be simple or elaborate according to the weather conditions and the resources of the town.

A PROGRAM

The simplest ceremony may consist of turning on the electric current at a specified hour and giving a number of musical selections. This music may be supplied both by special groups of people, such as children from certain schools, the choirs of the churches, and singing societies of various kinds, and especially by general community singing by all the assembled men, women, and children. For this purpose the Extension Division of the University of Wisconsin offers its particular aid by recommending that the songs to be sung be chosen from the following seven:

1, *O come all ye faithful;* 2, *Silent night, holy night;* 3, *O little town of Bethlehem;* 4, *The first Nowell;* 5, *God rest ye, merry gentlemen;* 6, *Hark, the herald angels sing;* 7, *A carol for Christmas Day.*

THE ORGANIZATION

The practical details of working out these suggestions will vary greatly with the individual community. As has already been seen, frequently a single individual will have to start everything into motion, gradually uniting the efforts of many helpers. In other places, an organization, fraternal or religious, may perform the same function.

Certainly, in many towns by this time the idea will have gained sufficient importance so that a committee appointed by the Mayor or the Board of Education will assume charge. But whatever the means, the ideas already stated will supply suggestions of results to be obtained, and the details can be worked out as are needed.

One of the best results of this Christmas celebration should be the bringing into the greeting of the New Year and the passing of the Old Year, a larger sense of decorum, reverence, of consideration for the significance of the event, than has obtained in many places. Just as Christmas Day should be welcomed by the sound of music, either human voices or splendid brass instruments at the stroke of twelve, so should the passing of the Old Year have a similar dignified greeting.

THE SUPERVISOR'S OPPORTUNITY

I

The day comes in the life of every Music Supervisor when he must ask himself how real the Kingdom of Music may be made for children in the Public Schools.

He may think, and others may tell him, that having taught the necessary songs and the art of reading by syllables his duty is done; that everything beyond these essentials is "up to somebody else." But as he stands in the midst of the children themselves realizing that while he is with them they literally live by every word that proceeds from him, he will pray now and again that the word he speaks may be fruitful, that it may convey more than the syllables of the scale, and

That it may vitalize the subject of music and make it truly alive.

Now, so to command "every word" is a considerable contract. Perhaps it is wise, therefore, to take up one clause of this contract at a time.

There is in the making of music after the true way such a lot of Joy (as well as of Education), its emphasis of the true things of Life is so pronounced, that it stands a vast amount of revealing. It is of this revealing that it seems worth while to speak.

In a certain European opera house, there were two principal conductors with equal authority.

When a new opera was about to be rehearsed with the orchestra the one conductor came absolutely prepared to drill the men to the attainment of a degree of skill which they knew he had already worked out for himself. So without score before him, he set to work with the orchestra as a whole, with the special choirs, even with individual players at times, forever aiming to secure what the composer requires of the instruments. No trouble was ever too great for him to undertake; no detail too small for him to work out. Then when orchestra, singers, and chorus came together, a foundation for an almost immediate smooth performance had been established.

But the process of the other conductor was different. He used to go to rehearsal having done no preparation whatever. It was his plan to learn the score with the men as they played over and over with him. And the men knew this perfectly well; they realized that this conductor was actually learning the lesson with them, and therefore it all became a matter of mechanical drill, of gaining skill by repeating again and again, of seeking the meaning in the sounds instead of putting the meaning into the sounds.

But it was not a vitalizing process that made the spirit of the whole work serve as inspiration from the very beginning.

The methods of these two men exemplify all work and all workers, and they suggest this fact:

To secure from others the best results, the most highly efficient responsive action, and ultimate attainment, one must have a clear and vivid picture of that for which he is striving.

The same fact expressed in the words of the soldier says: "He leads best who knows where he is going and for what purpose."

II

The best work is done with a group of people, whether instrumental players or children in school, which has first been as perfectly done as it can be in the privacy of one's study.

A rote song is infinitely more than a means for stimulating the halting processes of imitative music and empty words, and there are two art products in a good rote song. They demand infinite care.

The poem (and it should be truly a poem) must be recited in speech as it is in song. So the melody must be learned and appreciated for its tonal beauty alone. When the two are combined there evolves that mystical, magic combination of the poet's imagery and the composer's tonal interpretation.

The pictures in the poem must first be brought out for the child so that he is under no misapprehension as to what they mean

The little girl who persisted that there were three buckets in the well was absolutely right so far as her interpretation was concerned. No one had informed her that the old oaken bucket, the iron-bound bucket, and the moss-covered bucket, were all one and the same. Naturally enough, then, she concluded there were three.

In the first rote songs never leave the imagery of the poem to the child's unguided imagination.

To do so in any subject is disastrous. Was it not the late Mark Twain who repeated the reply to the boy's query: "State the period of the Dark Ages"? "The Dark Ages," said the lad, "come in between antiquity and posterity."

Like most blundering intellects, this lad hit a great truth.

It is well to regard the rote song as a miniature opera.

The children themselves are the character or characters; the Supervisor is the orchestra and conductor combined. The entire stage setting is not wanting. It is perpetually set up in the theatre of the children's imagination. Now if everything that enters upon this wonderful stage be made clear and definite before the scenery is set, then the little opera will go smoothly.

Out of this artistic practice of the rote song, or of any other detail, for that matter, it is possible to plant in the soil of the children's minds more than the mere facts of music. Facts come fast enough.

The main thing is that every day we must increase his fund of human interest stories about the men who have made music as well as about the music men have made.

They are real hero-stories if one tells them well.

Lincoln splitting rails is no more an inspiring picture than is Beethoven becoming a greater and yet greater composer while deafness was gradually closing the world of sound to him.

No trouble should be too great that permits us to vitalize the beauty of art for those who are as yet unable to vitalize it for themselves. But the whole lesson lies in the example of the two conductors. It is wiser and safer to go into the school-room fully prepared to work out the little opera with the players than to learn it as they struggle over its difficulties.

STARTING COMMUNITY MUSIC WORK IN AUSTIN, TEXAS

THE MUSICIAN has emphasized this one fact.

Community Music work does not start itself.

Some person or persons must take the initiative. The call, therefore, is for LEADERS. And our most emphatic statement to our readers is:

You may be a leader if you will.

Read the following account of how interest in Community Music work was brought about in Austin, Tex. The beginning came when some persons in that city read certain articles on the subject published in THE MUSICIAN. The first active step was to send a letter to Mr. Tapper seeking further suggestion. The letter tells the story.

My dear Dr. Tapper:

"The papers were received a week ago and have proved interesting and helpful. Without waiting for the magazines to arrive we adopted the suggestion given in your first letter about using the columns of the daily paper to start community singing.

"First of all my husband published a long article from *Musical America* about Harry Barnhart's success with community choruses in New York. This we followed with letters purporting to be from the people, signing fictitious names. Mr. Norton then called the attention of the band master to the letters and asked him if he could arrange to have a few songs sung at the next concert. He seemed much interested and said he would try it. The following evening the mayor announced the plan from the band stand, but no leaders volunteered and the response was scanty. The next week a few of the leading singers of the town stood on the band stand and encouraged the crowd, a cornet lending valuable assistance.

"At the third concert the people joined in the singing heartily, and we may say that community singing is established in Austin. Thus a chance word written by you in New York started the good work in far off Texas.

"The Austin *American* published yesterday morning a clipping from an Abilene paper which approved the Austin plan for community singing and hoped that Abilene would be the second city in the state to adopt it. Abilene is a town in west Texas with a population of little over nine thousand. It is very interesting to have a part in this great movement.

"The work that you do is truly remarkable, and the articles you sent me will undoubtedly be of assistance in the work of our music festival association. We are bringing fine artists here for concerts and hope soon to have the organization on such an excellent financial basis that it will be possible to establish a permanent orchestra.

"MRS. CHAS. G. NORTON."

A MUSICAL CLUB OF MEN

IN previous issues of THE MUSICIAN we have given an account of musical clubs for men in a number of cities. The list is to be extended by the addition of the Men's Musical Club of Winnipeg, organized last December, with a membership of 150, and a limit of 200, which number it is expected will be reached before the end of the present year.

The club occupies regular quarters with a recital hall adjoining. It extends an invitation to musicians or music lovers who may be visiting Winnipeg to make themselves known.

The weekly recital season commenced October 2 and will continue to April 23, with a few interruptions. Some of the topics are: British Composers, Grand Opera, Oratorio, Russian Composers, Chamber Music, Ballads, Grieg, Gounod, etc.

AN IDEA FOR CONCERT SERIES IN SMALL TOWNS

COMMUNITIES in which financial resources are moderate often deprive themselves of excellent musical entertainments because the artists they wish to hear command too high a fee.

One remedy is to co-operate with persons in adjacent towns for definite days in close sequence, thus dividing traveling and hotel expenses which makes possible a lower fee by the artist or the manager. This is not at all difficult, but simply requires opening communication with several other persons who are likely to be interested and then arrange dates as seems most practicable and convenient.

Miss Margaret Anderton, pianist, of New York, who has contributed valuable articles to THE MUSICIAN, has succeeded in interesting several other artists and worked out a chain of engagements within a radius of 100 to 150 miles from New York, and reports the plan as very satisfactory. Perhaps other artists, not only in New York, but in other music centers, may find this a worth-while plan.

MUSIC IN NEW YORK DAILY NEWSPAPERS

IT is significant of the increase in matters musical that the New York *Evening Globe* now has a page devoted largely to music, which is a part of the issue twice a week. Another paper with a music department is the *Evening Mail*.

Isn't this an idea worth following in your own town? Think it over, then talk it over with the editor of the best and most progressive paper in your locality.

SYSTEMATIZING MUSIC TEACHING

THE MUSICIAN has recently received from a very progressive, hard-thinking teacher a booklet outlining his system of teaching music. It contains some very interesting suggestions, which we reprint here, following the policy of THE MUSICIAN, namely,

To gather Teaching Ideas from One Teacher and pass them on to Many Others.

"In the first place, every pupil is required to use a copy of my booklet, 'The —— System of Music Teaching,' in which are lists of technical exercises, studies, pieces (carefully graded), theory and reference books, with blank spaces, for recording the dates on which each subject is commenced and finished and also the time taken.

"This idea of *recording the work*, so that the pupils and their parents may see the results in black and white, I have found to be highly desirable and successful.

"The course of study is divided into four grades: Elementary, Intermediate, Advanced, and Artist. No pupil can be promoted from one class into the next without passing all the passing-marks. At intervals of every two months, or five times in the fiscal year, tests are taken of every pupil, individually (preparation for which is daily work), and in consequence of this the desired results are easily obtainable, inasmuch as all pupils work hard to excel in what they recognize as a race. For at the end of the 'year,' the books of all pupils are compared, and prizes of value given to the holder of the best marks.

"I try to encourage this spirit of emulation among children particularly, for children have not naturally the high ideals of the adult, and require an incentive, although it works equally well with the advanced pupil. I have seen children—absolute beginners—improve so visibly by the system, that some have entered the Intermediate Class in four months, and the Advanced in little over a year! To reach the Artist Class depends, of course, upon individual temperament and the amount of work done by the pupil.

"But it is not too much to say that by this system—provided the pupil does his part in practising— the normal pupil can accomplish the work desired in *half the time* of the average 'method.'

"The 'Contest' begins in October and lasts until July. Any pupil, however, may enter at any time of the year. And this system need not interfere with any other method you may have used."

The Value of Reputation

The teacher of music is criticised by some persons because of what they consider the high price he charges for his instruction. A big factor in determining this fee is the Reputation of the teacher based upon the Quality of the instruction which, it may be, his competitors cannot duplicate.

Reputation has value. Louis D. Brandeis, Justice of the United States Supreme Court, in a statement made before the Interstate Commerce Commission, said: "I am as willing to pay for reputation in an article as for the merchandise in it."

Two teachers may offer instruction of equal value, but if A has the reputation of giving high-grade teaching and B has not, A will get the higher fee.

Perhaps there is a lesson in this point for you.

Arm Movements, Not Weight Alone, the Test of the New School of Piano Playing

BY FLORENCE LEONARD

I

THE WIDESPREAD DISCUSSION OF RELAXATION

WITHIN ten years a remarkable change has taken place in the minds of teachers and students of piano-playing. They have waked up, or have been educated up to the idea that Relaxation and Weight are indispensable to artistic playing. The magazines are flooded with accounts of the value of weight-playing, which range from that of Sieveking, the latest musician to announce its discovery, to those of the followers of Deppe and William Mason, who were of the first to realize its importance. A list of prominent players who dwell on its necessity would include the names of practically all the artists before the public today.

This state of things is gratifying to the pioneers in such teaching, who have lived to see this radical change. But the subject is not so easily disposed of. A distinguished teacher of singing said recently to the writer, "Why do teachers of piano devote so much time to discussing 'relaxation'? Isn't it recognized as necessary, as a presupposed condition of playing?"

The reason that the question will not subside is that it is not fully understood, even by some of those most zealous and conscientious ones who have collected the most facts about it.

What is the right amount of relaxation?
When shall I use it?
How shall I use it?

These questions still need to be answered. They should moreover be preceded by another question:

How shall I get and keep relaxation?

For there are still many students who are unable to reach the desired condition of arm.

THE USE OF THE ARM THE KEY TO RELAXATION

To recognize the need of relaxation, of weight, was the first step toward understanding the "new" school of technic. There are other steps of vital importance. The first is to know definitely how to teach and to use relaxation. To this end we must learn *how to use the arm*. It is not enough to say to a pupil, "Do not be afraid to use your arm; it will not fall off." It is not enough to divide the amounts of weight into finger-weight, hand-weight, forearm-weight, full-arm-weight, and to apply these combinations in an up movement, or a down movement, or both movements.

RELAXED ARM OF THE OLD SCHOOL

What was meant by "relaxed arm" in the old school? Of this school Louis Köhler may well be taken as type. He has been called the father of all schools of technic.

Köhler taught that the arm should hang "like a wet cloth." That meant that it should hang loosely, in such a condition that it could be swayed or pushed about. It had, therefore, to be relaxed. For the rest, Köhler insisted on a "normal" hand position, a finger that struck the key from the knuckle, with its own force, a hand that struck from the wrist, for octaves, chords, staccato. And he limited the movements of the forearm to two:

1. The stroke from the elbow, to give more force than hand could give, to octaves and chords.

2. That sidewise motion which was necessary for change in position along the keys.

The upper arm had scarcely any active responsibility. And thus the arm was almost wholly passive. It had no active contraction of the muscles to interfere with the free movement of the hand in the wrist, or the fingers in the knuckle. It was ready to be moved from side to side, as the hand, transferring a "quiet position" along the keys, should drag or shift it. The aim of the player was to keep it as quiet as possible without letting it become stiff. This was the limit of its co-operation. Thus this idea of the "passive" arm is as old as Köhler, and it still has supporters.

RELAXED ARM OF THE NEW SCHOOL

The difference between the old idea of the relaxed arm which hung in *quiet*, and the new idea of the relaxed arm which has an *active* part in tone-making, is clearly shown by a few quotations. Frederic Horace Clarke, with his wife, Anna Steininger, was one of the first writers to explain the principles of Deppe. He wrote:

"All the methods until now teach the exact opposite of this [principle], for instead of directing the attention to developing the organized mass which we have in the arm, they devote their energy to making separate parts, such as finger, hand, or forearm, work independently of the other parts."

Breithaupt teaches "the rhythmically natural movement of the whole playing organism," and the fundamental principle of playing, the movement from which all others originate, as "the fall, or the free shake and throw of the whole arm, from the shoulder."

Steinhausen, physiologist and musical amateur, who founded his statements on his scientific observation of pianists, and on discussions with them and with theorists, writes:

"The fundamental form of touch is a swinging movement of the whole arm, from the shoulder down, in combination with the swinging roll of the forearm and swinging participation of hand and finger."

Bandmann, Caland, Carreño, Chittenden, Godowsky, Jäell, Mason, Matthay, Söchting, Stoewe are among the most conspicuous names of teachers who give the arm a considerable active share in forming the tone. They differ as to the predominance of the arm-formed tone, and as to the proportion of activity and passivity in the arm.

THE TONE-PRODUCING ARM, ACTIVE AND PASSIVE

But if the arm produces or helps to produce the tone, how can it be relaxed? Does not a tone-forming arm mean a pressing arm? If the arm does anything more than reinforce the tone it cannot be passively hanging.

Suppose that the arm is a rope. One end of the rope is attached to a boat, the other end is attached to a wharf. The boat is the hand, the wharf is the shoulder. When the boat, being set in motion, moves back and forth or from side to side, it drags the rope with it. That is the old, passive arm.

But *the hand and fingers are not passive*. They are, with some help from the forearm, making the exertions which produce the tone. Suppose, however, that the arm is a fire-hole into which energy is being forced. The small end of the pipe is passive. It is thrown or tossed about by the impulse from the larger end. The small end is the hand. The flail is a favorite example of this sort of arm, which, set in motion at the larger end, delivers that impulse through all its smaller parts.

But in neither case is the likeness to the arm perfect; for all the energy is applied from without. In the case of the arm, the energy comes partly from the shoulder, outside itself; and partly from the triceps muscle, within itself.

Thus the arm is partly active and partly passive. This is the condition in the case of what is called the fundamental movement, the free swing of the arm in the shoulder.

THE ARM CAN PLAY SCALES

Now the hand, which is the small and passive extremity of the swinging arm, can divide itself, by its finger-tips, into five extremities. And these extremities can so apply themselves to the keys, that, without being lifted from them, they can receive and deliver five different impulses. Or they can deliver five successive tones from one impulse. Therefore the arm can be made to give out five tones, well joined to each other.

Further, by arranging the fingering, the number of tones in the unbroken group can be increased indefinitely, so that, plainly, the arm can play scales and arpeggios in smooth groups.

The use of the arm, then, is not to be restricted to detached tones, staccato, non-legato, or to chords and octaves. In playing the groups or the chords it has no help from hand or fingers, except that the finger-tips remain on the keys, and that the fingers adjust themselves to the notes.

Hand and fingers, then, are passive or nearly so. This use of the arm is the first striking point in the "New School."

HOW MUCH TO RELAX AND WHEN

Thus, starting with what the New School describes as the fundamental movement, we can answer the questions: How much must the arm be relaxed? and, When shall relaxation be used? by saying:

Swing the arm by means of shoulder and triceps, let the other muscles and the joints be relaxed as far as the very finger-tips (which must not slip from the keys). Use this arm to play every sort of figure and passage. Vary the tone by the amount of weight applied, and by the suddenness of the swing, but not by *isolating* finger, hand, or forearm.

In all of this application it should be remembered that relaxation means a natural condition of mobility, and not an abnormal disintegrating of natural connections.

Further, it should be remembered that the foundation, the fundamental tone and movement, are all that are to be expected from these instructions.

MANY POSSIBLE MOVEMENTS

The instructions themselves are very general. They provide for the use of all four portions of the arm, but how?

Each portion of the arm can move in several different directions. In which direction shall each be moved?

The finger-tips must stay close to the key. Shall the knuckle, then, swing up or down or sidewise or back or forward?

What shall the hand do, swing up at the wrist or down or sidewise?

The forearm can go forward and back, up and down, turn in the elbow, swing out or in with the elbow. The upper arm, too, has various possibilities.

Besides, if the whole arm is to assist, we must know what proportion of the energy is found in each part of the arm which must act most?

It sounds as if, instead of having five individuals to train, as in the old school, we had now eight and *not* an "arm as a whole."

NATURE ASSISTS

But Nature comes to the assistance of those who take the trouble to understand her. And if we begin with the simplest movement, the large movements, and swing, in certain ways, Nature arranges both direction and proportion in the energy.

And thus the teacher who understands the arm knows how to begin with the easiest movement the long swing, and by teaching the arm to swing up or down or in a circular fashion upon the

finger-tip, he teaches *at the same time*, loose wrist, loose elbow, firm finger-tips, weight, for at least three varieties of tone, in scales (with perfect connection) arpeggios, in the foundation of the trill, in chords and octaves.

AFTER RELAXATION OF ARM, FINGERS ARE TAUGHT

Then, he seizes upon the natural tendencies of the arm, and begins to teach:

The next steps after relaxation.

And here, Nature no longer chooses the proportions of the movements, but we choose, from what is offered us by Nature, to assign to certain portions of the arm more or less work, and work in certain directions. For the direction of the movement is of great importance, not only to endurance, but also to tone. And we choose:

1. By using the smaller part of the arm, the fingers, as tone-makers (combining with the whole arm), with relaxation, and

2. By using the fingers as tone-makers, with less of relaxed movement in both hand and arm.

GRADUAL DEVELOPMENT OF ACTIVITIES

The natural tendencies of the particular player help in the order of the teaching; for some of these styles are more instinctive in one person, some in another. The most logical development takes place when the hand has, naturally, much mobility in the loose knuckles, for then the free fling of the long, relaxed finger upon the key, which adds sparkle, brilliancy, to the relaxed arm-tone, can be easily learned, and prepares the way for that sort of finger activity which is less natural and less free.

Thus the teaching begins with the simplest, easiest form of movement, and advances by degrees to the most difficult tone-making. And meanwhile it teaches, it *must* teach, supple wrists, fingers now loose, now firm, a hand secure, whether it is high or low, relaxed or fixed. For all these conditions are needed to combine with the free or the controlled movements of the arm.

CONTROLLED ARM THE LAST STEP

Thus choice of directions and proportions continues further, through various stages, up to the point where the whole arm preserves, instead of relaxation, a fine *balance* between looseness and stiffness, yielding with the quickness of thought to any other condition of the arm (more or less relaxation) between extreme relaxation and extreme control, as such a condition may be required for the tone.

"SWEET HOME" AGAIN

REVIVED REMINISCENCES OF JOHN HOWARD PAYNE

BY F. W. COBURN

Once more John Howard Payne, the author of the most popular song in the English language, came into the news of the day. After a lapse of sixty-four years the United States government paid to a collateral heir the sum of $207.92, representing indebtedness that had never been collected for salary while Payne was United States consul at Tunis, the place of his death in April, 1852. A short time previously a long-forgotten portrait by Charles Robert Leslie had come to light and been acquired by the Boston Museum of Fine Arts. Naturally, therefore, there was newspaper talk again about this gifted and erratic American who in life was an able actor and a magnificent poseur.

The legend that has grown up about Payne is interestingly foreshadowed in a little sketch noted lately in an old copy of the *Boston Musical Journal*, specifically of Dec. 15, 1853. Even in his lifetime it was fashionable to stress the loneliness of the man in contradistinction to the happy home life which he had celebrated; this tradition was continued and emphasized after he had gone. The *Musical Journal's* tribute to him, written by an acquaintance of his later years, contains data that do not appear in any of a score or more of magazine articles listed by Poole. It is perhaps on that account worth reprinting verbatim:

THE AUTHOR OF "SWEET HOME"

As I sit in my garret here in Washington, watching the course of great men, and the destiny of party, I meet often with strange contradictions in this eventful life. The most remarkable was that of J. Howard Payne, author of *Sweet Home*.

I knew him personally. He occupied the room under me for some time, and his conversation was so captivating that I often spent whole days in his apartment. He was an applicant for office at the time, consul at Tunis,—from which he had been removed. What a sad thing it was to see the poet subjected to all the humiliations of office seeking. Of an evening we would walk along the street. Once in a while he would see some family circle, so happy and forming so beautiful a group, that we would both stop, and then pass silently on.

On such occasions he would give a history of his wanderings, his trials, and all the cares incident to his sensitive nature and poverty.

"How often," said he once, "I have been in the heart of Paris, Berlin, or London, or some other city, and heard singing, or the hand organ playing, *Sweet Home*, without a shilling to buy the next meal or a place to lay my head. The world has literally sung my song until every heart is familiar with the melody. Yet I have been a wanderer from my boyhood. My country has turned me ruthlessly from my office; and in my old age I have to submit to humiliation for bread."

JOHN HOWARD PAYNE

Thus he would complain of his hapless lot. His only wish was to die in a foreign land, to be buried by strangers and sleep in obscurity.

I met him one day looking unusually sad:

"Have you got your consulship?" said I.

"Yes, and leave in a week for Tunis; I shall never return."

The last expression was not a political prediction. Far from it. Poor Payne! His wish was realized. Whether his remains have been brought to this country I know not. They should be, and, if none others would do it, let the homeless throughout the world give a penny for a monument to Payne. I knew him, and will give my penny for an inscription like the following:

Here Lies
J. Howard Payne
The Author of *Sweet Home*
A wanderer in life; he whose songs
were sung in every tongue,
and find an echo in every heart,
Never Had a Home
He died
in a Foreign Land

Doubt has sometimes been cast on the truthfulness of the legend of Payne's poverty and loneliness. It is probable that for the sake of picturesque effect he may have formed the habit of exaggerating his sufferings and his aloofness. This tribute unearthed in a musical library at least testifies to the kind of stories he used to tell about himself in his latter years. He was then near the end of a career quite like that of hundreds of other "professional people" of his day.

Educated in Boston and at Union College, New York, he had been unable, through family circumstances, to finish his college course. He had tried the stage and made a great hit, which was precursor to many appearances abroad.

In London and Paris he knew everybody in the profession and many painters and literary people. In the early twenties he undertook to write operas. In one of these, *Clari, the Maid of Milan*, was contained the *Sweet Home* song, the words written about an old Italian melody. It proved to be one of the most marked successes in the history of popular music, though the author realized but little money from it. He returned to America in 1832 and was much fêted.

At least two romances have been "dug up" regarding his "lady loves," but he never married.

As recorded in the extract above he died at Tunis, April 9, 1852, and was buried in St. George's Cemetery. The doubt as to his remains which our anonymous author expresses no longer exists. In the middle eighties they were removed from Tripoli and brought to Oak Hill Cemetery, Washington, amidst imposing ceremonies.

The very fine portrait of Payne which the Boston Museum has acquired is by Leslie who carried much of the good eighteenth century tradition down into the inartistic age of the great decadence. According to a tradition he pronounced this the best likeness he had ever made.

The picture was owned for many years by Miss Virginia Cox, a cousin of Payne's, resident in Paris. At her death it was bought by Howard Payn, an English gentleman, who claimed no relationship, but who was named after the American composer as a consequence of personal friendship between his father and the latter. Being minded to dispose of it in the early days of the European war Mr. Payn began negotiations which resulted in the canvas's coming to this country. It now hangs among the works of the English school at the Boston Museum.

How it happened that a collateral descendant of the author made application for the balance of salary due on account of the consular service at Tunis is not disclosed in the report from Washington. The failure of the Government to compensate the estate until after sixty-four years is stated by Auditor of the Treasury, Edward D. Herne, not to be due to any fault on its part. Payne was a bachelor and no heirs came forward to claim his salary. "There was no red tape," says the Auditor. "On the consul's death no money due him could be paid except to a person qualified with authority to receive it. During all these sixty-four years no one was found to whom the money could be paid."

Thus has an "alone in the world" legend been perpetuated down to this day.

Motherhood and Careers: or, The Mother Artist

BY HELEN WARE

HELEN WARE, THE ARTIST

NOT long ago one of our leading musical papers brought forth statistics to prove what a small percentage of women musicians follow their profession after marriage; incidentally also commenting upon the number of American girls whose European musical studies have abruptly ended in marriage, thus causing absolute neglect of their artistic endeavors. Mme. Carreño's opinion explains this problem in few words:

"It is a blessing to themselves as well as to musical audiences that they do cut short their artistic ambition on account of marriage, for surely the spark of Genius must have been flickering faintly if the softly whispered exchange of vows has blown it out."

To these girls Art meant but social accomplishment, the means to an end, and that end the winning of trivial public recognition, and not the expression of their own messages.

Marriage in a woman's artistic career is the supreme test as to whether she truly has a calling for the artistic field or not. It exemplifies the "survival of the fittest."

European music centers have always been crowded with American girls of mediocre talent who have been encouraged to go forth in quest of fame either by unscrupulous teachers or well-meaning but sadly misinformed relatives and friends. After their marriages most of these good women look back on their sojourn abroad as a pleasant experience only.

Not so with those young artists who consider Art not as a toy, a pastime, but as their sacred life work.

I know a very talented violinist who actually lived on milk and stale rolls for many years and dwelt in a poorly ventilated stuffy chamber, practising in her topcoat on cold days for lack of heat, so great was her desire to master her Art.

Two dear friends of mine, during their student days, shared an allowance sent by a wealthy relative as adequate for one person. In order to complete their studies these two girls stinted and deprived themselves of the very necessities of life. They were compensated, however; for today both of them fill prominent positions in opera companies. And this in spite of the fact that they have both married.

Among the greatest woman artists, supreme alone are they whose lives have been broadened through the ennobling influences which come with Motherhood. It must be admitted that Motherhood certainly does not lighten the burdens of a musical career. But on closer study we learn that

The woman artist's new problems, which follow in the wake of new responsibilities, are of a nature which can be solved through economic mediums.

The material welfare of the child and home is an economic problem, and can be almost entirely separated from the spiritual influence which the Artist Mother will continue to wield over her home and dear ones.

ARTIST MARRIAGE AND DIVORCE

The true Woman Artist who in marriage has not found a sympathetic helpmate for further development in her Art is indeed to be pitied. The greatest percentage of divorce cases can be traced back to this cause.

MARRIAGE SHOULD STIMULATE THE DESIRE FOR SELF-EXPRESSION

Even though in marriage and in the succeeding bliss of motherhood she finds new vistas of life, new work, and new ideals, these, if anything, will but stimulate her desire to express life in all its complexity through her chosen art.

How futile the thought that a Woman Artist could eliminate from her life the intensive desire to live and succeed in her Art, to toss aside the chosen work for the fulfilment of which she has relentlessly and conscientiously prepared for half a lifetime.

No, those who can so readily discard their aims in Art were never born to become artists; for their artistic endeavors have never taken root, but were like an exterior decoration, insignificant and of no consequence to the real cause of musical art.

EARLY MARRIAGES NOT DESIRABLE

In looking over the names of successful artists, we find some who have married during the student days of their career. No one who is acquainted with the strenuous physical and spiritual efforts that a thorough musical study requires will advocate such early marriages.

A young woman artist should have mastered the technical difficulties of her art and feel absolutely convinced of her vocation in life before she considers matrimony. The *presto tempo* marriages of Bohemia are rarely of lasting nature, for no other reason than that the ever-present economic problem and the effort to master the technical difficulties of her art, also the new obligations of married life, all in all prove too much of a strain for woman. Something must be sacrificed.

In the case of a woman artist whose attitude toward her artistic calling is well-defined and tested by actual experience and time, matrimony brings but minor adjustments to her new mode of life. The blending of professional and domestic duties causes no fatal discords, for the independent woman artist has learned to eliminate from her conceptions of matrimony and life all the sentimental elements, not at the cost of high ideals, but in preference for the practical issues of life.

To say that a woman in the musical profession can succeed in matrimony and her art only if she find a fellow artist for a life mate would be as ridiculous as stating that a cool-headed business man will be the right kind of an antidote for the temperamental woman artist. What may be found a blessing in one case will prove a curse in the other. Women artists have made a success of art and matrimony at the side of minus as well as plus artistic husbands. May it be said in the same breath that they have also been glad to rid themselves of both varieties.

THE HUSBAND

The woman artist's rôle in the perplexing problem of a musical career plus matrimony is one that requires infinite study of human nature and the economic problems involved.

When one considers that matrimony, even in the case of women with no profession or artistic career, is the unsolved riddle of the ages, it will

HELEN WARE, THE MOTHER

dawn on us how much more complex this proves in the case of a woman who, besides her domestic and maternal calling, must also carry out her painstaking work in the pursuance of her artistic career.

The eventual clashes between the issues of life-success and art-success are bound to take place sooner or later, and it is the sane balancing of these two dominating factors in a woman artist's married life that will eventually tip the scale toward failure or success in her matrimonial venture. The man who cannot analyze and appreciate the woman artist's attitude to her dual rôles in life should never run the risk of marrying her; for there are not many conditions in life that will influence a woman artist to give up her career if she is destined for a public career, and has made her art a life study.

As a rule we find that those women artists who, even after several experiments, have found the linking of matrimony and their artistic careers quite impossible have been women who were either unfortunate in their choice, or were splendid artists, but not staunch WOMEN. It requires the rare combination of the two to make a lasting success of this risky venture.

UNFORTUNATE PUBLICITY

It is most unfortunate that the public loves to gloat over the private life of an artist. This is responsible for the repulsive airing of the women artists' wrecked marriages. If the happily married artists' home life would receive an equal amount of publicity, it is certain that the much abused artistic temperament would have fewer scapegoat parts to play in the women artists' matrimonial ventures.

MOTHERHOOD

Our high artistic standards make great demands on woman's intellectual as well as physical resources. In her life she must adhere to the fundamental laws of Nature in order to preserve her powers. No woman artist, no matter how great in her art can afford to dispense with that great blessing and privilege—Motherhood. Nature is the supreme master in all arts, and least of all can woman disregard its great teachings.

The woman artist whose vision of an artistic career consists of a struggle for artistic efficiency at the cost of life-success is indeed to be pitied. Of all the tragic finales what is more pitiful than that of the woman artist whose vista is a never-ending succession of gray distances, void of all sunshine and its contrast of shadow that come to those who have been brave enough to face not only their own audiences but the trying responsibilities of Motherhood as well.

Teaching Efficiencies { The Profitable Lesson / Education and Drill

BY THOMAS TAPPER

WHETHER the lesson costs the pupil fifty cents or ten dollars, it should be delivered to him in such manner that he can realize a hundred per cent upon his investment. This is seldom the case, and probably for the reason that most teachers assume greater powers of interpretation of the spoken word and acceptance of directions than facts justify.

No lesson is profitable to the student that is not a clear work-unit to him. He must know exactly what is to be done and the relationship of what he is about to do to what he has been doing. Perhaps this is a better way to put it:

Just as there must be a cultivated technic with which to perform pianoforte music, so there must be a technic for getting at things; an order, a system, a way that may be called the best and most direct.

All this is an art which the pupil must learn and in which the teacher must instruct him. There are still a few people who take it for granted that the pupil can receive quickly and accurately our directions for doing things.

Three factors should form a part of every Lesson Assignment:

1. The lesson content must be specified exactly.
2. The best and most direct way of going about it must be equally specified.
3. There must always be a small margin of unexplored country on which the pupil may exercise his own power.

When the Lesson Assignment is efficient, then it is a clear specification. The unknown quantity in all teaching is the thought process on the part of the pupil. Some of the most curious mental twists and turns go on through mere misunderstanding.

Perhaps the case of the boy struggling with an English sentence will illustrate this. The factor that tortured him in the privacy of his own consciousness was his inability to imagine what kind of a bird a Saw Bird is. He came upon this query in the following sentence from his history:

Columbus, on approaching land, encountered seaweed and saw birds.

There are countless pupils wandering up and down the earth worrying over their particular trouble with Saw Birds.

We can help them only when we have learned exactly what it is *they think*, after we *have spoken*.

EDUCATION AND DRILL

Readers of this magazine are undoubtedly familiar with the Gary (Indiana) plan of education. In its basic principle it distinguishes between what is primarily DRILL and what is truly EDUCATION (or leading out). It also distinguishes between the technic which must be attained to enable one to receive impressions (or pressings in) and similarly the technic needed for self-expression (or pressings out).

The words themselves, Education and Drill, should set the music teacher to thinking, for only too much music training is carried on, in the assumption that Drill is Education, which it is not and never can be. We often fail to distinguish this difference.

For example, in the teaching of Music Theory. But when we have drilled the pupil thoroughly in Analysis and left him high and dry as to synthesis, we certainly have not educated him.

Let us for our purposes say that Drill is that which establishes and maintains any form of technic, while Education is the training of the creative faculty in ourselves joined with the appreciative faculty of things outside of ourselves.

In music both interpretation and composition are distinctly of the creative principle in us; while physical technic of hands and fingers, knowledge of chords, of form, and the like, is pure drill work.

Drill work, consequently, builds the road over which we are destined to travel out into the life of activity and enjoyment.

The Gary plan recognizes that some teachers are especially long on Drill, that they can do this phase of teaching best. Others are more adept in leading the pupil to express himself and to appreciate.

So the plan involves two groups of teachers. The children go to a drill teacher for drill itself and not for expressive and interpretative education; that they receive from another group of teachers.

Leschetizky recognized this principle long ago. He always sent a pupil whom he thought worth while to a preparatory instructor, with whom all technical foundation and adjustment was made. Then he accepted the pupil, if it seemed worth his while, and began the true process of education. And he had a marvelous way of doing it.

The drill work might still go on, but if so, it was carried on with a drill teacher, not with him.

A few distinguished teachers of music in the United States follow this same process. They are not technic builders—a phase of the work which they perceive belongs to the specialist.

But the vast majority of teachers must have to care for both operations. For a part of the lesson time they are the drill teacher, then they transform themselves by a twist of the wrist, so to speak, into the educational teacher. There is no reason why this double office should not rest in the same monarch.

The only thing necessary is to recognize clearly and distinctly that the two factors of Drill and Education require to be considered each from its own particular point of view.

So long as the teacher does not confuse them, does not misconceive the purpose of either, he can carry them forward simultaneously and successfully.

———o———

CHARITY begins at home is an old saying; so does Progress.

THE DREADFUL SONATINA

BY ALBERT FULWOOD

MANY a pupil, I find, fails to respond to the allurements of the piano composition that carries only a generic title. And the reason is not far to seek.

If anyone should try to sell to the piano teacher by mail a dozen Bropoligs at four dollars and thirty cents, the possibility is that she would not risk the money. And her reason would be very simple. She does not know what a Bropolig is, has never handled one, has never seen one. She would not, in fact, know what to do with one.

Briefly, the thing does not appeal to her subconsciousness, which, by the way, is but another name for her accumulated past experience.

Now setting the Bropolig aside for a moment, is it not very much the same with the child and the sonatina? Here is a new thing—something about which there is no accumulated experience to which to refer.

Can we expect the young pupil to have any more enthusiasm for the sonatina than an adult may have for something of which he has never heard before?

What must we do?

So far as possible we must provide that first needful and receptive experience.

We cannot dismiss the matter with a professional wave of the hand and a "Come again Tuesday." We must set out to make the very word, and every other word we come upon, vital with interest. The teacher who cannot tell absorbing stories about the word *Sonatina*, or the word *Largo*, or the word *Cadence*, is a handicapped individual.

And there is nothing in this but gain, for lots of sonatinas are the jolliest things in the world. I venture that any child would be interested to know that some of the prettiest sonatinas were written by a man with one eye. There are many entrances into the Garden of Knowledge all of them pleasant ways for little traveling feet.

Why then should they be left alone to climb in over the wall?

———o———

A SYMPHONY STUDY CLUB

MME. MATHILDE RUDORF, of Los Angeles, has sent to THE MUSICIAN an account of a club which she has organized and conducts in Los Angeles, composed of professional musicians, amateurs, and students which studies the great symphonic and other orchestral works of the great composers. Arrangements for piano, two and four hands, and for two pianos are used in the practice, the works being played and analyzed until they are thoroughly familiar to the members. Mme. Rudorf believes that to familiarize a person with these master works is to develop a love for the best in music.

Here is an admirable form of organized effort. There should be such groups in all towns and cities.

A PUPIL'S REPORT CARD

FOLLOWING our policy to present to our readers efficiency devices as used by experienced and progressive teachers we reproduce here a portion of a card used for the past seven years by a successful teacher in one of the smaller cities of Massachusetts. The upper part of the card, not shown here, contains the name of the school, the teacher's name, and a simple statement of the work laid out. The full size is $3\frac{1}{2} \times 6\frac{3}{8}$.

THE PROFESSOR TALKS ABOUT THE AGE TO BEGIN STUDY AND TEACHING

"Some time ago, Professor, you promised to say a few words about Singing, and about Harmony and Composition. Today many of your hearers are teachers of singing. No doubt they will be glad to hear from you concerning the subject which is ever uppermost in their minds—the one which is not only their chief occupation, but also their chief preoccupation: SINGING."

"By 'preoccupation,' my dear Editor, I take it that you do not mean absent-mindedness' or 'inattention,' but rather that state of mind which may be described as being intensely occupied in thought about one special subject—in this instance, Singing? If this fitly describes the state of mind of my hearers, I shall be very pleased indeed to consider, with them, some of the phases of Singing, from the teaching standpoint, chiefly.

"As, however, it is not possible to embrace the whole of the art of teaching singing, in the time at our disposal, perhaps the best way of proceeding would be for our friends here to formulate their questions as they occur to them; it may be somewhat irregular, but like all irregular things much more interesting. Now, ladies, and gentlemen, I am at your service." A long silence ensues. "Well, who begins?" The silence continues, while a feeling of embarrassment seems to pervade the gathering.

"What! Not a question! I thought you were more eager!"

WHEN TO BEGIN VOICE TRAINING

Then, after a moment's awkward pause, a lady asked hesitatingly: "What is the earliest age at which regular voice training may be commenced with safety?"

An amused smile spread over the faces of the auditors; the question seemed so far from the general trend of thought.

"Why smile, my friends? Surely the question is most apposite. We could not begin with a more important consideration. My reply shall be equally plain and pertinent.

"Regular, systematic training of the voice should not be begun before the age of sixteen for Females, or before the age of eighteen for Males.

"By this I do not intend to convey the idea that the young people may not sing at all. Let them sing about the house and amuse themselves with song, in their own way, moderately But let there be *no voice training* of any kind, otherwise serious voice trouble may ensue.

"*En passant,* I would state that I am strongly opposed to the class-singing that obtains in many of our high schools, because of the wrong classification of voices, by means of which contraltos and baritones are forced up and their beautiful, natural quality of voice irreparably damaged. I have known many sad examples of this. Let the young people learn Solfeggie, Sight-singing, Music; but no shouting in chorus, no vocal effort, no voice training (which often means voice straining).

CONSTITUTIONAL CONSIDERATIONS

"The reason for the ages of sixteen and eighteen is chiefly physiological. The organic change that has taken place prior to th se ages, has left he voice in a weak, unsettled state—far too unstable to respond to any strenuous study. Indeed, in the majority of instances, I hold that what is known as *voice training* before those ages is nothing less than a crime: a voice has been killed.

"I know that there have been a few no able exceptions, such as: Henriette Sontag, Tietjens, Alboni, Grisi, Adelina Patti, J nny Lind, and the wo Garcia sisters, Mme. Malibran and Pauline Viardet. These are rare exceptions indeed; so rare that they help to prove the rule. Even these naturally gifted singers had to retire for a period of judiciously directed study, in order to correct the blemishes and faults of voice contracted by overprecocity and by abuse of voice at too early an age Henriette Sontag, Tietjens, and Alboni are the great exceptions; they had no second study period, such was their perfection.

"As for male voices, it may safely be stated that there are no exceptions to the rule of *not less than eighteen.* Unless you wish to meet with an unpleasant surprise, keep to that. With girls, however, there is a little uncertainty at times, owing to constitutional differences. Some mature much earlier than others. This is frequently observed among children of the races of southern Europe, and of our own South. Nevertheless, keep to the rule: *not less than sixteen.* Safety first."

LEARN TO BECOME MUSICIANS

"But, Professor," objected a teacher, "are these girls and boys to be deprived of music, of following their natural bent and of singing, for something like four years before they reach the respective ages you have named?

"My dear sir, you have misunderstood me. I did not say they should 'be deprived of music' or 'of following their natural bent.' Quite the contrary. The four years, preceding the age at which they may begin their regular voice training may be employed to the very best advantage by the study of piano, solfeggio, literature, language, the history of music and so forth; in short, everything that contributes to make one a thorough musician. Because the singer requir s a higher and a more fully rounded education than any other exponent of the art of music"

"Why do you say that, Professor?"

"For the simple reason that

"The singer has to interpret not only the music but also the words. He must be well-read. Still more; he should possess sufficient critical acumen to enable him to compare the relative values of music and words so that he may either weld them together in one artistic whole, or else discriminate between them by concentrating his interpretation upon the more worthy part."

EIGHT YEARS' CONTINUOUS STUDY

"According to that, Professor, it must require a long time to make an accomplished singer—to say nothing of a really great one, such as those you have mentioned?"

"Most assuredly, it does; unless most exceptionally gifted, as they were. My experience shows me that eight years' continuous and assiduous study is a conservative estimate of the period required to form a singer adequately equipped to commence a public career—and to continue it successfully. Even so, the newly fledged professional must go on studying for many years, not only to become more accomplished and greater but in order to keep abreast of musical progress."

"But, Professor," began a juvenile looking "teacher," "I know some professional singers, who are appearing in public and getting good money, who have not studied more than a year. How do you account fer that?"

THERE ARE SINGERS AND SINGERS!

"I don't have to 'account' for it any more than I have to account for the success obtained by selling wooden nutmegs, gold bricks, or any other spurious articles. But I can cap your example by saying that I have heard of 'public' singers who are said to have 'never taken a lesson in their lives!' Must I account for that also? There are singers and singers, public and public. Would the talents of the 'eminent vocalist' who 'fills in' with a 'rag' or a popular song, between the films at a well-known picture house be equal to the task of captivating an audience at Symphony or at Carnegie Hall? So-called 'vocalists' of that order are as a blot on the profession of the legitimate, competent singer.

"It is you, teachers, who are mainly responsible for the well- or ill-timed first appearance of your students. Do not allow them to make their débuts, until thoroughly prepared—fit and adequate in every respect, no matter whether the music to be interpreted is *The Rosary* or the solo work in the oratorio of *Elijah.*"

"No doubt, you are quite right, Professor," said the juvenile looking teacher; "but if it is to take as long as you say to make a competent professional singer, look at the time that would be needed to make that singer's teacher! Why, I know of singing teachers anywhere from eighteen to twenty-four years of age, who not only teach privately but who hold excellent positions as teachers in schools and colleges. How is it possible for them to give the necessary instruction?"

"*It is not possible for them to do so.* It stands to reason that if it requires some eight years to teach the pupil adequately, it must require *more* than that time to prepare the pupil's teacher. I am quite aware that, 'like an eagle in a dovecote, I' shall 'flutter' innumerable flocks of young teachers. 'Truth will come to sight.' **It is better to know our own deficiencies and so supply the want, than to continue ignorantly our task to our own self-satisfied applause.**

PRACTICAL EXPERIENCE REQUIRED

"To a great extent the singing teacher's profession is empirical (I use the word in a good sense, meaning: founded upon practical experience, depending upon the observation of phenomena), in a similar manner to a doctor's profession. The preliminary years of study are occupied in acquiring all the special knowledge needed in the profession. Then comes the *practice,* and

The Practice is the Thing

"When the doctor has qualified by satisfying his examiners, he is obliged to pass one or two years in a hospital, practising upon its patients and thus gaining his practical experience. He learns that there are no two constitutions exactly alike; the same remedy will not do for every patient; he has to study the patient, exercising the greatest patience and tact and the most acute powers of observation.

"In like manner the singing teacher's first steps in his profession are entirely experimental, based, it is true, upon the theoretical or self-applied knowledge acquired during his own years of pupilage. He has now to practise upon the living subject; to listen intently to the tones emitted by the pupil; to determine by his hearing what are the faults in the voice and how produced; to watch the pupil's play of face, noticing any abnormal muscular action and confirming by sight what he has decided by hearing.

"It will take years and years of the most persistent practice and experimental observation, with all sorts and conditions of voices, before the singing teacher becomes an infallible expert in diagnosing vocal faults and their causes and in applying the correct remedy.

BREATHING AS A MEANS OF HEALTH AND BEAUTY

BY V. M. HOLMSTROM

ARE you one of those who think you know all about breathing and that because you always have breathed well enough you can go on doing so?

Even if you do, read this short article and it may be that you will realize things you never thought of before.

The first fact which I wish to bring out is that the respiratory function is the most important we have. Without it, we could not live two minutes, while we could live without food for several days.

The second fact is that this function is the most neglected and abused of all we have.

This is especially true of women and girls, for most of them breathe in only half and less than half the quantity of air which their systems crave. What is Breath? *Life.* Yes, life itself.

How many of the present day women and girls have not enough life, staying power, or constitution, vital force, or whatever you like to call it. Every reader of this article has, without doubt, friends and acquaintances to whom this description applies. They do not realize—physically—life in its fulness.

The best way to replenish nerve force or vital power is to eat plain, wholesome food and enough of it (the average American girl student is in a state of semi-starvation, existing largely on candy, pickles, and cream puffs), to sleep in a well-ventilated room, and to relax when sleeping and resting.

How can you relax? By letting go of everything, by giving in. And this will be done in the easiest manner if you also *breathe* deeply and consciously.

Not the usual careless, unconscious breath or the shallow unrhythmical kind you do when tired or upset.

No! To do the vital, nerve-strengthening, and refreshing kind, you lie down comfortably, ease the clothes, place hand on diaphragm, and *don't try to see* how deep a breath you can take, but just watch for the gentle beating of your lower ribs and abdomen.

You see, the respiratory tract is like a balloon. When the air enters the balloon, it becomes big, when the air leaves it, the balloon becomes small. The respiratory tract is not only the chest but—more important—the lower ribs, abdomen, and small of the back as well. That is why breathing in the manner I shall describe, becomes such an important exercise, for it strengthens women just where they are apt to be weak. The exercises are graduated in quite a wonderful manner so that no one is too weak to do them, neither is anyone too strong or too well to do them.

The diaphragm is the most important muscle concerned in the breathing, and it *goes down* when an inhalation takes place, that is, if it is not prevented by wrong method, unsuitable clothes, etc.

This descent gently pushes the lower ribs and abdominal walls *outward.* It is like taking a feather pillow and gently pushing into it with the fist. It will bulge out round the fist. The diaphragm is the fist, and this fact of the lowering of the diaphragm in inhalation is an important one. So please don't forget it.

Now when the hand is placed on the diaphragm, and you feel this gentle muscular action, you are also directing the nerve force there, and each breath will be getting deeper, slower, and calmer, as you go on. Before you know it, you will be asleep. Such a sleep will strengthen and refresh you as no other sleep could. So why not resolve now to make it a daily habit? The principal thing you need for success is the *will* to do it.

To breathe in a standing position is a little more difficult, however, for in the vertical position of the body, the organs and muscles are under more disadvantage. The breathing is the same, always, but standing erect requires more exertion on our part, and this is one reason why the breathing is so slighted.

Now, don't think because the waist and abdomen muscles should be used in breathing that you will "lose your figure." No! You will cease, instead, to resemble an overgrown weed, those great creases beside your collar bones will vanish, and you will "round out" nicely. On the other hand, if your weight tips the scales at the 160 or 175 mark, and you find yourself getting cumbersome, you can "train down" also, by breathing and other exercises, because the oxygen you take into your lungs and *whole system* burns up the useless fat.

The natural process of filling the lungs is the same as filling a bottle—from *below upward.* The air wants to fill the *bases* of the lungs first, and then (in the complete breath) it fills and fills and fills, until the very tips of the spaces are expanded. The sensation of *thus* filling the lungs (*without straining*) until you feel that you can take in no more, is a wonderful one of buoyancy, lightness, satisfaction. On account of the obstacles the average girl puts in the way of her breathing, she does not often experience the complete breath.

The unpleasantness of some voices is caused by the misplaced effort in breathing on the part of the owners of the voices. They breathe *with* their throats and not *through* them.

The air should *never* be held in the throat "by main force." We have the strong muscles round the waist for the control of the outgoing air.

My advice is to watch yourself and see how you *habitually* breathe. If there is no motion below the waistline, your breathing is not the vital life-sustaining function it should be. With the high chest breathing, you will continue to catch colds. Coughs and catarrh* will be likely to stay by you, and so will your indigestion. If you sing, your voice will never acquire the richness and timbre it would with the complete breath.

Such women as Schumann-Heink, Melba, Calvé, and Fremstad are living examples of sustained breathing, and they are also fine-looking women.

But then they do not "slump" when they stand so that their lungs are pressed down by the chest walls. Their *muscles* hold the chest where it belongs. This "slump" is one of the worst things possible for any young girl or woman, for it means a corresponding slump all through the body.

Having had these plain and straightforward explanations, we are now ready to show the faith that is in us by *action.* So "Attention!"

"Weight on balls of feet. Lift heels to test. Raise upper chest slightly, and push neck gently against coat collar, if you have one. If not, imagine one."

*For catarrhs, colds, etc., sit relaxed in chair. Put finger on right nostril and inhale through left. Change finger to left nostril and exhale through the right. Repeat for a few moments several times during day. If dizzy, stop and begin gently again after resting.

(For Explanation See End of Column)

Now you stand well. Your hips will now be where they belong, *without* the indrawing of abdomen so often taught in gymnasiums, and which is bad for proper breathing.

Put your hand a little below the diaphragm and make sure that when you inhale, your lower ribs and abdominal walls go out with a slow, easy motion. Of course, if these muscles are semi-paralyzed because of non-use, it may take you a little while to get it, but it will come all right.

Do not strain. When you now have taken in all the air you can, let it go out through the mouth in one long, big, satisfying sigh. Also, at first, allow yourself to sink in, to aid the expulsion of the air. Thus you will gain flexibility.

After a little practice of this, repeat the exercise, but now, before letting go of the air, draw in the lower part of the abdomen gently (this will raise the upper chest for you) and try to hold the

(*Continued on page 770*)

EXPLANATION OF PHOTOGRAPHS

1. Correct standing position, and a Dalcroze exercise for developing breathing muscles. *Exhale* and raise arms with hands crossed in front of the chest. *Exhale* and bring them back as in picture. *No tension.*

2. Exercise for removing neck creases. Inhale and bend head back. Exhale and raise.

3. Bad sitting position.

4. Good sitting position.

5. Correct standing position and splendid exercise for keeping chest high. Inhale. When *exhaling,* push chest walls when hands are gently against hands, keeping chest up in exhalation as long as possible.

6. Bad position for breathing.

7. Correct standing position, and exercise for developing upper chest. Step forward and inhale as in picture. Step back and exhale.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

What Will You Give?

ONE IDEA largely dominates the minds of the people of Christendom at this time: GIVING.

The great city daily papers contain pages of advertisements to assist their readers in solving the problem satisfactorily.

The department stores are planning big business because of this spirit of giving.

In public places and in public conveyances we are reminded of the advantages of doing our Christmas shopping early.

Conversation between members of a family and friends will come back to the question of giving at Christmas-tide.

So widespread is the idea that even those who do not recognize the divinity of the founder of Christianity fall in with the custom of GIVING.

A custom which grips a great part of the population of the world is worth thinking over, that one may have the best attitude toward it.

THE INDIVIDUAL who ponders over this question of giving should consider it as a means of expressing himself most completely and satisfactorily. Something personal should be present.

Is it a very personal gift to take some of your surplus cash, go to a department store or a specialty shop and purchase an article which you may fancy?

Think of the multitude of things offered for your purchase! When you make the choice it should be because the article selected is the one best expression you can make of your interest in the one who is to receive it.

Some are apt to consider it especially praiseworthy that the gift is the work of the giver. The thought is that it contains more of the personal element. This sounds reasonable, but is not wholly true. Even the thing made by one's own hands may lack that phase of self which is expressed in the one test word of giving: SERVICE.

In Giving to Others There Should Be a Giving of Self

THE teacher of music will not be likely to undertake the expense of purchasing a Christmas token for each one of his pupils. But he can, in various ways, at this time—and then, not forgetting, keep it up—give of himself to his pupils, Ideas, Influence, Stimulus, which shall be a lasting benefit: A SERVICE FOR LIFE.

What can he give?

Himself as an EXAMPLE—It's up to him to be a good one.

And PRECEPTS which train a pupil to Thoroughness, to sound Musicianship, to the Spirit of Study—permanent, not merely for the period of pupilage; inculcate a Love for Art and an Understanding of it, a willingness to Serve in the Community, Breadth of View; and inspire to High Ideals.

And a CONSTRUCTIVE CRITICISM which encourages and builds up.

The result of such GIVING is that a Young Musician of Promise and Power is added to the Community.

This leads to the following statement of the principle of giving as an expression of the Christmas spirit:

Give of Yourself to Others for Music

Three ideas, a veritable trinity in giving for the Art Worker.

SERVICE implies not one person, but more, let us even carry the thought to its logical end, it implies ALL. While you are planning to serve others, other persons are also planning to serve you. In other words: SERVICE IS RECIPROCAL.

And finally: When you give of yourself to others, you do not decrease your personal riches. Like the oil in the widow's cruse your store remains undiminished. And if the gifts of others add to your supply you will note that

All Concerned in Giving in the True Christmas Spirit Are Enriched

---

WITH the present issue THE MUSICIAN completes 21 years of SERVICE FOR MUSIC, a service which has known limitations neither of national boundary lines nor distance. But recently we have had most appreciative letters from New Zealand, from Japan, and other far distant points. We try to think in terms of Music as a world-wide Art.

THE MUSICIAN has gathered and distributed IDEAS which help the Teacher, the Pupil, and the Lover of Music, and increase their personal efficiency.

But don't think that all the Good Ideas have been picked up and given out again. You have worked out some of them and perhaps have kept them to yourself.

Don't continue in this spirit.

Give out for the benefit of others, and you will get back from others more than you gave. This is not a theory, but a truth that has been demonstrated. And let THE MUSICIAN be your medium for this giving during 1917.

We want your interest and help.

TO EVERYONE WHO LOVES MUSIC FOR WHAT IT DOES FOR HIM

A Merry Christmas and a Happy New Year

We must listen to music, not alone with the ear, but with the understanding heart.

First Studies in Music Appreciation

BY THOMAS TAPPER

When we are in the presence of the great artist, mind and heart are lifted into the heights.

FOREWORD

Aladdin was, after all, a gentleman of limited resources. Though many desirable things sprang into being at the magic of his power, music was not one of them. But today, a little child, with as few motions as it took to manipulate the Wonderful Lamp, can summons into his presence all the Master Singers, Troubadours, Trouvères, Jongleurs, and Strolling Players. And they come obedient to his bidding, without hesitation; never unwilling, never indisposed, never engaged elsewhere; ever ready to perform the best music of all the world for them anywhere and at any time.

As yet we have not realized to the full what a privilege we have; what a source of enrichment. But when we begin to inquire into its value as means for education and culture, for appreciation and pleasure, we then perceive that modern art, science, and invention are creating for us an Arabian Nights' world, more magical than that woven for the Sultan of the Indies in the stories of the Vizier's daughter. While that was the realm of the Wonderful and the Unreal, ours is the realm of the Beautiful and the True.

* * *

We learn in all human activity, that the value of anything is rightly determined only by a hundred per cent efficiency of use. If we brutalize the mechanism, misuse or abuse it, turn it to base purposes when it is capable of yielding a significant result, we never arrive at or suspect its true value. Most musical instruments are subjected to this treatment, and many of us soon begin to think them to be as ordinary as the noises which the bungler extracts from them. But then, a Hofmann and an Ysaye chance along, and touching them make their glory shine through. So it is we learn that there are often acres of diamonds at our feet when we were vainly looking for them afar off.

It all depends on what we go forth for to see. Those who look for not much, find it, while those seeking the greatest and the best have good luck too.

* * *

It will be the purpose of THE MUSICIAN for some months to come to devote this page to acquainting its readers with the simple principles which are fundamental in the study of MUSIC APPRECIATION. As a basis for the lessons it will present certain distinctive compositions; aiming to bring the reader into concrete possession, through the understanding mind and heart of their meaning and purpose. Each of these will be performed by a great artist, not once merely as in the concert hall, but as often as we may desire in the privacy of our own homes.

By this means we shall aim to acquaint ourselves with the message of the composer; to make ourselves efficient in grasping its meaning and beauty; to appreciate the artist's interpretation of music which the world cares for so much that it never ceases to hold it as a precious possession.

* * *

Just as the home library must contain our choicest gathering from the garden of the world's best books, so it should possess among its music treasures and as an indispensable factor in its cultural equipment the messages of the world's great artists preserved and presented in the thin circular discs which (unlike books) look absolutely alike, and which (like books) tell, every one of them, a different story in a different way.

WEDDING MARCH

(Mendelssohn)

Chicago Symphony Orchestra

Frederick Stock, Conductor

(Columbia Record A5844)

There was once a music reviewer who felt compelled by the demands of his professional work, to keep at hand for ready reference a list of adjectives useful in describing the music of which he wrote. But even with this equipment, he soon found it impossible to convey in *words* any exact description of how music *sounds*. Indeed, Mendelssohn, the composer of the composition we are about to hear, once said: "Where words end there music begins."

But most of us catch the mood of music: its grave or gay, its light or sombre, its joyous or sorrowful, its placidly quiet or dramatically intense. This far we can go with our friend's words, but in using them we soon discover that we are not describing the music, rather we are confessing the state of consciousness which it arouses in us.

The constant association of Mendelssohn's music with the wedding ceremony, its joyous tunefulness, the happiness we associate with the occasion, all tend to make this composition distinctly a piece of program music. We listen to it, so to speak, with the mind in festival mood and the memory in festival array. We translate it into terms of our own association. The opening trumpet tones are indeed a call to remembrance as well as a summons that we give heed in our joy to the solemnity of the moment.

The March is so tuneful that its melody is caught at once. Who is there that on hearing it does not begin to sing or hum or whistle its opening strain as if he were welcoming an old friend? And its rhythm is vital, really full of life. It compels us to fall into the march mood and motion. Its tone variations from loud to soft, from the vigorous strength of its opening measure to the delicate tracery of the flute trills at the end, all combine to create a tone picture unusually varied, attractive and brilliant.

For over seventy years this music has found its place at the wedding ceremony. It was composed by Mendelssohn as a part of the Midsummer Night's Dream music, which he wrote at the command of the King of Prussia in 1843. Even as early as his seventeenth year he had already composed for the piano, four-hands, the Overture to the Shakespeare play, which he performed with his sister Fannie to the great delight of the distinguished visitors at his father's house.

All the world loves this wedding march music, a delightful part of what one writer has called Mendelssohn's delicious commentary upon Shakespeare's Faerie vision.

SPANISH DANCE

(Granados)

Pablo Casals

'Cello Solo

(Columbia Record A5847)

This fine Serenade has all the folk-flavor of the tribal consciousness out of which it comes. It is now bold and vigorous, now tender, now almost mystical in its unexpected turn of melody. The dominant factors that impress the listener are at once the national color of the music, and its essential tunefulness. It is a melody to remember and to hum to oneself. And yet, with all the force of its courage there is here and there a little turn aside into the realm of sadness.

The Serenade is an evening song, or music intended to be played at night, let us say by the lover beneath his lady's window. We are prone in listening to music to make it tell us a story. We see the lover with his lute and the lady with her lovelorn look. We delight in having it set free the imaginative power. Sometimes such mental pictures associated with certain music are quite permissible. Often, however, they spring into being where the composer never intended they should. Beethoven, for instance, never attached the idea of moonlight to his famous Sonata. It took what has been called a "picture-minded" man to do that.

Nothing perhaps is more likely to set the mind off on its image-making canter than this enticing music by Granados. That it is a Serenade, and a Spanish Serenade at that, pours out of the mind all its stored up associations. And so we create at once the tender moonlight, the latticed window, the dark-eyed senorita, the mantilla, and below in the shadow the youth with the magical guitar, who always sings to the listening lady just as the famous tenor sings at the opera. How readily and yet how delightfully the imagination creates the desirable!

While the individuality of the composer stands out in the unique melody and its characteristic national rhythm of this Serenade, that of the performer is no less unmistakably present; the tone is free, singing, truly noble in its declamation.

The reader will recall that Enrique Granados perished in the Sussex catastrophe as he was returning to Europe from the United States after having witnessed the production of his opera at the Metropolitan Opera House in New York. In the full tide of life, richly gifted, his work received with enthusiastic recognition; his untimely passing out on the full tide of death was a loss the world could ill afford.

ETUDE

Op. 25, No. 3, in "F" Major.

(Chopin)

Vladimir De Pachmann Piano Solo

(Columbia Record A5831)

In many compositions we find interest and variety in the way the writer develops the rhythm; that is, in the manner he combines long tones with short; rapid runs with quiet, reposeful passages. This is one means at his command for beautifying the movement of the music.

Rhythm is the motion of tones; the larger and smaller tone values giving infinite variety. While in some music this rhythmic variety is a prime essential, in others, like this Etude of Chopin's, it is reduced to its lowest terms. In fact, were it not for the butterfly-flight off into Nowhere at the very end, we should say of this Etude that its rhythmic uniformity were unchanged from beginning to end.

When the composer denies himself the privilege of employing so powerful a means as rhythmic variety, it is because he has other purposes in view.

When the piano composer excludes rhythmic variety and turns to his palette for other colors with which to paint his picture, he finds at his disposal harmonic shades and tints, melody, change of register, dynamics, and tone coloring. It is just these factors that give this Etude its wonderful charm, for the composer uses them all. Its tunefulness lies in a very definite melody line of the simplest kind. Its color comes from changing harmonies, from the shifting of the music from the middle to the higher portions of the keyboard. There is a zephyr-like rising and falling, a swinging and swaying, a shifting and lifting; all the while the melody stands out through the tracery of the tone pattern as clearly as a figure shows against a monotone background.

The melody with which the study opens sings very simply and keeps to its key as a youth untried keeps to home and friends. After a few measures it grows restless, and, again like the youth, who is attracted by the enchantment of distance, it sets off on a pilgrimage nto strange lands and among strange people in the terms of music, it moves through other keys); tending ever, hesitatingly but relentlessly, to find its way back to the Land of the Tune which gave it birth; singing cheerfully meanwhile, like the youth who goes forth with a heart full of melody, determined, some day, to return to the home of his fathers.

Mr. De Pachmann's playing will delight the music-lover. To the student of Chopin the pianist's playing of this work is the lesson of the master in touch, interpretation, the subtle use of the pedal, the strength and delicacy of tone color and balance.

CONDUCTED BY HELENA MAGUIRE

Once Again, Dear Children, We Send You Joyous Greetings This Christmas Tide

CHRISTMAS DAY

THEN let us sing the anthem
The angels once did sing;
Until the music of love and praise
O'er the whole wide world will ring.
Gloria in excelsis!
Sing it, sinful earth,
In excelsis Deo!
For the Saviour's birth.

———o———

DECEMBER MUSICIANS

DECEMBER 3, 1721, was Johann Sebastian Bach's second wedding day. He married Anna Wülken, who had a beautiful voice.

December 14, 1788, their son Karl Philip Emanuel Bach, died.

On December 15, 1790, Haydn started on that wonderful and story-like trip of his to England.

December 18, being MacDowell's birthday, should be generally celebrated throughout the music clubs of America. Let us not forget our own musicians.

December 22, Beethoven's *Pastoral* symphony was first given in Vienna. The year was 1808. This too, is Teresa Carreño's birthday, 1853.

———o———

LITTLE LESSON OF THE MONTH

WIDE SKIPPING

FIRST we play in what is called "five-finger" position, then the scales come, which necessitate "thumb under the hand" and "hand over the thumb"; then come chords; then we "break" the chords; and so we arrive at playing music in which we sometimes have to jump or skip about dreadfully, even over two or three octaves!

This wide skipping or jumping often scares children, for one can never be sure if one is going to "land" upon the right key, or on a key just far enough above or below to make a horrid discord.

So here is a thought to help you to "land" right:

Suppose you were drawing a picture of a house—hasn't your school teacher told you that you will draw straighter lines if you keep your "mind's eye" (as we call it) *not* on your pencil-point or on your hand, but on the point *to which* your pencil must travel? This is true.

If you have dotted out the panels of your door, your pencil will go much straighter and surer if you keep your attention fixed on the *dot toward which* the line must go, instead of on what your hand is doing in between dots.

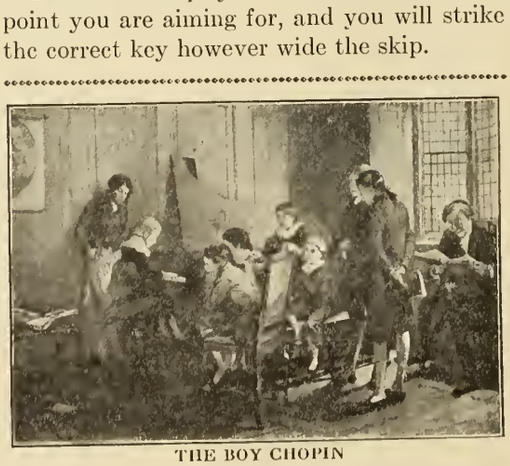
And this is just as true at the keyboard. The reason for this is (if you don't mind looking up a few words in the dictionary) that the thought which immediately precedes an action is called "the motor-cue" and this motor-cue may be of two kinds, either *resident* or *remote*.

The resident motor-cue is the thought which stays right in your hand while it is moving, and that is not the one we want.

The *remote* is the thought which *precedes* the hand, going before it to its destination, so that we travel the distance in thought *first*, then in reality.

We can walk a beam the better the less we think about our feet. We pitch or catch, shoot or chop, the better, the less *resident* and the more *remote* our motor-cue is.

Therefore keep your mind's eye on the point you are aiming for, and you will strike the correct key however wide the skip.



THE BOY CHOPIN

If you want a suitable Christmas token for a boy or girl musician, send to THE MUSICIAN for a copy of the picture THE BOY CHOPIN, photogravure, 8 1-8 x 11 2-8, mounted on large card ready for framing, and equal to pictures sold in art stores at $1.00.

Special price, during December, 25 cents.

FINGER JINGLE

HERE's my fingers—ten they are,
Each one has a number,
Thumbs are one and this is two,
Three is the longest finger.
Then comes four that's bound so tight,
Last the littlest finger;
It's hardest to remember quite
That *five* is the *littlest* finger.

———o———

THINGS WE OUGHT TO KNOW

THAT Accent is the salt that savors—too *much* or too *little* ruins.

That Rhythm is the vehicle by which musical feeling and musical expression are conveyed to the listener, that it is the life of music, its heart-beats.

That we ought not to say that "a sharp raises a note," but that "a sharp *indicates* a note one-half step higher than the note itself."

That leger lines are short added lines placed above, between, or below staves for the reception of such notes as are too high or too low to be placed on the staff proper. That *five* is the greatest number of these placed above or below, and *three* the greatest number placed *in between* the staves.

That intervals are named in *two* ways.

That the first note sharped is the last note flatted, and that the first note flatted is the last note sharped.

That a "note" is on the page; a "key" is on the piano; a "tone" is in the air, or rather, *is* the air in motion.

———o———

A CHRISTMAS MUSICAL

IN TOYLAND AND TABLEAU

BY LAURA ROUNTREE SMITH

THE invitations contain a drawing of a toy in one corner and the following rhyme:

To Christmas Musical and party,
We bid you come with welcome hearty,
And at this Merry Christmas time,
We'll entertain with song and rhyme.

PART I. IN SANTA LAND

(Children are seated in a semicircle and take the part of dolls and toys.)

1. Violin and Piano. *Dreaming of Santa Claus*, Miersch. Piano. *Boat Song*, Lichner.

2. Recitation. *The Dream Ship.*

Santa Claus a dream ship built,
For his dolls and toys,
And he said, "It will delight
All the girls and boys."
He stepped on board, I do believe,
And so set sail on Christmas Eve.

ALL:

Oh, dream ship bright, sail on tonight,
Over the moonlit sea,
Oh, dream ship bright, sail on tonight,
And bring the dream to me.

3. Song. *Fairies' Lullaby*, Orth (*Thirty Songs for Children*). *A carriage to ride in* Reinecke.

4. Recitation. *Toys Awaking.* (Top's Song.)

SHEPHERDESSES

All the toys are waking, waking,
Now in Santa Land,
Of the Christmas joys partaking
Dancing hand in hand.
In December all are jolly,
Twining mistletoe and holly.

My top it singeth so sweet and low,
As into Dreamland the babies go,
'Tis humming the song that I love so,
Spin, spin, spin.

My top it singeth a song for me,
When all the hours are full of glee,
And tinsel and gifts deck the Christmas tree,
Spin, spin, spin.

5. Piano. *The Spinning Top*, Nelson. *Dollies' Waltz*, Lewin.

(Children who represent the dolls dance.)

6. Recitations. Firelight Fairies, Beautiful Drum, Jumping Jack.

Firelight Fairies dance and play,
I hope you all remember,
Firelight Fairies, blithe and gay,
In merry old December.

I'm a beautiful drum, and the songs I sing,
With a rat-a-tat-tat make the echoes ring,
Many a year, new dreams I will bring,
But none are so sweet as the songs I sing.

Jumping Jack lives all alone,
In a house he calls his own.
He is there, have a care,
In his box so small and square,
Jumping Jack, as I remember,
Is very merry in December.

Jumping Jack likes to play,
When the toys are put away,
It is true, if you do touch a spring
He will laugh at you.
Jumping Jack, as I remember,
Is very merry in December.

7. Piano. *Firelight Fairies*, Williams. *Good Time Brownies*, Kern. *Dance of the Bears*, Heins. *The Jumping Jack*, Carman.

8. Song. *Bunny Rabbit White*, Reinecke (*Thirty Songs for Children*).

9. Recitations. Rocking Horse, Christmas Thoughts.

Sing high and sing low,
And rock to and fro,
For sweet is the song I sing,
Sing high and sing low,
As December days go
The baby's the rocking horse king.

Sing high and sing low,
A-riding we go,
While Christmas bells merrily ring,
Sing high and sing low,
While the merry winds blow,
The baby's the rocking horse king.

Think of the stockings in a row,
Waiting for Santa Claus, you know.
Think of the very heavy pack,
Santa will carry on his back.

Think in December, if you please,
Of all the beautiful Christmas trees!
Think of the reindeer on the roof,
Stamping each tiny little hoof.

Think of the sleigh-bells tinkling so,
Jingle, jingle o'er the snow.
Think how happy we are because,
It is almost time for Santa Claus.

10. Piano. *Hobby Horse*, Ladoukhine. *The Sleigh Ride*, Behr.

11. Song. *Santa Claus will come tonight*, Orth (*Thirty Songs for Children*).

12. Holly Wreath Drill and Recitation.

Ho, for the holly at Christmas time,
The bright red holly when sweet bells chime,
'Tis Christmas Eve and lights burn low,
Hi! ho! for the holly and mistletoe,
The bells chime low, the bells chime low,
When we deck with holly and mistletoe.

PART II. IN TABLEAU

(Old folks are seen seated by a fireplace. The tableaus and pantomime are shown at the back of the stage.)

1. Song. *Old Folks at Home* (behind the scenes).

2. Dialogue. OLD LADY: You are so quiet tonight, I believe you see pictures in the fire.

OLD GENTLEMAN: It is Christmas Eve. I can see the woods tonight and the snow falling on the pine trees. Soon the dawn will break and we will cry "Merry Christmas" one and all.

3. Piano. *Snow Flurries*, Engelmann. *Angel's Dream*, D'Orso.

(A tableau is arranged, snow falling o'er a pine tree by an open window, white paper is dropped from above.)

4. Dialogue. OLD GENTLEMAN: I see another picture tonight. We are all dancing the minuet. We wear old-fashioned costumes, and I hear the *Minuet* of Beethoven played.

OLD LADY:

Oh, little piece that took my fancy,
Many years ago,
I dream that I'm a child again,
And lights are burning low,
Played with little trembling fingers,
Melody in my heart lingers.

5. Piano. *Minuet*, Beethoven. (*Rhythm and Action*, Norton.)

(A couple pose for minuet in tableau.)

6. Song. *The First Noel* (*Folk Songs for Children*).

7. Dialogue. OLD LADY: Hark! I hear a chime and see a procession passing to church, and we too must go, for it is Christmas Eve and bells are chiming.

8. Piano. *The Chimes*, Müller. *The Bells*, Wachs. (*Rhythm and Action.*)

(The old couple pass out, and "Waits," are seen in tableau.)

9. Song. *Stilly night, starry and bright* (*Folk Songs for Children*).

10. Piano. Duet. *Christmas Eve*, Hiller.

11. Piano. *Christmas Eve*, Heins.

12. Shepherdess drill.

Three enter from the right, three from the left, meet, march forward in twos, separate, march right and left, pass each other, meet in line, hold crooks in right hand, forward, in left, hold horizontal, hook with the next one Recite:

Oh, Shepherdess, with saucy look,
On Christmas Eve, with dainty crook,
Like fairies now we all appear,
While on the air, sweet chimes we hear,
Merry Christmas, join the call,
A Merry Christmas one and all!

March right and left, meet in a circle, dance right and left toward the center, hold crooks touching, separate, form two circles, skip round, form a line. One line marches round the other, that is, three in line march round three who stand in line, march in and out between those in line, hold crooks touching, standing in two lines, sides to audience, while the Spirit of Christmas enters, they circle round him saying:

The Spirit of Christmas in song and rhyme
Comes every year at Christmas time.

SPIRIT OF CHRISTMAS:

A merry, merry Christmas
I bring to you this greeting,
A merry, merry Christmas,
When kind friends we are meeting.
The Spirit of Christmas holly wreaths twine,
And sweet bells ring at Christmas time,
Loving and giving, loving and giving,
'Tis a gladsome time of year,
Loving and giving, loving and giving,
For Christmas time is here!

The SINGER and His ART

WAS THERE AN OLD ITALIAN METHOD OF SINGING?

BY DAVID C. TAYLOR

A NUMBER of authorities on voice culture have recently expressed the opinion that the old Italian method of singing is something in the nature of a myth.

A sharp line is drawn by these writers between the scientific methods now in vogue, and the haphazard plan of vocal training supposed to have been followed before the advent of vocal science. The writers referred to are not altogether in agreement as to what the older plan was. But they do agree that the present systematic course, based on scientific principles, is superior, in every respect, to anything which preceded it.

They even go so far as to assert that the masters of the old school never had anything worthy of the name of method.

There is a question here which students of singing and teachers as well, may reasonably wish to have settled. We all know what the scientific system is. Even its warmest advocates do not claim that it is altogether satisfactory. Perfect coloratura singing is too rare nowadays for such a claim to be justified. Altogether too many voices are ruined. In fact, the dissatisfaction with the scientific method becomes more pronounced year by year. Yet if no other method is possible, we must force ourselves to be contented with vocal science.

On the other hand, if it is shown that the old masters really had a method, it will be to the advantage of every vocal student to have that method revived.

We know, for one thing, that however they taught, the old masters achieved remarkable successes with their pupils. The great excellence of their instruction is seen in the high level of perfection to which they and their pupils carried the art of coloratura singing. We read some of the old operatic scores,—those of Hasse, Handel, Porpora, etc., and marvel at the difficulty of the ornamental passages they contain. Yet all contemporary accounts agree that these elaborate arias were uniformly sung with brilliancy and ease by the artists of those days.

It was not alone the light soprano voice that was then trained for rapid and flawless delivery. Contraltos, tenors, baritones, and even basses were regularly called upon to exhibit the same fine technical command of their voices. Nowadays the belief seems to be generally held that only the light soprano is capable of being trained to sing difficult ornamental passages. Such a belief would have been scouted by the old masters.

We cannot get away from the fact that the modern vocal student demands a methodical plan of procedure.

This is the ground on which the old method is criticised. It is asserted that the older Italian teachers never had a logical plan or system for developing the voice, that they proceeded in some haphazard manner, feeling their way with each pupil, but never having an assured grasp of the principles of vocal management. Such a course would not be tolerated nowadays. Let us see on what basis this criticism of the old method rests.

The whole question hinges on the meaning of the word method.

Modern vocal scientists insist that a method is followed only when the scientific principles of vocal control are mastered in a logical sequence. Breathing, breath control, vocal cord action, resonance, and tone placement must be taken up in about the order here mentioned, or the instruction does not deserve the name of method.

We know, beyond question, that the old masters never touched on any of these topics. The conclusion is therefore drawn that they taught without method.

J. Frank Botume sums up the whole scientific view of the older system in one passage, in his book entitled *Modern Singing Methods.*

"If a teacher says, 'that tone is harsh, sing more sweetly,' he has given no method to his pupil. He has asked the scholar to change his tone, but has not shown him how to do it. If, on the other hand, he directs the pupil to keep back the pressure of the breath, or to change the location of the tone; if he instructs him in regard to the correct use of his vocal cords, or speaks of the position of his tongue, of his diaphragm, of his mouth, etc., he gives him method. The Italian teachers of the early period of the art had so little method that it can hardly be said to have existed with them. In fact, the word 'method,' as now used, is of comparatively modern origin. The old Italian teacher took the voice as he found it. He began with the simplest and easiest work, and trusted to patient and long-continued exercise to develop the vocal apparatus. In all this there is no method as we understand the term."

But the real meaning of the word method is not involved in Mr. Botume's statement.

Method is simply a logical plan of procedure, based on assured grasp and sound understanding of a subject.

It can readily be shown that the old masters had a thorough understanding of the operations of the voice. True, this understanding of the voice was entirely different in its nature from what is nowadays called scientific knowledge. On the other hand, the vocal scientists do not, as a rule, make any claim to possess that insight into the operations of the voice which the old masters had, without exception.

There is one great difficulty in our way when we come to consider the knowledge of the voice on which the old system was based. It seems so absurdly simple that we are apt to doubt whether it could ever suffice for artistic vocal cultivation. Our minds are so filled with the intricate doctrines of vocal science that we believe the problem of vocal management to be extremely abstruse and difficult. Let us try to free our minds of this idea, and to approach the subject with no preconceived notions of tone production. Nature provides us with our voices.

To grasp the meaning of the old method we must take the voice as nature gives it.

The old method was based on three natural laws of vocal control.

These are:

1. The voice naturally obeys the commands of the ear and instinctively produces the tone qualities which the ear demands.

2. The voice is developed by the exercise it receives in the singing of pure and beautiful musical tones; it is injured by the production of harsh and unmusical sounds.

3. The cultured hearer can always tell by listening closely to a singer's tones, exactly what takes place in the singer's throat.

All the instruction of the old masters was directly founded on these three laws. Taken together, they supply everything needed in the highest artistic cultivation of the voice. The laws are so simple that they can be readily grasped they call for no explanation.

But for their practical application they demand one thing involving a great deal of time and experience. This is the possession of an extremely keen and sensitive ear.

An indispensable requirement of the teacher in the old school was a highly trained and cultivated sense of hearing, such as can be acquired only through several years of almost daily exercise in listening to voices.

Considering method as a definite plan of procedure, what, then, was the method of the old masters? The answer to this question is contained specially in the second of the laws of vocal control, namely, the voice finds its normal and beneficial exercise in the singing of beautiful tones.

In actual practice this law is, if possible, of even greater importance than the other two. Only a keen and cultivated ear can recognize the character of a perfect musical tone, and so demand it of the voice. Ear training is a means to an end so far as the singer is concerned, not an end in itself.

Everybody familiar with the voice knows that some melodies are much easier for the voice to sing beautifully than others. Some simple melodies are so well adapted to the voice that even the untrained singer can perform them with a fair degree of ease and beauty. The first exercises which the old masters gave to their beginners were always of this style.

They applied the second law of vocal control as follows. An hour or two of practice in singing these first simple exercises, carried on for three or four days, enables the voice to sing, with the same ease and beauty, other exercises of just a trifle more difficulty. These in turn prepare the voice for still more advanced study. This progress goes on without interruption, the voice advancing imperceptibly, step by step, until the most difficult passages can be perfectly sung.

A good composer, thoroughly familiar with the voice, will have no difficulty in writing a set of melodious exercises perfectly adapted to lead the voice along in this manner. That was exactly what the earliest masters of the old school did.

They bequeathed to us a large number of such sets of exercises and vocalises. These were the practical part of their method.

Where the logical plan of procedure comes in is seen here. The old master knew the voice through years of experience in listening to it. In giving a lesson he was never in doubt just what stage of progress the pupil's voice had reached. His cultivated ear enabled him to tell with certainty exactly what exercises to give for the next

esson. He had at his command a vast number of xercises, vocalises, songs, and arias.

These were carefully graded, according to the ocal and musical difficulties they presented. At ach lesson the master assigned the compositions vhich were needed to carry the voice one step arther. The student advanced one step at a time. But the advance was steady and sure.

All that the student was called upon to do was o practise the exercises assigned to him, striving lways to produce a pure and beautiful musical one.

No student was ever asked to master intricate problems of acoustics and laryngeal action.

Yes, there was an old Italian method. The plan of instruction followed by the old masters was, in every sense, a logical and systematic procedure. They did not grope their way with their pupils. Their understanding of the voice was assured and reliable. They did not leave it to their pupils to find out for themselves how to produce their voices and place their tones, as is so often claimed by the opponents of the old method.

On the contrary, they taught tone production in a way that was always completely satisfactory to their students. The old masters understood the natural laws of vocal management, and the results they obtained from them were vastly superior to the results which modern teachers attain from the scientific rules.

It is in every way to be wished that voice culture would return to the old Italian method.

———o———

SHOULD THE CONCERT SINGER TEACH?

This question no doubt is considered by most of the singers of the day. A full and frank expression of opinion, or relation of experience would be intensely interesting to say the least if it were possible to get, say, fifty singers of note to discuss the subject.

Those who have many engagements, requiring considerable traveling, find it practically impossible to devote time to teaching. And beyond this they are unwilling to run the risk of impairing the finer qualities of their voices by studio work in addition to daily practice. Still other reasons may be cited, such as irregularity of lessons due to absence *en tour*, necessity for rest after trying engagements, the time required for adding to the repertoire, etc.

Yet singers who have arranged to do even a minimum amount of teaching find it stimulating and helpful in various ways. When one attempts to give instruction to others it is necessary that all items of the teaching must be clearly formulated and convincingly explained to the pupil. This gives the artist a more definite grasp of his art and leads him to more thorough study, not merely of the art of singing, but of his own art. And personal growth rarely comes except from study of one's own work.

———o———

NASAL RESONANCE

BY GURDON A. FORY

Nasal resonance is, technically, that resonance secured from setting in vibration the walls of the nasal cavities and the air within these cavities which lie above the roof of the mouth and back of the nose. By some it is termed "singing toward the nose," by some "singing through the face" or "into the mask of the face."

Whether the air passes behind the soft palate up into and through these cavities or whether it does not concerns us very little.

Neither does it concern us in the least whether a wad of cotton or a disc of cardboard on a string and pressing against the soft palate on one side or the other kills nasal resonance or does not kill it.

AN OPEN LETTER

To Whom It May Concern:

I might print here the usual "professional card."
Instead, I am going to be "unconventional."
I have studied singing in the United States and Europe.
I have had a long career as a professional singer.
Have taught singing 28 years, more than 20 in Boston.
My experience as student, singer and teacher has enabled me to "THINK THROUGH" to the UNDERLYING PRINCIPLES OF VOICE PRODUCTION.

HENCE I have something, I believe, of genuine value for every teacher of voice production who may feel the need of assistance. I offer not merely exercises and devices, but TEACHING PRINCIPLES and ways of applying them in dealing with the actual problems of the teaching room. This matter can be used by the practitioner of any "METHOD."

If you are interested and will write me at once, while these lines are before you, I shall be pleased to answer promptly pertinent inquiries.

13 Huntington Ave., Boston, Mass. **FREDERICK W. WODELL.**

Past President Boston Vocal Teachers' Association. Lecturer on Vocal Teaching Before M. T. N. A. and N. Y. State M. T. A. Conductor Boston Choral Union Oratorio Concerts, Symphony Hall.

No one can sing naturally with a string passed up his nose and out his mouth or *vice versa*.

No more can anyone sing naturally with his tongue pulled out half way to his knees with a dry towel in order that a "scientific" observer may see the vocal cords work.

I have written it and talked it and sung it and shouted it and I here repeat it and want others to take it up as a slogan:

What the voice teacher needs is not a laryngoscope but an ear trumpet.

Nasal resonance is, artistically, a QUALITY. The ear is master of the voice, and back of the ear is the mind and its concept of tone.

As the artist must see vividly, beforehand, the object he portrays so must the singer hear, mentally, the tone he is to sing. His mental concept of a tone with the proper admixture of nasal resonance has everything to do with his getting such a tone. To illustrate:

I wish to sing a tone "through the nose," that is to give it that objectionable "nosey" twang. I simply think how such a tone sounds and I produce it. Whether or not I know that the tongue and soft palate come together tightly in this tone does not in the least matter—I get the tone just the same.

As it is with an objectionable quality so with a desirable quality. But do not expect to get what you want as a *discovery*. Nearly always it comes as a DEVELOPMENT.

It may be convenient, sometimes, to know how the vocal organs act, but it is not essential. It may impress your wisdom upon the pupil, but it does not help his voice. I know this from a sad and dear experience.

Helpful Suggestions for Young Singers

That which contributes more to a singer's progress than anything else, other things being equal, is correct work.

The solution of the more difficult voice problems will be found within, not outside of, yourself.

Does it do any harm to singers to smoke? Does it do any good?

The more perfectly you feel the pitch and quality of a tone the more closely will you come to an ideal realization of it.

It is much better for beginners to have tone light and right than to have it strong and wrong.

The acme of good voice training lies in learning to sing as unconsciously right as you formerly sang unconsciously wrong.

Go over songs and vocalises mentally. Sing them over voicelessly. Sing with audible voice as freely as the voice sang in the mind.

The teacher of singing who really is a teacher of singing is the one who says: This is the right way, and then proves it. This is the test of teaching efficiency.

From *Guiding Thoughts for Singers*, by George Chadwick Stock.

A single hearing of the kind of tone he wants is of more value to the pupil than would be twenty lessons explaining the action of the vocal organs in producing such a tone.

Here lies the reason why we all have to admit that to hear a great singer is worth more than many lessons.

The teacher who cannot sing a tone properly enriched with nasal resonance can never induce such a tone in his pupils.

True we must explain what nasal resonance is, what it does for the voice, that it gives color, richness, warmth, etc. We must give some idea as to the sensation of resonance which it gives in that part of the voice where its use naturally falls. We must explain it as an effect. We must often give consonants to induce it properly.

But above all we must listen and see that the pupil listens.

It is a good plan to illustrate, using first a tone devoid of nasal resonance, and then the same tone enriched with it. And after the pupil has gotten it properly he must understand that it is to be developed and perfected like any other vocal asset.

Nasal resonance should be regarded as auxiliary —not as fundamental. The resonance of the mouth, teeth, and hard palate might be considered as fundamental. To this the chest is added below, the nasal in the middle, the head above.

J an de Reszke is quoted as saying that singing is merely "a matter of the nose." It may be half true—it may be wholly true of De Reszke.

But if a teacher worked on that theory he would be a freak and a builder of lop-sided vocal structures. He might do many pupils a great deal of good, but would leave most in a half developed state with short voices.

In most voices that have come to me I have found a woful shortage on nasal resonance. The chest and head resonances are developed and a great gaping, white-toned, throaty void left between the two extremes.

Many pupils, especially sopranos, shy off in affright at the mere mention of nasal resonance, instinctively fearing that the teacher is trying to make them sing *through* the nose when the opposite is true. The right kind of nasal resonance effectually prevents the "nosey" twang.

And, too, they are afraid of getting too much, whereas, I can safely say, too much of the right kind of nasal resonance is an utter impossibility, just as it is impossible for a soprano to get too much head resonance into the high tones. On the other hand, ever so little of the wrong kind of nasal resonance is too much.

On the whole, I think nasal resonance a difficult subject for both teacher and pupil.

The bass, baritone, and tenor will find that largely in nasal resonance lies the solution of the tones around the upper C, D, and E, and higher with some. The contralto will find nasal resonance the salvation of her voice around the middle E, F, and G. The average

THE HERMAN KLEIN PHONO-VOCAL METHOD

Based upon the Famous

School of Manuel Garcia

Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

soprano will find heavy nasal resonance much more pleasing and infinitely safer on her low tones than chest resonance.

The region of greatest nasal resonance lies from B flat below middle C to E flat an eleventh above, on the keyboard, or at the upper end of the bass voice, upper middle of the baritone and tenor voices, middle of the contralto voice, and lower part of the soprano and mezzo-soprano voices. As you approach either extreme of this range there is less and less gradually.

Toward the top the head resonance gradually comes into play more and more.

Toward the bottom there is more and more of the grander chest resonance.

Just where the one ends and the other begins should not be apparent to the listener or to the singer either, after a time. The one should merge into the other as one view on the screen dissolves into another. That is one of the ends sought by every sane voice builder.

Nasal resonance gives color to the white voice, warmth to the cold voice, mellowness to the hard voice, richness to the insipid voice, fulness to the thin voice, heart to the empty voice, freedom, in certain parts, to the tight voice.

You see that, after all, I have gone almost as far as Jean de Reszke.

PHONOGRAPH RECORDS IN THE STUDIO

Progressive teachers of singing recognize that it is essential for pupils to hear the standard works in the vocal repertoire. If the teacher is qualified to give adequate interpretations of the works he uses in his teaching the problem is solved for him. But it still exists for others who have not this degree of executive skill.

And this is the point at which the perfected product of American inventive spirit offers a simple practical substitute for the *viva voce* rendering of the teacher of singing who is also an executive artist.

The phonograph, the talking machine, with a record made by some artist of high standing, is a model always ready, never tiring, never varying, which teacher and pupil can study with the utmost detail, with a thoroughness impossible at a recital, when the work is performed as part of a program.

The teacher can use the instrument to very great advantage providing he gives proper respect to the limitations of the reproduction of the vocal effects by the machine. The tone heard is not the tone as sung by the artist, but that tone as reproduced by the instrument. Therefore, tone quality must be abstracted, and attention be concentrated on rhythmic, dynamic, and other phases of the reproduction in order to get their bearing upon the interpretation.

We feel called to express the wish that more records of master compositions might be given in English, and that more songs with English text (original, not translations) may be offered by artists and record producers.

The teacher who has not added a good talking machine to his studio equipment, should take the matter under advisement.

Helpful Suggestions to Singers *By MR. STOCK*

Rushing Before the Public

I observe that women, owing to their sex, abandon study when young and deem it worthless, because they receive praise for their talent. Thus few reach a high standard in art.

Other youths suffer from similar mistakes, because their teachers expose them too soon in the theatre, and the praise received deceives both student and teacher. Would that the student could but realize that the applause was given to him more as an encouragement for further study than for his present ability, and would that the teacher looked more deeply into his welfare, so he would not expose the pupil to the public until he is perfect.

What perfection can be expected from a youth of seventeen years? He may show good quality of voice and an artistic disposition, but the rest remains to be worked out through effort and study. How many promising youths have been stranded like ships near to a harbor and, instead of getting into port, landed on a sandy bank?

Such disorders result when a youth abandons study, thinking he is all-sufficient because he has a natural, pleasing voice, a graceful portamento, winning ways and a pleasing appearance. If such a one and others would go back to their teachers when their engagements end, and take up their study again, they might then hope to reach perfection in art.

Alas, the dominating conceit in our profession is like the germ of consumption which blinds one, so that we see things differently from what they are.

This sounds like a complaint of today. On the contrary, it is a voice from the past when the Old Italian School of Singing flourished. It is taken from a book of the *Art of Singing*, by Mancini, published in 1777. A translation of the book, made by Pietro Buzzi, was published a few years ago by the Gorham Press, Boston.

HENRIETTE SONTAG'S REVENGE

After her first success at Prague, where she had attended the Conservatory, at Leipzig and Berlin, Sontag came to Vienna. But her reception there was by no means so satisfactory as might have been expected, and, in addition, she aroused the hostility and jealousy of rival singers, the most inveterate being Amélie Steininger.

Disheartened and discouraged Sontag resolved to leave Vienna. It is a matter of record that great success came to her in Leipzig again, then in Paris and London, where her artistic rivalry with Malibran is celebrated. Later she repaired to Berlin where the following incident happened some years later.

One morning as she was driving her carriage along the Friedrichstrasse she heard at the corner of the street the voice of a child singing very sweetly, a song to excite the sympathy of passers-by. Stopping the carriage she said:

"What is your name?"

"Nannerl," was the reply.

"And what does your mother do?"

"Mother is blind."

"Blind!" echoed the singer.

"Yes, blind," said the child. "She was formerly a singer at Vienna, where she had much success. Then she lost her voice, became blind and everyone abandoned her. We had to sell everything and now I am obliged to sing in the streets."

"Tell me your mother's name," said Sontag.

"Amélie Steininger."

"Steininger!" replied the singer, much affected. "And where do you live?"

The child mentioned the address and was told by Sontag to hurry home and say to her mother that she (the speaker) would come very soon and that she hoped to be received.

Sontag kept her word. In the afternoon she went to the house, met her former enemy, who was greatly confused as one can imagine by the visit, embraced her, learned her sad story, and very discreetly supplied her with money for the most pressing needs.

Then she organized a benefit concert for a "necessitous artist," and her assistance and influence went far toward making it a big success.

Thus did Amélie Steininger learn how a noble artist avenged herself.

SING THE OLD BALLADS

It is significant that there should be an evident revival in the matter of singing the songs of forty to sixty years ago. As is generally the case, artists of high standing have used their art to interest the public in these old songs.

About a year ago Alma Gluck took up the once popular *Carry Me Back to Old Virginny*, and aroused a big interest in the song. The publishers announce a sale of copies running into five figures and the Victor Talking Machine records sold in surprisingly high quantities.

Just recently Mme. Gluck made a record of *The Mother's Prayer*, by J. R. Thomas, and Evan Williams, the well-known tenor, one of *Dreaming of Home and Mother*, by Ordway, both of them songs very popular, fifty or sixty years ago.

It is worth while for teachers to make discreet use of such songs in their studio work.

Teachers who want to have at hand a useful repertoire of teaching songs for first year work will find 50 splendid examples in SOMETHING TO SING (75 cents postpaid); with THE MUSICIAN, one year, or $1.60 (not available for Canada).

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

MORE KNOWLEDGE ABOUT YOUR VIOLIN

BY RAY G. EDWARDS

For the students and teachers who followed my suggestions in the October number of The Musician, under the caption *Know Your Violin*, I want to present some rather more advanced work in the present article. To others who have not followed the previous work and started their individual book of home-made studies, I would say, get the October number and familiarize yourself with the method of procedure.

Know your violin if it takes your last bit of spare time. You have plenty of spare time unless you are a very efficient person. Read the splendid editorial on the subject of conserving time in the October number.

So keen an observer of life and of its democratic tendencies in all art manifestations as Edward Carpenter, the English seer, in his book, *Angels' Wings*, referring to Beethoven's reaching out for the freer forms and means of expression—freedom in rhythm and harmony—has this to say of the composer's use of the diminished seventh chord:

"About this last point a few words may be said. There are only three chords of the diminished seventh possible on the piano, thus:

No. 1

Although by inversion and enharmonic change of notation they may be written in a great variety of ways.

"They are almost structureless, protoplasmic, protean chords, each one lying outside any key, yet each closely related to all the keys, so that it is easy to pass indifferently from any one of these chords into any one of the twelve scales. They are generally treated as chords of the minor ninth with the root left out; but it is better to preserve the separate name, diminished seventh, for them. Between them they cover all possible notes of the chromatic scale, and form a kind of Trinity underlying the created world of music.

"We have seen how in the free fantasia passages of his sonatas Beethoven produces a lulling mesmeric effect by rapid key-changes and consequent indecision of key. He produces a similar mesmeric effect in these and other passages by the use of the chord in question."

Describing the use made of this chord in the *Sonata appassionata*, Carpenter says that the tension, having reached nearly to the breaking point, is relieved "and the whole rushes out and away in a white-hot electric stream of the same strange chord. . . . In a moment of intense excitement we are suddenly carried out of all relation to any one keynote; the tragic burden of the melody, with all its overstrained feeling, rolls off, and we break through into (what shall we say?) a state of Liberation, of boundless Expansion—somehow strangely expressed by this fluid protean chord."

It is to the difficulties of this democratic chord that I would now draw your attention. In the first place, study it.

You observe that it contains three minor thirds; no major intervals at all, unless you invert the chord. Also that it contains two diminished fifths, and, as stated in its name, a diminished seventh.

A diminished fifth is always difficult on the violin, because the instrument is tuned in perfect fifths, so the diminished interval necessitates a drawing back of the finger on the upper string, an action which causes trouble from the start in violin playing. It may be made easy (comparatively) if the instructor is keenly alive to his or her responsibility in the matter, which I am sorry to say is very often not the case.

Writing these chords out in the simplest form, without inversion, we have this:

No. 2

Now you can see the truth of the statement that every interval of a third is minor.

Lower any one of the four notes and you have a dominant harmony. Invert them as you will, descend through a series of these chords, one whole tone at a time, or by half tones, chromatically, or to the dominant harmony, or ascend chromatically; at all times you will find this democratic chord to be perfectly at home. It seems to say, "I am a cosmopolitan; the world is my country." Try as you will, you cannot catch it in an awkward position. Only in this respect—it is awkward to play.

But being so universally useful and agreeable, at home anywhere, it becomes necessary to master its technical difficulties. And here at the start a word of warning:

Do not attempt to learn it in every position and inversion, in all the keys, at one sitting. You will only confuse the ear and conclude that nothing can be done with it. On the piano it is different, and easier, so that is the place to try it out at first. On the violin, however, the ear will soon become confused and fail to record a difference in the minor and major thirds. In time you will learn to recognize it anywhere.

It will therefore be best, in writing your home-made exercises employing the diminished seventh, to get on solid ground frequently. In other words, do not use chromatic series or sequences of the diminished seventh, but touch the solid earth frequently.

It is probably best taken after a dominant harmony with seventh by changing the root of the latter, raising it a half tone. Beginning, then, with the dominant seventh on G, as a broken chord, through two octaves, make the diminished seventh on G♯, and then the dominant seventh on A, and the diminished seventh on A♯. Continue in this method through all the keys.

No. 3

Again the same chords can be played, descending first and then ascending.

No. 4

Broken chords of the dominant seventh and diminished seventh through three octaves instead of two, following the same plan of ascending and descending, descending and ascending, should also be noted down in your home-made book of studies, and practised faithfully as soon as you have mastered the two-octave form. This will of course carry you into the highest positions, but even this need not deter you from the reverse form—descending first.

Starting again with the two-octave form, change it to the double stopping of octaves, first the dominant seventh and then the diminished seventh.

No. 5

As minor thirds by inversion become major sixths, it will be within the scope of possibilities to write dispersed chords of the diminished seventh for two strings, three strings, and four strings, but I will leave this for the advanced player. He may also place in his book the chromatic order of these chords on two, three, and four strings. When he has done so he will recognize some of the bizarre, fantastic ornaments used by Vieuxtemps and later violinist composers.

Whether the less technically perfect player can render these difficult dispersed forms of the diminished seventh chord in approximately true intonation, or will have to await further developments in his skill, it is at least helpful to know they are from this same "structureless, protoplasmic, protean chord," and the knowledge thus gained will add interest to study, and let us hope will give a cleared mental conception of the task.

Again Edward Carpenter says of the effect of this chord:

"There is something more than music in all this. In those strange climaxes of feeling, . . . one is suddenly swept beyond all the ordinary relations of life, the individual consciousness appears to be (for a moment!) exchanged for some other and more far-reaching state of being."

Some such effect is certainly produced in numerous places in Beethoven's sonatas and symphonies. Its mesmeric effect is akin to its difficulties. Further study may reveal something more of its binding powers over the entire world of harmony.

ZOELLNER STRING QUARTET
SEASON, 1916-17
Direction
HARRY CULBERTSON, Fine Arts Building, CHICAGO

SHORT PIECES FOR STRING QUARTET

When a musician suggests to the average person that he attend a concert by a string quartet the answer will probably be that he (the average person) is not fond of "high-brow" music. So true is it that the String Quartet is generally associated only with music in the strict classical forms.

It is therefore especially interesting to note the programs of the Zoellner String Quartet, which is working nobly to create a wide public interest in string quartet music, and to observe that there are numerous compositions of a character to please an audience of average persons. The string quartet can present effectively other music than the classical quartets by Haydn, Mozart, Beethoven, and a few others,—not that these are uninteresting,—and thus attract and hold appreciation.

For example in a program given in October in Oklahoma City, the Zoellners did not have a single selection from the classical repertoire. The quartet was Op. 3, by Jules Mouquet, a contemporary French composer, little known to American musicians. It is a composition characterized by a wealth of melody combined with great brilliancy.

Other numbers were a *Lullaby* and *Two Indian Danees*, by Charles S. Skilton, of the University of Kansas, a *German Folk-song*, arranged by Kaessmayer, and *Novelctten* (three movements), by Frank Bridge, one of the younger English composers.

Of Prof. Skilton's novel and distinctively original Indian dances Mr. Zoellner writes: The *Deer Dance* of the Rogue River Indians is an elegy given annually as a memorial ceremony for those who passed away during the course of the year. A curious bit of primitive ensemble and rhythm in this dance is the three-four beat of the drum (played by the viola) against the two-four movement of the melody, making an effect of cross rhythms which is not at all uncommon in the Indian music. The *War Dance* is a Cheyenne melody, being danced somewhat in the form of a circle. It is music of a very descriptive nature, and needs no stretch of the imagination to comprehend its warlike character.

—o—

DESCRIPTIVE ANALYSIS OF SOME POPULAR SARASATE COMPOSITIONS

BY WILLIAM WALKER TODD

(Book rights reserved)

I. PLAYERA

In the violin world there are few names among the modern virtuoso composers which possess more fascination for many violin students than that of Pablo de Sarasate, the wizard violinist of sunny Spain, whose position and achievements in his art were, in a certain sense, unique and unrivaled.

As a composer, transcriber, and interpreter of the music of his native land, as adapted to his chosen instrument, he stands alone, and, whatever may be the estimate of his compositions from the standpoint of severe classicism, it must be admitted that they, in their own particular *genre*, have gained a place in the concert room which will probably be theirs for many years to come.

The usual violin program of today is almost sure to include a Sarasate number, and the effect of one of his sparkling and daringly capricious Spanish dances, even upon an audience of the most serious musical frame of mind, is electrical.

Being possessed, of course, of an enormous technic, and writing to suit his individual fancy and mechanical equipment, it naturally follows that many of his best-known concert numbers can be given adequate rendition only by players of a high degree of technical attainment.

There are some, however, which the advanced student may study with pleasure and technical profit, among which may be mentioned the pleasing melody *Les adieux*, the two *Dances*, Nos. 5 and 6 (*Playera* and *Zapateado*), an arrangement of *Adios montanas mias*, which is in the form of the *zortzico*, a dance in 5-8 time peculiar to the Basque provinces of Spain.

Still further advanced in difficulty are the popular *Zigeunerweisen* (*Gypsy Life*), the *Spanish Dance*, No. 8, and the *Faust Fantaisie*, the last-named composition being, in point of difficulty, between the Alard and Wieniawski transcriptions of the same name, and are much played, though considered by many to fall short in musical worth of the inspired Wieniawski arrangement.

Other Sarasate numbers which are frequently heard on the concert platform are the *Introduction and Jota-Caprice*, and the *Capriee Basque*, frequently played by Elman (the latter also by Eddy Brown), the *Romanza Andaluza*, Op. 22, a favorite number with Kubelik. The very difficult and interesting *Bolero* is sometimes played, and *Navarra*, a duo for two violins, is occasionally heard. The complete list of Sarasate's published works contains several other numbers in the series of Spanish dances, a number of operatic transcriptions, and some original compositions, all of which, however, because of slight musical value, or by reason of their ultra-characteristic expression of the personal technical equipment and idiom of the composer, are rarely played.

The *Playera*, which we wish to consider in the present article, is well within the range of the student who is fairly settled in the first five positions, being the easiest of the *Dancos*, of which it is No. 5.

The name *Playera* is a general term applied to a certain type of folksong or dance indigenous to Southern Spain (Andalusia), which portion of the country is considered to have furnished some of the most beautiful, as well as the most musically interesting of the Spanish folksongs and dances.

In this connection it may be said that it is sometimes a difficult matter to disassociate the folksong from the dance music, as the Spanish have a custom of singing their songs as accompaniments to dancing, but the prevailing characteristics and form of the composition in question would point to it being primarily a song, rather than a dance.

In an extensive article on *Song*, in Grove's *Dictionary of Music*, Mrs. Edmond R. Wodehouse speaks of the songs of Southern Spain, of which she says: "They are generally of a dreamy, melancholy, and passionate type, especially the *canas* or *playeras*, which are lyrical. These are mostly for one voice only, as their varied rhythm and uncertain time precludes the possibility of their being sung in parts."

Therefore, the student who may be a bit puzzled to note that this dance is marked *Lento*, will observe the lyrical character of the piece, the varied rhythms in the violin part and the polyrhythmic cast of the composition as a whole; "polyrhythmic" meaning the simultaneous existence of different rhythms in two or more parts, as is presented here in the violin and piano part. This peculiarity, which is more strongly evidenced in the music of Southern Spain than in any other part of the peninsula, and of which Sarasate has here given us a most excellent and characteristic example, is directly traceable to Eastern coloring imparted to the music of this portion of the country during the Moorish invasion.

PETROWITSCH BISSING
Violin Virtuoso---Composer---Master of Instruction
Author of SYNTHETICAL VIOLIN TECHNIC (the acme of material for left hand), CULTIVATION OF VIOLIN VIBRATO TONE (indispensable to the violin student).
STUDIO, KIMBALL HALL - - CHICAGO, U. S. A.

THE POETIC IDEA

The specific meaning of the term *playera* is "fisher-maiden," and, according to Sarasate's own statement, the little piece is intended to suggest a fisher-girl drifting in her boat, and singing in the witching beauty of a still, moonlight night. In the first twelve measures the swaying rhythm of the accompaniment, together with the sustained trills in the violin part, form a sort of introduction suggestive of the gentle rise and fall of the little boat as the night breeze ripples the surface of the water. The melody beginning on the G string may be taken for the song the girl sings, and which is now and then echoed softly back from shore. The violinist should endeavor to *sing* the song on his instrument in the manner in which it would be interpreted by a fine vocalist. The repetition, at the end of the piece, of the first twelve measures, forms an appropriate close suggestive of the gentle drifting of the little boat back into the harbor.

THE TECHNIC NEEDED

So far as the left hand is concerned, this piece offers no particular difficulties to any fairly capable student, and, as there are no complicated bowings, the player can concentrate his attention on purity of intonation and fine tone quality; for, from the point of expression and contrasting tone effects, this little number can be made wonderfully effective. A full, round tone of velvety quality, especially on the G string, should be constantly in mind, and this can be attained only by a light, well-balanced arm, together with a supple wrist, which combination will permit the hair of the bow to adhere in a clinging manner to the string during the full stroke, yet without scraping or digging into the string.

Let the student experiment assiduously with scales, a full bow to each note, played at varying speeds from slow to moderately fast, keeping the arm thoroughly relaxed, the wrist supple, and carefully watching that the reversing of the bow at nut and point is accomplished with as little break as possible in the tone.

The production of a really fine, well-balanced and controlled tone is one of the most difficult feats in violin playing, and it is only through the persistent practice of such apparently simple bowing exercises that one can attain the arm control necessary to do justice to pieces of this nature, where a singing tone of fine quality is the prime requisite.

To return to the number in question: The student should aim at a free and graceful interpretation, as a mechanically exact rendition of a piece of this style precludes any artistic effect. Care should be taken, however, not to go to the other extreme and fall into exaggerated and undue distortions of the rhythm. The lyrical character of the piece should be constantly in mind, the student striving for a free, song-like rendition of the melody which alternates between a gentle sadness and a passionate melancholy.

This number is a little gem of its kind, and the *Playera*, together with the accompanying piece, the *Zapateado*, present what are considered by the best musicians to be two of the finest specimens of the Sarasate *Dances*, though by no means the most difficult or fantastic. While marked *Lento*, the time should not be so slow as to give a dragging effect, about 80 to 84 quarter notes to the minute, being, in the opinion of the present writer, a satisfactory tempo.

The next article will be an analysis of the *Zapateado*, the second of this pair of *Dances*.

A FINE PIECE FOR CONCERT VIOLINISTS

MR. KARL RISSLAND, of the Boston Symphony Orchestra, composer of a number of works for the violin, as well as transcriber of other interesting pieces, received a letter from Mischa Elman in regard to two of his compositions which the great violinist is using in his concerts. Players who are looking for worth-while additions to their repertoires, should try these two pieces by Mr. Rissland. An extract from the letter follows:

Dear Mr. Rissland:

Your dear little *Valse caprice* is making a big hit with the public as well as with the musicians. I played it in San Francisco and in Los Angeles as an encore, because the original program which I sent to the coast was without your waltz and then it was too late to change. I put it in the program in San Diego and in Long Beach. I am going to play your *Romance* in my second recital in New York and Boston and also in other cities.

MISCHA ELMAN.

ENCOURAGE AMATEUR VIOLINISTS

BY PERCIVAL FASSIG

WHAT inducement is offered to the boy or girl who is studying or the man or woman who can play fairly well on an instrument of the violin family? John must learn to play the violin; his parents insist that he take lessons and practise. For what purpose?—In nine cases out of every ten to forget all about it in a few years after the lesson period. Why?

Simply, because he is offered no opportunity to use what he has learned.

The fact that he has received valuable mental training while studying is not lost sight of. But why should he be permitted to forget instead of improve what he learned?

It requires a lot of perseverance for the amateur to sit down and play an instrument of the violin family without an accompanying instrument. Few young men today have that perseverance.

How much better it would be if the teachers of violin organized string orchestras for these aspiring instrumentalists.

The only reason that string orchestras are mentioned is that they are more easily held together and pleasing effects are more readily obtained. Furthermore, there is scarcely a community of any consequence in which amateur violinists cannot be found; whereas, passable players of other orchestral instruments are less frequently met.

In some sections of our country, school orchestras have been formed with good results. Could anything be more beneficial?

Such gatherings keep the young folks off the streets; give them something worth while to think about; teach them to appreciate the higher forms of music; and make for better citizens. But the school orchestras are not far-reaching enough.

Every city of ten thousand and more should have an orchestra.

In such an organization the young and the older folks, who have the necessary ability and love for music, can take part. The city could easily provide a place for rehearsals in the city or town hall, and no doubt some of its enterprising citizens would provide the music. As stated above, the teachers of violin should furnish the conductors and drillmasters. While such organizations would further moral uplift, they would increase the number of violin pupils, and this would be a direct benefit to the teachers.

A little agitation and a little determination would bring the results—pave the way for the young man and young woman to a better and more agreeable life.

RARE OLD VIOLINS

LYON & HEALY, the Chicago manufacturers and dealers, have recently issued a new (26th) edition of their *Catalog of Rare Old Violins, Violas, and Violoncellos, also Bows of rare makes.* This is a handsomely printed brochure, with a number of full-page plates showing a number of celebrated instruments, reproducing the colors most effectively. This collection is undoubtedly one of the very best the world offers in all classes of violins.

Of unusual interest are the description and the plates of the famous Joseph Guarnerius del Gesu, Cremona, 1742, which just recently passed into the possession of John McCormack, the popular concert singer, at a valuation of $18,000. It is distinguished for its broad pattern, large size, exquisite wood selection and superb workmanship giving a tone of power and virility as well as purity and tenderness.

This violin was formerly the property of Wieniawski, and, at another period of its history, of Léonard, the famous Belgian virtuoso and teacher. We cannot help expressing the wish that this magnificent instrument may be heard occasionally in concert performances.

Any of our readers who have ambitions to own a fine old violin should read a leaflet issued by Lyon & Healy entitled *Enjoying the Violin.* We note one paragraph direct to the point: "Looking at the question from a purely commercial point, no instrument is too good for the one who makes his living by it," whether his work be on the concert stage, in the theatre, the studio, or the dance hall."

There is a good field for the violinist who will take up Public School work. School orchestras need well-trained string players. Mitchell's PUBLIC SCHOOL CLASS METHOD FOR THE VIOLIN is the pioneer text-book for this kind of work. It is elementary, practical, and progressive.

One of the Very Finest of Modern Violins Will be Sold at a Sacrifice

This is an artistic instrument in every way, made by one of the greatest modern makers, and a violin with a magnificent tone. For furthur details write to W. S. E., 711 First National Bank Bldg., Cincinnati, Ohio.

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGAL

IMPROVISATION

BY HENRY S. FRY
Organist of St. Clements Church, Philadelphia, Pa.

In treating the subject of Improvisation we will not go into the question to the extent of taking up the larger forms—the extemporization of extended Preludes, Postludes, Fantasias, Fugues, etc., improvisations such as were played by the late Alexandre Guilmant, who is said to have practised the art for a period of twenty years.

We will, however, endeavor to treat the subject along the lines of improvisation required in many church services.

First, we must understand that improvisation is not a meaningless, incoherent "slapping together" of chords, runs, arpeggios, etc., without rhyme or reason.

Improvisation requires the ability simultaneously to create and to render musical phrases of proper balance and rhythm, joined together with due attention to the question of form.

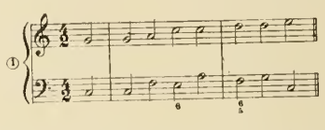
Perhaps the simplest way to begin the practice of improvisation, after having a complete knowledge of harmony, etc., is to take four line verses from hymns and improvise tunes for them. If necessary at first, the harmonic basis of the tune originally set to the words may be used, and a new melody improvised over it, with the necessary rearrangement of the harmony. In order to aid cultivation of memory (a valuable acquisition in improvisation) it is suggested that one section or line of the hymn be taken at a time, and the improvised melody be committed to memory, before another section is treated, each section being memorized and added to those preceding, until the complete improvised new melody is memorized.

The next step will be the improvised reharmonizing of the new melody, resulting in a complete improvisation in hymn tune form.

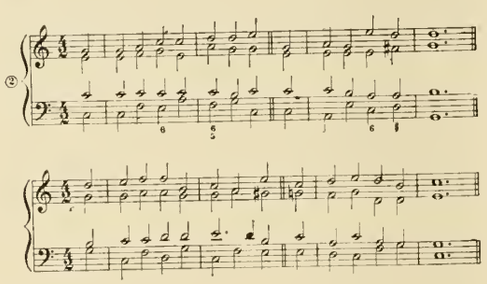
This procedure is to be recommended principally as a model for FORM. Hymn-tunes are written "vocally," while improvisation should be instrumental in character. Hymn tunes may, however, be treated in such a manner as to make them "instrumental." Improvising new melodies over the harmonic basis of a hymn tune also serves as valuable practice in the free accompanying of hymns, which is very effective if well done.

Some samples will serve to illustrate the ideas suggested.

Let us take the bass part of the first section of the well known hymn tune *St. Anne* and, using it as a figured bass, place above it a new melody.

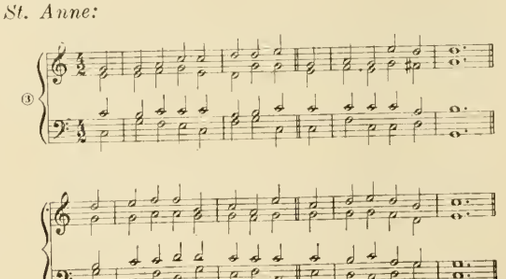


After the new melody of this section has been memorized, the remaining sections are treated one at a time in the same manner until a complete new melody is the result,—as follows (the original bass and harmony retained, the latter rearranged):

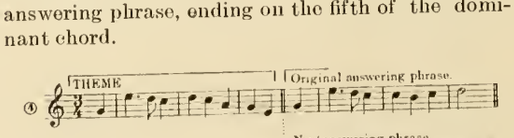


The next step, as before suggested, will be to use the new melody and reharmonize it. We then have a complete improvisation, the form only remaining, which, as we have said previously, is the principal desirable feature in using the hymn tune as an example. Later we shall give an example which will serve the double purpose of illustrating a short prelude of eight measures based on the hymn tune to follow and treated "instrumentally."

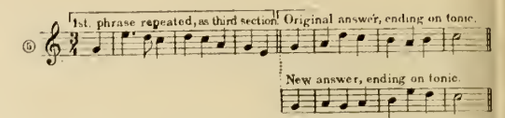
The following shows a reharmonization of the new melody placed over the bass part of the tune *St. Anne:*



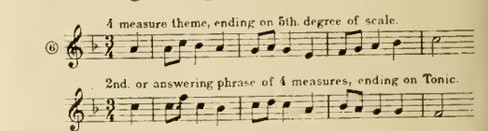
Having practised along the lines suggested we next take the first themes from compositions of a simple nature and improvise an equal number of measures in the same style. As an illustration we will use the first theme of a well known melody and the original answering section, showing also a new answering phrase, ending on the fifth of the dominant chord.



The first phrase being repeated as the third section we will give the original answer ending on the tonic, followed by a new answer ending on the same note.

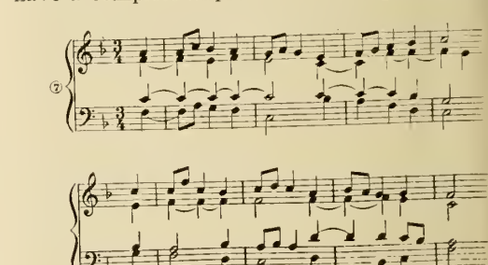


After some experience has been gained along this line the next step will be to improvise an original melody of four measures ending on the fifth degree of the scale, following it by four measures in a similar style, ending on the tonic, as illustrated in the following example:



It may be noted here that the two phrases given are exactly alike in rhythm. This is not necessary in all instances, but there should be a rhythmic relation between the phrases along the same lines as the rhythmic relation between poetic phrases.

This theme and answer being harmonized we have a complete improvisation of eight measures:



Before extending the improvisation to sixteen measures it is advised that sections of eight measures be continued with melody and harmonies improvised simultaneously instead of the melody being given alone and subsequently harmonized.

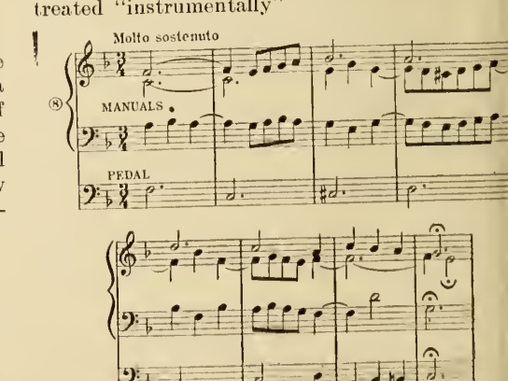
Improvisations may be extended to sixteen measures by not bringing the first eight measures to a complete close on the tonic chord, but proceeding to the dominant or some attendant key.

A twenty-four measure improvisation may be arranged as follows:

Eight measures ending with tonic harmony.
Eight measures in dominant or related minor.
Repetition of first eight measures.

Unless the player has the ability to extend these ideas to forms large enough for Preludes or Postludes it is advisable to confine improvisation to the places where it is required in the service proper. In this connection the player may use original themes or base them on a musical number that has preceded or is to follow the improvisation.

To illustrate, let us presume that an improvisation of eight measures is to precede the giving out of the hymn *Sun of my soul.* A prelude along the following lines would be fitting, and illustrates the use of the tune as a suggestion for the improvisation treated "instrumentally"



to be followed by the "giving out" of the tune.

The ideas given in this article are not by any means exhaustive and the reader may be mu

aided in further investigation by the study of some extended work on the subject such as *Extemporization*, by Frank J. Sawyer, Mus. Doc., which treats the matter from the small forms to the more extended ones.

HE WANTS TO LEARN TO PLAY THE TREADLES

Dr. Albert G. Mitchell, of Boston, pioneer in the teaching of violin classes in public schools, in charge of the work in Boston, and author of *The Public School Class Method*, has received the following letter from a musical enthusiast who read of his very successful classes at the summer school of the New York University last August. The letter follows:

dear perfesser

I see in a N Y musicpaper where it tells how you can learn growed up mail & female adults to play good on a voilin the same not knowin anything at all previus in 7 lessens. now what I want to ask perfesser is if you can do it in regards to a pip organ with foot treadles. if so I got a job in a piscopalial church and while the hand work dont bother me none I get way off in the treadle work, the reason bein that most every time I kick I hit the wrong treadle & if you can learn me about this I will pay you good monny. how mutch for your Coarse & do I get in a pictur.

yours respectful

THUMBNAIL SKETCHES. No. 1

ARTHUR SCOTT-BROOK

Arthur Scott-Brook was born in New Zealand, in 1868; studied harmony and orchestration under Thomas Fleming; organ with Arthur J. Towsey, of Auckland, N. Z., and August Wiegand, of Centennial Hall, Sydney.

Upon coming to this country he was appointed organist of Memorial Church and director of music, at Leland Stanford Jr. University, Cal., and was the organist in charge at Festival Hall, Louisiana Purchase Exposition, St. Louis, 1904.

At present, Mr. Brook occupies the positions of organist at the Church of The Strangers, New York City, organist to Honorable Wm. A. Clark, New York City; and to S. M. Schatzkin, Esq., Eliot Manor, Rutherford, N. J., organist-in-chief to the Loew Theatres, New York City, Editor of *The Console*, the journal of the National Association of Organists, and has just been elected to his third term of office as President of that association.

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS: MIXED VOICES

BERWALD, W.
No. 13,007. **Behold the Master passeth by** $0.10
Most effective if sung without accompaniment.
No. 13,054. **Praise, O praise our God our King** ..... .12
A broad, melodious anthem, with soprano solo.
No. 12,941. **Saviour, now the day is ending** ..... .10
An easy piece for unaccompanied singing.
No. 13,006. **Sun of my soul** ..... .10
A short hymn-anthem to be sung by a quartet or chorus, unaccompanied.

BLOUNT, CHARLES B.
No. 13,030. **Create in me a clean heart** ..... .12
A short, easy anthem, with soprano and bass solos.

GAUL, HARVEY B.
No. 12,971. **Three closing sentences** ..... .12
Very effective for use after the sermon, with or without accompaniment.

GRETCHANINOFF, ALEXANDER
No. 13,000. **Our Father** ..... .12
A chorus of unusual style and power from the Russian church repertoire; calls for a large choir, dividing into seven and eight parts.

HENRICH, C. W.
No. 13,065. **Silent and alone I wander** ..... .12
Very interesting in style, with a strong alto solo.
No. 13,064. **Thy life was given for me** ..... .12
Broadly melodious (a unison strain), with solos for tenor and bass.

JUDE, W. H.
No. 13,043. **Onward, Christian soldiers** ..... .12
A rousing processional anthem, with a brilliant organ accompaniment; includes some effective unison work.

STEANE, BRUCE
No. 12,983. **The Lord is my light and my salvation** ..... .12
An easy, effective anthem, with a short solo for soprano.
No. 13,005. **Sing unto God** ..... .16
A spirited anthem for general, festival, or harvest use, with a solo for tenor, pastoral in style.

WEST, JOHN E.
No. 12,965. **Guide me, O thou great Jehovah** ..... .15
A strong choral number for a full choir, but not difficult.

WOOLER, ALFRED
No. 13,008. **Jehovah's praise prolong** ..... .12
Easy and straightforward in style; solos for alto and tenor.

SCHOOL MUSIC

BULLARD, FREDERIC FIELD
No. 12,986. **Winter song** ..... .12
A fine concert song for a high school chorus.

VAN RENNES, CATHARINA
No. 12,990. **Forward March** ..... .05
A unison song.

PART SONGS: MIXED VOICES

NEVIN, GEORGE B.
No. 12,975. **Love was once a little boy** ..... .10
In the English glee style, easy and melodious.
No. 13,035. **O little mother of mine** ..... .12
A song to appeal to the mother heart.

PART SONGS: WOMEN'S VOICES

BRADSKY, THEODORE
No. 12,998. **The tryst** $0.10
A delightful song in the German folk-song style; four parts.

FOSTER, FAY
No. 12,871. **Sing a song of roses** ..... .12
A charming three-part song for women, based on the very popular song of the same name.

HAWTHORNE, ALICE
No. 13,011. **Whispering hope** ..... .12
Three-part arrangement of a favorite song of other days.

HEYSER, E. K.
No. 13,027. **Brightly gleams the silvery starlight** ..... .12
For soprano and two alto parts, easy and melodious.

HORN, CHARLES EDWARD
No. 13,016. **I've been roaming** ..... .12
A three-part arrangement of an old English song.

LISZT, FRANZ
No. 13,015. **O in my dreams** ..... .12
A three-part arrangement of one of the composer's finest songs.

MARSCHAL-LOEPKE, G.
No. 13,020. **Summer is here again** ..... .12
A charming three-part song, festival in style, with brilliant piano accompaniment.

MOLLOY, JAMES L.
No. 13,019. **The Kerry dance** ..... .12
A three-part arrangement of a favorite song.

OLD ENGLISH MELODY
No. 12,884. **Pretty Polly Oliver** ..... .12
A three-part harmonization of a famous old English song.

PÊRILHOU, A.
No. 13,014. **The Virgin at the manger** (*La vèrge à la crèche*) ..... .12
Three-part arrangement of a French song in the carol style.

VERDI, GIUSEPPE
No. 13,017. **Ave Maria** (*Otello*) ..... .12
For three-part chorus, a gem of choral beauty.

WAREING, HERBERT W.
No. 12,963. **Blow, blow, thou winter wind** ..... .10
For two-part chorus, in the old English style.

SECULAR PART SONG: MEN'S VOICES

SCOTCH AIR
No. 12,958. **The hundred pipers** ..... .16
An old Jacobite song, with a rollicking swing, with some clever writing for the voices.

SACRED PART SONGS: MEN'S VOICES

HOSMER, E. S.
No. 12,993. **Under His wings** ..... .10
A simple, melodious number for quartet or chorus.

NEVIN, GEORGE B.
No. 12,960. **Lord of our life** ..... .12
A short, easy number, with interesting tenor solo.

WILSON, C. F.
No. 12,270. **Sweet hour of prayer** ..... .10
An effective number for a quartet; the baritone has the melody in several verses.

SACRED PART SONGS: WOMEN'S VOICES

NEVIN, GEORGE B.
No. 12,978. **Grant us Thy peace** ..... .10
For three-part chorus, with soprano solo.
No. 13,009. **Some blessed day** ..... .08
A four-part arrangement of a successful mixed chorus anthem.

THE ECHO ORGAN

BY H. C. M.

Meeting Jones the other day we began to talk shop at once after the manner of our kind. I saw he was not feeling very cheerful and I asked him what the trouble was.

"Well," said he, "it is beyond my understanding what makes a certain kind of parson act the way he does."

"What do you mean by 'a certain kind of parson?'" I asked.

"The kind that insists on singing the Alexander tunes, or on having a poor orchestra perform in the Sunday evening services, or on doing both."

"I have known such things to happen," I replied, "but why this outburst at this particular time? Is it worse than usual?"

"No," said Jones, "I am sorry to say that it is no worse than usual; it is the persistent badness of it that gets my goat." (*It will be perceived that Jones occasionally drops into the language of the street.*) "I can't for the life of me—"

"See here," I interrupted, "let me ventilate a theory of mine that bears on the situation; there may be nothing in it, but you shall be the judge:

"You have the movies in your town, have you not? There must be a dozen movie houses in your small place, and probably every family in your church attends at least once a week. When the parson faces his congregation on Sunday he feels that he is really competing with the movie. The movie is stimulating; it is active; it does not promote thinking; it appeals primarily to the eye, and not to the brain, not to the esthetic sense, not to the intelligence, not to the sense of repose; it stands for uneasiness, for restlessness. Every moment there must be—and there usually is—something doing. Don't you see that the unfortunate minister must compete with the movie? It is not strange that he should feel the desperate case demands desperate remedies. What *is* strange is that he tries to beat the movie on its own ground. He ought to realize that it is his mission to lead the crowd where the movie cannot follow."

"Oh, I don't see very much in that," said Jones; "what I do know is that an execrable orchestra, consisting of three poor violinists, two of them under fifteen, one 'cellist who has had three months' lessons, a trombonist who is the terror of his neighborhood, and two cornetists who are old enough to know better, are to reinforce the organ Sunday evening and make the occasion one to be execrated forever more. The noise is wondrous in amount and unbearable in quality; how the parson endures it I cannot see. How long, O Lord, how long!"

* * *

It is rather interesting to note that Mr. Hugh Goodwin, of the New England Congregational Church, Chicago, has recently completed a series of organ recitals in which he has played 1000 pieces without any repetition. This is an unusual performance and recalls the similar performance of Clarence Eddy many years ago when he played 100 programs without a repetition of a single piece. One comment made at the time on Eddy's achievement—for it must be regarded as a notable one—was that there must often have been times when the program would have been improved by the omission of certain pieces not played before in favor of certain standard pieces that ought to be heard again and again. This is said without intention of belittling the records of either Clarence Eddy or Mr. Goodwin. Both gentlemen have done what very few of us have either the will, ability, or opportunity to accomplish.

* * *

Mr. Goodwin's 1000th piece was a *Prelude and Fugue* in E minor by Horatio Parker, written for the occasion. Mr. Goodwin is printing the list of pieces and will send it to anyone who will enclose a stamped and addressed envelope to him at 19 West Delaware Place, Chicago.

* * *

I never knew the late Samuel P. Warren, but I have always had a great respect for him as the teacher of my friend, Prof. Hammond, of Mount Holyoke College. Mr. Warren's library was sold at auction in October last. The catalogue for the sale is before me and I am surprised to see how strong the collection was in psalm books, hymn and tune books, and works with a strong antiquarian interest. It occurs to me, however, that as Warren edited *In Excelsis* and probably other hymn and tune books, his collection was made while engaged in such tasks. It is evident that he was something of a bibliophile. Among his treasures were a *Missal* printed in 1498, and a copy of Heinrich Loris's *Dodekachordon* (Basle, 1547), which is one of the rarest and most valuable of musical works. Among the less valuable items, but quite as interesting to the ordinary musician, are an autograph album containing 111 contributions, among which one notes the names of G. Schumann, Ole Bull, Charles Dickens, Anton Rubinstein; twenty-eight copies of various editions of Sternhold and Hopkins' *Whole Booke of Psalms;* the first edition of Fux's *Gradus ad Parnassum;* and what is described in the catalogue as "a liberal lock of Liszt's hair."

WILCOX SCHOOL OF COMPOSITION
C. W. WILCOX, Director
Dept. "A." 225 Fifth Avenue, New York City

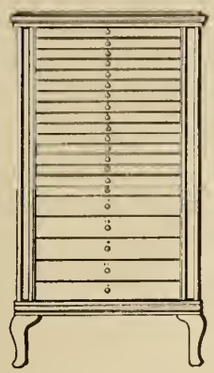
The Pittsburg Musical Institute, Inc., directed by those sterling musicians, Oetting, Boyd, Russell, and Hunter, is doing a great deal for the esthetic and historical side of music study by the faculty recitals. An organ program by Mr. Oetting is devoted to the French school; a lecture-recital on *Orchestral Transcriptions for the Organ*, by Mr. Boyd, was scheduled for a later date. It is interesting to see how the appreciative study of music as distinguished from the rigidly limited professional study of an instrument or the voice is being everywhere practised.

* * *

The church orchestra described above by my friend Jones is evidently not the sort of orchestra they have in the North Avenue M. E. Church of Pittsburgh, Pa. The "cut" of the organization shows forty performers, all, with two or three exceptions, adults. There is a first division made up of people considerably younger, numbering twenty. The larger band is under the conductorship of Mr. Charles N. Boyd. The orchestra plays a prelude, voluntary, and postlude at every session of the school, rehearsing from three to four (that is, after the session of the Sunday School), but not during the week.

* * *

If a young organist wishes to take up a line of work richly rewarding musically, in every aspect broadening,—work that will vitally relate itself to his playing, let him take up orchestral conducting. Of course he must take an orchestral instrument for his second study; he must also join some orchestra and get the routine.



Tindale Music Cabinets

Make it easy to keep your music as you would like to keep it---orderly, protected from damage, easily found, quickly replaced.

Now used in hundreds of homes, studios and music schools.

17 styles, well made pieces of furniture, distinctive in appearance, an ornament to any home or studio.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley-Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY-MATHEWS

THE general opinion seems to be that school teachers need to specialize for certain ages, at least at one time they are not expected to teach more than one grade. Do you think that applies also to piano teachers?

I sometimes wonder if the 'teen age, especially, needs specialized teachers. The question is unusually interesting to me at present.

I have had a pupil for three years—a boy, who did better than the average because he is a student, not because of talent. He and I are congenial and his parents were perfectly satisfied with the work. He is now fourteen and entering high school. During vacation he did not show any interest in reviewing pieces and when his mother suggested starting lessons, he *strongly* objected. He has shown unusual interest in his new school work, and his mother wonders if a change of piano teachers would awaken his interest in music.

There are no men teachers in this suburb, so he would have to go to a woman. I say this because many people believe that boys should have men instructors.

Naturally, I am anxious to keep the boy after I have brought him this far, but I want to do what is best for him, and thought I would ask what your experience suggests. I. R.

Your very interesting letter raises many questions. I am very much against specializing in the first two grades. The fact that so many teachers have taught beginners only, is just what is the matter with the beginners' work. It is narrowing to the teacher and therefore very detrimental to progress.

Teachers who handle only the first years of music waste time in the early part of the course permitting all sorts of fad work, for it apparently brings business, and children are side-tracked from serious work to games and various finger plays. The children may have a good time but are they growing musically and technically? Are not those precious weeks flying by without any definite results?

Anyone who investigates such teachers knows the outcome—lack of ambition, little or no "gumption" in tackling a new composition, a certain half-heartedness toward all effort that makes real music study impossible.

These "beginners" are sent later on to advanced teachers. The artist teacher finds he has nothing to work with; little or no preparation in technic, no method of study, a very hazy idea of interpretation, some slight knowledge of chords and keys (but known in a manner no artist will tolerate), and what is the artist teacher to do? He turns them over to a *Vorbereiter* and the "beginning work" is done all over.

In the re-making process many students become discouraged and disgusted and drop out of music altogether.

If this elementary teacher had handled the beginner differently, if she herself had appreciated how necessary it was to save time and cut every corner she possibly could, such a condition couldn't exist. The only way she can appreciate how long the road to musicianship is, is by traveling it herself, and no teacher who has worked successfully with the great minds in music will ever be happy dealing with beginnings only.

If the artist teacher would turn his attention more to children, he in turn would be more of a power in the class room. As is well known, most of the artists are bad teachers, for the reason that they do not understand the principles which underlie good pedagogy, and that they are mainly interested in making money through their lessons rather than making musicians of their pupils. In other words they give many *lessons* at a high price and *teach* very little. If a pupil is already a student and is mentally alert he gains great benefit from the artist teacher; otherwise he gets nothing.

Very few of the artists have any respect for their pupils, as all of us can see when we hear them talk of those under their care. All this could be very easily changed if the artist teacher would know the joy of opening up the art of music to a little child. He would very soon find out that developing the musical perception in a little one is just as much worth while as correcting wrong notes and giving instructions in fingerings and practice stunts. When the artist realizes how much use he could be if he would try some elementary work, our musical life will gain a great impetus.

School teachers are in a very different position from music teachers. We are all specialists and deal with the individual, not with the mass. We do not have the change of studies or classroom and by having a beginner follow an advanced pupil we get a relief that is very necessary to successful teaching.

As to the boy you mention, I should be governed by what the boy said when he talked to me and not by what his mother says. My advice would be to send for the lad and talk things over with him. Find out if he is against studying music or not interested in the way you present it. Very often a change of teacher is desirable and very often it would be a decided disadvantage. It is very easy to find out what the trouble is when you are face to face without any outside influence.

I should certainly talk seriously with him as to what his music will mean to him when he is taking his place among the voters of America. There is no question but what the citizen who is musical—who can do things in music—is considered in every community a man worth while. He has social advantages that are not to be overlooked. He is more popular because he adds to every gathering. He can go into the making of the artistic life of the community as well as the business life. He can stand for the highest instead of the material.

It means a little self-denial when he is entering high school but even then he will find that he will be more sought after if he can help out in social gatherings with his music. All boys and girls love to sing at the close of an evening, and many and many a time I have heard them call for volunteers at the piano.

I should use every power at my disposal to hold his interest in music but I wouldn't urge him to study with me if he was my pupil. Tell him to try some other teacher if you feel, after talking with him, that someone else could bring a new interest to the work. I believe however that you will find that it was not because he didn't care for your work but because he thought it might take time

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment — a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

which he would like to use for football. If you can change his attitude you will be able to continue to do good work with him I am sure.

* * *

I am fifty years of age and realize that my fingers are losing their nimbleness and my hands seem heavy and clumsy.

After playing for a half-hour or more my hands feel lame, especially if many octaves have been played. I read your article on "The Care of Musical Hands" in a preceding number. The exercises therein advised leave my hands feverish and lame. Someone has advised a hot olive-oil bath for loosening up the joints and relieving the stiffness. I would appreciate your advice. A. B. S.

Olive oil or warm almond oil has a loosening effect on hands, and massage is also very useful and, if rightly done, will be of great benefit to you. The specialists in hand and arm massage free every joint in time and give you far greater flexibility and an increase in span. Having the skin of the palm soft permits the hand to stretch just as a fine kid glove will stretch.

You should practise a great variety of technical exercises and not spend too much time on any one.

Relaxation must be obtained and the ability to use certain muscles of the hand and arm, while others are at rest, is not so easy to acquire without intelligent help.

The mental condition has much to do with relaxation naturally, and you must acquire the knack of letting go with your arms and holding on with the ears and head. Almost all tone is secured through the weight principle, in our modern technic. It is not a question of "striking" a key any more, but of permitting the weight of arm, hand, or finger to fall on the key. The player must have the feeling of going to the bottom of the key, and no surface work is permitted.

I rather fancy that your trouble lies in your arms not being free. While you may not be rigid still there undoubtedly is tension that is unnecessary, and therefore undesirable.

Try swinging your arms, describing a circle with the whole arm free from the shoulder joint. Free the elbow and then the hand in the same way. Try simple exercises rather than difficult ones to get your hand in trim for the day. Falling arm work with the finger in contact with the ivory before playing is sometimes useful. Have the feeling that the weight of the whole arm is on the key as the tone is sounded. Such exercises played with one finger at a time, up an ascending scale, help to get your thought right before playing.

Rest one hand by changing to the other and then go into more strenuous exercises like the five-finger forms. Some scales and arpeggio work is essential to every one and I find the application of the rhythmic tables and velocity practice of the Mason System most helpful.

But do not work on any one too long. The secret of improving your hand would be in changing the exercises often enough to avoid strain. The third form of the two-finger exercise of Mason is a most valuable hand loosener, but it is an exercise that must be used with discretion.

Easy chord exercises should help you in arriving at the chord hand without stiffening either the wrist or arm muscles. The bounding arm chords should never tire anyone if rightly done.

Your technical practice should not be continued for over fifteen minutes at a sitting, and that by doing work with hands alone. Two periods of this length each day rightly used, would make a big difference in your hand in a few months.

You cannot do some things at fifty that you could do at twenty; but there are some compensations at fifty. For our minds should be more analytical, and we therefore waste less time than the youngsters.

After you get your hand in better shape practise more music and less technic. Make exercises out of the difficult places and avoid all meaningless repetitions. Seek to give your best self expression and you will find self-consciousness will leave the arm more quickly; and you will be surprised how much you can accomplish.

Sometimes the musical thought will find its way out through hands and arms that seem to be in no way fitted to cope with a musical situation.

* * *

Will you kindly give me a list of piano solos of a melodious nature or the popular classics of the moderately difficult grades. W. S.

Grade IV: *Marche grotesque*, Friml; *Astrid*, Torgussen; *Valse printaniére*, Lack; *Minuet l'antieo*, MacFadyen; *Orange blossoms*, Friml; *Rope daneer*, Koelling; *Restlessness*, Zilcher; *Seherzo*, Schelle; *Love song*, Cadman; *To a vanishing raee*, Cadman.

Grade V: *Valeik*, Mokrejs; *Valse arabesque*, Cadman; *Surging sea*, Barbour; *Prelude*, Op. 73, Foote; *Sprites of the glen*, Dennée; *Chaconne moderne*, Dubois; *Danse Andalouse*, MacDowell; *Poem*, Op. 31, No. 2, MacDowell; *Whispering zephyrs*, Lynes; *March*, West-Adams; *Pantomime*, Moszkowski; *Mélodie méditative*, Godowsky; *Puek*, Philipp.

BREATHING AS A MEANS OF HEALTH AND BEAUTY

(*Continued from page 731*)

breath, with the *waist museles*, for a few seconds; never in the throat. Now, instead of sinking in, as before, let the air escape in exhalation by *the reeeding* of the abdominal walls, keeping the chest high.

The chest is a sounding board and must never be allowed to sink, except *to aid in relaxation* and flexibility.

This is the breathing our Maker gave us, which you unconsciously do when you deeply smell and enjoy a flower. After several years of study, a big fund of experience, and in spite of cranks with "new" methods, I believe our Maker knew what He was about.

Never draw in the abdomen in inhalation, as is only too frequently taught. If you want to do that for the sake of reducing, for instance, do it when *exhaling*.

This breathing requires and develops strength in your most vital muscles (you will feel it in the back as well). It will make you a *strong* woman, a *well* woman, and a fine-looking one. Surely that is worth while!

———o———

FROM MUSIC TEACHER TO "OIL QUEEN"

(*Continued from page 721*)

her return from the school she accepted, in a whim, a position as instructor in music in a college of Tennessee. Later she married, and, with her husband, located in California late in the seventies.

Straitened financial circumstances soon after made it necessary that she contribute to the support of the family, and she began again to give music lessons. She was quite successful in this work, and in a short time her home was virtually converted into a college of music. At one time she owned seven pianos and was giving lessons herself all of the day and half of the night.

When oil was first discovered in Los Angeles she had seven hundred dollars in a bank, earned from her music teaching. Like many others, she soon acquired the "oil fever," and she, with a woman friend, pooled fourteen hundred dollars with which to drill for oil. Difficulty after difficulty developed in the undertaking, and before the first well could be made to yield, an additional eighteen hundred dollars, borrowed money, was expended. Although considerably in debt, she was determined to "stay in the game." With practically no security, she succeeded in persuading a banker to lend her ten thousand dollars.

MAKING A FORTUNE

She was now left alone in her undertakings, and with an indebtedness of several thousand dollars to goad her on, she began to sink well after well. Most of them fortunately penetrated oil, and in a very few years a steady income began to relieve the financial worries.

All during this period of struggling she not only attended to all details of the work, hiring and discharging men, buying tools and supplies, directing the operation of forty horses and ten wagons, and gradually learning to be an expert in testing oil, but also continued to give music lessons at night to help pay the avalanche of bills—besides keeping her own set of books.

Ten years ago Mrs. Summers controlled more than half of the total output of the Los Angeles oil field. She has drilled over one hundred and sixty wells in all, and today she is producing several thousand barrels of oil a day. She is now, however, a larger contractor than a producer, and with the oil she buys she supplies contracts aggregating two and a half million dollars a year.

She has lost thousands of dollars in some of her ventures, but as she possesses absolute self-reliance, independence of thought and action, and

FAUST SCHOOL OF TUNING
STANDARD SCHOOL OF AMERICA
formerly with the
New England Conservatory of Music
Year Book Free
27-29 GAINSBOROUGH ST., BOSTON, MASS.

unflinching courage, nothing has ever disheartened her. Although slender and small of stature, she is known, among her male competitors, as a good fighter and never to be "bluffed." She is a lover of flowers as well as music, and is fond of motoring, driving her car with the skill of an expert.

"Most women," she says, "rely too much on what others tell them. I would not take even the highest priced lawyer's opinion unless it squared with my own convictions."

"I am a very earnest advocate," stated Mrs. Summers recently in an interview expressly for THE MUSICIAN, "of a musical education for everyone, especially every girl, who shows any talent for music whatever. I particularly favor such education for girls brought up in the more affluent homes, and I am glad that the custom of spending a considerable amount of money to give them this accomplishment is as generally observed as it is. The money so expended cannot be put to better advantage.

"In the first place, it means the endowment upon the girl of a beautiful accomplishment. And while it is to be hoped that she may never need to make use of it for any other purpose than for pleasure, a good musical education equips her for the emergency which is always apt to occur—the time when, because of the possible financial reverses of her parents, she may be compelled to resort to her own resources for a livelihood.

"Placed in such a position, as many girls eventually are, she, in her knowledge of music, finds that she possesses not only an accomplishment, but also a profession—an understanding of something that she can do. She can become a teacher of music, and be at least fairly independent from the very beginning, and, moreover, it is a pleasant occupation upon which she has been thus forced to embark. And, although it is the girl brought up surrounded by the protection of wealthy, or well-to-do parents who is the less frequently prepared for self-reliance in any other direction, and who perhaps stands most in need of an emergency knowledge, a musical education affords similar professional possibilities also to any girl forced to work for a living.

"I would also recommend that every working girl, particularly every music teacher, for I am especially interested in her, be impressed with the importance of saving—saving something regularly out of each day's earnings. Make it a habit, and it won't be difficult. Instead, it will become a real pleasure to watch the amount grow, no matter how slow its growth may be.

"And above all, be sure that your savings are safe. Realize that there are always unscrupulous persons especially laying in wait for the savings of the working girl, because of her usual unfamiliarity with what constitutes a sound investment. Don't even rely solely upon the apparently friendly advice of your family's life-long friend; even he may have an interest in your savings of a nature which you do not suspect, or, hoping to bring you big returns, his judgment may be decidedly faulty.

"It is much safer to depend upon some officer of your bank, although he may be a comparative stranger to you, for because of the governmental regulation of banks today—state, national, and savings—he cannot well occupy the position he does unless he is honest. He is also easily approached, although you may have heard differently, and to give disinterested advice in such matters is a natural adjunct of his business. He invariably will advise investment in securities which yield not more than the legal rate of interest, which may be a lower rate than is offered from some other source, but 'safety first' is excellently adaptable to all business transactions. Receive interest on your savings, but it had better be small and safe than large and doubtful.

"When you become thoroughly initiated to the business world you will find that it is always a 'give and take' proposition, and that a woman can expect to receive no greater consideration therein than a man—at least, that she can anticipate no greater consideration than she is able, by her business acumen, to command. When she proves herself a real business woman, however, she can count on the proper business respect, and will receive just as square a deal as any man of equal ability."

Victor
"HIS MASTER'S VOICE"
REG. U.S. PAT. OFF.
Will there be a Victrola in your home this Christmas?
Think of the delight of having Caruso, Destinn, Farrar, Gluck, Hempel, Homer, McCormack, Melba, Ruffo, Schumann-Heink, Scotti, Tetrazzini and a host of other great artists sing for you!
Think of having Elman, Kreisler, Paderewski, Powell, Zimbalist and other famous instrumentalists play for you; of hearing Sousa's Band, Pryor's Band, Conway's Band, Vessella's Band, Victor Herbert's Orchestra and other celebrated musical organizations; of enjoying the inimitable witticisms of Harry Lauder, Nora Bayes, Raymond Hitchcock, Mizzi Hajos and other leading entertainers.
Who wouldn't be glad to get a Victrola for Christmas! The only instrument that brings to you the best music of all the world superbly interpreted by the world's greatest artists.
Christmas day and every day, let the Victrola inspire and entertain you!
Christmas isn't too far off to see about your Victrola today. Any Victor dealer will gladly demonstrate the various styles of the Victor and Victrola and play any music you wish to hear.
Victrola
Victrola XVI, $200
Victrola XVI, electric, $250
Mahogany or oak
Other styles of the Victor and Victrola $10 to $400
Important warning. Victor Records can be safely and satisfactorily played only with Victor Needles or Tungstone Stylus on Victors or Victrolas. Victor Records cannot be safely played on machines with jeweled or other reproducing points.
To insure Victor quality, always look for the famous trademark, "His Master's Voice." It is on every Victrola and every Victor Record. It is the identifying label on all genuine Victrolas and Victor Records.

THE PROFESSOR'S TALK

(*Continued from page 730*)

MUSICIAN'S ULTIMATE GOAL IS TO TEACH

"Just ponder deeply, ladies and gentlemen, and make your mental confession of how far you fall short of the necessary standard. And that concerns only the technical side of voice training. You have to consider also the artistic side: Style and Interpretation. Why, a whole lifetime rarely suffices to reach the plenitude of one's artistic powers! It is frequently the case that the singer does not reach the apogee of his art until his voice is on the wane. Is he, therefore, lost to music? On the contrary, he will be one of its greatest gains. He will be the ideal teacher.

"And the greatest and highest aim of the true musician is to teach, to make disciples, to propagate his art—his ultimate goal.

"What! You really insist upon my stating an age? You, sir, you ask how old the teacher should be? And you, madam, you ask how young?

"Let me ask you a question: How old do you take me to be, sir? or how young, madam?

"Well, the fully equipped teacher should be as old as I am young: young in zeal, in energy and in earnestness, and old, very old, in experience."

Music Lessons Sent Free

You too, can now quickly and easily satisfy your musical ambitions—learn to sing or play your favorite instrument, whether for pleasure, social prestige or to teach music, by our wonderful home study lessons under great American and European teachers. The lessons are a marvel of simplicity and completeness, endorsed by Paderewski and other great authorities.

Any Instrument or Voice

Write us the course you are interested in, age, how long you have taken lessons if at all, etc., and we will send you six lessons, free and prepaid, any of the following Complete Courses: Lessons in PIANO (students' or teachers' courses) by the great Wm. H. Sherwood, HARMONY by Dr. Protheroe and Rosenbecker, PIPE ORGAN by Clarence Eddy, VOICE COURSE (with aid of Phonograph) by Crampton, PUBLIC SCHOOL MUSIC, by Frances E. Clark, VIOLIN, CORNET, MANDOLIN, GUITAR, BANJO, REED ORGAN, CHORAL CONDUCTING, by equally eminent teachers.

This offer is Free—we do not ask you to pay one cent for the six lessons, either now or later. We want to prove in this remarkable way what fine lessons they are—SEEING IS BELIEVING. This offer is limited, so write today. A few Special Introductory Scholarships now being awarded by our Faculty. Full particulars sent along with free lessons. Send no money.

SIEGEL-MYERS SCHOOL OF MUSIC,
CLARENCE EDDY, Dean
1851 Siegel-Myers Building, CHICAGO, ILL.

New Teaching Music for the Piano

REVERIE *by Charles Huerter.* Grade 4-5. Ab **$0.50**
Is there anything in music like the irresistible "pull" of a genuine melody? This "Reverie" has that peculiar kind of magnetism in its melody. It comes, it arrests our attention; it flows on, it carries us with it; and the whole seems as spontaneous an outpouring as the Liebes Traume of Liszt. It is worked out with considerable variety and intensity, but the main point is that it is what it sets out to be—a *real* melody.

ORIENTAL DANCE *by L. Leslie Loth.* Advanced Third Grade ..... **.30**
The pupil who is ever to attain a reasonable brilliancy of style must learn to make a beginning at this sort of playing in the third grade. The "Oriental Dance" is precisely the piece that may be used as a means to this end. The ambitious pupil will consider the practice of the last page—in working it up to tempo—a bit of sheer fun. Besides being easy to memorize, the Oriental color suggested makes it especially attractive.

OUT OF DOORS *by Alice Bennett Wing.* Summy Edition No. 73..... **.75**
When the pupil reaches the point of playing his first little piece of two to four lines, the teacher has a wide selection. But immediately after! Either the pieces are too difficult or not interesting. Here are a set of seven pieces which in point of imaginative appeal, strength of idea, difficulty and length completely answers this very urgent need.

FIVE SKETCHES *by Esther Gronow.* Second Grade. Summy Edition No. 74 **.40**
A set of little pieces, each in a different style, including a March, and a lovely little tone-poem for melody playing entitled "A Wild Flower" that curiously enough has something of the same beauty that one finds in MacDowell's "To a Wild Rose."

GRADED STUDIES for Four Hands *by Mrs. Crosby Adams*..... **1.00**
Book III. Just issued.
The value of Duet playing is agreed upon among teachers. No teacher denies its power to stimulate quick thinking, encourage rhythmical steadiness and develop sight reading. Yet most teachers *neglect* this side of education. WHY? Probably because it is difficult to obtain interesting worthwhile material in convenient form. Therefore Book III of this Series is put forward with confidence that it will be of real helpfulness. The Duets are short, and include selections from Loew, Reinecke, Mozart, Henselt, Tours and Schubert.

Be sure and send in your name that you may receive FREE the new number of THE STUDY-SERVICE SHEET. A practical Periodical of working methods with artistic ideals.

COLUMBIA RECORDS FOR DECEMBER

For many years, up to a comparatively recent date, the greatest obstacle to progress in the higher musical art was the inability of a few great artists to meet the many. For example the Paris Opera had superb artists who were rarely, if ever, heard outside their own city or country; and it goes without saying that notable European artists were never heard by Americans who did not cross the Atlantic.

The problem, then, was how to get the fine interpretations of all great artists to the music lover without reference to limitations of time or space. It was a great step for artistic progress when the creative genius of a few men devised a means to record musical sounds and to reproduce them again with unfailing accuracy.

The result is that today, given a mechanical equipment securable at a moderate price, thousands of persons in thousands of different places may hear the voice of some great artist at the same time, and as often thereafter as they may wish. Isn't this a gain for the art of music?

In looking over the issues of the Columbia Graphophone Co., for December, an outstanding name is that of

Hipolito Lazaro, the eminent Spanish tenor, whose range of voice is as phenomenal as its purity and beauty are astonishing. His contribution is two records: *Recondita armonia* (*Strange harmonies*) from Puccini's opera, *Tosca*, a brilliant emotional modern number; and an aria from the classical opera *Rigoletto*, the famous *La donna e mobile* (*Woman is fickle*), which has been, since the first performance, a great favorite with the lovers of song.

Johannes Sembach, tenor, sings two Wagner arias, *Walter's Prize Song*, from *Die Meistersinger*, and *Lohengrin's Farewell* from the opera *Lohengrin;* this favorite artist gives superb renderings of these master songs.

Leon Rothier, basso, a member of the Metropolitan Opera Co., offers Marcel's famous air *Piff! Paff!* from *The Huguenots*, and *Drum Major's air* from Thomas' light opera, *Le Caïd*, a magnificent voice and splendid style.

Lucy Gates, soprano, with "a voice like a bird," as some one has said, renders two brilliant, florid airs, *Spring* by Henschel, and *Sing, sweet bird*, by Ganz, both with orchestra accompaniment.

Graham Marr, baritone, contributes two songs appropriate to the jollity of the holiday season, Bullard's celebrated *Stein Song*, and De Koven's *Brown October ale*, with vocal quartet and orchestra accompaniment.

Instrumental novelties are also present, and the list includes such numbers as, a double-faced record of Rimsky-Korsakov's oriental ballet, *Scheherazade*, by the Russian Ballet Orchestra; 2, Tchaikovsky's "1812" overture as played by the band of the Grenadier Guards, of London; 3, *Nearer my God to Thee*, as played by Creatore's Band, and Gottschalk's popular *Last Hope*, by Prince's Symphony Orchestra.

Pablo Casals, the eminent Spanish 'cellist, plays the *Adagio* from Haydn's concerto in D major and the *Gigue* from Bach's C major suite, two beautiful numbers from the classical repertoire.

BOOK NOTES

A History of Music. By Charles Villiers Stanford and Cecil Forsyth. Macmillan Co. Price $2.00 net.

A book of 350 pages, with exhaustive index, by two eminent English musicians, intended for the use of students and amateurs, presented in a concise and readable form, with musical examples, portraits, and other illustrations; an appendix gives the names of the chief personages in the history of music with the dates of birth and death. The whole subject is discussed by the authors, a preliminary chapter dealing with the *Origins of Music*, three chapters for the music of the older civilized nations, bringing the subject to the Dark Ages, with the eleventh chapter beginning the presentation of the Modern Period, from the 17th Century to the present day. This period, the most important, is treated in considerable detail and contains both appreciation and criticism of all the most prominent living composers.

Of especial value to the wide-awake musician is the final chapter on *Nationalism and Modern Schools*, in which the characteristics of the music of the various countries, Russia, France, England, America, Germany, etc., are presented.

Twelve Selected Songs of the Hebrides. Collected edited, translated, and arranged for the voice and piano by Marjory Kennedy-Fraser and Kenneth Macleod. Boosey & Co. Price $1.50 net.

The airs are given as the people sang them. the original Gaelic text being preserved, although an English translation is included. The instrumental settings are the work of the editor, who has used especial care to preserve, even in the harmonies added to the tunes, the atmosphere of the old songs.

MUSIC TEACHERS' NATIONAL ASSOCIATION

38TH ANNUAL MEETING, NEW YORK, DECEMBER 27-2

The headquarters of the Association will be at the Murray Hill Hotel, 41st St. and Park Ave., one block from Grand Central Station, and the meetings will be held at Rumford Hall, 50 E. 41st St.

GENERAL NEWS ITEMS

Silas G. Pratt, an American composer and formerly well-known as a pianist, died at Pittsburgh, October 30. He was born at Addison, Vt., August 4, 1846, studied music in Chicago, and then in Europe, spending some time under Liszt. Upon his return to the United States he located in Chicago, and later in New York The past ten or twelve years he was a resident of Pittsburgh.

Lucrezia Bori, the opera prima donna, according to New York papers, has canceled her engagement with the Metropolitan Opera Company and returned to Spain, on account of throat trouble, due to an operation on the vocal cords.

George Lehmann, well-known as a violin teacher of authority, who located in Berlin nine years ago, has returned to New York and opened a school of violin playing. Mr. Lehmann is highly appreciated as the author of *The true principles of violin playing.*

Harvey B. Gaul, of Pittsburgh, won the W. W. Kimball Co. prize of $100 offered by the Chicago Madrigal Club for his setting, in madrigal form of *A Spring Ditty*, by John Addington Simonds. The composition will be sung next March by the Club under the direction of Mr. D. A. Clippinger.

Lyon and Healy Hall, the recital hall in the new Lyon and Healy Building, Chicago, was formally opened for concert and lecture work, October 29, by Mildred Dilling, harpist, assisted by Valerie Deuscher, soprano.

Mme. Teresa Carreno will give some of her time to teaching this season, with a studio in New York City.

New York University, Department of Music, under the direction of Dr. Thomas Tapper, is offering Saturday morning courses to prepare persons to teach music in the public schools. The instruction will cover methods, harmony, ear training, history of music, appreciation, etc.

The New England Conservatory Library recently received valuable additions, the largest being given by Mr. Louis C. Elson, the well-known author and music critic, who presented a collection of about 200 works on history and theory of music and musical scores.

New York City Department of Education offers to the public lectures on musical subjects, delivered by Daniel Gregory Mason, Mrs. Mary Gregory Murray, John S. Van Cleve, and Pearl Cleveland Wilson. Sunday organ recitals will be given in co-operation with the American Guild of Organists in a number of high schools in Manhattan, the Bronx, and Brooklyn.

Yale Bowl was occupied by 40,000 persons to view the Yale Pageant, October 21, showing Colonial, Revolutionary, early American, and modern periods in the history of the University.

VICTOR TALKING MACHINE RECORDS FOR DECEMBER

When you buy a Talking Machine and the first lot of records to start you on the way to enjoyment of music in the home it is really only a start. Naturally interest and enthusiasm are at a height and this special interest continues for a time.

Too often, however, in six months, or perhaps in a year, enthusiasm begins to wane, and fewer and fewer records are purchased. Various reasons can be assigned for this, but in the judgment of the present writer, a strongly contributing cause is a state of doubt as to which records should be purchased to make the library of music the best and most desirable for the family life.

The test of the artist who makes the record is a good one, but the composition must also be valued and in the long run the decision will probably rest upon the work, even more than upon the artist who performs it. Then one person will be interested in records purely for entertainment, another for educational reasons; and so on through a long and varied list.

Following this we mention certain records which especially interest the writer of these notes. They are worth hearing before you make up your minds as to the purchase of records for your own use or for the purpose of holiday gifts.

Caruso, Enrico, tenor: *Ah, la paterna mano* (*My paternal hand*), from Verdi's opera *Macbeth.* not well known to Americans, but an aria considered worth reviving by the eminent tenor.

Farrar, Geraldine, soprano: *All through the night*, a lovely old Welsh air, beautifully sung.

Garrison, Mabel, soprano: *Happy days*, by Strelezki, a favorite song of a decade or so ago, with a violin obbligato.

Gluck, Alma, soprano: *The mother's prayer*, an old time song of the ballad style, by J. R. Thomas, very popular fifty or sixty years ago.

Journet, Marcel, bass: *Pie Jesu* (*Requiem*, Op. 48), by Fauré (pronounced *Fo-ray*), a French composer of eminence (not Faure, pronounced *For*, the composer of the well-known *Palm Branches*). *Pie Jesu* is from a work for the Catholic service.

Kreisler, Fritz, violinist: *Andante cantabile*, from Tchaikovsky's string quartet, Op. 11, a charming melody played, as may be expected, in a masterly style.

Lazaro, Hipolito, tenor: *O paradiso*, fr Meyerbeer's opera, *L'Africaine*, and *Spirto ge* (*Spirit so fair*), the beautiful tenor air in Donizet opera, *Favorita*, sung by a popular Spanish te whose voice is of unusual beauty and sweetness.

McCormack, John, tenor: *The sunshine your smile*, by Lilian Ray, a big European succe and *Il mio tesoro* (*To my beloved*), from Mozar opera, *Don Giovanni*, one of the most beautiful operatic airs.

Williams, Evan, tenor: *Dreaming of home a mother*, by Ordway, a favorito ballad of an ol generation, sung by a popular American tenor.

Zimbalist, Efrem, violinist: *Menuet* in by Beethoven, and *Gavotte* in D, by Gossec composer of the French school, both delight numbers.

Reimers, Paul, tenor: *To Mary*, by White, attractive English song, and *Phyllis und die M ter*, a German folk-song.

Werrenrath, Reinald, baritono: Two f opera numbers, *The heart bow'd down*, from *hemian Girl*, and *Even bravest heart*, from *Faust*, sung by one of the popular concert artists of tod
